About Gurgaon Workers News

GurgaonWorkersNews is a project independent from political parties, trade unions, state institutions or NGOs, trying to support workers’ self-organisation in their struggle for a better life – as part of the process towards global social emancipation from the existing system. One of the projects aim is to document the development and workers’ struggles in and around Gurgaon, one of the current boom regions of global capital. For this reason we publish a monthly electronic newsletter on this site.

GurgaonWorkersNews is not meant to be a purely documenting project, it is not supposed to be a one way street. We plan to distribute a regular newsletter/leaflet amongst workers in the area which, apart from local news, would contain workers’ information of related industries, companies or boom regions from other places in the world. If you want to have your information distributed to workers of a specific company, see list of companies on this site, or if you would offer to do the same at your place, please get in touch.

ABOUT FMS

‘Faridabad Majdoor Samachar’ is a monthly publication in the Hindi language. In 1982, we began publishing 1,000 copies in 2 page format. In 1993 we began to publish and distribute 5,000 copies of the paper each month in Faridabad and Okhla Industrial area of Delhi. Since 2007, the number of copies has increased to 7,000 since we now also distribute the paper amongst factory workers in Udyog Vihar, Gurgaon. Between Faridabad, Okhla, and Gurgaon, there are two to two and half million factory workers.

The newspaper is free and we distribute it by standing along roadsides during shift-changing hours. We give the newspaper to workers who ask for it. It takes ten days each month to distribute the 7,000 copies. Most of the copies are taken by industrial workers working in thousands of
factories in Faridabad and adjoining industrial areas of Delhi. Some copies are taken by office workers in Faridabad and Delhi. About 500 copies are posted to different places.

First-hand experiences and ideas of wage-workers at large of different factories, offices, research-centres, etc. make-up most of the newspaper. A brief article addresses these experiences and ideas. A column also deals with ‘Questions for Alternatives’.

In Faridabad three-fourths of the factory workers are invisible workers, or workers who are not in the company’s records. 85% are temporary workers and workers hired through contractors. The statutory minimum wages, presently Rs. 3,914 [US$ 83.28 approx.] per month, are not paid to 80% of the work force. Even permanent workers are not paid wages for two-three-four-six months. Workers of hundreds of factories that have been closed have not been paid their legal dues even after five-ten-fifteen years of factory closure.

Each issue of ‘Faridabad Majdoor Samachar’ caries articulations of workers of 50 to 60 factories on such issues. Over a period of time, stress on self-activity of wage-workers to confront and transform the present has become a focus of the newspaper.

Gurgaon is a satellite town in the south of Delhi, situated in the state of Haryana, with about 2,200,000 inhabitants. Haryana was one of the Indian states where the impact of the Green Revolution (‘industrialisation of agricultural production´) was most severe. On the background of the agricultural changes, industrialisation in Gurgaon started in the early 1980s with the opening of the Maruti car plant. During the last decade Gurgaon became an industrial hub characterised by the automobile sector, by the textile industries, by call centres and increasingly by biotech, agro and pharmaceutical industries.

The state and private development companies such as DLF enforce the political and infrastructural frame-work for the rapide development. Additional to the already existing textile, automobile and IT parks a new Special Economic Zone is in the making, alledgedly comprising 200,000 future jobs. The investment flowing towards the industries in Gurgaon also led to a Dubai-isation of the area, the real estate and land prices rocketed, speculative capital mushrooms in form of shopping-malls and architectural arrogance. The development pulled in thousands of migrant workers from all over India, seeking jobs in the various industries, being it as contract workers in the textile mills and factories or as agents for the call centre jobs. The main companies of the automobile sector are Maruti Suzuki (cars), Hero Honda (scooters) and Honda Motor Cycle and Scooter India (HMSI). Attached to them are various multi-national suppliers, like Delphi, Bosch and other, mainly Japanese companies. Most of the metal sheed and second and third-tier supplying work is done in work-shops in Faridabad, an industrial town situated about 40 km in the east of Gurgaon.

The policy to recruit mainly non-local workers has been used as a strategy to undermine workers’ power in case of unrest. The textile sector is export orientated. There are various major export companies, such as Orient Craft, which have several factories in and around Gurgaon. They heavily rely on contract work, as well.
chief minister of Haryana Gurgaon is the biggest call centre hub in India and therefore in the world. Fact is that about 150,000 to 200,000 young people work in call centres, phoning mainly for US and UK based companies, such as American Express, Citibank, Dell, IBM. The call centres are often located right next to car or textile plants, which might have an impact on future workers’ struggles (for more information on call centres in Gurgaon see newsletter no.1).

In terms of workers’ struggles Gurgaon became known when police attacked a demonstration of Honda (HMSI) workers in July 2005. Previous to that there have been various conflicts at Maruti, mainly in consequence of the company trying to down-size the number of permanent workers. Since 2006 it were first of all contract workers who took the initiative of struggles, often without being represented by an official union. After the experience of the lock-out and brutal repression at HMSI, most of the subsequent struggles have been short wildcat actions combined with factory occupations. In May 2006, immediately after a five day occupation at Hero Honda by 3,000 contract workers, tools were laid down in the supplying plant of Shivam Autotech. Since than there have been similar situations at HMSI and Delphi. For further up-dates on the situation in Gurgaon see monthly newsletters.
Gurgaon is a satellite town in the south of Delhi, a new development area. The area is characterised by the automobile industry. Maruti/Suzuki, India’s biggest car manufacturer, and Hero Honda and Honda Scooters and Motorcycles India, Indians biggest two-wheeler manufacturers have their plants and suppliers in Gurgaon. Apart from the automobile sector Gurgaon is a textile hub, there are extensive industrial zones consisting of textile export factories. The government of Haryana recently announced the opening of another Special Export Zone within the next few years, allegedly creating an additional 200,000 jobs.

About five years ago Gurgaon became a call centre cluster. Several multi-nationals have off-shored their call centre work to Gurgaon or nearby Noida, South Delhi or Okhla: Microsoft, American Express, Dell, Amazon, IBM, Citibank, Deutsche Bank, HP etc.. Some of the call centres are huge, e.g. in the building of Genpact, formerly GE Capital, about 12,000 workers are employed. In May 2006 Dell was just about to open a 5,000 seat customer service centre. Other call centres are hidden backrooms with six people on the phone.

Exact numbers of how many people work in call centres in and around Delhi are not available, but in Gurgaon alone there are probably about 150,000. Most of the bigger companies not only off-shore their work to India, but outsource it at the same time to tele-service companies like Wipro, Converges, Genpact, IBM. American Express for example has an outsourced process at Converges, at the same time and just across the street it runs its own in-house call centre. Wipro employs 1,200 people in the Dell process while Dell is opening its own centre only few kilometres away. It is unclear yet whether Dell will keep on running both processes parallel, but during conversations we heard that workers in the area are also effected by re-locations of their work. Some workers reported that
the process they had worked in was re-located to a call centre in Hyderabad in the South of India. IBM has an in-house call centre and at the same time acts as a service provider for Amazon and various bigger airlines and travel agencies. Due to the re-shifting a lot of workers see their work as unstable. They know that they were at the receiving end of global re-location (although they are also aware that they earn only about 20 per cent of the US-workers), but they also know that the boom is temporary, that capital/work might move on. While having a stroll through Gurgaon, the main revelation is that the planners of the industrial plot have not studied European revolutionary periods in the late sixties, or the struggles in Latin America or the movements in South Korea in the 80s. Or they think that due to the general deeper divisions in Indian society putting call centres right next to huge motorcycle factories and textile mills will not create explosive potentials in case of bigger turmoil. While we were distributing the call centre brochure the temp workers of the Hero Honda factory organised a wild occupation of the plant which went on for five days. Right opposite the factory is a bigger call centre with 1,000 young students, able of conversing in international languages and with access to modern means of communication, having to work ten hours night-shifts under quite severe pressure, while watching the police sleeping in the shadows of the occupied factory. Only a couple of weeks later we heard of trouble in the call centre because incentives were not paid in time. We were not able to verify the rumours but during a visit at the site a lot of young workers complained about having to travel and wait two hours in cabs before shift starts and about delays of wage payment. During times of revolutionary upheavals the students first had to “discover” the workers, here they work right next to each other and are in similar ways connected to the global movement of capital, e.g. the IBM call centre is right next to the Delphi plant, the world's biggest car supplier, and in the US both companies are in deep economical shit.

Also in the daily street and communal life of Gurgaon its particular class composition expresses itself. The nights are full of white medium sized transporters carrying night-shift call centre workers, in the middle-class housing estates of skilled permanent Maruti/Suzuki workers young call centre employees of different call centres have sparsely furniture shared flats, bigger groups of call centre workers have coffee breaks in the
shopping malls while ex-Honda temp workers sell them cigarettes or tea or peanuts. The spatial proximity is obvious, as obvious as the social abyss that still opens between them. Their different status is a social and cultural one, but can also be expressed in money terms: an unskilled building worker on the Dell call centre building site might earn 1,000 to 1,500 Rupies per month, working a 80 hours week; a textile or metal worker employed through a contractor earns about 1,500 to 2,500 Rupies for the same working hours; the official minimum wage for unskilled work in Haryana for a 48 hours week is about 3,000 Rupies, a contract worker at Maruti or Honda is paid between 3,000 and 5,000 Rupies for 50 to 60 hours per week; a guy at Pizza Hut serving the call centre agents gets 3,700 Rupies for a 60 hours week; permanent skilled workers at Maruti with a certain seniority, the highest paid industrial workers in India earn about 10,000 up to maximum 30,000 Rupies. Basic wages in call centres for a-level students start at about 8,000 Rupies, the average wage including incentives range between 12,000 to 14,000 Rupies for normally 50 hours night-shifts. Some call centre people, mainly in sales, earn up to 25,000 to 30,000 Rupies. During the last five to ten years the wage of unskilled factory workers decreased (apart from wages in the main automobile factories), while basic call centre workers wage are said to have increased by about 3,000 Rupies. To put it in context: The rent for a normal single room in Gurgaon ranges between 1,000 to 2,000 Rupies per month; if you cook your food yourself, as a single person you would need about 3,000 Rupies for a basic, but health nutrition; a basic meal at a street stall is 20 to 30 Rupies, a coffee at Starbucks or one hour internet the same; a mobile phone contract/number for one year without credit is about 1,000 Rupies; the price for a small car ranges between 300,000 and 500,000 Rupies. In many cases a nineteen year old daughter of a university professor or hospital doctor would earn more than her father. The money, the night-shifts, the contact with the “western world” creates a kind of call centre culture, even best-selling novels about it. The fact of having the first job after school or university in a call centre, the night-shifts, the technological control and general pressure, the shared flats, the purchasing power, the expensive food in the neighbouring shopping malls, the long hours in cabs, the frequent job changes, the more open gender relations at work, the burn out, the difficulty to keep the perspective of an academic career or to find jobs as academics... are
experiences of a new proletarianised middle-class generation.

To these general experiences others are added. We had gatherings with other call centre workers in their flats, they arrived in Gurgaon coming from various states in India and they worked in different call centres in the area. One guy had been put into an Australian detention centre for several months and has not seen his two year old son for a year, since being deported. Another guy, a heavy metal guitarist, originally came from Mizoram, a state in the north-east and grew up under a militarised state of emergency. Someone was about to open his own small call centre, having worked four years night-shift he has the money and business connections. Our conversations mainly evolved about the sense of this new life, the question of love-relationships opposed to classical married life, the shattered illusion that a well paid work is a fulfilling one, the threatening perspective of depending on call centre jobs, the lack of other opportunities, migration.

Concerning the gender relations the social management tries to contain things and maintain certain boundaries, e.g. we heard of various cases where people were told off and warned by the management for bonding or flirting in the call centre. Landlords and neighbours normally make sure that there are no “mixed” shared flats, at Evalueserve normally only the male Indians came to the parties of the foreign workers etc.. We also heard of cases where male team-leaders took advantage of the new moral pressure on female employees to be out-going and modern, by privileging flirty agents. The following interviews are products of rather short conversations during breaks, but they give an impression of the workers background, reality and perspective.

WORKERS INTERVIEWS

Female worker, 22 years old

In April 2004 I was still living in Bhopal when I had my first job interview with a call centre company in Gurgaon. After a first interview over the phone I was invited for a second interview in Gurgaon. I went with my mother. The company said that they were interested, but that they currently had no job, that I should wait another week. A friend of mine
arranged me a different job, so I moved from Bhopal to Gurgaon. I first had to convince my family, but when my father saw that the flat is fine, they let me go. It was the first time that I went to a big town. In the following one and a half years I worked in fourteen different call centres and by changing jobs I increased my monthly wage from 8,000 rupees that I earned at my first job to 20,000 rupees, my current wage. All jobs were outbound, I was calling the US, Canada or the UK. First I had a quite glamorous picture of call centres, you know, free cabs and meals and all. But that changed after a while, after working six days a week from 2.30 am to 12.30 pm plus travel-time. I started working in small call centres with ten people employed, later I worked in companies with up to 2,000 employees. The smaller call centres are less organised, they often do not give you a contract, they do not pay in time, you do not get your promised incentives. They also often do not pay the Provident Fund (unemployed/pension insurance), they do not give you a PF-number, although it is obligatory. They also hire more or less anyone who can speak a little English.

In the smaller units I called for Rogers Canada, they do business in telecommunications, or I called trying to convince people in the US to make use of the Government Grant Profit. They are supposed to pay 299 USD into this scheme, but often it turns out to be a con-trick. The shift-times for the US are tough, you work from 11 pm. to 6.30 am. I called for Three-G-Network or OneTel, selling mobile phones to private households in the UK. A lot of call centres here call for telecommunication companies.

Most of the call centres had automatic diallers, meaning that you can not influence when a call is made. Sometimes you have to make 400 to 500 calls per shift. Bigger companies like Infovision or Technova sometimes share a building, so that you have one row of Infovision workers the next from Technova. Big companies have their own buildings, unlike smaller companies, which often share a single one. It can happen that in one row there are people working for seven different companies. Infovision also has several branches, one still in the US, three or four in India. Some people start working while they are still living with their parents. For them it is pocket-money for party or gadgets. For them it is also not such a problem if wages are not paid on time. But I guess that 60 to 70 per cent of the people actually have to pay rent, they came from various
places in the North, if there is no money, they are in trouble.

One time at Icode Customer Management wages were not paid in time. It is a small call centre, only 25 people worked there. The management made cheap excuses, said that the client was not paying, that money will come in soon. That happened several times before people got fed up. During a night-shift people decided not to work as long as there were no wages. The manager actually went and got cash money from the bank and paid people the next morning. Later several people left this company, now there are only ten workers left. Similar things happened at bigger call centres, as well.

There was also trouble about taking leave. For example my brother was ill and I had to go back to Bhopal. The team leader said it was fine, but when I came back he asked me “Who allowed you to take holiday?”. Sometimes I just left a job because I needed holiday, I took a new job after coming back. You can find them in the internet, in the newspapers or you hear about them from friends. There are call centres like Wipro or Converges which are seen as better and more established call centres, also because they have good clients, for example BT or Orange. The problem is that they are far away from Gurgaon, you would have to travel at least two hours plus working a ten hours shift. The atmosphere in the call centres is a bit like in college. There is a culture of parties, people share flats, keep in contact via google-groups. Sometimes it is fun, people come to work after a party still drunk, falling asleep, waking each other up when a CIO comes. Sometimes it is childish, even harassing. Boys play their games, make jokes of the girls. We also got abuses when calling the US, but mainly from private people, not from employees. We did not know much about working conditions in call centres in the US, also we did not talk about it much. We only saw the high-up US managers from time to time, that is it. When I saw that more and more people came into the call centre business I felt that only speaking English is not enough of a qualification, because so many people speak English. I learnt French. In call centres you mainly learn about working time and discipline, you are physically un-free, but mentally free. You do your task. I also tried to get a job teaching French, but that is difficult and the wages are not that good. I finally joined Evalueserve, here you are less under pressure. In a call centre, if you do not sell, you are fired. A lot of people try to continue their studies while working in a call centre, about 40 per
cent study on correspondence. But it is difficult, a lot of people stop after a while. Also for managers working in a call centre is not a step towards career, they can stay within the industry, but outside of it call centre experience is not valued.

GE Capital, female worker, 21 years
I worked for GE Capital in the Australian shift. The shift would start at 4 am and finish at 1 pm, meaning that the cab would wait for you at 2.30 am. We did not get better pay for these shift-times, the same wage, about 8,000 rupees Sometimes when Australian people heard that we were from India they would say “How can I trust you”. About the job in general, well, I just finished college, still living with my parents and I thought it would be fun, but it was more like a prison. You could not move away from your desk, you had to be available all the time. If someone missed a call, a manager would call from Australia and complain about this particular worker. We answered about 100 calls a day. We had five minutes to go to the toilet. I had to give me an English name, the dress code was very strict, as well.

Female worker, 27 years
The job gave me a lot of confidence, I worked hard, got some respect for that. But the job was tough, 120 calls a day, often no weekends off, because clients of water and gas companies in the UK have queries at weekends, as well. We were supposed to convince UK customers to get a regular payment plan for the gas or water, meaning that the money is regularly extracted from their bank accounts, instead of them paying each single bill individually. For poorer people we proposed a pre-payment meter, so that they would pay in advance. They are keen on quality, if someone disconnects a call, he would be fired. If someone would be a second too late back from the break the incentive would be scrapped. There were bi-annual bonuses, a good performer would get about 14,000 rupees. In some call centres they display the incentives right there on the shop-floor, for example bikes or fridges or televisions.

HP, male worker, 22 years
I came to Gurgaon from Calcutta. I come from an Adivasi (indigenous) background, my father got a job in the government sector. I first went to a Catholic School were a lot of rich kids hung out. I graduated and my
brother, who is working as an engineer paid a technical course for basic computer hardware knowledge for me. The course cost about 17,000 rupees, but the qualification is basic, so I would have only found jobs which paid 1,500 to 2,000 rupees a month, so it would not have been a great investment. I wanted to start working at Wipro in Calcutta, because it was the biggest and best known call centre in town. But a friend told me that they make you work 16 to 17 hours and would only pay eight. Soon after a guy from a consultancy contacted me and asked me to come to Gurgaon to work in the technical support for HP. I talked to my parents and then decided to leave for Gurgaon, only because HP seemed to be a chance to increase my computer knowledge. There was some delay with the re-reimbursement money that HP is supposed to pay, for travel costs and the first two weeks rent in a hostel, but that seems to be solved now. HP outsourced its technical support to Daksh, which was then taken over by IBM. In the call centre there are also other processes, such as Delta Airlines, another US company. The HP process is quite new not older then six months, I guess. HP has its own call centre in Bangalore, I do not know why they have kept it, they do basically the same job there. About 100 people work in the HP process, all rather youngish, often not married, most of them fresh from college, I guess for 80 per cent it is their first job. They know a little bit about computers, but HP only requires good English skills. They come from everywhere, the consultancies which work for HP even go to Kashmir in order to hire people. They get 5,000 to 6,000 rupees per head. Before we started to take calls we had a two months training period. It was basically about how to use the tools. The main tool is a kind of HP trouble-shooting google-like program, a search engine to find technical solutions to problems. Basically we receive calls from the US, mainly from private people who have problems with their HP product. On average I receive 30 to 50 calls in a 9 hours night-shift, some of them take 30 min, most of them less. The company tells you off if you would need more than 30 minutes. We have direct-to-ear phone machines. After three months on the phone I have already dealt with about 90 per cent of the problems that I come across. That makes things rather boring. I am happy if a new problem crops up and I can learn something new. It is strange, I brought all my software books from the course, because I thought that I would work at IBM now, but I do not need them. I can come to work in T-Shirt
and with my base-ball cap. The basic wage is 10,500 rupees, but there are incentives. We are supposed to sell things, from software programmes to computers. For example if a guy calls because of a virus problem then we are supposed to sell him a virus software after having solved the problem. I sell stuff for 1,000 to 2,000 US-Dollars a month, but I get only 1,000 to 1,5000 rupees incentives for that. The rest is for HP. There are other incentives, e.g. the client can rate the service on a scale ranging from 1 – 5. You should not get less then 4. Some of the incentives are tied to team performance, meaning that if you take too much time on a call, the whole team would loose, the team leader would get trouble and pass it on. The total incentives would sum up to 3,000 to 3,500 rupees per month. One guy sold stuff for 5,000 US-Dollar a month, he was invited by HP guys for dinner and then offered a job in the HP call centre in Bangalore. There he would make 250,000 rupees a year. We rarely talk to guys from HP in the US, only if they pass on clients. But there is no time for chats. Also everyone knows that they earn more and that HP shifted to India because we work long hours for much less money. We mainly talk to clients, about life here and there. This is what I like most, the rest is not too exiting. Apart from that we make jokes, the atmosphere is fine. We say that HP computers are pretty crap, but at least this saves our jobs. Somehow the main thing that I got out of the job is that I have learnt to cope. Night-shifts are tough, there is not much life left, I could not send money home during the first months, because life is quite expensive here. So in a way I am prepared. It is the first job and it is tough, it can only get easier. I will not stay longer than for another year.

Citibank, male worker, 24 years

I used to work for Convergys, in the Citibank process. In total about 600 people work there, it is a 24×7 process. Convergys made sure that they got the people with the best accent for the Citibank process. I worked inbound, the credit card department for US clients, we had to do balance transfers, give information on interest rates and loans. We were also supposed to sell pro-active loans and credit protectors, a kind of insurance in case people pay their rates to late they would not have to pay higher interests. We got two US Dollars for each sold credit protector. We were supposed to sell two a day. Our wages were calculated in Dollars. The other people at Convergys would not get these
incentives. The basic wage would start from 8,500 rupees for beginners, they could go up to 17,000. Some people made 26,000 total wage including incentives. It was also the most strict process at Convergys, e.g. if you did not log out your computer and left the desk for a minute you would get the sack. Citibank had a individual floor and entrance in the building. People working for Citibank were also obliged to wear a tie, the others not. So you could see who works for Citibank and who is not. The call centre here in Gurgaon was the only outsourced call centre from Citibank. If a supervisor was not available and there was a problem then we sometimes had to transfer a customer back to the US. But the Citibank workers would only ask for the client’s details, they were professional, no chat, no nothing.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the front facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling credits to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop, at the outskirts of Gurgaon Indias biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please have a go at:

www.gurgaonworkersnews.wordpress.com

gurgaon_workers_news@yahoo.co.uk

For this and following newsletters we want to introduce four different categories of texts which should make it easier to trace back certain developments.

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

2) Collective Action –
Reports on proletarian struggles in the area
3) According to Plan –

General information on the development of the region, certain company policies

4) About the Project –

Up-Dates on Gurgaon Workers News

Most of the texts in this issue display the dark-side of the boom. A deeper analysis of the more hopeful recent struggles of temp workers at Hero Honda, Honda Manesar (HMSI), Delphi and the dynamic work-force composition within the new industrial areas is still to come.

1) Proletarian Experiences

*** Death and Development –

Short news on industrial accidents, road deaths, bomb alarms, serial killings and other achievements of development in Gurgaon and on its highways.

*** Exploitation and the Law –

Short glimpses of current conditions in various Faridabad factories, in the shadow of the official labour law (March 2007 issue of FMS)

2) Collective Action

*** Pressline Worker –

Example of small but sucessful industrial action, trying to avoid the lock-out trap.

*** Bicycle-Rikshaws and Strike at Liberty Shoe factory –

Short chat with former Liberty Shoe worker and short news on last industrial dispute at Liberty Shoe factory, Haryana.

*** Commuter Riot –

Fear on the highways, stress on the railways. Proletarian commuters causing a riot at Faridabad Old Station. From October 2006 issue of Faridabad Majdoor Samaachar (FMS).

*** Techy Wage Increase –

Unsuccessful attempt of wage increase by Gurgaon Call Centre Workers

3) According to Plan
*** Special Economic Zones, Part One –

Economy times two in Gurgaon, short summary of recent newspaper articles on the planned SEZ.

4) About the Project

*** Short Presentation of Gurgaon Workers News and Glossary –

Introduction to GurgaonWorkersNews and Glossary on welfare policies, wages and prices.

1) Proletarian Experiences

*** Death and Development –

Capitalist development kills in many ways. On 14th of March 2007 several peasants in Nandigram, West Bengal are shot dead protesting against being displaced for a SEZ. In Singur people get killed because they resist the construction of a Tata car factory. Once the car factory is running, the production creates more victims. Suzuki Maruti in Gurgaon has outsourced most of the dangerous sheet-metal work to work-shops and slum production-units in Faridabad. The blood now flows outside the companies premises, union sources estimate that daily over a dozen fingers are mutilated in the work-shops. On 14th of March 2007, while peasants are shot at in Nandigram, three workers in Gurgaon die and six get injured at Evergreen Plywood Limited factory when a boiler explodes. Technical failure. The enforcement of (automobile) industries, the production and the product are fatal. On 12th of March 2007 a young man dies on the new Gurgaon-Delhi highway. He is the twelfth, other sources say the seventeenth person who got killed on this short 15 to 20 km stretch of the NH8 during the last 50 days. In the period between 2003 and 2006 over 1,500 people got injured on highway. The highway and the double lane street beneath it cuts old and new Gurgaon in half and there is hardly safe way to get from one side to the other. Foot-crossings are not part of the supply-chain. Main reason for the construction of the highway: supply of the Gurgaon call centres with thousands of workers from Delhi, just-in-time supply of Maruti, Hero Honda and HMSI with parts, easy travelling for the upper management and high-speed drive-way to Gurgaon’s shopping-malls. Wealth on display attracts people wanting to shine in its halo and people wanting to shine in its purgatory. The shopping-malls on the road between Delhi
and Gurgaon are packed with tens of thousands of consumers every day and monthly tens of thousands run onto the street in panic, scared by bomb alarms, the last time on 16th of March 2007. Development is brutal and causes brutalisation. In February 2007 the chapter of a serial killing is legally closed. During the time between January and April 2006 a group of taxi drivers killed 20 people travelling between Delhi and Gurgaon, most of them local workers. They robbed a total of 60,000 Rs, this is 3,000 Rs for a life.

The following reports are translated from Hindi, published in Faridabad Majdoor Samaachaar (FMS). FMS is a monthly independent workers newspaper, about 5,000 copies are distributed in Faridabad and beyond. The newspaper exists since the early 1980s, it is free. Workers are encouraged to contribute with their thoughts and experiences. If you want to get in touch:

*** Factory and Police Station –
(FMS no.225, March 2007)

MG Export Worker

The factory located on plot 108, sector 24 produces steel and aluminium kitchen utensils and decorative pieces for export. The factory employs 67 people who receive ESI and PF (see Glossary), out of which 20 are staff (see Glossary), the rest permanent (manual) workers. Additionally 235 casual workers (see Glossary) work inside the plant, currently their number is low compared to other times. Even after two or two and a half years of constant employment for the company they remain casual workers, they do not have ESI and PF. MG Export runs two 12-hours shift, but after one day of 12-hour shift the next day you have to work during day and night. The shift would start at 8 am in the morning and end at 4:30 pm the next day. This is a 36 and a half hours shift. When it comes to working-times the company makes no difference between permanent and casual workers. You might be a permanent or a casual, the payment for overtime is only at the normal rate (although legally it should be paid double).
On Sundays the factory is made to seem closed, but actually production is on from 7 am to 3:30 pm. On Sundays workers have to keep their bicycles inside the plant. In sector 24 there are three other factories which appear to be closed at night, but MG Export uses them for night-shift. Workers are sent to night-shift from factory on plot 108 to plot 305, plot 329... In order to hide production there are all kind of legal and illegal papers. Finished products ready for export were first sent to Faridabad sector 59, now they are sent to Daadri in Uttar Pradesh.

MG Export pays the helpers 1,900 Rs per month, the operators get 2,300 Rs (see Glossary). On pay day workers and white-collar workers have to sign unofficial documents. Two or three days after having received the wage people have to sign the official register which says that the wage is according to the minimum wage defined by the Haryana government, which would be 2,485 Rs or more, according to wage category. The overtime is not even documented on the unofficial papers.

On the 15th of February 2007 the chairman and managing director of MG Export were on rounds in the factory from 1 pm to 4 pm. During this time the sahib started to kick a power press worker for a minor fault. In front of all workers the sahib slapped-beat-kicked. The people who started working at 8 am on the 15th of February were supposed to work till 4:30 pm on the 16th. The press operators left the factory on the 15th of February at 8 pm. There are twelve power press machines in the factory and they all stood still from 8 pm to 9:30 pm. The management called workers from the second shift at their homes, but in the night of the 15th only three power press were running.

On the 16th of February the power press operators gathered on a nearby square instead of coming to the factory. The head foreman went there and at 9:30 am the workers were brought back in the factory. The press operators started to work. Three hours later the company called the police inside the plant. Two police men took four workers from the press shop to Mujesar police station. Two workers were sent back to the factory and the other two were told to be charged with theft... Those two police men who had come to the factory had taken twelve metal bowls to the station themselves. One of the workers who washeld in the station was the worker who had been beaten by the sahib, the other one was his friend. The police threatened and scared these workers untill in the
evening they made them sign their resignation from the company and the police asked the company to settle the accounts of the workers. From the final payment the police men took 500 Rs each from the workers.

*** The laws are for exploitation and there is freedom to exploit beyond the law –

(FMS no. 225, March 2007)

The law: wages for a month of work have to be paid by the 7th to 10th of the subsequent month; the daily working-time is eight hours, the maximum overtime allowed is 50 hours in three month; overtime has to be paid by double rate; the minimum monthly wage defined by the government of Haryana for an unskilled helper-worker is: 2,484.28 Rs; this is based on an eight hours day and four days off per month; the extra dearness allowance DA (see Glossary) for January 2007 has not been announced yet, this is at the beginning of March 2007; the labour department declares that they have not received any information yet about the speech of the Chief Minister announcing the introduction of a minimum wage of 3,510 Rs.

– Essar Steel Worker:

The factory on plot 10 is located in the Industrial Area, it runs two shifts of 12 hours each. The overtime is paid at single rate. The helpers get 1,950 Rs and the operators between 3,500 and 4,000 Rs. The employer does not give ESI and PF.

– CMI Worker: The factory on plot 71 is in sector 6. Now, on 17th of February workers might receive the wages for last December. The production is booming, the permanent workers are forced to work 16 hours. The workers hired through contractors are driven to work 36 to 40 hours at a stretch and often fall ill because of that. The overtime payment is at single rate.

– Mahawir Die Casters Worker:

The factory on plot no.153, located in sector 24 runs two 12 hours shifts, 30 days per month. Overtime is paid at single rate. The helpers hired through contractors get 2,000 Rs per month.

– Galaxsy Instruments Worker:

On plot no.2, sector 27 C, the helpers hired through contractors get 2,100
Rs per month. The shift starts at 8 am and finishes at 5:30 pm. Even the permanent workers do not receive overtime payment for the nine and a half hours shift.

– Inotech Engineering Worker:

12/6 Mathura Road, Gurukul. The wage of the casual workers is 2,400 Rs, there is neither ESI and PF. The shift starts at 8 am and finishes at 10:30 pm. Overtime is paid at single rate.

– Dalaal Auto worker:

Plot no.262, sector 25. The factory runs two 12 hours shift, the overtime is paid at single rate.

– JBM Worker:

Plot no.133, sector 24. Less than 10 per cent of the work-force are permanent workers, more than 90 per cent are hired through three different contractors. The 50 to 60 permanent workers work two shifts of 8:30 hours each. In the filing, welding, cleaning, packing department 200 workers work on one shift, from 7:30 am to 9 pm, sometimes till 10 pm or even 1 am. In the press shop 300 people work and in the axle department 150 workers, on two shifts. From 7:30 am to 7 pm or 8 pm to 6 am. There is work on Sundays, too. Overtime is paid at single rate.

– Sangita Industries Worker:

Plot no.55, Industrial Area. The helpers in the factory get 2,150 Rs, but no ESI or PF. Daily working time is 12 hours. Overtime is paid at single rate. Four to five days wages get siphoned off before wages are paid. If you ask them about it they say that the wage office is in the companies factory in sector 24, “so what could we do about it”. Threatening takes place, but whoever keeps on asking again and again will finally receive their money.

– Venus Metal Industries Worker:

Plot 262, sector 24. Out of the 600 workers employed in the factory ten per cent are permanent, ten per cent are casual and eighty per cent are hired through contractors. In the press shop, the paint shop and the tool room they run two shifts. There is only little overtime. In the welding, assembly and packing department there is only one shift, from 8:30 in the morning to 9 in the night. During the twelve and a half hours shift
they would not even give you a cup of tea. Overtime is paid at single rate. There is hardly any space in the factory. In the paint shop there is no exhaust fan and there is no space for putting up a fan. The heat of the paint shop enters the press shop, as well. This condition gets worse during summer. There is no canteen and there is no space to make meals. Venus Metal supplies Maruti, Hero Honda and others.

– Shivalik Global Worker:
12/6 Mathura Road. The workers directly employed by the company received their January wage on 21st and 22nd of February. The workers hired through contractors have not received their January wage, and today is the 24th of February.

– High Tech Worker:
20/6 Mathura Road. Out of the 40 workers directly employed by the company about four or five have ESI and PF. The workers hired through six different contractors have no ESI and PF. Whenever an official comes for inspection to the plant they are pushed outside the factory. The helpers get 2,000 Rs per month. Working-time is 12 hours and overtime is paid at single rate. Per month 100 Rs out of 500 Rs wage is siphoned off. When you leave the job they rarely pay your outstanding wages. The contractors push and threaten and tend to delay the wage payment. The January wage has not been given yet, on 19th of February.

– Escorts Worker:
The permanent workers have received the annual statutory bonus (minimum one month wage) in October on Diwali, but after half of February has already passed, the casual workers did not receive it. For any little fault casual workers are kicked out the factory. And in order to get hired the casual workers have to give the company officers a bribe of 500 Rs.

– Vaibav Engineering Worker:
Plot no.63, sector 24. There are eight permanents and 120 casual workers in the plant. The wage of the casual helpers is 1,650 Rs, ESI or PF is not covered. There are two shifts, each twelve hours. Overtime is paid at single rate.

– SPL Worker:
Plot no.47-48, sector 6. The workers employed through contractors get 90 to 115 Rs per twelve hours shift. The wages of January have not been paid yet, on 22nd of February.

– Clutch Auto Worker:

12/4 Mathura Road. The 500 casual workers have not received their January wages, on 20th of February 2007.

– Orient Fan Worker:

Plot no.59, sector 6. On 14th of February in the tool room and press shop factory of the company a manager and supervisor together beat up two casual workers.

– Unique Engineering Worker:

20/3 Mathura Road, Northern Complex, plot no. 5/6. The workers have neither ESI nor PF.

2) Collective Action

*** Pressline Worker –

Given that a lot of industrial actions in the Faridabad and Gurgaon area end up in a lock-out and are often used by the employer to replace permanent and/or contract workers, the following short example shows that workers have to develop different kinds of collective actions. Particularly after the lock-out and repression at Honda Manesar(HMSI) in July 2005 a lot of workers, mainly those on contract basis, have learnt their lessons. Most of the struggles after the HMSI lock-out were short factory occupations (Hero Honda and Shivam Autotech in May 2006, Honda Manesar HMSI in December 2006).

Plot no. 262 -D, sector 24. In order to get better wages and working clothes and so on, us 30 permanent workers neither took a banner into our hands nor got engaged neither in a tool down strike nor in a walk out strike. We undertook other steps in order to effect production. The production level came down to 25 to 30 per cent. As a reaction the company locked us out on 16th of January 2006. On our own complaint to the labour department the company made the excuse that construction work was going on inside the premises and that for the workers attendance will be marked. After fifteen days a three-year contract is agreed on: 500 Rs annual wage increase, shoes, working
clothes, soap is provided by the company, annually three days tour, and for all who worked for the company for five – ten years a service award of 1,500 – 3,000 Rs. The full wage for the fifteen days that we were kept outside the factory was given. But still the company pays the ten casual workers only 1,800 to 2,000 Rs and they do not have ESI and PF.

*** Liberty Shoes, Strike and Cycle Rikshas –

Silaam is from West Bengal, he came to Gurgaon about two years ago, in spring 2005. He first worked at Liberty Shoes in Haryana, he did a lot of overtime, earned about 3,000 Rs per month. He says that he did not like the work, the control. About a half year ago he bought a cycle riksha. He now has regular customers, for example two women from Maruti Vihar who work in Call Centres. He cycles them every day. His monthly income is 5,000 Rs now, although it is unclear whether he has to pay back a loan for the riksha. If you want to lease a riksha, and this is what most of the riksha-valla do, you have to pay the owner 25 Rs per day. This is the big deal for all those who think that you can save the world by handing out micro-credits: give people a 20,000 Rs credit and they can be their own employer. The riksha then becomes the mill-stone around their self-empowered necks, while waiting with dozens of other small entrepreneurs at street corners, fighting over passengers to transport, not being able to go back to their village, because invested capital has to be moved. The alternative? Staying at Liberty Shoes stitching for nothing? The following news item on the last strike at Liberty Shoes show that conditions there are bad, but that at least there is a possibility of collective response.

26th of June 2006

Over 30 people, including policemen, were injured after the Haryana Police resorted to lathicharge on hundreds of protesting workers of Liberty Footwear who had blocked National Highway No 1 near Gharaunda on Monday afternoon. Police officials said that they had to resort to lathicharge after the workers pelted stones at them and refused to lift the blockade. About six policemen sustained injuries in the stone pelting, they said. Many of the workers, including women, were detained to clear the highway that had remained blocked for over three hours, leading to nearly 10-kilometre-long queues of stranded vehicles on either side of the industrial town of Gharaunda.
Nearly 3,500 of Liberty Shoes’ 4,000 employees went on a strike on Tuesday after about 50 of them were injured on Monday in a police lathi charge near the company’s Karnal plant in Haryana while protesting against low wages. Low salaries and lack of bonus have been the bone of contention between the two sides for the last nine-ten months.

According to Dilawar Singh, union leader, Liberty Workers Union, “The company has not paid any bonus in the last one and a half years after reducing it from 20% to 10%. There hasn’t been any major hike in salary as well for many years. The management raised the salary from Rs 1,600 to Rs 2,300 over a period of 10 years. The management also misbehaves with the employees quite often.”

The company has about 4,000 employees working in its three units based at Kutail, Gharonda and Karnal. Employees of the two units at Kutail and Gharonda boycotted work on Tuesday and only 15-20 employees turned out in Karnal plant which has about 500 employees.

Liberty, though, seems confident of meeting its production targets despite the strike. “The employees at these three units had been producing very less since the last 6 months and keeping in mind their lackadaisical attitude we have increased our production in Uttaranchal unit by 30-40% by adding two more lines to it. We have about 170 employees there but the target is easily achieved due to major outsourcing of component part. There will be shortage of the products but we are hopeful to cover the losses soon,” said Bansal. The company also plans to set up 3 new units in Uttaranchal and Ponta.

The company workers say they will return to work only if their colleagues are released from jail and all false cases imposed on them are withdrawn. The Liberty Shoes workers have been in protest mode for the last three days ever since eight of their leaders were arrested by the police after a clash with two senior officials of the company who were reportedly seriously hurt.

*** Riot at Old Station, Faridabad –

(FMS no.220, October 2006)

A daily commuter:The 7:55 am Mathura Shuttle towards Delhi, the 8:15 am Ballabgharh train and the 8:35 am Palwal Shuttle haven’t reached
New Town Station yet, and it is already 8:35 am. The platform is packed with commuters. The Ballbhagarh train arrives New Station at 8:40 am, there is a fair bit of pushing and punching and quite a lot of people miss the train. The train has half reached platform number one of Old Station when people stop the train and force the driver to get off. After the front wind screen and the headlight are smashed people start breaking the windows of the waggons, the passengers get off the train and join in pelting stones. At Old Station about 20,000 daily commuters are crammed together. The front screen window of a freight train engine which stands in the station gets broken, too. The Capital Express (posh train connecting state and national capital) from Mumbai towards Delhi stops at the outer signal. A crowd smashing the signals arrive at the Capital Express and start to break the windows. A Minister of Home of the central government is on the Capital Express, as well. The police is there, but what can ten to twenty police men do once there is such a crowd? If they would use their clubs, they would get beaten up themselves. The DC (see Glossary) and SP (dito) from Faridabad and the Railway SP and a heavy police force arrives and the situation turns back to normal.

Between 6:30 am and 9:30 am there are nine local trains which carry 100,000 daily commuters from as far as Agra to the factories, offices, shops and other work places in Faridabad and Delhi. More and more people get stuffed into the local trains. The situation is so bad that there is not even space left to stand. There are between 500 to 700 people in one wagggon! People who hang outside the train often get hit by signals. Often people get seriously injured while trying to get on or off the train. And an eight hours working day easily turns into a twelve to fourteen hours day. The Railway department often stop local trains while giving green lights to freight trains and express trains. In consequence a half an hour local train journey can extend to one or even one and a half hours. Reprimands for coming late you can get everywhere, factories often refuse people who arrive late access and send them back. Only yesterday night the local train which was to reach Okhla at 8:10 pm had been cancelled. After a long time in limbo the Malwa Express to Jammu was turned into a local train. In order to clear the way for the Capital Express the local train stopped for ten minutes in Tugalkabad and then 20 mintes at Old Station in order to clear the way for the Southern Express. The
local train would have arrived New Station an 8:45 pm, the Malwa arrived finally at 10 pm. Under these conditions commuters will always be in a state of tension.

*** Techy Wage increase attempt at Convergys in Gurgaon –

Already older news item (August 2005) from major call centre service provider Covergys in Gurgaon.

“Not satisfied with their earnings, some BPO employees feel they can outsmart technology and earn bonuses for themselves. Some employees at Convergys were sacked because they managed to ‘create’ fake favourable ratings apparently from customers of SBC Yahoo, a popular ISP in the USA who have outsourced customer services to Convergys. The employees created new email IDs in the name of SBC Yahoo customers they were handling, sent a positive feedback to their company from this email ID and also updated this email ID temporarily on the customer’s database in their system.

Apparently this was discovered when Convergys noted unusual patterns of excellent ratings for some employees. On pinging, it was found that these feedback forms had been originating from an Indian server (used by Convergys, Gurgaon) rather than from the US servers from where they actually should have come. Customers were also asked to verify if they had actually given such feedback. Possibility is not ruled out that these executives even asked for passwords from customers under the pretext of solving their problems. But Raman Roy, the former CEO of Wipro’s BPO operations, says almost no one can access passwords unless customers themselves disclose the same. “But it’s possible if one has a strong understanding of technology. If these kids could manage that, then they are wasting their talents in a BPO,” he adds. But money seems to have been the greatest lure for such employees, as an excellent rating can get them bonuses of up to Rs 4,000 a week”.

You can read more about Convergys and the Gurgaon call centre world in newsletter no.1.

3) According to Plan

*** ;Not yet special enough: Special Economic Zones, Part One –

The following is a summary of recent newspaper articles concerning the planning of a SEZ in Gurgaon area. This can only be a first step towards a
more general understanding of the capital and class composition in the area and the general process of urbanisation. The main questions concerning the bigger picture are:

- What kind of industries are concentrated in Gurgaon, how are they intertwined locally and beyond?
- What is the role of the state and private development companies in the expansion process?
- In which way is the village economy and agricultural surrounding important for the expansion and for the local labour market?
- What are the general movements on the labour market?

We have to avoid to get hooked on the different legal forms of exploitation, e.g. by demonizing Special Economic Zones or the impact of foreign direct investment and creating illusions about the workers’ friendliness of the public sector or of ‘homegrown capital’. Nevertheless it makes a difference for the conditions or workers’ struggles whether they are exploited in a (public sector) school or an (export) textile mill. Recent uprisings in Vietnam, the Southern China and Bangladesh have shown that particularly in the export zones a young and uninstitutionalized workers’ movement appears on the stage. This is not because there the working conditions are particularly bad or exploitation relatively worse, often the opposite is true when we compare it to the conditions in older or small scale industries in the respective countries. The erruptions are more due to the fact that these workers know about their potential power: they see their generation united by similar experiences (migration), they know about the importance of their work (export), there is no incorporated (union) institution which would have an interest to sell them out and they know that due to the generalisation of conditions their struggle will very likely spark off chain reactions of discontent.

In Gurgaon area we have some similar features: spacial concentration of industries, importance of export and multi-national companies (e.g. 75 per cent of all Japanese FDI in India flow to the area), a young migrant work-force, most of them on contracts, meaning that they have worked in various factories in the area.

The SEZ might intensify this concentration process. Right after taking
over the Congress-led Haryana government decided in June 2005 to set up the SEZ in a private-public cooperation. The main developer is the private company Reliance Industries Ltd., the company also holds 90 percent of the shares of the project. Reliance Ltd. started as a company in the chemical sector and became huge by attracting small shareholders and riding the late 80s stock-market boom. Nowadays Reliance is in chemicals, communications, energy sector, real estate and others. In cooperation with the Haryana State Industrial and Infrastructure Development Corporation they plan to set up a 25,000 acre SEZ, which would be the largest SEZ in India. It is supposed to provide a cargo airport and a 2,000-megawatt power plant.

Officially the numbers of created future jobs in the SEZ vary quite a bit: the Haryana political leaders speak about the creation of 500,000 jobs, Reliances Industries Ltd. about 200,000. The actual industrial composition is still unclear. Just from scanning recent news items it seems that apart from IT, textile and automobile industries the trend goes towards bio-tech and pharmaceutical industries and companies manufacturing for the “green energy sector” (wind turbines, solar-energy, bio-fuels). Confusingly enough there are two more SEZ announced in the Gurgaon area, one by Rockman Projects, a multi-service SEZ, and one by Orient Craft, a textile hub. Rockman Projects announces that as of December 2006, the land has been fully acquired in Gurgaon. The SEZ will be spread over 1,615 hectares and will also be located on National Highway 8. Orient Craft announced to set up a 750-acre SEZ, which is supposed to employ 30,000 people once finished. In the official Masterplan 2021 a total of 4,570 hectar is allocated to Special Economic Zones.

Clear is the trend to develop industrial land in Manesar, a small town in the south of Gurgaon, about 20 to 30 km down the highway. Official term for the outcome is Industrial Model Town-Ship (IMT). The Haryana government already announced a bulk of tax exemptions for companies which would settle in the IMT. After Honda HMSI opened their plant on the green field, also Maruti Suzuki set-up the new plant there, with various bigger suppliers in tow. According to the governmental Gurgaon-Manesar Masterplan 2021 about 700 hectares of land was converted into industrial area.
About the development of the SEZ first critical voices appear, e.g. of the Sampuran Kranti Manch, stating that Reliance Ltd. is more interested in the land acquisition for planning golf courses and Disney theme parks than in creating jobs. Compared to the situation in Singur or Nandigram the farmers seem to be less resistant to the selling of their land, which might be due to the fact that Haryana was one of the states of Green Revolution, meaning that subsistence or small scale farming has not a chance of survival anyway. Of course the media portrays the farmers as the winner of the situation, as people making loads of money by selling their property. This ignores that according to the magazine Frontline more than 50 percent of the people who live in the area are landless, they will be displaced and loose their jobs in agriculture (the official notification of the government states that the developer would have to provide alternative housing and jobs). The farmers say that the land is actually very fertile and that it is a shame to cover the soil with marble, but that nevertheless prices for agriculture products are down and cannot compete with the prices for land offered by companies like Reliances.

That not everyone is happy to leave their land is obvious. On 28th of March villagers from Gadauli Khurd opposed the occupation of land by Haryana authorities for a proposed SEZ to be set up by Mukesh Ambani’s Reliance Industries, chasing away police and a squad that had gone to the area to demolish some houses and tube-wells. The local people gathered to oppose the demolition work and pelted stones at the team, which comprised a HSIIDC official. The window of a bulldozer was damaged and the team had to retreat due to the opposition by the villagers. Physical possession of the land will be taken soon with the help of police force and it would be handed over to RIL, said Gurgaon’s deputy commissioner Mr Rakesh Gupta. The villagers said they were opposing the demolition as the land was originally acquired by HSIIDC for the development of an SEZ by the corporation but was now being handed over to a private party. Sources said the current dispute related to about 300 acres of the total of 1,380 acres to be given by the Haryana government to RIL for its SEZ. So the overall effect on the rural population has still to be seen. Other voices criticise that the state would pamper private companies with tax exemptions and other incentives, while the state explains, that the income from interests and general
prosperity will more than counter-balance the low taxation. Fact is that compared to expected profits and attracted capital, state and companies managed quite cheaply to turn a large amount of farm land into an industrial area.

We still have to see what is actually behind the SEZ boom. There are already various “parks” in Gurgaon, IT-City, textile and cyber parks, automobile hubs. If you have always wondered what a Cyber City is, here the explanation from the Haryana Government Masterplan 2021: “Cyber City means self contained intelligent city with (...) high speed communication access to be developed for nucleating the Information technology concept and germination of medium and large software companies”. Some hot air with your bits and bytes, sir...? In the notification from May 2006 the Haryana government declared that it granted approval for 23 SEZ to be developed in the state. If the actual legal terms of SEZ will actually apply in all of the announced projects, is still unclear. Already existing are the impacts on the real estate and land prices in the area, another topic yet to cover.

*** Corporate Watch –

On the web-site you can find some news items on following multi-national companies in Gurgaon area, just click on “List of Companies”. The list is boring in a general sense and it smells like share-holders oi-stress sweat, but it might possibly be useful once shit hits the fan or a picket the factory gate. For a longer list of companies situated in Gurgaon have a look at the web-site, as well. News items this month on:

Alcatel Lucent
Amdocs
Amtek
Apollo Tyres
Caparo
Carrier
Dell
Donaldson
DRS
HSS, Flextronics
Genpact
INC
Maruti/Suzuki
Metro Tyres
Mitsubishi
Nippon Paint
Orient Craft
Posco
Samsonite
Samsung
Sintel
Su-Kam
UnitedLex
Zentek

4) About the Project

*** About Gurgaon Workers News and Glossary

Gurgaon Workers’ News is a project independent from political parties or unions, trying to support workers’ self-organisation in their struggle for a better life. One of the projects’ aim is to document the development and workers’ struggles in and around Gurgaon, one of the current boom regions of global capital. For this reason we publish a monthly electronic newsletter on this site. GWS is not meant to be a purely documenting project, it is not supposed to be a one way street. We plan to distribute a regular newsletter/leaflet amongst workers in the area which, apart from local news, would contain workers’ information of related industries, companies or boom regions from other places in the world. If you want to have your information distributed to workers of a specific company, see list of companies on this site, or if you would offer to do the same at your place, please get in touch.

>>>Glossary
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
HSIIDC
ITI
Jhuggi
Lakh (see Crore)
Lay off
Minimum Wage
Panchayat
PF
Ration Card
SP
Staff
Trainees
VRS
Wages and Prices
Workers hired through contractors
AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work
in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official
retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial
worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even to contribute to this project, please have a go at:

In the May issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** “Thousands of invisible hands moving the automobile [sic!] industry in Gurgaon area, Part One” –

A short introduction to the local automobile industry, plus five Faridabad Majdoor Samaachaar reports from workers employed in different companies of the supplying sector (Yamaha Motors, Super Auto, Talbros Engineering, GEMI Motors, Alpha Instruments)

*** “After the Slum Fire“ –
Short note on a slum fire in Gurgaon, which destroyed about 800 huts of families of cleaning and recycling workers on 24th of April 2007. The first two days after the fire office bosses came down to the slum, asking why their offices kept on being dirty.

*** “Whose security is it anyway?” –

Reports from Security Guards in Gurgaon, one of them employed by G4S, formerly known as Group4. The worker reports about the massive and open money swindle the company undertakes. Another guard reports why he had to work 48 hours without a break.

2) Collective Action –

Reports on proletarian struggles in the area

*** “Unions and the Law” –

A short introduction to the Industrial Disputes Act and some general thoughts on union-related local problems.

*** “Amtek Incident” –

Short report on a union struggle in the automotive supplying industry which happened in 2006. Permanent workers got bashed up by paid goons while the division between permanent workers and workers hired through contractors remained unharmed.

*** “Fashion Express” –

Recent dispute in Gurgaon in March and April 2007. Permanent workers of the textile export company occupy the factory after union leaders got sacked. Most of the demands of the union could be enforced, but the complaint of sexual harassment made by women workers against the owner was dropped under the negotiation table.

3) According to Plan –

General information on the development of the region or on certain company policies

*** “Concrete on Soil: A Glimpse at Urban Development in Gurgaon, Part One” –

Some background information on population development, land acquisition, planned urban projects and the bubbling real estate sector in
*** “Not yet special enough: Special Economic Zones, Part Two” –

The developers face more resistance from local farmers and the nuisance of legal changes while trying to convert land ownership into capital.

*** “Corporate Watch” –

News items on companies situated in Gurgaon, this month on:

Aksh Optifibre Limited, Brite Group, Didi World of Fashion, Eastern Medikit Ltd., Fashion Express, Hexaware, Infovision, JBM Group, Koutons, Mercury Press San Jose, Pepsi, Sandhar, Strabag, Stryker, Whirlpool, ZTE Corp

4) About the Project –

Updates on Gurgaon Workers News

*** We proudly present / We urgently request –

New Makeshift Multi-Media Section on the Website and Workers’ Film Documentaries for Local Workers’ Resource Centre Project.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences

*** Thousands of invisible hands moving the automobile [sic!] industry in Gurgaon area, Part One –

The automobile industry is of major importance in the Gurgaon and Faridabad area. According to an IBEF presentation of Haryana published in October 2005, half of the four-wheelers and 60 to 70 percent of the two-wheelers manufactured in India are manufactured in Haryana, which basically means in wider Faridabad and Gurgaon area. Half of the industrial work-force of the state is said to be employed in the automobile sector. Given that about 70 per cent of the industrial work-force is officially non-existent, due to not being registered, official numbers are not to trust. In the 2001 census Haryana had a 40 percent
‘work participation’ rate, which can be translated as roughly 8.4 million wage workers. The census then distinguishes between ‘main’, ‘agricultural’, ‘household industry’. The main work-force comprises 65 percent, which would be around 5.5 million official ‘urban work-force’. The number of automobile workers in the Faridabad-Gurgaon-Manesar belt is difficult to assess. The main assembly plants alone (including trucks, tractors, two-wheelers) employ somewhere around 50,000 workers. Maruti alone has 400 first tier suppliers, Hero Honda 240, ... and the supply-chain has many more hidden links within the area.

Often parts have many tiers to pass through before they end up at the Maruti or Hero Honda main factory. For example, rubber hoses for carburetors arrive in the form of rubber blocks in Mujesar, a village in Faridabad surrounded by industry. What remains of the village is the scattered layout of the small one-story shanty huts with cows and goats in front. The rest is transformed by the industry. Inside the huts people work on 1970s laces of German origin, turning metal or working on antique power presses. Maruti’s supply-chain starts here. In the backyard of one of the huts there are three different garages, each is one company. In one garage, door hinges are galvanized, the chemical liquide up to the ankles of the workers. In the other room a woman works in the dark next to a mind-numbing noisy generator, de-burring metal parts. In the third garage two children take the fin off rubber hoses, covered in black dust, operating a one-phase electrical engine. Two workers next to them have just finished pressing and cutting the hoses with a hand-wheel press. The woman and the children get 800 Rs to 1,200 Rs per month (see glossary), for a ten to twelve hour shift, a six to seven days week. One of the workers is the official owner of the rubber hose company; he used to be a permanent worker in a rubber hose manufacturing company and this is where he got the contract. The rubber hoses end up at Mahindra, Maruti/Suzuki and in the railway industry. They will pass through another four to five suppliers and the hands of hundreds of workers on the way.

The amount of capital involved increases when we approach the main plant. It starts with slum production, women sitting in front of their houses sticking together plastic parts. It moves on to smaller workshops like the ones we have just described, on to medium work-shops, mainly doing sheet-metal work. Then we reach small and medium sized
factories like those of the following reports. In the final suppliers like Delphi, Bosch, Mitsubishi, Denso, and Sona Koyo in Gurgaon and Manesar the technological standard is similar to that in the main car or scooter/motor bike plants. Apart from Maruti/Suzuki, Hero Honda, and Honda HMSI there are other automobile assembly plants in the wider sense, e.g., Escorts tractors, Eicher trucks, Claas agriculture vehicles, and JBM excavators, and they often extend into the same industrial network. Even between local suppliers, parts have to go a long way, e.g. Hero Honda in Gurgaon receives gears from Shivam Auto-Tech in Manesar, which is 20 km away, while Shivam is supplied with metal parts from KDR in Faridabad on a daily basis, passing Gurgaon on the 70 km trip. Maruti/Suzuki changed their supplier policies in the 1990s, cutting the number of direct suppliers from 800 to 400, out-sourcing the responsibility for on-time delivery and quality. The total number of suppliers is said to be 6,000, not including the workshops in Mujesar. Suppliers manufacture the most crucial parts right on the Maruti premises.

The automobile industry extends into a fragile net of manufacturing units and keeps a mass of casual workers circulating within. Ask any of the security guards, cigarette stall workers or auto-rickshaw drivers in the area and they will know someone working in the industry, if they have not worked there themselves. And the hierarchy within the workforce of Maruti persists after workers have been kicked out. In Maruti Vihar in Gurgaon, a housing colony for permanent workers built in the 1980s, the medium-sized clothes shop belongs to a former Maruti unionist and permanent worker kicked out during the 2003 strike against the Voluntary Retirement Scheme, while a former contract worker now handles the cigarette stall in front of the house. His wife and three children live in Allahabad, but there is no work. He prefers the work at Maruti to the work at the stall, where he has to hang out for fourteen hours a day and hardly makes 2,000 Rs at the end of the month. On Sundays he cleans the house and car of his landlord.

There is more to be written about the industrial structure and the circulating work-force, mainly because we get a glimpse of how workers can turn this social cooperation against the regime of capital. In the coming issues of the newsletter we want to have a closer look at the main automobile actors in Delhi and Gurgaon and the recent workers’
unrest which they had to face: Maruti/Suzuki and the trouble with the Voluntary Retirement Scheme, police repression and contract conflicts at Honda (HMSI), Hero Honda factory occupation and its chain reactions of workers’ unrest. There is more to come.

Following are five reports from workers employed in the automobile supplying industries in Faridabad. They describe the conditions in the first-tier suppliers. They are translated from Hindi. Their stories were published in Faridabad Majdoor Samaachaar (FMS) no. 220, no. 222, no. 223, during October 2006, December and January 2007

Yamaha Motor Worker

19/6 Mathura Road, 250 workers are hired through 24 different contractors. At first workers could stay when the company changed the contractor, but they started to replace the workers together with the contractor, which meant that people got sacked after more than ten years of continuous employment in the factory. Today only in the spare parts department there are fifteen of us older workers left, fifteen workers who are hired through contractors. They intimidate us, but the togetherness amongst us is good. Nevertheless, the situation is precarious. We used to give our dues to the union, after seven years of taking our dues, the union gives the money back to us (which means that they refuse us as members). In this situation we took steps ourselves, for our interests. Three years ago stopped work for one week, then our wage was increased by 700 Rs and they accepted that overtime is paid at double instead of single rate, they agreed to give us 12 to 14 paid holidays per year, and to give 10 Rs for food for each working-day. Every three months wages are checked according to the DA (see glossary), but although the permanent workers get their wages increased accordingly, we do not receive any additional money. This January our wages have been increased by 30 Rs, this is after three years receiving the same wage of 2,968.20 Rs. You cannot make ends meet with this wage. The permanent workers who work next to us get 15,000 Rs.

Super Auto Worker

Plot no.84, sector 6. Out of the 500 workers employed in the factory only about 50 to 60 get PF and ESI. The factory processes sheet metal using power presses, workers often cut their hands. The company keeps some prepared ESI forms, so if there is an accident and workers cut their hands
it shows that they get ESI. Amongst those who receive ESI and PF seven or eight workers had cut their hands. During this month alone one worker got two fingers cut off, another one chopped off one finger. The company itself employs 25 workers directly, 100 are employed through Durga Enterprises. The rest are hired through some permanent workers who the company has labelled as contractors (a legal fake in order not having to hire people directly). In the paint shop at the Yamaha, Mahindra, and the Honda lines workers are hired through contractors; the unskilled workers amongst them get 3,000 Rs for a 12-hours day and 30 days month. During the twelve hours they don’t even give you a cup of tea. There is no canteen in the factory and we have to take our meals on the road. Every month the company gets rid of documents. The company has other factories in sector 6, plot no. 13, 50, 79, 80.

Talbros Engineering Worker

Plot no. 74 – 75, sector 6. In the factory there are 25 permanents employed and 1,000 workers are said to be hired through a contractor, but in fact it is the company which does the hiring. Out of the 1,000 who are documented as hired through the contractor only 60 get ESI and PF. The monthly wage for ‘unskilled work’ is 1825 Rs. The factory runs two 12-hours shifts and it is obligatory to work 30 days per month. They define when to enter Talbros, but they do not fix a time when to leave the factory. Overtime is paid at single rate. If you cut or wound yourself at work you receive a little treatment and then you get dismissed. The factory manufactures parts for Tata, Mahindra, Bajaj, Massey and others.

GEMI Motors Worker

Sector 11, Model Town. First the sign at the factory said American Universal, after that GE Motors, and now the name is GEMI Motors. The factory is very clean, but the 10 Rs meal in the canteen will not fill your stomach. If you ask for seconds the canteen guy turns a deaf ear and says that for 10 Rs this is how much you get. They say that the company contributes with 15 Rs to each meal. For the packing and cleaning the company employs workers hired through contractors, and there are trainees in the categories of six months or eighteen months. By luring and by inflicting fear the company increases the work load of the trainees constantly. It is said that the company factories in America have holidays on Saturdays and Sundays, but here the factory runs even on
Sundays. In New Plant on Sunday the 24th of December the company reached a limit. During the year itself production had been increased by 40 per cent and on the 24th of December the manager came and said that on that day we would be allowed to go home once we increased production by 80 per cent. The shift started at 6 am and the few permanent workers who arrive on Sundays left at the end of the shift at 2:30 pm, but in order to meet the production target the trainees had to work till 5 pm. Officially the company does not acknowledge overtime. The two and a half additional hours after the end of shift will not be paid for by GEMI – GE Motors. On 24th of December the company made the workers do unpaid labour.

Alpha Instruments, Abhirashi Impex Worker:

30/2 Industrial Area. Work starts at 9 am and 4 to 5 workers leave the factory at 6:30 pm, the rest of the skilled workers at 7:30 pm. The casual workers and those who do the packaging work have to stay as long as necessary, sometimes they work for 48 hours continuously. Those who stop at 6:30 pm neither get a tea break, nor are they paid the one hour overtime. Those who work till 7:30 pm get tea and biscuits at 7 pm and their two hours overtime are paid at single rate. If they keep you for longer than 10 pm they give you 10 Rs for food. More than half of the workforce does not show up in the official documents, they do not get ESI or PF. The initial wage is 1,500 Rs per month. In the factory, which got shifted from SGM Nagar to Industrial Area, the management set up three different companies in order to make the workers show up in this or that document. By doing this the management has done away with workers’ 8 to 10 years of employment and the benefits attached to this. The company directors are father and son and the father always is always putting pressure on us. Two months ago a woman worker submitted a complaint at the labour department, the company did not bother to send a representative, instead they sent a permanent worker and presented him as a manager. The permanent workers handed in a complaint in the labour department on 24th of November. In reaction to this on 29th of November most of the casual workers were dismissed. The company, which has never paid on schedule, this time paid the November wage on 9th of December and for the first time the permanents received a pay slip as well. Now many permanent workers finish their work at 5:30 pm. The company has never paid the statutory
annual bonus, but when the November wages were paid, they even made people sign the bonus register. The factory manufactures auto-meters for all kinds of vehicles. Most of the products are for export to America, Britain, Germany, Holland, and Turkey. The company gave only four holidays during the whole year.

*** After the fire: When the offices keep on being dirty, the bosses come down to the jhuggis... –

The following newspaper-clip about the fire in a Gurgaon slum is small. If 8,000 to 10,000 rich people would have lost their houses in a fire (the article speaks about 2,000 destroyed jhuggis), it would have been on the national TV- news.

HR: Major fire at Gurgaon slum

Gurgaon: Around 2000 huts in a slum were destroyed in a major fire that broke out in the early hours of Tuesday. No one was injured in the fire that broke out in the area near Wazirabad village at about 2:30 am, fire officials said. Eighty fire tenders from four fire stations were pressed into service which took five hours to extinguish the flames, they said. The cause of the fire is yet to be ascertained, they said. Small gas cylinders weighing one to five kilograms created problems for the fire officials as they kept bursting after regular intervals, they said. Cycles, rickshaws and other vehicles were reportedly gutted in the fire, they said. (PTI)"

The slum is close to Golf Course Road – St Thomas Marg crossing, where a lot of new office towers and upper-class housing estates are situated. The basti might have comprise 2,500 jhuggis altogether, about 800 have burnt down. Most of the people came from West-Bengal, they live in the basti for three to four years. They do recycling work, house keeping and cleaning work in the nearby offices and housing estates. There were no complaints by authorities or any other trouble before the fire broke out. There is no compensation our any aid after the fire. The people who lost their homes now live with neighbours or started to make new make-shift huts. Some pics of the charred landscape and of the people rebuilding are on the make-shift photo-section of the web-site. People reported that the first and second day after the fire bosses from the offices came to the jhuggis, inquiring why their offices kept being dirty, why their cleaners have not arrived at work...
Workers’ life time, energy and acceptance to risk physical damage is a cheap commodity. There is a night security guard in front of each upper-middle-class house of Gurgaon areas like Sushant Lok and the lifetime wage of the guard will amount to less than the price for the wooden entry door and front widows. There are two guards in most of the stores of the shopping malls. With the rise of a middle-class which has less modesty when it comes to the display of their wealth, the security business becomes a big one. The major global players are in India, too. While Group4 runs private prisons in the UK or supplements the Israeli army, in India their employees secure factories, call centres and other buildings from ordinary people. In Gurgaon the union AITUC managed to get their foot in and organise a number of workers, but this is an exception given that most guards belong to smaller companies or are employed on a personal level.

For example Subod works as a night-guard for a tower-bloc of middle-class apartments in South City Gurgaon, he has to sit and watch, open the gate for cars, ask visitors who they want to visit. He is from Bihar, and visits his village and family twice a year. He used to work as a casual worker at Maruti, but he was kicked out. He also worked in factories in Faridabad, but he stopped due to the health hazards and stress level. For the past six months he has worked twelve hour night-shift without a day off. Working 84-hours per week he gets 2,000 Rs per month. He has no proper work contract. When the guy from the day-shift fell ill, the housing association did not get someone to jump in, so Subod had to work the day-shift as well. He is afraid of losing his job, so he would not accept the help of a friend who offered to do six hours of his night-shift. He worked 48 hours on stretch. The situation at the world’s biggest security company is hardly better:

G4S – Group4 Worker

FMS no.218, August 2006

Security Guard: The company name used to be Group4, then it changed to Falck and now it is G4S. The company’s headquarters for India is in Panchvati, Gurgaon. The company employs about 90,000 security guards all over India. Group4 alias G4S openly misappropriates the provident funds of the workers. The company used to base the ESI and PF payment only on the basic wage. Currently the ESI (health insurance) payment
takes the DA (inflation compensation) into account but the PF (pension fund) is still only applied to the low basic wage. The basic wage of a guard is 1,200 Rs and it is only this which PF is applied to – this practice is done to 90,000 guards every month and this is also shown in the documents.

As with other companies, there are things which are not shown in the documents and which are an even bigger scam. Each month a security guard makes 100–240 hours overtime, but the company does not show this in the documents. The overtime payment is at single rate. A guard works every day, 30 days per month. Together with the 30 days of normal attendance there should be overtime shown for 30 days in the books, as well.

The G4S company gives two pay slips. One pay slip shows 26 working days of eight hours each and the according wage of 2,447 Rupees. On this payslip it shows that the ESI contribution is cut from the 2,447 Rupees and the PF from the 1,200 Rs basic wage. On the second pay slip the overtime payment is documented, but it is shown sometimes as travelled kilometers, sometimes as conveyance or for something else – but never as overtime. The amount on the second pay slip is supposed to be paid fully, but money is cut; according to the document it is cut in the name of ESI. As by law the guards make 40 crore Rupees worth of overtime, but G4S company and management swindle 20 crore Rs from the guards every month. The company officer also forces the guards to work 36 hours continuously and they are not even given money for food during this time. The company talked about giving two uniforms per year, but the management gives only one.

2) Collective Action

*** Union struggle and the law – Examples from Amtek (Automobile) and Fashion Express (Textile) in Gurgaon –

First we give (A) short overview on the legal constraints, then there will (B) some more thoughts on problems of union struggle in the area, in the last part you will (C) how these problems play out during two examples of more or less recent industrial disputes.

(A) The Law
The following is a rough extraction from the Industrial Dispute Act, 1947, giving some background of the legal framework in which strikes in India take place. Theoretically any group of workers with a common cause (which has to be legally accepted as a cause for industrial dispute, e.g., wages, unfair dismissals) can raise an industrial dispute. The group of workers need not be union affiliated, but has to comprise at least 1/12 of the total work-force of the company. If the company and workers or union cannot settle the dispute by negotiations, workers have to address a Conciliation Officer, engage in voluntary arbitration or finally address the Labour Court and Tribunal. The government has the legal opportunity to refer the dispute to the Labour Court.

A strike is prohibited while conciliation proceedings are pending before a Board and seven days after the conclusions of such proceedings. The same is valid during proceedings before a Labour Court or Tribunal and two months after conclusions of such proceedings. A strike has to be announced 14 days before it starts, and it must not start later than six weeks after notice has been given. In the “national interest” the government can declare a strike illegal (the scope of the “national interest” could be seen when the state government of Tamil Nadu wanted to illegalise the strike at Toyota car plant in 2006 “in the interest of the nation”). Striking workers have no legal right to prevent (strike-breaking) employees from entering the plant, or to obstruct goods, trucks, etc. from leaving it. Neither have workers the legal right to use or enter the place of work if they “have no intention to carry out their work” (sit-in strike).

(B) The problems of union struggles

Some specific local factors aggravate the problems of union organisations. In the Gurgaon belt mainly the bigger factories or companies have a union representation. In summer 2006 AITUC reportedly has about 30-35 unions in the Gurgaon belt, HMS has about 15-20 unions (eg. Lomax, Deep Autos), CITU has about 15 unions in the area. This is a small minority. To this adds that in India unions often only represent the permanent workers on the shop-floor, which in many industries in the Gurgaon-Faridabad area account for less than 30, 20, ... per cent. Classical forms of representation and the main aims of unions (‘defending the market value of a specific group of work-force’) is less
applicable when it comes to mobile contract and migrant workers, who tend to switch between locations, sectors, modes of employment. In times of confrontation the unions in the area tend to fight for their permanent members, sometimes at the cost of workers hired through contractors or other ‘casual’ workers.

The legal restrictions and the vast supply of potentially strike-breaking work-force (migrants from the country-side etc.) and – at least in the textile and smaller industries – the mobility of industries (the possibility to shift plants and units within the area) undermine most tradionally lead struggles. A lot of openly and legally lead strikes (necessary for the organisation’s recognition or repuation) end in lock-out situations and in the repression of workers by capital and state. Often companies make use of or even provoke a strike/lock-out situation in order to change the existing composition of work-force or capital in their favour.

(C) Examples of recent industrial disputes: Amtek and Fashion Express

Overview on company structure

According to the company website (www.amtek.com) the Amtek Group of Companies is a $650 million global auto component company with 25 manufacturing facilities in Asia, US and Europe. It is the largest flywheel ring gear manufacturer in the world. It is a tier 1 supplier to major auto makers around the world.

The company started manufacturing in Sohna, India in 1987. Forging operations in Gurgaon started in 1993. In 1997 a joint-venture with the Japanese company Benda Kogyo Limited was forged. Since then Amtek bought or merged with various medium-sized (European) automobile suppliers, starting in 1999 with the collaboration with Ateliers de Siccardi of France.

In 2006 Amtek has about a dozen plants in the Gurgaon area and the international group consist of, amongst others: Amtek Gears Inc., located in Bay City, Michigan (USA); Amtek Aluminium Castings UK Ltd., GWK Amtek Ltd. (UK), Lloyds (Brierley Hill) Ltd. (UK), Midwest Mfg. Co. (US), Sigmacast Iron Ltd. (UK), Zelter Gmbh. (Hennef, Germany).

Amtek supplies parts to many automobile companies, for example: Ashok Leyland Limited, Aston Martin, Bajaj Auto Limited, BMW, CNH Global, Eicher Motors Ltd., Escorts, Fiat India, Ford, General Motors, Hero
Honda, Hindustan Motors, Honda Scooters, Hyundai, Jaguar, John Deere, JCB, Kawasaki, Land Rover, Mahindra & Mahindra, Maruti Suzuki, MG Rover, Piaggio, Saab, Scania, Tata Motors, Toyota, and Yamaha Motors India.

Chronology of the Dispute

In hindsight it is difficult to trace the reasons for why on the 6th of June 2006 about 20 permanent workers and CITU union members got beaten up by paid goons or, as other sources say, by workers hired through contractors on the behalf of the management. Though the underlying reason for the attack is a longer dispute between the management of Amtek and the CITU union representatives, some elements of the dispute might have been on a rather personal level (some union members got dismissed for allegedly not paying their company phone bill, etc.).

Central to the incident is the fact that Amtek, a huge international automobile company, uses this kind of repression in order to enforce discipline at the workplace. Some characteristics of the dispute question certain union forms of struggle: the union having to get engaged in struggles (and risking workers being beaten up) in order to defend or reinstate their official leaders; the complete division if not hostility between permanent workers and workers hired through contractors; the use of the media in order to create pictures of martyrs. We give a short chronology of the incident.

Events leading up to June 6th:

On 14 April 2006, two workers of ASIL had a scuffle outside ASIL premises on the road near Denso (another auto part supplier) regarding a private matter of money loaned to some workers who worked as casuals at ASIL. This happened as they were coming to duty. The casual workers went to the company and reported this incident. Thereafter, ASIL gave a verbal notice to two workers, transferring them from the Manesar unit to an Amtek unit in Gurgaon. Not having received a written notice, both workers showed up for work at the Manesar unit and were not allowed to enter the gates. According to the workers the transfer was legally incorrect, amongst other reasons because no written notice was given. When both workers were not allowed to enter the gates of ASIL at Manesar, the ASIL union (CITU affiliated) protested the matter.

Since 24 April 2006, 20 of the permanent workers were asked by the
management to sit in the conference room/reception area and not allowed to enter the factory. They went to the Labour Office (LO) and to the management four times but management refused to compromise.

On 18 May 2006 there was a meeting with the Deputy Labour Commissioner (DLC) and an agreement was reached. However, when the workers reported to work the next day on 19 May 2006 they were still not allowed to go in. So the workers went back to the DLC, who sent them to the LO, but still there was no agreement.

On 5 June 2006 there was another meeting with the DLC with management and union representatives where Mr. Vikal, Personnel Manager, told the DLC and workers that management would broker an agreement the next day and asked the workers to meet them at 5:30 pm in the conference room/reception area.

The incident on June 6th:

When the workers showed up for the meeting on the 6th of June 2006, the gates of the factory were locked and two vehicles filled with goons were allowed to enter the factory premises; these goons encircled the ASIL workers and finally beat them up using saria and crank shafts that are manufactured at the plant itself. About 22 workers had to be sent to hospital.

One unionised worker reports in a conversation on the 7th of June 2006 that four local (Gurgaon) workers who got hurt had previously been targeted by management. Management has even asked the union to expel him as a member, so that management could then dismiss him from work.

In the local newspapers the management describes the incident from their point of view: ‘Said Baljeet Singh, factory manager at Amtek, “About 20 men went on strike after two of their colleagues were transferred from Manesar to Gurgaon. On Tuesday, the 6th of June, they entered the plant and started breaking things. They also hit our chief general manager on the head. Later, they managed to flee.” The management lodged a complaint against 12 workers on charges of beating the employees, while no complaint has been lodged by the workers against the management. The retelling of some unionists who have not been involved in the dispute puts both pictures together. They assume that negotiations
between the CITU unionists and the Amtek management were going on, that then there was some physical fight, and that the management called in contract workers to beat up these permanent workers since goons could not be arranged at such short notice. Proof of this is (a) the so called goons came without weapons and used make-shift weapons such as saria and crankshafts, (b) there was ongoing tension between permanent and contract workers. They say now the permanent workers are afraid to go back to work and are refusing to return until a settlement is reached and they feel protected.

The strategy to charge workers with assault on policemen or managers after they have been beaten up by the latter is common practice in current disputes. In the subsequent court cases the charges against the workers are used in order to blackmail them to drop their charges against the police or managers. In order to react against the power of the law, unions and other workers’ organisations often try to use the media and the images of beaten up workers in order to win over public opinion. This is how the scene looked in Gurgaon Hospital during the night of June 6th: several known union leaders who had just arrived at the hospital and who knew little to nothing about the history of the dispute standing next to the beds of the beaten up workers, holding speeches surrounded by cameras and journalists.

Since 6 June incident:

On 10 June 1,000 workers gathered at KN Park in Gurgaon and marched to the DC’s office and submitted a memorandum and via the DC to CM Hooda (Central Minister of Haryana). On Monday June 19th unions planned to take out a big rally in IMT Manesar that culminated in front of the ASIL factory gates.

Overview on Company

The Fashion Express factory is situated in Udyog Vihar Phase 1, plot no.100 in Gurgaon. The company has two more factories, one of them in Manesar. In Udyog Vihar about 110 permanent workers are employed, in addition to 100 to 150 workers hired through contractors. The workers work six to seven days per week. The workday normally starts at 9 am and finishes at 8 pm. The permanents receive about 5,000 to 6,000 Rs per month the workers hired through contractors about 120 to 150 Rs per day. The company tailors clothes for export, mainly for the US. Buyers
are companies like:

http://www.brownstone-studio.com
http://www.seventhavenue.com
http://www.hsn.com
http://www.ullapopken.com

There are two major show-rooms in New York the company collaborates with. If the dispute would have carried on, a joint action with activists picketing these show-rooms would have been an important next step.

Florissant Fashion

1005 Estate
New York 10018

Chronology of the Dispute

According to a statement of the Fashion Express Karmchari Sangathan (union in Fashion Express) the conflict started when two women were sexually harassed by the factory owner. The women went to complain to the local police, but the police did not know what to do against the powerful owner. The women, the union and AITUC representatives went to court. The judge issued summons against Tejpratap Mamik and Gaurav Mamik, the owners of Fashion Express. On 22th of November 2006 the judge sent them into one-day custody.

On 24th of November 2006 the bosses suddenly and without considering legal processes sacked four union leaders and pressured one woman to ask for her final dues. The other woman was called to the office from home and also pressured to ask for final dues and to withdraw her case against the bosses. The union AITUC and Fashion Express Workers Union demanded a solution. Conflicts must have started earlier on given that
the demand notice from the union was issued on the 11th of July 2006 and is still pending.

On 20th of March 2007 the permanent workers, represented by the union, stopped work and about 40 of the (women) workers stayed inside the factory. All workers hired through contractors left the factory, having to look for a different job. According to union officials the Fashion Express workers from Udyog Vihar tried to contact the workers in Manesar, but those workers were afraid of losing their jobs, so they kept on working. The union rep, when asked about the relationship between permanents and these workers hired through contractors: “We are separate from each other”. The workers in Manesar actually took over a lot of the work which could not be finished in Udyog Vihar. The clothes were then delivered in the name of Fashion Express.

In the following weeks joint rallies with AITUC members were organised; one took place in the Kamla Nehru Park in Gurgaon. About 500 union members from various companies took part (G4S, Honda HMSI etc.). The rally had the usual character of leaders speaking and members repeating slogans. Nevertheless it is possible to meet and talk to union members from different sectors, e.g., from Gurgaon Classical Golf Course. The AITUC had a long struggle to get recognised at the golf course; during the dispute it was closed for several months and some unionists were jailed. About 280 workers are employed on the course.

Concerning Fashion Express unfortunately we do not have any firsthand reports on the situation inside the occupied factory and how the struggle was organised there. This would be particularly important to know because of the fact that many women are employed at Fashion Express. In general (and this is a big difference to similar export sectors in Vietnam or China), the female wage employment in Northern India is low, in 2001 officially about 7 percent.

On the 8th of April about 150 police (wo)men were gathered outside the factory. The police threatened enter the premises and kick the workers out. The workers said that they would stay inside and defend themselves. In this situation the union, employers and the Deputy Labour Commissioner started to negotiate and finally signed an agreement (Section 12(3), a binding agreement). The agreement comprises the following points:
1) The pending annual increment of the last two years will be given to the workers on basis of their performance.
2) Three days wages which have been cut around 1st of May 2006 will be paid to all workers.
3) Annual leave will be increased from 8 to 10 days.
4) The four women workers who had been suspended are to be taken back on duty.
5) Issues related to bonus and annual tour (company leisure travel) will be solved by discussions with union.
6) The dismissal order against the union president and treasurer dated 24th of November 2006 will be taken back and converted into suspension. The management assures that if the atmosphere in the company remains good for one to one and a half months, they will be taken back on duty.
7) The days of strike/occupation will not be paid, “no work no pay.”
8) All workers will remain disciplined and make sure that full production will be given.
9) All legal complaints made by both sides will be taken back, and the complaints made by the women workers against the owner will be withdrawn, so that the atmosphere in the company will be congenial.
10) All issues of the demand notice given by the union on 11th of July 2006 have been resolved.

Work resumed on Monday, 9th of April. Some permanent workers say that only 60 of the former workers hired through contractors came back or were taken back. At the factory gate there is a sign saying that “tailors are wanted”. Unfortunately we have not managed to talk with either the women workers or the sacked workers from the contractors. The positive element of the dispute is that by staying inside the factory workers managed to avoid being bashed up by the police and thereby to enforce some demands. Problematic is the fact that the charge of sexual harassment was used as a negotiable issue and that most of the workers hired through contractors have lost their job due to the dispute. The ‘probation’ situation of the union representatives now puts additional pressure on workers to remain ‘disciplined’.
3) According to Plan

Intro

It takes force to divide society into urban and rural. Regarding urbanisation the force of the State under British Colonialism was not too effective. Frank Brayne, the Deputy of Gurgaon in the 1920s and a Victoria Cross holder and Mussolini admirer, tried to introduce something like a first Green Revolution to the agriculture of Gurgaon, but without lasting success. He complained about the slow-moving imperial state and the resisting Muslim Meo population of Gurgaon. His “Gurgaon Experiment” mainly impressed the Oxford University Press.

The proper Green Revolution came later, but it was the first major industrial projects in the 1980s which triggered urbanisation and population growth in Gurgaon. Since then job opportunities attracted more and more (or the agrarian crisis expelled more and more) migrant workers and the expansion of the road network made it possible for better-off people to live in Gurgaon and work in Delhi, which was the initial plan of the Delhi authorities. Like NOIDA– a planned satellite city in the east of Delhi, the land grabbed and then populated by force under the state of emergency 1976– Gurgaon was supposed to relieve the Delhi inner-city area. Actually in many cases it is Delhi which has become the dormitory town of Gurgaon; tens of thousands of call centre workers are driven to Delhi to sleep and are fetched from there for their night-shift in Gurgaon. With the extension of roadwork (mainly the NH-8 highway towards the Rajasthan border), the villages in the surrounding areas are affected by land acquisition and by further settlement of industries. From the industrial capital, the stock-market, and international investors, e.g., from Dubai and Singapore, over-liquide capital flows into the area and coagulates in concrete and glass. Developers plan one shopping mall after the other, one office tower higher than the next, whole private cities are in the making. If we believe Marxist architects who say that the rapid increase of sky-scraping buildings are the main indicator for an impending economic crash, than we better take cover or prepare ourselves for the social convulsions.

Before having a look at statistics and price developments, here is a short scene about a result of urbanisation. The thirty people living in tents next
to the famous Sahara Shopping Mall, Gurgaon, right in front the Vipul Agora building, belong to one family; originally they are from Rajasthan. They have lived on this piece of land for twenty years, they have goats and chickens, they do skilled blacksmith and other artisanal metal work. When MG Road in front of their tents was developed and the construction of the Sahara shopping mall began, life started to become more stressful, too much noise, too many people, and the fear that they would have to move on. Despite years of living on this ground they had no legal status. Some members started to work on nearby construction sites, others started to sell things on the increasingly busy street. Their original skills are rarely needed when malls and office blocks are built. A huge construction site emerged right behind their tents, first planned as the new call centre for US-company Dell, then taken over by Dubai-based Vipul Agora. The Vipul Agora office building is still empty and the security guards tell you that the owner has difficulties attracting new companies after Dell pulled out. The construction of a second road forced them to move their tents to a 90 sqm small plot, which is further diminished by gardening work for the mall. Half of the family already moved somewhere else in winter 2006/2007. Sometimes the police come and hassle them, but the land-owner promised that they can stay as long as there is work to do. Some women and men do excavation work next to the shopping mall; when you ask them about payment, they quote the land-owner and shrug their shoulders...

First short glimpse on the matter:

a) Population Development of Gurgaon
b) Public-Private Partnership of Land Grab
c) Disjointed Urbanisation
d) Currently-Planned Urban Projects
e) Real Estate and Land Price Bubble

a) Population Development

Between 1945 and 2001 Gurgaon’s population grew by about eleven times to 1,660,000 people; this figure comes from the 2001 census. The population growth is mainly due to work migration, partly also due to administrative changes during the time, e.g.,, by counting more of the surrounding villages as part of the District Gurgaon. The state-issued
Master Plan for Gurgaon-Manesar estimated a further eight to ten percent annual population growth. Critical voices say that the actual annual growth was 20 percent during recent years and that therefore the Master Plan has major shortcomings. An environmental study commissioned by the state government in July-August 2006 stated that the maximum population (in terms of water supply, etc.) that Gurgaon area could carry was 2,600,000 people. If the current growth rate is sustained then by the end of the Master Plan in 2021 6,000,000 people will live in Gurgaon.

The public and basically upper-class opinion is quick with allegations of over-population. They say that there would be lack of water (for private consumption, not for the industry!), but they do not mention the fact that a posh family unit in Gurgaon Sushant Lok uses about 2,000 litres of water per day, thanks to water tanks and private pumps, while a poor family unit in Gurgaon Chakarpur might use 20 to 30 litres, and only if they manage to use it before the water runs out for the day. A mere look at Delhi City can tell us that over-population is essentially a created condition and reactionary construct, given that one quarter of Delhi’s (poor!) inhabitants are crammed together on 1.5 percent of the total Delhi land. The question will be how those in power manage to control these pent-up masses. The plans to resettle them in town-ships like Noida during the State of Emergency, or to relocate them together with the industries during the industrial closure campaigns in the early 2000s, seem to have failed. When it comes to control, it comes to policing and this seems to be a problem in Gurgaon, at least for the middle-class inhabitants worrying about increasing burglary and car theft. A newspaper article in March 2007 states that there is only one policeman per thousand people on an average in Gurgaon. This ratio is far lower than the average ratio of policemen per people in the country; on average, there is a ratio of 1:800 in India. The article did not mention the vast army of outsourced policemen (see report from Group4 security guard in this issue).

b) Public-Private Partnership of Land Grab

The crisis of agriculture and village life is the driving force behind urbanisation. People sell or leave the land mainly because agricultural production under the existing market conditions equals debts equals
malnutrition. The government of Haryana massively cut government jobs in the 1990s, which had allowed a lot of small farmers in the semi-rural villages around Delhi to have a regular income and to keep their farming activities at the same time. In the Haryana villages since the end of the 90s the Special Employment Schemes for the rural poor were reduced, while non-agricultural employment opportunities did not increase, both tendencies forcing more people to look for jobs outside the village. Official reason for the decrease in the special employment schemes given by the governmental Planning Commission: “… more and more outside [migrants from other states] labour is getting benefit of the Special employment schemes, operated more and more through contractors”. (source: Study on growth of rural non-farm employment for selected district of Haryana, Final Report by the Planning Commission, March 2002). The Rural Employment Schemes are in most cases paper tigers; officially they are supposed to guarantee 100 days of paid work per year for the rural poor. These poor people are then for example used to do road works, literally breaking rocks, or street sweeping, for 500 to 1,000 Rs per month. The young men sweeping the street in front of the Sahara Shopping Mall in Gurgaon work eight hours daily and receive 500 Rs per month. “At least the boss sits far away in his office in Delhi,” they say. The fact that the state does not make more use of these schemes, despite the low wages they pay, might tell us something about the general wage level and employment opportunities of the rural working poor. Contractors often pay their workers even less for public road works.

While state policies aggravate the land flight, it also re-adjusts the legal framework of the acquisition and industrialisation of the left-behind land. In Gurgaon the legal frame-work for a kind of united public-private development front was forged in 1975. The Haryana Urban Development Authority (HUDA) was set up and the Haryana Development and Regulation of Urban Area law was passed, which allowed private companies to acquire land. One hundred acres (45 hectares) of contiguous land has to be assembled in order to get permission for residential buildings. The public-private framework formed the legal starting point for the later real estate boom.

HUDA generates its income mainly from the sale of plots, auction of commercial sites and buildings, rent, fees and fines on unauthorised
construction/unauthorised occupants, interest on bank deposits, and loans from State Government and the NCR Planning Board. As everywhere there are many minor scandals about how HUDA operates; e.g., an Audit Report (Civil) for the year ending 31 March 2005 says that HUDA sold land reserved as forest areas, that some million Rupees got siphoned off, that there was a lack of internal control over the land acquisition process, etc. It concludes: “All these deficiencies are indicative of ineffective management in development of urban estates.”

For the private land acquisition it is important to get local respected persons involved as brokers, as middlemen between the private developers and the farmers. As soon as money pours in all kind of cracks appear in the village, already existing divisions might widen, new alliances are formed. Some end up as newly-rich, others pelt stones at the bulldozers of developers (see the report on SEZ in newsletter no.2), others just move on. A short extraction from the text “Unruly Urbanisation of Delhi’s Fringe” by Bentinck (2000) gives a rough overview of what a “farmer” could be, and how the “farmers’” interests might differ a lot: “[Apart from big and small land owning farmers] there is a group of farmers who do not own the land they cultivate [in Haryana villages they account for 50 to 75 percent of the population]. Most of them are migrants who lease-in land from local landowners. Lease contracts are usually arranged on a yearly basis. Nowadays, most leases stipulate monetary compensation (the leaseholder pays a fixed amount to the owner). In a minority of cases, the land is cultivated on a more traditional ‘sharecropping’ basis, whereby the landowner and the cultivator share the cost of the inputs and the revenues from the harvest. This form is chosen when the leaseholder is poor and cannot raise the funds to pay the amount for lease and inputs beforehand. An increasingly common form of agricultural contract is lease by the so-called ‘suitcase farmers’. Suitcase farmers are outsiders with sufficient resources to lease land at various places, to hire workers, and to market the crops themselves. They specialise in high-value seasonal crops such as vegetables and flowers and are highly mobile. Landless labourers are numerous. They work on other people’s land for wages or on the basis of piecework. Most of the agricultural labourers are highly mobile seasonal migrant workers, and they do not necessarily come back to the same village each time”.

Given the property relations in the villages we can say that the influx of
money will even further deepen the class division. For the few big landowners the compensation will actually be a starting capital in order to become urban capitalists while many others will consume the compensation for their plot of land in the process of shifting places and jobs. The majority of the villagers will not get compensated, because they do not own land anyway. The private-public partnership to get hold of the land works by creating money dreams and nightmares of forced displacement. During the five year period after the legal framework allowed private land acquisition, DLF, a private developer, grabbed 225 hectares of village land while HUDA managed to get ‘only’ 150 hectares through compulsory land acquisition. Basically there is no competition going on, the numbers just show that there is money available on one side and that the force of money/scarcity is brutal enough so that further state-sanctioned measures are merely necessary as a threat in the background of the deal.

c) Disjointed Urbanisation

In the Gurgaon area the rapid urbanisation results in a disjointed landscape, a cities’ ripped back-side:

leftovers of older rural villages – next to wasteland – next to gated and double-locked high-rising residential estates – people grassing their cattle on land whose price sky-rockets under their feet – a new road in the middle of nowhere connecting an IT park and a block of upper-class detached houses – slum huts of 300 building workers next to a shopping mall construction site – a huge waste dump next to a Dubai-style office building – an expressway cutting the older village in half – rubble of demolished shops and huts behind Delhi Metro signs – a well-designed industrial zone without space allocated for workers’ houses – more slum huts... a battlefield of a city in the making.

No wonder that apart from critical voices about the actual process of HUDA’s and private developers’ land acquisition there is also a critique of the impact of the public-private relationship for the town’s development. Souro Joardar quoted from “Development Mechanism in Spatial Integration, Congress 2006”, about the development policy in Gurgaon:

“Private developers have built their respective residential colonies at locations where they could assemble land from the market through negotiations with local landowners and these do not necessarily match
with the phases of development of the city according to the master plan. The HUDA usually has been notifying areas (for land assembly) contiguous with the existing built-up areas of the city; whereas, most private developers have assembled the cheaper lands available closer to the fringes, near the limits of the future urbanisable area of the master plan. Thus there has been sharp leap-frogging of development with vast patches of undeveloped land lying in-between private colonies and the rest of the developed city whereby the connectivity of many colonies by major arterials carrying also the utility trunk lines are often delayed. Also, the disjointed spatial pattern gets multiplied when many private developers assemble and develop lands at different locations at different points of time. Another major difference between the areas under the private developers and those under the HUDA is the absence of encroachments by slum squatters and unauthorized developments in the former due to the greater control over their acquired lands as well as the faster developments thereon whereas these encroachments have been significant across the undeveloped acquired lands of the HUDA”.

Leon Krier, urban planner and representative of bourgeois architecture and aesthetics puts it more bluntly while visiting Gurgaon for the International Network of Traditional Building, Architecture & Urbanism (INTBAU):

Question: “Part of the conference included a field trip to Gurgaon. What did you think of that?”

Leon Krier: “It's horrific. Something which should have never been allowed to happen, ... happened here. It’s the worst kind of town planning. It's vulgar, anti-culture. What struck me the most was this green lipstick type sky scraper, surrounded by shanties. Maybe that's a symbol of times to come”.

By the way, if you want to see the green lipstick besieged by the poor, have a look at the makeshift multi-media section on our anti-cultural web-site...

d) Currently-Planned Projects

So what is all the land taken for? Below is just a short and incomplete list of current major building projects in the Gurgaon area, already in the making or planned as of March 2007. Of course, given the speculative
character of the sector things have to be read with the appropriate speculative approach:

- India's largest private-sector entity, Reliance Industries Ltd, and the Haryana government signed an agreement establishing India's single largest multi-product SEZ (25,000 hectares), involving an investment of nearly $9 billion.

- DLF wants to set up a SEZ of 5,000 hectares, Omaxe wants one of the same size

- New Delhi-based real estate builder DLF and Nakheel, a large property developer from the UAE, signed a 50:50 joint venture for two integrated townships spread across 40,000 acres in India with an initial investment of $10 billion. The city in Gurgaon will be three times as large as New York's Manhattan Island, DLF said.

- Gurgaon is set to get the biggest mall in the world — a large property that is being developed by DLF Universal.

- Gurgaon will have the world's tallest skyscrapers. It will be situated in the Golden Triangle City Centre in Sector 29 with the four tallest buildings in the world by 2010.

- Omaxe wants to set-up a wedding mall and a drive-in mall in Gurgaon

- End of March 2007, the Haryana Urban Development Authority sold a 2-hectare plot for a five-star hotel in Sector 47, Gurgaon, for $57.5 million.

- The Metro (subway trains) extension from Delhi to Gurgaon requires the destruction of allegedly illegally-built shops and slums

- There is further extension of the NH-8 highway linking Delhi, Gurgaon, and Manesar towards Rajasthan.

- Gateway Rail Freight Pvt. Ltd. plans to construct and operate a Rail-Linked Container Terminal at Garhi Harsaru near Gurgaon

- Over 2,000 acres of land acquired: ten British institutions have expressed interest in setting up campuses on information technology, pharmaceuticals, environmental technology, biotech, nanotech, new materials and alternative energy sources, among others.

To this add various other malls, office buildings and upper-class housing estates. The major “local” players of real estate development are Reliance
e) Land Price and Real Estate Bubble

Land Prices

With the announcement of the major projects like the SEZ and the extension of the National Highway and others, the land prices in the affected areas increased. Property dealers say there has been almost a 400% increase in the land price during the last six months of 2006. The price is around Rs 3-4 crore per acre nowadays. All major developers including DLF, MGF, Unitech and Ansals have bought land, foreseeing increase in the demand for residential properties. The easy money has created a neo-rich class amongst the older land-owning class. “Bhiwadi’s Inder Lal, for example, sold off his 47-hectare land for Rs 2.18 crore recently. And attracted by the projections in the area, Lal, a farmer with an extended family of ten, has already begun investing most of the money back to where it came from: he is buying more land in the hope that the future would get him an even better deal”.

With the extension of the National Highway the industries and their demand for land travelled further south. A couple of years ago land rates in Kundli were Rs 25-40 lakh per acre. Today, they touch Rs 2-3 crore per acre, depending on the location. A little further down in Bahadurgarh, the rates have increased from Rs 13-18 lakh per acre to Rs 50-90 lakh per acre. In Manesar, they have shot up from Rs 20-25 lakh per acre to Rs 1.10-1.40 crore per acre. The rise is courtesy the proposed 135-km, 6-lane Kundli-Manesar-Palwal expressway. And once it becomes fully functional by July 2009, rates are expected to further double from what they are today.

Land property is theft and it attracts other criminals. In an article dating 12th of April, a land-owning lady from Gurgaon reported that her husband was put under pressure by the local mafia. “The entire drama began when Mrs. Sita Devi, whose husband is joint owner of the 60-65
acres of prime land in village Narungpur, which is now part of the National Capital Region (NCR), lodged a complaint with the Manesar police on 15 February. In her complaint, she alleged that some members of the family, including her husband, were kidnapped by land grabbers, who forced them to sell their land worth crores for peanuts”.

Real Estate Prices

The increasing land prices transform into rising real estate prices and rents. According to figures from Cushman and Wakefied, NCR residential rates have seen growth with Gurgaon apartment rentals rising 105% in 2006. Office rates have also seen a marked rise with prime rentals rising 98% and their capital values rising 156%. In 2005 and 2006 the building boom increased and shopping malls, residential estates and offices space were built rather speculatively, thriving off willing investors. The main capital nowadays comes from the ‘alternative investment market’ (e.g., corporations or funds, foreign investors). In an interview from 16th of February 2007, the boss of Raheja Developers explains this by the fact that the Reserve Bank of India has imposed restrictions on the sector, being afraid of over-heating. The developers bypass the RBI by borrowing money from the ‘alternative investment market’. Many of the projects which were planned during the sharp increase of prices are still under construction; the future will show if a) there will be enough need for retail and office space and b) they will yield rents which return the high investments made during the recent price boom.

Amit Bagaria, Chairman & CEO, AsiaPac Group, says, “In Gurgaon, the late investors into the malls have burnt their fingers. So if you ask investors to invest in Gurgaon today they are sceptical.” They might be sceptical, but given the fact that they are forced to invest their capital and given the restricted investment opportunities in other sectors they might have to continue feeding the bubble.

It looks like Reliance Ltd. and the SEZ developers might meet more problems in Gurgaon than they expected. This is due to: a) resistance from farmers in the area and b) some current changes in the legal framework which are intended to prevent future trouble.

a) After having pelted police and developers with stones (see newsletter no.2), “Farmers from five villages in Gurgaon unanimously decided on 1st of April 2007 that they would not let the Reliance Industries acquire 1,395
acres of land which they have already sold to the Haryana State Industrial and Infrastructure Corporation (HSIIDC) for ‘public purpose’,” newspaper articles on the 3rd of April 2007 reported. They warned the government of creating another Nandigram-like situation if it goes ahead with the plan on the special economic zone (SEZ). The farmers from Khandsa, Narsinghpur, Mohammedpur, Garouli and Harsaru villages took this decision at a panchayat (see glossary) held at Garouli village: “We had given the land to HSIIDC since it was acquired for public purpose. However, we now realise that the government has snatched everything from more than 10,000 families to help only one industrial house,” said Rao Srikrishan, a farmer from Harsaru. One of the farmers at the panchayat also said that the government’s argument that the land already acquired is not fertile is misleading. “We have got compensation for tubewells and well falling in those patches. This clearly shows that the land is fertile,” he added. Another farmer said that the state government could never dare to take any step, if villages across the region stood united: “This is the largest acquisition of land in Gurgaon-Manesar region for SEZ. Government has played a cruel joke on us by getting the land acquired by the HSIIDC.” “When farmers these days are getting crores for selling similar piece of land in the same region, how could the government expect us to sit idle after getting only Rs 20.75 lakh as compensation?” asked another villager. The newspaper article says nothing about the size of land these farmers own, so the category “farmer” is rather blunt.

The resistance of the Gurgaon farmers might be a bargaining move of land-owners, rather than a movement against the SEZ, but at least Reliance Ltd. and the state will not get away cheaply. The peasants seem to know what they can demand and they know that the government will be rather soft-handed after the violence in Nandigram.

On the 16th April 2006 the Hindustan Times reports that 1,000 people from 24 villages assembled in Garoli village, opposing the move of HSIIDC to acquire 6,000 acres of land along the KMP Expressway for industrial developments. The industrial area’s name will be ‘Global Corridor’. The president of the Kisan Majdoor Krishi Bhumi Bachao Sangarsh Samiti said: “The land acquired from us would be sold to private sector players at very high rates for setting up profitable ventures. We will not let this happen. Private companies can purchase land directly
from us”. According to an HSIIDC informer the compensation for land in urbanised villages has been raised from 25 lakh per acre to 35 lakh.

In an article from the Economic Times (5th April 2007) it becomes clear that one of the problems of local farmers will be to meet the formal demands when claiming not only their land property rights, but when trying to prove their own formal existence as dwellers:

“HSIDC has imposed Sec 4 (intention to acquire) in an area near IMT Manesar, which it claims is vacant. However, this has been contested by the local organisation — Kamal Farm Owners’ Association. It appears that no one has actually surveyed the area and the master plan has been drawn based on inaccurate facts such as patwari’s old records. Many families have inhabited this area in the last 10-odd years, and we have apprised the concerned authorities of the ground situation,” the association’s president PK Saxena said. In fact, there are many loopholes when patwaris update regulators such as the district revenue officer and the town & country planner with development records at the grassroots. In the process such patwaris become centres of power which leads to easy corruption. “For a common man in rural areas, it’s absolutely impossible to get construction activities entered into government records, without paying a hefty sum of money to these patwaris,” Mr Saxena said’.

More bribing and pressure on farmers in the area is caused by another feature of borderless capitalism, global climate change. Local farmers are angry about how the government used the recent hailstorms to put them under additional pressures. A newspaper-article from 20th March says that: “a lot of farmers in Gurgaon are angry with official registrars, because they underestimated the damage done to the land by recent hailstorms and they accused them of taking bribes. The registrars called for a strike against the accusations.”

b) Confusingly enough DLF and Omaxe reported on 6th April that both developers want to set up SEZs in Gurgaon, each more than 5,000 hectares; at the same time the article reports that the new SEZ act prohibits SEZ areas owned by one developer bigger than 5,000 hectares. The article says:

“Faced with the new rule on special economic zone that limit the maximum area to 5,000 hectares, India’s largest real estate player DLF
may split its proposed mega zone in Haryana into two tax free enclaves in the region. All SEZ proposals for which states acquired or allotted land after February 10, 2006, when the SEZ Act was notified, will have to be redone, according to official sources. “We have just started the process of acquiring the land. Now, there will be one SEZ of 5,000 hectare but if we get more land, we may set up another SEZ of 3,000 hectare in Gurgaon,” a senior company official said. Another real estate firm Omaxe, which planned an SEZ on over 6,000 hectares would also ‘go back to the drawing board’ to chalk out the new strategies’.

If the legal maximum is now fixed at 5,000 hectares, what does that mean for the Reliance Ltd.? Both the state and RIL will find a way to bypass the legal curb.

“According to sources in the Haryana government, RIL has proposed it will go ahead with land acquisition in the area. However, further acquisition will only be aimed at generating contiguity in the 10,000-odd acres the company has acquired. Then, the company may use 12,500 acres for one multi-product SEZ, and spin off its proposed container facility, food processing unit, power plant and airport into separate projects. When contacted, an RIL spokesperson declined to comment. As per RIL's original MoU with the Haryana government, the company was to buy 17,500 acres directly from farmers, and the state was to give the remaining 7,500 acres.” (12th April, Source?).

One problem for RIL seems to be that the airport project would then not be under the tax-free SEZ.

Maybe the upcoming government-sponsored management think-tank will solve the problem: “The government is finalising plans to set up an Indian Institute of Corporate Affairs—a think tank and academic institution—on the lines of the IIMs for issues relating to corporate affairs”. The newspaper article from 9th April Source? said that the institute is likely to be located at Manesar, near Gurgaon, and its construction will start by year-end.

On the web-site (www.gurgaonworkersnews.wordpress.com) you can find some news items on the following multi-national companies in Gurgaon area, just click on “List of Companies.” The list is boring in a general sense and it smells like shareholders oi-stress sweat, but it might possibly be useful once shit hits the fan or a picket the factory gate. For a
longer list of companies situated in Gurgaon have a look at the web-site as well.

4) About the Project –

*** Shanty Pictures and Workers’ Film Documentaries Requested –

We proudly present a new Make-Shift Multi-Media Section on the Web-Site. If you find that the report lack graphicness, please have a look at the photos documenting Gurgaons convoluting landscape. We will try to deliver two or three wonky pictures per week, some snap-shots of Gurgaon workers’ reality. For the archive of a local workers’ resource centre project we urgently look for workers’ film documentaries (in English or with English subtitles) from other places around the world. Please contact us if you have material to share!
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Centre of Indian Trade Unions, a national central trade union federation
in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers

Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

Jhuggi
Slum Hut

Minimum Wage:

Official minimum wage in Haryana in March 2007 is about 2,500 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-Driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100 Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 3,000,000 to 5,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the work force, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon, India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even to contribute to this project, please have a go at:

In the June issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from workers’ perspectives

*** “Needles and Threats”, Local Textile Industry, Part One –

A text on the local textile export industries, including Faridabad Majdoor Samaachaar reports from a young textile worker about his journey from village to industrial city life. Plus stories about how the management of a bigger textile company in Okhla got rid of permanent workers by making use of repression and by taking advantage of the workers’ trust in their official representatives.
2) Collective Action –
Reports on proletarian struggles in the area

*** “No more Heroes!”, Local Automobile Industry, Part Two –
Factory occupation and chain reaction of workers’ unrest at Hero Honda and Shivam Autotech factory in Gurgaon, April 2006. A rough overview of one of the most significant workers’ actions in the area during recent years.

3) According to Plan –
General information on the development of the region or on certain company policies

*** “Red Flags and Welfare Schemes” –
Some symbolic gestures during the Day of Labour.

*** “Extreme Outsourcing”-
Because of rising rents and wages and toll-taking highwaymen, some local call centres make use of internet cafes in order to outsource work; they speed-up the hiring process and put pressure on the less fortunate service workers.

*** “Corporate Watch” –
This month with news items on: DGM India, GVK Bioscience, House of Pearl, IKEA, Maruti, Promed, TCI

4) About the Project –
Updates on Gurgaon Workers News

*** “Hindi Version” –
Introduction to the Hindi version of the Gurgaon Workers News, about to be distributed in the area.

*** Glossary –
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences

*** “Needles and Threats”, Local Textile Industry, Part One –
Reports from the local textile industry

The series “What are we/you doing...?” puts our daily experiences in the focus, against the general trend of giving more importance to the ‘big events’ (marriages of the rich and beautiful, election results, cricket World Cup, etc.) than to our own life. The first step in changing our lives is to reflect upon it together, shredding the veil of boredom and misery. Following are three reports from the textile sector. The first report is from a young worker living in Delhi area, telling about his daily life; it was originally published in Faridabad Majdoor Samaachaar (FMS) no. 215, in May 2006. The second report is from a Sona Fashion worker; the third is about LM Sagar Export describing the policy of many textile companies in Delhi’s South, shifting work and workers between various factories, often using official strikes as a pretext to re-structure exploitation. These two stories were distributed in the area with FMS no. 216, in June 2006. All three stories are from the industrial area of Okhla, in the South of Delhi.

In order to get some background information on Okhla textile cluster we attach a summary of an academic study by NISIET (2003).

On the rather narrow empirical base of short chats at chai stalls in the more shiny textile area of Gurgaon Udyog Vihar Phase One we can say that at least in terms of basic wages and working-hours the situation is similar compared to the one in Okhla, as is the situation in sector 34 and 37 in Gurgaon. In front of the Orient Craft factory (pics: see web-site), opposite of the Hero Honda factory, two former workers hired through contractors sit and wait for their out-standing money. They report that workers are abused and hit in the factory. But as soon as buyers from America or Europe arrive, everything is all nice-nice again. One of the workers has been kicked out because he returned late from his village in Bihar. He worked at Orient Craft for about seven months. He says that the permanents get about 3,200 Rupees (Rs) per month, their over-time is paid double rate, while the workers hired through contractors get about 2,500 Rs and mostly do piece-work. Orient Craft has about 20 factories in the Gurgaon area. Just across the road in the industrial area of so-called Pace City 1, Sector 37, a permanent worker sits at another chai stall, also waiting for his severance pay. He worked as a skilled tailor in sector 37, in the finishing department of a company making shirts for export. He had a permanent job, but he decided to quit it. The company promised double-rate of the over-time payment after three months of employment,
but they never paid. People were abused, wage payments were delayed and the wage was crap anyway, ranging between 2,500 to 2,800 Rs. The worker knows that he might have to return many times in order to get his outstanding money, about 5,000 Rs. Maybe the many job adverts at most of the factory gates in Gurgaon assured him in his decision to leave the job “tailors needed, helpers needed”. The decision of the Haryana government to increase the minimum wage might be more than just a formal move, but a reaction to the wage pressure from below. The conditions in Gurgaon are not only similar to those in Okhla, but also to those in Bangladesh and Vietnam, where there have been major textile workers upheavals in the export zones recently...

What are we/you doing...?

(A nineteen year old worker.) I get up at 6:30 in the morning. For an 8ft by 8ft room in a newly built house in Tekhand we three people pay 910 Rs rent per month. The house has two floors, altogether fifteen rooms, the landlord lives somewhere else. There is one latrine upstairs and one downstairs. At the moment three or four rooms are empty, that is why the queue for the latrine is not that long. There is no bathroom; the men bathe outside, the women inside their rooms. The house where I lived before was much more crowded and the rent for a much smaller room was 920 Rs. At 7 am one of us cleans the alloy pots, the second prepares wheat flour rotis and the third cooks some vegetables, then we bathe. At 8:30 am, after having had rotis, we three go off to work. At the moment I work at the Anand Internationals D-3 factory in Okhla Phase One. Right from the beginning of the shift at 9 am you are immersed in trying to meet the target. Nowadays I make ties – when starting this work the company gave you 12 minutes to finish a tie, then after three days it was 11 minutes, then 10-9-8 and now it is 7 minutes per tie. Because the target was too high I left the Anand Internationals A-185 factory after two months of work. There you got 20 minutes per skirt at the beginning, then 19 minutes the next day and the target time kept on dropping; by the third day it was down to 10 minutes. You have to increase the work speed so much that the body cannot keep up, the work is consuming the body.

My father does handicraft work, he makes metal utensils as a profession. Well-off people in the trade asked him to come to Kanpur, Nagpur, or
Nepal. But today – because of steel and aluminium – plates or water-pots made of brass or copper do not sell anymore. In the village I left school after the seventh class and learned how to tailor. When I was fifteen, in 2002, I went to Delhi with an uncle and he got me a job in Okhla Phase One, in the A-257 factory of Raj Mataar. Instead of small sewing machines like in the village there were big Zukki machines and ‘modern fashion’ production in the factory. During the four months of the ‘learning and doing’ period I worked day in and day out from nine in the morning to one in the night. The pressure from the company was a clear “do it or leave it”, and my uncle also said that I should stick to it. I was still in puberty and after four months of working such long hours I fell ill. In Delhi Doctor Usha Maheshvari took a 200 Rs fee and diagnosed TB. I went back to the village and Doctor Pande in Ilahabad took a 20 Rs fee and said that my blood picture is bad. I stayed in the village for four months and bought medicine from Doctor Pandes’ shop, which was 20 percent overpriced, and continued my treatment. When back in Delhi I started working at PeeEmparo Exports factory (F2/6 Okhla Phase One). I worked there for three years and they covered neither ESI nor PF. Every eight to nine months I went to Ilahabad in order to get medicine. Then I made friends with someone in Okhla who gave me treatment.

Then at D-3 factory of Anand International you had to work from 9 in the morning to 12 at night. Official working hours were from 9 am to 9 pm but if a worker finished work at 9 pm then the company would only count working-time till 8 pm, meaning that in order to save one hour paid working time for which you had already worked, which is 16 and a half Rupees, you work till 12 at night! Your company account is sealed on 15th of April, meaning that the company card will expire and you will be made a new one. The numbers on the cards change and the cards are kept in the factory. (meaning that the workers cannot proof their seniority). From the total of fifteen working days I was 30 hours in minus, lacking behind in the race for the target. The company cut 496 Rupees from my wage.

In the factory the target becomes an obsession; if you go for a piss, you get minus (meaning that they cut your wage), if you go to drink water, you get minus. Only when it becomes unbearable do we go for a piss or to get water. Only for the lunch break at 1:15 pm do we get up from the machines. On the board in the canteen it says that a meal is 8 Rupees
and a tea is 1.5, but actually it is 12 and 2. If you ask about it they say that the board is just for display. The lunch break is 45 minutes and in order to allow people to get out quickly there are two security guards for checking people; at midnight when people finish work a huge crowd queues up because there is only one security guard. Then it takes ten minutes to leave the factory premises.

For lunch I go back to my room, where there is the food we made in the morning. After eating I leave the dishes like they are so that there is a little time for relaxing.

At 2 pm you are back in the factory behind the machine. At 4 pm there is a fifteen minute tea break; we leave the factory for tea. From 4:15 pm till 6 pm behind the machine, then another tea break, leaving the factory in order to grab some food, and again from 6:15 pm onwards behind the machine.

In the factory there are 300 sewing machines, they are in the basement where it is very hot; even in winter you sweat. One always feels suffocated. Out of the 300 workers there will be 10 who are healthy, the rest of us suffer from this or that illness. No one has been given an ESI card, we pay privately for our treatment and if you are too ill you get fired from the company. In the first floor of the D-3 factory of Anand Internationals there is the office, in the second and third floors the finishing department – cutting threads, removing stains, ironing and packaging. In the fourth floor there are people who earn 15,000 to 25,000 Rupees, they don’t talk to us. In the fifth floor, next to the canteen, chemicals are prepared for washing the clothes. For 500 men and women working in the factory there is only one latrine each in the basement, there is always a queue.

Because nowadays they keep us working until midnight they give us half an hour dinner break at 8:30 pm. We eat at a street stall – the company gives us 20 Rs for food. Then again, from 9 pm to midnight behind the machine. After returning to my room I go to sleep at about 1 am, leaving the dishes from the noon break like they were. At the moment they put 7:30 pm as the time that we finish work on the timecard, so it shows 1.5 hours overtime. The payment for overtime is at double rate, but what does that mean if we actually work 15 hours, from 9 am till midnight? If the working time was from 9 am to 9 pm they would say on the timecard
that we stopped work at 6 pm. The timecard is to show to the buyer and the labour department. There is not a day off, neither Sundays nor any other day. The delegates of the buyer GAP or Lenson announce their arrival, and at that day we finish work at 6 pm. In the factory conversations are not like they should be and people misbehave – abuse, swear words, lies, exaggerations, petty cheating. If a piece is wrongly made then you get told off by the line man and the master. Our land-lord at home bickers about our water and electricity consumption.

When work finishes at 9 pm then one of us gets some veggies on his way home from work. In Tekhand the market is very crowded even at 10 pm. The shop-keepers pack up their stuff at midnight. When back in our room we clean the dishes and make food. We do not even make tea at home. At night we make rice, lentils and roti-bread, the veggies we prepare in the morning. We get veggies, lentils, rice, flour, oil, spices, gas and soap together and each cent is listed in a book; in every respect we have learnt to keep separate accounts of everything one spends. At the moment I live with very close relatives. For food and rent each of us pays about 1,100 Rs, in addition to that 10 Rupees are spent daily on tea and food in the factory. If you work from 9 am to midnight you get 5,000 Rupees, if you work from 9 am to 9 pm you get 4,000 Rupees. Apart from covering my costs here I send money back to the village, because if you fall ill you cannot predict how much money it will cost you. During the four years that I am in Delhi, I have never been well – illnesses have cost me 30,000 to 32,000 Rupees. What hope is there in this kind of existence? You just have to keep on going.

Sona Fashion Worker

Plot F-63, Okhla Phase One. There is one shift from 9 am to midnight. Only the 20 women employed in the thread-cutting department leave the factory at 9 pm. Fifteen hours of daily work, 30 days per month: our condition is bad. Some skilled workers are given 110 Rs for an eight hour shift, others 115 Rs; this is 13.75 Rs and 14.25 Rs respectively per hour. For lunch and tea break they deduct one hour, so they pay us for fourteen hours per day. Those women who cut threads and other helpers get 1,800 Rs per month, based on an eight hour work day and a 26 day work month. The overtime is paid at the single rate, based on this wage. For the fifteen hour shift the company does not give you tea, but they
provide 20 Rs for food. The water-cooler in the factory is broken and the quality of the drinking water is bad. For 80 machines there are two air coolers; the air reaches eight machines and the other 72 sewing workers are soaked in sweat during work.

LM Sagar Exports Worker

FMS no.213 and no.216, March and June 2006

Okhla Phase One – the factories B-48, B-237, B-242, and D-116 manufacture clothes for export. The sign at the gate of all the factories says LM Sagar Exports, but inside on the documents it says JK Textiles, KK Apparels, Manish Apparels, DB Garments, Sonu Enterprises, MM Apparels, HV Enterprises and other names. There was only one general manager and one personnel manager. In order to avoid having to give workers permanent contracts (see glossary) the company had a trick: workers are sometimes listed in the account of one company, sometimes another. In this game of changing names, several months’ worth of workers’ PF money was embezzled as well. The workers kept on working and the PF is deducted from their wages, but the deducted money was not deposited at the PF office. According to the company’s documents, during this period the workers were not employed in the factory! There were also workers employed by contractors inside the factory. Despite all that the workers managed, by all kind of means, to create such a pressure that the company made 1,500 out of 6,000 workers permanent. Officially the shift was 8 hours, but actually workers worked 10 and a half, twelve, and even sixteen and a half hours on a daily basis. The overtime did not show up in the company’s documents and it was only paid at single rate. Most of the casual workers and workers hired through contractors were not mentioned in the company’s records, they neither got ESI nor PF. Those workers employed by contractors did not get the minimum wage mandated by the Delhi government. The management paid less than their stated fixed piece rate. They cut wages under the pretext of bad quality. This was common practice in the company. Bullying by goons was also a common issue in all the factories. The arrangements for drinking water were not acceptable.

In spite of it all the company started to get into difficulties. For four years (since 2002) there have been delays of wage payments. The resistance of the workers grew. Jag Sagar was replaced by Kailash Agraval and Amit
Agraval as directing managers. The new directors’ priority was to get rid of the 1,500 permanent workers. By bullying individual workers they managed to kick 250 out of the factory.

...On Saturday, the 11th of February, when the workers of the B-48 finishing department asked the new managing director Kailash Agraval for their January wage, he answered: “How can you have the courage to ask for wages? In two minutes I will kick you all out”. After the weekly Sunday off, when the workers arrived at the factory gate at 9:30 in the morning of the 13th of February, there were five guys with guns and 15 guys with laathis and inside there were guys with hockey sticks waiting as well. The company had brought these people in three vans. At the gate notices with the various companies’ letterheads were attached each listing the names of all workers employed in the finishing department. The notices said that the workers had verbally asked for their final dues and that the company was going to give them. The guns and laathi men stopped the 100 workers from entering. 150 sewing machine operators from the sewing division were let in and they were given the January wage on the 13th of February.

Once the shady deals with the future funds (PF) became known to the workers, the skilled tailors joined a union. On the 15th of February the finishing department workers also gave money to this union and obtained their member receipts. After a complaint by the union a labour officer arrived at the factory on the 16th of February. The personnel manager only talked about the issue of the final dues and said that the workers can do what they want but that they will not be taken back on the job. On the very same day there was a meeting of the union with the director Amit Agraval, where he said that he can get free electricity in Muradabad, that he will re-locate the company there, and that the Okhla workers will get their final dues. By making the notice pay, compensation, gratuity, bonus sum, etc. the question of concern, the conditions were created for striking a deal which did away with 1,500 permanent jobs of workers.

Then at the B-237 factory they managed to force a huge number of workers to resign at one go, after the workers were tricked into a union banner-and-strike-tent action (meaning a traditional union protest) with the corresponding lock-out by the management. After having kicked out
most of the casual and contract workers in January 2006, in February the management picked the B-48 factory as their target. On the 13th of February 100 workers from the finishing department were stopped at the gate. Hand-in-hand with another union and the Labour Department the company had arranged this deceptive action. It resulted in getting rid of 100 workers in one go (see passage above).

In April the company singled out the sewing workers of the B-48 factory. On the 12th of April 90 workers were laid off, on the 16th of April another 50, on the 18th of April the remaining 80 workers were laid off (see glossary “lay off”). Being transfixed by the union the workers abstained from taking steps themselves and then again, after complaining about the leaders having sold out, the workers only continued lamenting. In the absence of actions taken by the workers themselves the company, the union and the labour department were successful in tightening the noose – by 1st of May the employment of all permanent workers at B-48 was finished. Only some permanents are left at B-242 and D-116. All the talk about the company shifting to Muradabad turned out to be bullshit, the company opened a new factory in Faridabad, under the name of Target Fashion. Ten of the senior staff were sent there, too. The company sold the machines of the B-237 factory and was taking the machines of B-48 to Faridabad.

Okhla Readymade Garment Cluster

The development of the garment industries in Okhla started in the late 1950s, although the main boost came during the 1970s and 1980s, when imported, power-operated cutting and sewing machines were introduced. Another shift was the displacement of the raw material industries (bleaching, dyeing, printing) from Delhi during the 1980s and 1990s. Raw material now comes mainly from Uttar Pradesh and Haryana. Migrant workers from Uttar Pradesh and Bihar are the main work-force in the Okhla area. After the printed cloth arrives in Okhla the primary work then consists of cutting, sewing, embroidery, finishing, washing, ironing and packaging. Most of the garments are manufactured for export; the design and samples usually are dictated by the buyer. There are hardly any official figures of how many companies and factories are involved in the process; the NISIET study from 2003 states that there are 500 fabricating and 250 embroidering units in Okhla. The number of sub-
contractors is not given. The same report says that 40 percent of the overall export garments come from Delhi and 40 percent of Delhi’s output originates from Okhla. It reckons that 50,000 workers are employed in the area. Knowing that most of the workers are not on the official payroll (see reports), the actual number will probably be three to four times higher. If you wait at one of the several entry points to the industrial area and watch people arriving for the early shift, you get a feel for the real numbers of workers: at the railway-crossing near Apollo hospital alone over 100,000 people pass within two hours. According to the report the average export factory employs 100 people. It lists the following reasons for the development of the cluster: already-provided infrastructure for the factories, short distance to railways and the airport, short distance to raw material supply, easy supply of migrant work-force, and proximity to political and public administration in Delhi. The report categorizes different types of companies in the area:

- the buying house (getting contract from buyer, organising the business, checking quality of sub-contractors),
- the manufacturers (get direct contracts from buying houses, sub-contract parts of the work),
- the machine embroidery units (get contracts from manufacturers),
- the contractors (take contracts from manufacturers and embroidery units and give work to work-shop and house-hold units),
- traders and manufacturers of threads, buttons, fittings (supply to the industry in the area),
- the machine manufacturers and maintainers (provide and repair tools and machines for the industry),
- the packaging and transport units,
- the training and administrative bodies.

The study also comes up with following value chain analysis, with the percentage referring to the later sales price: basic raw material (50 to 60 percent), processing of raw material, e.g. bleaching, dyeing, printing (10 to 15 percent), cutting and fabrication (10 to 15 percent), fittings and accessories (7 to 8 percent), finishing and packaging (7 to 8 percent), embroidery and handwork (plus 25 percent on sales price). It reckons a profit margin of 5 to 30 percent for the different kind of companies involved. Most of the machinery is imported, mainly from Japan,
particularly from Zukki Machines Corporations. Most companies are family-owned, and the study says that a minimum investment of 100,000 to 150,000 Rs is necessary to get a contract in the area. Between 2000-2003 a down-turn hit the industry in Okhla; according to the study 50 percent of the manufacturing units have been closed or shifted to other areas, mainly Gurgaon, Noida, Faridabad. The study gives two (rather unconvincing) reasons for the closures: the liberalisation of the textile market and the lower minimum wages in Gurgaon (Haryana) and Noida.

2) Collective Action

*** “No more Heroes!”, Local Automobile Industry, Part Two –

Strike and factory occupation at Hero Honda motor-cycle plant and its supplying company Shivam Autotech. Gurgaon, April 2006

Intro

After we had a short glimpse at the structure of the local automobile industry in newsletter no.3, now we document how workers made antagonistic use of their central position in the web of social cooperation. The example of the Hero Honda strike is last year’s news. Why bring a workers’ struggle up again, about one year after it took place? Although widely ignored by media and by most of the official organisations, the strike and factory occupation at Hero Honda and Shivam Autotech have been the most important recent workers’ unrests in the Gurgaon area. The wildcat action at Hero Honda was followed by direct actions of temp workers at Honda (HMSI) and Delphi in the following months (see next issues of the newsletter). The important features and lessons of the short period of strike and factory occupation are:

* The unrest hit one of the main cores of the local industry. The Hero Honda factory in Gurgaon is the two-wheeler factory with the highest daily output in India and attached to it are over 240 official suppliers.
* The strike hit with full force, and no notice was given, therefore the management could not prepare a countermove (piling extra stocks, increasing production in other plants, mobilising strike-breakers, etc.).
* The strikers managed to avoid a lock-out situation and the consequent
police repression by occupying the factory.

* At Hero Honda the workers hired through contractors were organising the strike, at Shivam it was a united strike of all categories of workers. This is rare in a situation where most of the official strikes are led by and mainly in the interest of permanent workers.

* According to the group of workers who struck, their demands were addressing issues of hierarchy (abolishment of different kind of uniforms) as well as wage questions. The demands were egalitarian, trying to overcome differences within the work-force.

* The workers’ mobilisation spread from the main plant to the supplier, without open or official organisational links. The impact of the strike was noticeable further down the supply-chain (truck-drivers, second-tier suppliers).

* The official unions were outside of the strike. Some positive elements of the strike might be due to the absence of established unions (no strike notice, occupation, involvement of workers hired through contractors), as well as some of the problems, e.g., that there was little support from the outside, necessary during a factory occupation.

* Workers showed that they are able to organise a strike, but during negotiations workers displayed their inability to finish it in their favour. The workers at Hero Honda sent a small delegation for negotiations and they paid for this mistake. The Shivam Autotech workers tried to avoid this, but got bogged down in legal processes and were divided.

* Both strikes showed the volatile situation in the industry, the weak links of capital: the fragile supply-chain and the simmering anger amongst the casual and temporary work-force. In the aftermath the management debates equated the strike at Hero Honda with the suddenness of natural catastrophes.

For the summary of the unrest we rely on some internet and media material, some short conversations we had with workers at the factory gates during the strikes, an article published in the Faridabad Majdoor Samaachaar (May 2006) and a report by comrades from the area, written shortly after the strike at Shivam Autotech. We structured the summary as follows:

*** 3. Strike at Hero Honda
India is the 2nd biggest two-wheeler market and manufacturer in the world. The sales numbers increased from around 0.1 million in the early 1970s to 3.76 million in 2000 to 7.9 million in 2006. This is compared to about 1.1 million passenger cars being sold in 2006. About 70 percent of all registered automobiles in India are two-wheelers. The “market saturation” is still low; in 2000 there were about 10 bikes per 100 adults (aged 18 to 50), a total of 42 million running (registered) bikes. The main growth of the sector started with joint-ventures in the 1980s (Hero Honda, Bajaj Kawasaki, TVS Suzuki, Escorts Yamaha). Export of two wheelers is still limited, both in terms of numbers (about 350,000 in 2005), as well as regionally (mainly other Asian and African countries). Together with pedestrians, riders of two-wheelers also account for 60 to 70 percent of the 300 people who die in road accidents every day in India, 60 to 70 percent of the 1,000 daily permanent injuries, 4,000 daily serious and 18,000 minor injuries. These numbers are rough estimates from 2000, though as you can see above the number of annually sold two-wheelers has more than doubled since then.

The Hero Group, directed by the industrial dynasty Munjal, started as a supplier of bicycle components in the early 40s. Over the years, the Hero Group had entered multiple business areas, largely related to the transportation industry. The group bought into multiple areas of raw material processing, such as steel rolling, to the manufacture of subassemblies and components. In 1984/85 Hero Group started a joint-venture with Honda. Both partners held 26% of the equity with another
26% sold to the public and the rest held by financial institutions. Hero Honda became a public company listed on the Bombay Stock Exchange (BSE). In 1999 the joint-venture with Honda became critical, because Honda set up 100% subsidiary Honda Scooter and Motorcycles India (HMSI). The Honda HMSI plant is only 15 km down the road from the main Hero Honda factory. At the day of the announcement of the entering of HMSI into the market, Hero Honda’s share price dropped by 30%, given the outlook of fierce competitions in the two-wheeler segment. But Honda was ready for concessions. First, Honda agreed to delay entry into the motorcycles segment until 2004. It also agreed to form a four-person committee with two members from Hero Honda to examine any new motorcycles that it would release post-2004. Lastly, it offered an opportunity to Hero Honda to share in the equity as a minority holder in HMSI. The fact that both companies also tap into a similar pool of suppliers should make clear that only from a very legalistic and formal view can they be seen as two separate companies. The same is true for the composition of capital of the seven main suppliers of Hero Honda, which are basically subsidiaries of the Munjal Group (for example: Munjal Showa Ltd., Sunbeam Auto ltd., Majestic Auto Ltd. Shivam Autotech Ltd.). The Munjal Group has set up a range of firms to supply components, not just to Hero Honda, but also to other automobile companies. These operations range from the manufacture of shock absorbers and wheel rims to aluminum castings and plastic products. Apart from Honda, the Hero group has joint-ventures with Universal Cycles Plc. from the UK and Bombardier-Rotax from Austria.

In 2006 Hero Honda sold 3,336,756 motorcycles in India, which means that Hero Honda has a major market share in India (still around 40 to 45 percent) and is the biggest motor-cycle and bicycle producer in the world. In 2007 Hero Honda laid the foundation stone of a third plant in the Gurgaon area (the other two plants are located in Dharuhera and Haridwar). The Gurgaon plant has a daily output of about 6,000 bikes per day and a major dispatch department for spare parts. Spare parts are a big business, given the 42 million running bikes in India (2000).

Hero Honda’s management has been very paternalistic towards its workforce, a mixture of tight social control and employee family outings, of enforced discipline and company cricket teams. This is expressed, for example in the company’s suggestion scheme: “All employees who make
a suggestion are given a ballpoint pen. Further, the best suggestion of the year is given the annual award of cash prize and the family is given a plant visit along with a free lunch in the factory cafeteria” (source: “Transferability of Japanese Human Resource Management Practices: Case Study of Honda Japan and its Joint Venture Hero Honda in India” by Ms. Srabani Roy Choudhury). At the Gurgaon plant the permanent workers were put in a position very distinguished from the rest of the casual work-force, distinguished due to their supervising function and also visually distinguished by differently coloured uniforms. Following are some excerpts from a manager’s study showing that the paternalism at Hero Honda Gurgaon plant starts with recruiting:

“The Gurgaon plant has taken considerable trouble to recruit the right kind of individuals at the shop floor level. The personnel manager at the Gurgaon plant told the researcher that apart from technical knowledge he looked for honesty and earnestness in the candidates. Moreover the integrity of the candidate, past record of alcoholism, vandalism and involvement in union activity is given due consideration. The department has therefore ventured into a time consuming policy of background checks. A candidate’s background is given a thorough checking by contacting his previous employer. Moreover, someone from the plant goes and meets the employees in his previous company, as well as gathers information about him from nearby shops and tea stalls. Hero Honda management supports this sentiment and even rejects a candidate with very good qualifications, if he is found to have some past history of unionism. Honda Japan conforms to the Japanese practice of enterprise union system – with 100 per cent participation of workers up to the level of assistant managers. The Honda union functions at two fronts – collective wage bargaining during the spring offensive and participation through meetings at various levels. The management having had a bitter experience of unionism in the Daruhera plant is keen to establish communication channel with all employees so as to enable the management to react immediately to grievances of the employees”.

(source: see previous citation)

At the time when the strike kicked off at the Gurgaon plant the general division between the 1,400 permanent workers and the 5,500 workers hired through contractors became blatant. The company sent the
permanents into holiday, and they went. Interesting is the fact that, like the suppliers, the contractors at Hero Honda are also related to Hero Honda managing Mujal Group. They sub-contract the contracts to other smaller contractors (Sehgal Brothers, Prakash Contractor and Ram Mehar Mann of RSV Enterprises).

a) Prelude of the unrest

The workers hired through contractors at Hero Honda had been angry for various reasons:

* Although 50 percent of these workers have worked in the plant for more than six to seven years, they are not offered permanent contracts.

* There is a huge wage difference: after six to seven years a permanent worker will receive up to 30,000 Rupees per month while a worker hired through a contractor gets between 2,200 and 6,200 Rupees.

* Most workers have all kinds of trouble because they do not receive a company card, which is necessary for dealing with authorities (e.g., when applying for medical care or other benefits). They are not enrolled in the register, which means that they will not receive PF or ESI.

* Casual/workers (see glossary) hired through contractors are not given work periodically as production targets change. When that happens, Rs 500 is cut from their monthly wage.

* There have been cases of physical harassment of the workers hired through contractors by supervisors and managers of Hero Honda.

We have no idea what finally triggered the dispute. Some people said that a bigger group of workers was not taken back after they returned from holiday (a lot of workers come from far off places in Bihar or Orissa). This is said to have been the final straw. Other sources say that there were some informal gatherings taking place during the week before the 10th of April 2006 where workers agreed on taking action.

b) Chronology of the unrest

10th of April 2006

Strike and factory occupation begins when workers refuse to leave the factory after the end of their shift. For some pictures from the action, visit our makeshift multi-media section on the web-site.
11th of April 2006

Most of the workers have confined themselves within the factory premises demanding regularisation of jobs while another 500 are waiting outside, giving moral and physical support to the workers inside. “The police have prevented us from standing near the gate or raising slogans,” says Sushant, a contract worker from Orissa, who was not allowed by the management to go inside the factory. (source: Labourfile). Hero Honda starts negotiating with the strikers. In a public statement made by Hero Honda, it says: “A section of workers hired by contractors have raised demands on their contractors and have irresponsibly stopped working”. Reply of a worker during an interview with a newspaper: “We want all the 4,000 contract workers to be absorbed in the company as regular employees, so that we do not have to deal with contractors any longer.” (source: DNA Money) The article presented this worker as a “strike leader”, then as a “spokesperson”, while adding that there is no union inside the plant.

14th of April 2006

Allegedly the water supply for the workers inside the factory has been cut on the 13th of April. Hero Honda says in a statement that the ongoing strike at its Gurgaon plant will “not impact” the company’s annual profitability or production targets. “Hero Honda aims to make up the production loss by stepping up production from the current 5,800 units per day to 6,500 units per day, post commencement of operations at its Gurgaon plant,” the company said in a statement in New Delhi. “Due to the very nature of the business, there are sufficient stocks in the pipeline and at the dealerships,” it said. “The company would also like to clarify that this is a flash strike and there is no formal workers union at its Gurgaon plant. Also, the permanent workers are not supporting this strike,” it added. The canteen stopped providing food for the strikers after the third day of occupation. Some local unionists said that they started collecting money for food.

15th of April 2006

Production at the manufacturing plant in Gurgaon remains suspended for the fifth day in a row. Meanwhile production at Hero Honda’s other plant at Dharuhera is going on as usual. At the retail level some dealers
complained of supply problems for a few specific motorcycles. Only a small police force is stationed at the factory, most of them sleeping in the shade. Workers hold assemblies on the factory lawn and put up self-painted posters. Some call centre workers on the other side of the street watch the scene. No one is allowed to enter the factory, the security guards are still in place. Allegedly the police refused to enter the factory premises and management was afraid of creating dangerous situations (dangerous for their factory and machinery).

16th of April 2006

The rather miserable end of the strike. After representatives of the Labour Department refused to enter the factory, both the Labour Department and company management asked for a delegation from the workers. About six to seven workers went to a meeting outside the factory; other people, amongst them local unionists, were not allowed to attend the meeting. The delegation returned and said that the strike was over, promising that some of the demands were met. The workers called off the strike, but those workers who went as a delegation to the negotiation disappeared. People assume that they have been bought off. Allegedly, out of the 5,500 workers hired through contractors only 4,000 went back to work the next day, angry about the fact that a lot of the demands were actually not met (for more on the demands, see below). A contract worker at the gate said that they were granted an Rs 1,000 monthly wage rise. He said that people are not happy with the result, but that they decided in an assembly to stop the strike. It sounded like some strikers (strike leaders?) had suggested to resume work after the negotiations did not proceed. About 20 – 30 workers who took part in the dispute were dismissed. Hero Honda management announced that in order to compensate for the loss of production, output at the Dharuhera plant had been stepped up.

c) Workers’ demands and outcome of the dispute

Some demands of the workers have been agreed to – whether they are actually implemented remains to be seen:

* A 30 percent hike in wages of casual workers. Workers hired through contractors used to get Rs 4,000-4,500 a month for an 8 hour shift. That will now be Rs 5,500. In comparison, ITI graduates (skilled workers hired through contractors) get Rs 6,500.
* Besides this 30 percent hike, there will be no difference in dress colour between helpers and ITI graduates. The initial demand to abolish the different uniforms for permanents and temps has not been met.

* The wage of the contract workers will go into a bank and they will have ATM accounts.

* They too will get a gift annually.

This was told by workers at the gate one day after the end of the strike. However, workers seeking casual/contract work at the Gurgaon plant of Hero Honda report that ever since the strike at Hero Honda during April-May 2006, workers hired through contractors are now being hired only at the Haryana rates of Rs 2,400 (this is the minimum wage valid in April 2006). During short conversations in May 2007 workers hired through contractors working at Hero Honda say that those amongst them with ITI qualification get 6,000 Rs per month, those without get 4,800 to 5,000 Rs, which would mean that the strike resulted in a pay hike. Apart from that they tell that there has been little change since the strike. They say that the major changes after the strike were that they received ATM bank accounts and that now all skilled workers, disregarding their contract situation, got white uniforms. Nowadays the helpers hired through contractors have to wear the blue uniforms and the burden of visual minority.

Interestingly, in a discussion amongst managers of various automobile manufacturers managers were quite blatant about how to assess the strike. In an article published in the “automobile” section of http://www.indiatimes.com they stated:

“The Hero Honda strike or indeed the floods in Mumbai last year, the transport strike in were all instances when JIT-dependent Motown’s supply chains went for a six.

“When the floods happened not having a single supplier helped us because we had multiple suppliers from whom we could step up supplies to overcome the crunch,” says General Motors’ [manager] Balendran. As for strikes, here too there is a built-in buffer which is violated only when the dispute involves irregular workers. “In most cases, any legal strike that a labour union goes in for is preceded by an advance notice to the management about the strike which gives the management
some time to take stock of the situation,” adds Balendran.

Says Hero Honda head of marketing PS Sunder: “We have a stock of 15 days with our dealers so retail sales are not hit.” Adds Ravi Sud, vice president-finance, Hero Honda: “We manufacture 5800 bikes in our Gurgaon plant. If we value a bike at Rs 35,000 then we are losing an estimated Rs 20 crore per day which is loss of sales to dealers and not retail sales. However, we would make up for it by stepping up production to 6500 bikes.”

(source: http://auto.indiatimes.com/articleshow/msid-1496288,prtpage-1.cms)

d) FMS article ‘Hero ka Honda’

Although in the following article there are some repetitions and some statements which contradict some of the information above, we nevertheless want to include it as a report and a kind of summary.

The Honda Hero

Faridabad Majdoor Samaachaar no.215, May 2006,

(reported by someone who regularly visits the Hero Honda plant) In the Hero Honda factory in Gurgaon 1,350 to 1,400 permanent workers and 5,500 workers hired through contractors are employed. In addition there are 300 to 400 security guards who are hired through another contractor. On the 15th of April the 5,500 workers hired through contractors suddenly stopped work; the production was put to a halt till 21st of April, when work was resumed. The Hero Honda factory in Dharuhera was not affected. Most of the permanent workers are employed in the motorcycle assembly. About 25 percent of the workers hired through contractors are in the motorcycle assembly and 75 percent in the spare parts division. The workers hired through contractors who have already worked in the plant for years still get re-issued a card with their photograph every three months. On the card with the Hero Honda stamp is written that they have the permission to work on the company premises (meaning that the card is not an official proof of company ID, necessary for a lot of dealings with administrations). In the name of ESI 206 Rupees are currently cut from monthly the wages, but no worker has received an ESI card; the contractor says that if a worker gets ill, we will get him treated. No PF slips are issued.
Daily the spare parts division sends out parts worth 40 to 50,000,000 Rs. There is constant pressure to fulfil the immediate massive demands of the dealers on time. The finished parts are ordered from external suppliers. In the factory there is only coding, counting, packing and sealing machines; there are no machines to produce parts in the spare parts division.

The workers hired through contractors used to get 2,600 Rs, and a year earlier I saw a supervisor slapping a worker. Last year after the trouble at Honda Motorcycles and Scooters India (HMSI) the wage of the workers hired through contractors at Hero Honda was raised to 3,600 Rs. Then after some deductions some workers received 3,600 Rs and some 4,200 Rs.

Then the contractor refused to take back some workers who had been on holiday. The wildcat strike happened after that. The call to stop work on 15th of April was not made by a union, there were no leaders. The management sent the permanent workers immediately into holiday. The state government immediately got into gear, remembering the troubles at Honda HMSI in June 2005. There were talks of setting the factory on fire... Some people were chosen from the workers and on 20th of April a verbal agreement was given, stating, amongst others: that workers would get a 30 percent wage increase, that 500 workers would be made permanent and that white uniforms would be given to all workers. The workers who announced this agreement to the others disappeared from the factory; they were allegedly bought off by the company. Anger prevailed amongst the 4,000 out of 5,500 workers who arrived at the factory in order to work on 21st of April, “We have been cheated”.

When the strike ended at Hero Honda, the workers of a Honda supplier in turn occupied ‘their’ factory, situated 20 km away.

Shivam Autotech Ltd. (http://www.shivamautotech.com/) based at Binola Village (Gurgaon district) is part of the Hero Group owned by the Munjals. The factory is situated close to the NH8 highway, about 20 km south from the Hero Honda plant. About 80 percent of Shivam’s production goes to Hero Honda. Shivam Autotech is engaged in manufacturing of Hot / Warm and Cold Forging Components. On the 10th of August 2005 Mark Auto Components (MAC), a two-wheeler components manufacturer promoted by the Hero Group, had decided to spin off its Binola unit in
Haryana into a separate company named Shivam Autotech allowing it to focus on its forging business activity. According to workers met on the 12th of June 2006 the company only changed its name on 1st of April 2006. The workers are still wearing MAC uniforms as uniforms are distributed each year only in November – December.

The factory is fairly new, production started at 2000. There are about 300 permanent workers, 350 contract/casual workers and 150 trainees. Permanent and Trainee workers all have either ITI certificates or B.Sc degrees. Casual/workers hired through contractors have ITI certificates but none have B.Sc degrees. Permanent workers get a salary of Rs 3000 (net) which must be about Rs 4000 gross they say. A miniscule 2-4% of workers may get salaries up to Rs 8000 net. Workers hired through contractors only get the Haryana minimum wage rates of Rs 2400 and even then the canteen charges are deducted from this amount. Since the work involves forging and metal work, there are no women in the workforce (there are some in the managerial staff). Workers say that Shivam uses CNC machines of various technological levels. The contractors at Shivam are R.N.V. Enterprises, N.N. Associates and Ravipul Enterprise. Just as a piece of information: a supervisor who works for one of the contractors said that he gets 5,000 Rs wage per month in order to manage the workers hired through contractors, to hire them and ensure a sufficient supply of new work-force.

There are various interesting elements in the Shivam Autotech strike. First of all is the fact that it started at the very same day when the occupation at Hero Honda finished. Unfortunately we can only speculate why this happened. Workers must have noticed the impact of the Hero Honda strike, which might have contributed to their decision. When the management decided not to send the buses for the next shift, which is more or less a clear move to a lock-out, it might have thought that now is the time to battle things out, with the main client paralyzed by industrial dispute. The management’s strategy not to send the buses to the villages of the workers is an often used practise. Many bigger local companies prefer to or exclusively hire people who live in villages further away, workers who depend on bus services and who can be left isolated in case of industrial action.

It is also interesting to see that ‘small’ things like the food question
became the trigger for a conflict with much more pressing problems in the background. The fact that workers know about the conditions and higher wages in the main Honda plants and refer to these standards when they put forward demands is of major importance. During the struggle it looked like that workers managed to stay together, despite their contractual differences and despite the attempts of the management to single out ‘representatives’, which then could be bought off like in the Hero Honda case. The final outcome of the struggle, which turned into a rather boggy negotiation process, excluded the workers hired through contractors from the wage hike.

a) Prelude of the unrest

Workers had been unhappy since February 2006 since they got increments which were very small about Rs 70 only, whereas the increments of managerial staff were nearly 50% of their salary and the workers’ increment amounted to only 2-4% of their salaries.

Workers were also unhappy since managers were not treated them well on the shop floor. One new trainee was made to sit like a murga (chicken) on the shop floor on making a small mistake. Another senior worker was slapped by a senior engineer.

For 2 years the workers had been requesting management to extend the company bus service up to Bhiwadi (Rajasthan) which was only 3-4 kms from the last pick up at Dharuhera. However the company had been steadfastly refusing since this meant the bus would have to cross state borders and the company did not want to pay the additional taxes etc. to the Rajasthan government. This was a big problem for the workers since Bhiwadi was much cheaper for them to live in and many were complaining that had the company extended the bus service up to Bhiwadi many employees would have shifted there and would have been able to buy their own houses since land was cheap there at that time. Now the same land which was selling for Rs 1000 is selling for Rs 10,000 in June 2006. After the recent SEZ deals the price will have gone up even more.

Workers were unhappy that management was unwilling to seriously discuss these issues during the open houses that were held in the company. They were strictly told to only talk about production issues during open houses and the bus service or financial matters would not
Another ongoing problem was the food in the canteen. Ever since management decided to tear down the old smaller canteen and build a new canteen with new food supplier there were problems with quality of food and standards of hygiene. Workers complained that bugs and cockroaches were found in the food. A canteen committee was formed to address these problems. Meetings would be held, management would tell the canteen manager to fix the problems, he'd promise to fix it but there would be no improvement. The workers also complained that food served to staff (staff and workers had different canteen timings) never had these problems and bugs were only found when it was time for workers’ meals.

The catalyst for all grievances crystallizing into a strike unfolded on a Sunday. Cockroaches were found in the dal [lentils] served to the workers. A worker went up to the canteen staff and asked them to stop serving the dal. It was stopped. But after some time, some workers came up to one of the members of the canteen committee and said that the dal was being served again. Satish now went up to the manager and told him to stop serving this dal. He was promised that new dal would be cooked and then workers could have their meal. However, all workers trooped out of the canteen offended at being served the roach-ridden dal again and again. This resulted in management action against the worker who was a canteen committee member. Over the next few days he was called by different managerial staff time and again and asked that when you were present why did you allow the workers to leave the canteen? Why didn’t they wait for the new dal to be served?

Tired of being treated like this, the workers decided that they would place their demands before management and drafted a list of 21 demands, including issues of increment, contract workers’ problems, bus service, canteen service, etc. The workers hired through contractors demanded to be made permanent and to be allowed to wear the same uniforms as the permanents.

b) Chronology of the unrest

21st of April 2006

Workers arriving at bus stops for the 6 a.m. shift found that there were
no buses. They started calling the workers who were working the night shift to find out why buses had not been sent to the bus stops. They also called the security staff directly.

Workers for the 6a.m. shift used private means of conveyance to show up at the factory only to be told by the security staff that they should go home as they were being given a holiday. Workers had problems believing this since they didn't even get Sundays off (trainings were scheduled on this day. This was another bone of contention that training should be held during company time and not on their only day off).

Night shift workers were being asked to get their production figures noted and leave the premises. Security staff told them – why are you worried about the 6 a.m. shift? Those workers will report to duty when they show up. However, sensing that something was wrong, these workers, 600 of them, sat down on one side of the shop floor. Meanwhile, about 100-200 workers were gathered at the gate outside and not being allowed in. A fight erupted between workers and the security supervisor.

So the workers declared a strike. They occupied the factory for 5 days. A list of demands was handed over to the general manager, the vice president and human resource manager.

The canteen was allowed to run for 2 days but after that it was shut down by management. Food was not allowed in from the outside either. It turned into a case of hunger strike for the striking workers even though small quantities of food managed to get smuggled in.

Permanent workers and contract workers came together to occupy the plant for 5 days. They have been together in this fight ever since. All 3 categories of workers are united – permanent, trainees and casuals/workers hired through contractors. Permanent workers have been conscious of including contract workers from the start and have paid attention to their grievances and demands as well.

22nd to 25th of April 2006

During this time the Labour officer (B.S. Yadav – sits in the mini secretariat and Binola village comes under his circle) and management tried to negotiate with the workers. The Deputy Labour Commissioner arrived on the 4th day. A higher AITUC official also visited the workers. Together all of them brokered the strike to be broken on the 5th day –
25th of April. See copies of agreement.

c) Negotiation process

Workers had submitted paperwork to register an independent union. The first set of applications was ‘lost’ by the labour office. A second set of application papers has been submitted but again it has run into roadblocks.

There was one meeting with the DLC when he came to the plant on 24th of April. Another meeting was held on 8th of June when he asked the workers to resubmit 5 copies of the list of demands but this time to exclude the items on which an agreement has already been reached. He also asked the workers to submit an authorization letter signed by all workers, that they authorize the 5-10 workers to serve as their representatives and will abide by whatever agreement these workers hammer out with the management on their behalf. Workers were expected to submit these papers to the Labour Officer, B.S. Yadav, by 13th June.

There have been several meetings with the management. Workers were asked to sign a 3 year agreement whereby the workers would get small increments but agree not to ask for salary raises for the next 3 years.

The workers submitted a Rs 10,000 package for 3 years under which all workers would get a Rs 5000 raise in the first year, Rs 3000 raise in the 2nd year and Rs 2000 raise in the 3rd year.

Management has not accepted this proposal and is only willing to talk about Rs 1000-1500 raises in total over 3 years. This is unacceptable to the workers.

Mr. L.R. Parudhi, legal advisor to the Munjal Group has been inducted into the management team and has declared that he will not allow salaries to rise. Workers are also unhappy with his inclusion and would like to include a legal advisor in their team since Mr. Parudhi talks legal mumbo-jumbo during the meetings which the workers don’t understand and therefore stalls the negotiations.

Workers also report that the financial negotiations are stuck because management wants to know why they should raise the workers’ salaries by so much when the prevailing rates at nearby plants are not this high. Workers compare it to the Hero Honda plant in Dharuhera which does
have an independent union and where the prevailing salary is much higher. Workers tell that permanent workers there get Rs 25,000 and workers hired through contractors get Rs 6,000. Even at the Gurgaon plant of Hero Honda, permanent workers get Rs 18,000 and contract workers get nearly Rs 6,000.

According to the agreement signed on 26th of April 2006, the 10th of June 2006 was the last date by which all negotiations were to be completed and agreement to be reached.

However, 10th of June has come and gone and negotiations are stalled on the financial aspect. The DLC has asked the workers to sit quietly as he is working on their behalf. Meanwhile, the workers have been asked to re-submit the same documents to the LO and are now starting to feel that they are being given the run-around.

Workers are being called in groups of 2-4 and management is trying to persuade them to agree to a works committee and drop the demand for forming a union. In exchange they'll be given money.

Sometimes workers are asked by senior engineers to come with them to off-site places just to hangout and have a chat, only to find that when they get there, management is also there and tries to persuade them to drop plans for union formation.

Sometimes 2-3 workers are picked up and driven to some place where again they are persuaded/intimidated to drop union formation plans.

Workers report that so far they are all together and they are trying to counter management efforts to break them and/or create misunderstandings among them by creating very strong channels of communication amongst themselves. All proceedings of meetings/dealings etc with management are duly reported to the workers. They also try to go in a bigger group of 10 to 25 workers to the negotiation appointments

d) Outcome

With the end of the strike a short first agreement was signed, the workers ensuring work discipline and the managers that training would henceforth take place within regular office hours, not on Sundays. Bus service would be provided until Bhiwadi. There would be
special food twice a week, like the staff gets.

Later on workers representatives signed a settlement with management for Rs 2700 wage increase over 3 years (far less than the Rs 10,000 package they had presented management). They get 60% increase this year, and 20% increase each year after that. There is a reworked incentive scheme. Unfortunately, the workers hired through contractors are not covered in the wage hike, but they do get to participate in the productivity incentive scheme. Another outcome is that the management decided to replace all security guards. In general they have been too supportive of the workers during the strike.

e) Short visit at KDR, a supplier of Shivam Autotech in Faridabad

From a truck driver who had to return the metal parts during the strike at Shivam Autotech we got to know that Shivam is supplied by KDR Forgings in Faridabad, Ballabhgarh twice a day. The KDR workers must have noticed the strike. The industrial area of Ballabhgarh already looks more like second tier suppliers, no nice architectural lay-out and nice facades like at Shivam. KDR is about 70 km away from Shivam; the truck drive takes about one and a half hours.

Our info is based on very brief chats with a couple of workers at the gate as they were entering the morning shift, with the head of security who came to check what we were up to, and with a worker whom we talked to later in some detail.

KDR Forgings is a medium sized factory in the vast industrial belt beyond Faridabad, at Plot No. 32 sector 25, Faridabad. It’s owned by one Rajesh Juneja, who along with his family owns 8 factories in Ballabhgarh, four that do forging work, three that do more final CNC work on the gears and one lower down in the production chain where iron sariyas (forged parts) are made. From Juneja’s CNC factories, the product is sent also to America. However, of this particular KDR unit, Munjal’s Shivam Autotech is among their two main buyers, the other being QH Talbros, also located in Faridabad.

KDR Forgings has about 160 workers, who work in 2 shifts of 12 hours each, 8 am to 8 pm to 8 am. Only about 7-8 are permanent, the rest are directly employed by the company, not through a contractor, but not permanent. Their wage levels are about 2,000 for a helper and Rs 2,500-
3,500 for an operator. The one worker we spoke to in detail was a final checker who earns Rs 7,000 presumably for a 12 hour shift work.

Concerning the strike at Shivam, those we spoke to said that yes they had known of it because the parts from the factory had come back. During those days, they did work for other buyers. However, since Shivam is such a major buyer, it meant that production was lower than usual. Workers during those days worked only for 8 hour shifts. However since they seem to be regular workers and not contract, there were no lay-offs for the 5 days.

3) According to Plan –

General information on the development of the region or on certain company policies

*** “Red Flags and Welfare Schemes” –

The 1st of May, a great day for symbols and symbolic announcements. Mayday is the public day when to praise or re-claim labour, the day which allows those in power to ignore the plight of the labourers during the rest of the year. A day of symbolic parades and airy announcements. A friend reported that 300 people took part in the Mayday demonstration, which paraded through Okhla industrial estate. Every morning 200,000 people march in a long tired procession through one of the several entry point of this textile industrial area in the south of Delhi (see report in this newsletter). No red flags, but thousands of pent up demands. According to a worker active in the union in Gurgaon 2,000 to 3,000 took part in a Mayday celebration.

The Haryana government used the occasion of the 1st of May to announce further paper tigers, further welfare scheme for the local workers. We will have to see whether an increase of the minimum wage actually makes a difference in every day life (see report from a call centre cleaner below), how many people actually receive the announced benefits. On one hand we can see that the majority of workers are employed outside the legal frame-work, on the other hand there is an actual wage pressure in certain sectors (e.g. skilled industrial workers), due to the boom. The Haryana government announced two welfare schemes, a) a health insurance scheme for building workers of the
“unorganised sector” and b) a housing scheme for industrial workers:

a) “After a hefty hike of about 37 per cent in minimum wages this year, the state government has decided to give welfare cover to all labourers and workers engaged in the unorganised sector by realising a cess of one per cent on all constructions whose value is Rs 10 lakh or more. This amount will be purely meant for the welfare of construction labourers, who get engaged in the work for 90 days at a stretch. This will benefit around three lakh persons involved in such work at any given time of the year. It would cover various risk factors, including mediclaim and insurance. The money would also be used to set up night shelters and other facilities for the beneficiaries. These were non-existent so far. At least 30,000 works of this nature were in progress in the state at any given time, claimed the authorities concerned. It is stated any worker desirous of availing the benefit of the scheme was required to submit an affidavit. There was no need of any attestation from anyone. The authorities have revealed employers or owners of buildings who fail to follow the new rule will be dealt with strictly as this rule envisages imprisonment of three months, a penalty of about Rs 25,000 or both”

and

b) “The Haryana Government has decided to construct labour colonies near the major industrial townships under a new state plan scheme “Construction of Labour Colonies in Industrial Estates, Parks and Towns” for the convenience of the labourers. A sum of Rs. 50 lakh has been earmarked for the scheme”.

*** “Extreme Outsourcing”-

Because of rising rents and wages, local call centres make use of internet cafes in order to outsource work.

The boom in BPO (Business Process Outsourcing – e.g. of call centre work) creates demands amongst workers and the boom in real estate gnaws on the boom of BPO. Recently bosses of local call centres and BPO companies complained about

a) rising rents,

b) rising wages of the IT/BPO workers and

c) about additional costs due to toll-taking highwayman on the Delhi-
Gurgaon expressway.

They try to counteract the rising costs by

d) out-sourcing night shift work to internet cafes
e) finding new fields of outsourcing
f) rationalizing the hiring process
g) putting more pressure on the wages of the rest of the work-force, e.g. cleaners, security guards.

a) rising rents

In a newspaper article of the 12th of April Mr. Kapoor, a directing manager of a local BPO complaints: “Apart from availing the large English speaking talent pool to run their businesses, companies headed towards India for its affordable real estate, too, as BPOs require large areas of real estate compared to other businesses. But, in the last couple of years, India has almost lost the advantage. In cities like Gurgaon, Delhi and Bangalore, the rentals are almost equal to that in US. In Gurgaon, the rental in SEZ is Rs 75 sq ft per month which is more than $ 1.5 in US. In US, one will get ready to move in facilities where as in India one has to invest to refurnish the entire space”.

b) rising wages

Another article on the same day states that IT-wages in booming Gurgaon have become the highest in India: “Salaries of IT professionals in Gurgaon, which has seen an IT boom only in the last few years, are the highest in India and comparable to that in IT capital Bangalore, a survey by CyberMedia-Dice has found. The average annual salary of job-seeking IT professionals in Gurgaon is Rs 6 lakh plus, while in Bangalore it is Rs 6 lakh. This leaves Delhi far behind at Rs 4.89 lakh”. Also the wages of the call centre workers increased in the bigger call centre hubs: “Wages have increased 15-20 per cent in the last three years and continue to rise. A newcomer joining a call-centre in a metro is likely to be paid anywhere between Rs 15,000 and 18,000”. One way to counteract the rising local wages is to re-located work to other places. In May the market-research company Azure advertises jobs for Spanish speaking people in Gurgaon, who are ready to move to Ahmedabad. The wages offered are 17,000 Rs per months for a full-time job, which is about 8,000 Rs less than the rate
c) rising tolls

Apart from rents and wages the call centre operator in Gurgaon will also have to pay more for getting their workers driven to work. The expressway was built by private developers who rejected state subsidies; instead they will introduce a toll system. An article on the 2nd of May says: “What's spurring the increasing interest [of private developers] in road projects are rosy traffic projections. Says Subroto Choudhary, executive director, DS Constructions that gave a negative grant [to the state] of Rs 61 crore to construct the Delhi-Gurgaon expressway: ‘Our models suggested a manifold increase in traffic density on the (Delhi-Gurgaon) stretch. In fact, passenger car unit density at the time of tendering (2001) was 60,000 and that number now stands at 1.3 lakh. With this kind of traffic, toll collections would enable us to comfortably cover all our costs, including the negative grant’”.

d) outsourced again

Some friends wrote the following description of an internet cafe in the Delhi area which was transformed into an outsourced call centre unit at night. This is one way how the managers of the local BPO industry try to curb the wage pressure from below:

“Microgate internet-cafe is located in the basement of a three-story building, easily one of the better constructions of the area. Narrow steps lead to a tin door, which is usually open at all times. The ten feet by ten feet basement hall is divided into four sections: A small reception area next to the stairs, a cubicle with a table and a revolving chair for Guddu, the owner, a small empty space, where the technical and managerial staff of the cafe sleep at night, and a hall, which is the main cafe space.

Guddu provides better services than many cafes of the locality. There is round-the-clock supply of water, electricity and internet connectivity at Microgate.

One night, a couple of weeks ago, we used Microgate’s services to send off a few urgent emails. It was late and by midnight we were the only customers. Some of the staff were dozing on makeshift beds in the sleeping corner and most of the lights had been switched off. At about 1:00 PM however, people started trickling in young men, in one’s and
two’s, sometimes a helmet in hand. They began taking position on the vacant seats, behind the till now blank screens. Before long, a semi-American accent was confirming participation in Pope John’s funeral.

A few months before, a middle level manager of an elite international call centre contacted Guddu. The proposition was to share some load of that call centre in return for sum of forty thousand rupees a month. Guddu agreed. He hired some out-of-work and some working agents who had prior experience of the industry on ‘payment on performance’ basis, from 2:00 AM till 10:00 AM.

With no frills of dinner and snacks, pick-up or drop, and no facilities like toilets, cash coupons or tickets to multiplexes, Guddu operates an ‘international call centre’. He manages a complete gamut of campaigns and products, just like any other Business Process Outsourcing unit in Noida and Gurgaon. For the agents of this international call centre, there is no accent training, minimal process training, and a more informal relationship with the boss. Unlike many other premium call centres, less monitoring, supervision and surveillance takes place here, even as the work contract is more fragile. The call centre aspect of the operations of the cyber cafe has been closed since last week for about one month now, as the contract has expired; and while Guddu finalises his deal with the next company, his team of agents has moved on”.

(“Chronicling the Remote Agent: Reflections on Mobility and Social Security of Call Centre Agents in New Delhi” by von Taha Mehmood und Iram Ghufram)

e) finding new fields of out-sourcing

Local BPO companies try to find new markets, after the market for straight-forward telephone services is saturated. From a newspaper article: (17th of May 2007)“In an office in the southern port city of Chennai, Indian analysts pore over stock market data for a London-based fund company, searching for investment opportunities. Some 1,200 miles (1,900 km) away in Gurgaon, on the outskirts of Delhi, Indian lawyers have taken over research and patent filing for several Western technology and healthcare companies. Patent research can be done in India at $50 to $80 an hour, compared with $150 to $350 in the United States, said R. Sivadas, chief executive of Scope e-Knowledge Centre Pvt. Ltd. in Chennai. Average billing rates in the knowledge process sector are
40 to 50 percent higher than those in the call centres”.

f) rationalize the hiring process

A little story from a job interview at Teleperformance call centre, Gurgaon, Udyog Vihar Phase One. The entrance room is chilled, so is the woman at the front desk. Four young men sit silently in a circle of chairs, they do not talk to each other during the whole next hour. They came for a so-called “walk-in” interview, the equivalent to a drive-in, it seems. Fast job, fast food. From their age one would guess that it is their first job, they seem nervous. From the next room we can sudden cheering and applause, but it sounds like a routine, like on command. Then the already hired invisible agents start to sing a Michael Jackson song. May be this is how they try to heat silenced young men and women up for their coming verbal piece-work. After an hour the front desk lady tells the first young man to enter the glass-front meeting room in the middle and to pick up the receiver. We all can hear the phone ringing inside the room. The young man enters and starts to talk, with a submissive facial expression. After two minutes he leaves the booth, his face now expressing disillusionment. “Not short-listed”, he mumbles and leaves the building. The next one enters. The same process and outcome. It took four minutes for the HR person on the other end of the line to single them out. Not suitable for international calls, yet. The third one is successful; he can sit down again and wait for his face-to-face interview.

g) pressure on service workers’ wages

Another way for the management to lower costs is to put pressure on those workers who have a less favourable bargaining power than the actual call centre employees, e.g. the cleaning and house keeping workers. A less symbolic move around the 1st of May 2007 was undertaken by the management of the BPO company Evalueserve, First India Place, MG Road Gurgaon. The company changed the contractor of the house keeping and cleaning workers. The workers did not loose their jobs, they were just shifted from one pay-roll to the other, but they suffered a severe cut in wages. While the Haryana government uses the 1st of May to portray itself as ‘worker friendly’, these workers who do the cleaning job in one of Haryana’s model KPOs (knowledge business outsourcing: see article above) companies do not receive the new Haryana minimum wage of 3,500 Rs, instead their wage is cut by 500 Rs,
from 2,500 Rs to now 2,000 Rs. They also only get the canteen food left-over by the call centre employees, meaning that often enough there is only stale or no food at all. When asked for an ESI card or PF slip the contractor answers: “Tomorrow, tomorrow”. Six months ago the land-lord increased the rent for a plastic-tarpaulin jhuggi from 700 Rs to 800 Rs. A proper stone-built room in the same area is about 1,200 Rs, meaning that for the land-lord the jhuggis are much more profitable...

(for more info on the local call centre world: see newsletter no.1)

On the web-site (www.gurgaonworkersnews.wordpress.com) you can find some news items on the following multi-national companies in Gurgaon area, just click on “List of Companies.” The list is boring in a general sense and it smells like shareholders oi-stress sweat, but it might possibly be useful once shit hits the fan or a picket the factory gate. For a longer list of companies situated in Gurgaon have a look at the web-site as well.

News items this month on:

DGM India
GVK Bioscience
House of Pearl
IKEA
Maruti
Promed
TCI

4) About the Project –

Updates on Gurgaon Workers News

*** Hindi Version, One –

Introduction of the Hindi version of the Gurgaon Workers News, about to be distributed in the area. If you want to get hold of an electronic version of the Hindi Gurgaon Workers News, please drop us an e-mail.

Intro

When Politicians, Employers or other leaders talk about development,
about economic progress or ‘Shining India’, they mean places like Gurgaon. They mean rising DLF towers, the growth rate of Maruti or Hero Honda, the increase in textile export. They also mean, but do not mention, the shanty towns of the building workers, the 12 to 16 hours day of the factory workers, the people displaced for the SEZ. When they talk about progress, they mean the six-lane expressway, the computer programmed stitching machine in Udyog Vihar, the automatic-dialler in the call centre. They also mean, but do not mention, that for most of us their progress will result in further submission, their expressway only an accident-prone way to a pro-longed night-shift, their computer controlled machine the rhythm-stick which makes us move faster and faster. It is time for us, those who construct, tailor, weld, assemble their progress, to find our own way to a better life.

Together, we have the experience we need, we just have to start sharing it and use it in future struggles. We came from Bengal, Bihar, UP or the long way from the work on the fields or in our traditional crafts in the nearby village. With the help of friends and family we managed to find a first place to stay in this strange new place called Gurgaon. We have worked in small work-shops, or through contractors in big factories, we have sold vegetables or cigarettes on the market. We manage to raise children, despite the water-shortage, despite the pressure from the landlord, despite the little income. We have found ways with other workmates to resist the managers pressure to make us work on Sundays. We have seen the police repression at Honda Manesar. We might have failed to make the contractor pay our outstanding wages, but we have learnt for the next time.

The aim of this monthly publication is to share workers’ experiences. It is independent from any organisation, party, union. It is meant to tell about conditions in companies or living areas in Gurgaon. We can use it to tell others about problems with certain contractors or administrations, about successful or unsuccessful attempts to resist harassment by authorities or to enforce better working conditions. Given that most of the companies in Gurgaon have links with the rest of the world (textile for export, call centres call abroad, multi-national automobile companies), we also want to publish related workers’ news from other countries. You can show or read the publication to your friends, neighbours and co-workers. You can tell us or write to us your own story, anonymously. This
can be a first step to build new relation-ships and links amongst each other. Links which are stronger than their games to play us off against each other: permanents against workers hired through contractors, locals against outsiders, Hindus against Muslims and so on.

In this issue there are two stories, one from workers employed as security guards in Gurgaon and one about a struggle at Fashion Express, a textile factory in Gurgaon Udyog Vihar Phase I, plot 100.

Workers hired through contractors

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation
Jhuggi
Slum Hut
Lakh
see Crore
Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in March 2007 is about 2,500 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official
retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders are normally working in the hands of local political leaders, in return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial
worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay
  for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 3,000,000 to 5,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even to contribute to this project, please have a look at:

In the July issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** “Escorts: The big carve-up”, Local Automobile Industry, Part Three –
A short glimpse at the history of Faridabad’s formerly biggest industrial company Escorts and some current reports of permanent and casual workers employed in the tractor division, published in Faridabad Majdoor Samaachaar (FMS).
“126-hour-weeks for Maruti Suzuki, Toyota, General Motors, ...”, Local Automobile Industry, Part Four –

The situation of truck drivers at Anand Nishikawa Ltd., a rubber sealing supplier for the automobile industry in India. One of the Anand Nishikawa Ltd. factories is situated in Gurgaon, Udyog Vihar Phase One.

“Whose security is it anyway?, Part Two” –

Longer report of a retired skilled factory worker now employed by Haryana Industrial Security Service as a security guard. Published in FMS no.227, May 2007.

“Masters and Servants, a short note on rich men’s deaths” –

On the 19th of May a servant in Gurgaon killed his master and the master’s wife and child.

2) Collective Action –

Reports on proletarian struggles in the area

“If you cut the power, we block the roads” –

Women in Old Gurgaon and Faridabad take power into their own hands and protest against water and electricity cuts. A short look at the protest and the electricity policies in Haryana.

“Riot and Looting at construction site of Reliance thermal power plant after a road death” –

Short note on a riot which did not take place in Gurgaon, but Yamunanagar, both in Haryana, after a man was killed in a road accident.

3) According to Plan –

General information on the development of the region and on certain company policies

“The human fence post, the buried and the real estate boom, Another glimpse at urban development in Gurgaon, Part Two” –

DLF, one of the biggest private developers in India safe guards barren land against slum dwellers, the pavement-mafia in Gurgaon Udyog Vihar is part of the game and there are more deadly accidents in the rat-race of urbanisation.

“Not yet special enough: Special Economic Zones, Part Three” –
Some general thoughts on ‘Why SEZs?’, some news up-dates and a report from a free journalist attending a resistance meeting of farmers against the SEZ.

*** “Corporate Watch” –

This month with news items on: Amtek, Bank of America, Continental, Emaar-MGF, Lumax, Nisshin Steel, Sauer Danfoss

4) About the Project –

Updates on Gurgaon Workers News

*** “Drifting Social Whirlpool Chakkarpur” –

Some words about a 45 min stroll through convoluting/transforming Chakkarpur, a village in Gurgaon. The pictures and discriptions of the walk can be found on the web-site.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences

Intro

In the 1980s the Escorts Group belonged to the ten biggest manufacturing companies in India, an industrial giant active in various product segments, such as tractors and agricultural machines, motorcycles, cranes, earth moving machines, parts for the railways. Like Maruti Suzuki or Hero Honda, Escort collaborated with various international companies, such as JCB, Claas, Yamaha, Ford Motors. Till the mid-90s about 24,000 permanent workers worked directly for Escorts Group, the main company in Faridabad at the time, which had various plants in the area. Hundreds of smaller factories and work-shops still depend on Escorts as their main ‘client’. From the late 1980s onwards permanent workers were attacked by various management schemes to increase the work load and productivity, often in collaboration with the union leader-ship. This underlying battle went on during the early 1990s; management used various strategies, such as shutting down certain plants for one or two weeks, putting pressure on older workers to accept
early retirement etc.. This process got aggravated by various market slumps, which management used as a pretext to threaten workers with job cuts. From 1996 onwards the re-structuring process made great leaps forward: JCB, Yamaha and Claas split off from Escorts, the telecom division was sold. From then on Escorts focussed on the agro-machinery sector, of 24,000 former permanent workers now only 6,000 are left. This is not only due to the carve up of the former Escorts Group, but also because permanents were increasingly replaced by casual workers or workers hired through contractors. Till 1992 the number of casual workers in production was less than two per cent, today it varies from 10 percent to 50 percent, as per demand, and whereas there used to be no workers hired through contractors in the immediate production, now their numbers increase significantly.

Below you can find translations of the most recent reports from Escorts workers published in Faridabad Majdoor Samaachaar no.206, 214, 219, 220 and 224 during the time from August 2005 to February 2007. For the next issue of the Gurgaon Workers News we want to summarise the Escorts workers’ reports from the early 1980s till now.

FMS no. 206, August 2005

(An Escorts Worker) “The events in Gurgaon (1) made the management stop yet another planned attack on the permanent workers that was already in motion. The attack came along with a campaign to expose the union leaders (2) and the company used this or that pretext in order to transfer or dismiss workers and leaders. After the events in Gurgaon, in fear of losing his position, the chief minister asked the governmental administrations to rein in the Escorts management (in their offensive against the workers). Even today the capacity of 5,000 permanent workers to create a commotion can put temporary breaks on the management’s activities.

After the re-structuring and re-engineering (3) the Escorts management had settled a three years agreement in 1999 which was in line with their requirements. The retrenchment of permanent workers on a mass scale was inherent to this agreement which contained a massive increase of the work-load, multi-skilling and so on. There was to be a leap in production, the agreement fixed a daily target of 260 tractors. But first our workers’ resistance and then the market bridled the plans of the
The demand of tractors on the market declined and forced the company to lower production below the fixed target. If we would have had to produce the fixed 260 tractors many of us would have collapsed under the work-load. Nevertheless, in this period those people who retired were not replaced by freshly hired workers and through VRS (Voluntary Retirement Scheme) the management reduced the number of permanent workers by 30 percent.

Recently the demand for tractors increased again and with the new investment of 7,700,000,000 Rs the reduction of a big chunk of the permanent work-force was put back high on the companies` agenda. Refering to the last agreement and the reduction of labour costs which the agreement contained, now in July 2005 – six years after the agreement – the management declared half of the permanent workers in the third plant as superflous. There was bound to be opposition against the decision of making half of the work-force sit idle and making the other half do the whole work. After four days of push and pull the management settled an agreement saying that instead of half of the work-force only a quarter was superflous. In the third plant the company has started to make 25 percent of the workers stay idle. In the near future there does not seem to be a need of production numbers higher than the target fixed in the 1999. This is why the company feels no necessity for a long-term agreement (4). Against the demonstrations and slogan shouting inside the plant which are taking place at the moment the company takes no other action than cutting half or one hour from wages. This is due to the special situation at the moment (Gurgaon unrest). But there is the danger that, under this pretext or another, future agreements will cut further permanent jobs.

____________________________

(1) The worker refers to the trouble at Honda (HMSI) plant in Manesar, Gurgaon. In July 2005 after a month of lock out police attacked a demonstration of workers and injured hundreds of them severely. The attack was a major news item all over India and had its repercussions in the various industrial areas. One year after the attack LM Sagar Workers mentioned the Honda incidents as an example of possible consequences of resistance against the closure of the LM Sagar plant (see text on textile
industries in newsletter no.4). Even after one year in a different area of Delhi and in a different sector the repression still had its impact.

(2) The company published documents which questioned the integrity of the union leaders.

(3) The worker refers to the major re-structuring process in the mid-90s, when Escorts Group was broken up in various single companies.

(4) Normally these long-term agreements fix a continuous production increase and make this increase conditional for a wage increase (for the permanent workers).

FMS no.214, April 2006

(An Escorts Worker) In the paint shop of the Farmtrack plant there is always a danger of getting hurt or injured. On the conveyor belt parts move at head-height and can easily hurt your eyes, during the last four months this happened to two people. Rims can fall off the belt and on your feet. While putting up the mud guard you can get injured. Sheet metal is such that it can cut your hands. The company does not hand out safety gloves and when you ask them they say that they ‘ran out of gloves, so keep on working’. Currently out of the 130 casual workers employed in the paint shop only 2 to 4 have been given masks, the rest of us all eat paint. The air conditioning is bad – meaning that the paint is not fully extracted. In the paint shop there are 125 workers employed through four different contractors. On 14th of March 2006, due to intake of too much paint, one worker vomited and fainted. Breathing in the paint shop causes problems, you get dizzy, the company does not give you any Gur (raw sugar molasses). The permanents get a fixed amount of money in substitute for Gur. If you get injured the manager will tell you that if you continue to work so sloppily then you should stay at home. Out of the 130 casual workers only 5 to 7 have an ESI card, but even those receive no medication. The local ESI office says that the company should provide a written document saying that you are still employed there, but the company will not give you such a document. They tell you that they have filled in the no.72 form and that they will not give any more documents. The rest of the workers go to the ESI office again and again in order to take the 72 form – bribes are the cause for making you go again and again. When you go to the time office of the company they will sign the document but will not give you the slip which shows that
you are a temporary employee, the ESI office in return will tell you that they will not issue you an ESI card without the slip. Amongst the 130 casual workers there is not a single one who has an ESI card, neither a temporary nor permanent card. In the Farmtrack paint shop there are 60 permanent workers employed, although on the C-shift there are only casuals. During C-shift there is no time for taking your meals. The conveyor belt runs continually for six hours. The C-shift starts working at 1 am till 7:30 am, during this time there is not even a doctor in the dispensary. The shift does not change every week (according to the law night-shift has to change to day shift after one week), but every fortnight.

On the other shifts during meal time there is a huge crowd in the Farmtrack canteen. This causes most inconvenience for the casual workers, sometimes there are no vegetables left, sometimes curd is not available anymore, sometimes the roti is out, so you have to stick to rice. Many have to queue for half an hour in order to get their food and they will cut your wage if you are too late at work. Some casuals do not receive any food at all. And it seems that the raw rotis are dedicated to the casual workers, as well – when we told this to the Escorts union leaders and the management they said that there are so many people here, so the food will be of this quality only. Every six months the Escorts management interrupts the employment of the casuals for seven to eight days and then re-hires them under a different name (see Glossary). This causes a huge problem if you want to withdraw money from the Provident Fund (see Glossary). In January 2004 the PF office has started a bad attack on workers, as well. If 1,850 Rupees are reduced from the worker’s wage and 1850 Rs are contributed by the company then 3,700 Rs should show up in the worker’s future fund account, but all which is in the account is 2,600 Rs...

FMS no.219, September 2006

(An Escorts Worker) During a general assembly on 18th of August the union leaders spoke about the M.O.U (memorandum of understanding). The agreement is still in a drafting phase, therefore some things are not clear yet. The new three-year agreement should have been settled already on 1st of February 2002, but it is only now that it is on the agenda. There is hunger amongst the workers, but only crumbs are dished out. While the union leaders spoke in the general assembly the
expectation amongst workers was “at least now something will be in it for us”. The estimation was that there will be an increase of 5,500 Rs (per month over three years) and the leaders assured that this increase would be back-dated to January 2006. This is why people were upset by the actual increase of only 4,500 Rs and by the fact that this increase was only dated back to August 2006. While hearing the announced outcome things seemed overall alright, but now, in practice we find the outcome very problematic. There is opposition against it, but this cannot express itself openly, people are scared deep inside.

People are afraid about the fact that previously no leader showed much activity when it came to implement the agreement (and the productivity increase attached to it), whereas now the leaders are going to individual workers demanding to increase production. This time they use force and oppression therefore there is good reason to be scared. The management said that September wages (they have not been paid yet) and the wage increment will only be paid under the condition of an increased production. The company put together a complete new shift. Those machines on which the new production target could not be achieved with were put into a second shift. They did this in order to show that the new target can be successfully met. The company had difficulties to enforce a smooth running in the railway division, so the union leaders and the big bosses together called the workers for a meeting in a park within the factory premises. This was an effort to enforce the new target. A joint industrial tour of union leaders and management to Mumbai – Pune or Bangalore – Chennai, which took place before the agreement, resulted in increased fear amongst the workers.

Outcome of the agreement:

40 percent of the increase will be added to the basic wage;

the family of a skilled worker would receive 400,000 Rs instead of 200,000 Rs in case of death;

the DA would be increased from 2.10 Rs to 2.40 Rs (2.50 Rs for the third year);

the service award is increased by 1,000 Rs and when people retire they will be paid 40,000 Rs;

all increments included would raise the annual wage by 50 percent;
the offer for the VRS (see Glossary) is increased by 250,000 Rs.

Just a few words about the issue that the son, given that he fulfils the professional requirements, would get a job at Escorts once the father agrees on early retirement (three years before the official retirement age): If the older workers agrees on VRS without claiming the 400,000 Rs then the sons will be employed only as trainees. But instead of the 15,000 Rs monthly wage of his father the young worker will get a monthly honorarium of 5,000 Rs in the first, 6,000 Rs in the second and 7,000 Rs in the third year. And in order to get hired as a traineee you have to pay a bribe of 400,000 Rs to the company and even after having milked another 400,000 Rs the company will not guarantee you a permanent employment.

The 70 + 70 = 140 or 60+60 = 120 tractors (the numbers refer to two shifts in two separate plants) which were set as a daily target in the last agreement have not been produced, because the company was not able to sell them. Not to speak about 260, already producing 100 tractors daily was hard to achieve. Now the agreement fixed 90+90 and 80+80, in total 340 tractors daily, has increased fears. It seems that this agreement refers to a single shift. Currently there are not enough permanent workers employed in order to fill two complete shifts – there are permanents to fill one and a half shifts. Therefore there is no issue of superflous permanent workers at the moment, but this situation would change drastically under the conditions that there was only a single shift.

On the 21st of August, after the M.O.U., a one-shift system started in the third plant and 400 casual workers got sacked. The remaining 200 will be kicked out, as well. They say that all casuals of all plants will be dismissed. The permanents will have to do the whole work. But this does not seem to be the last word. After having called for a general shift in the CHD (crank shaft) plant the company started to set 25 to 30 permanent workers idle. In the railway division all casual workers have been kicked out on 4th of September and there is talk that 63 permanents will become superflous... The leaders say that no jobs will be cut, that there is no surplus of work-force, that no one will be transfered to other sites. But fear is growing after a boss who had a leading role in the large-scale down-sizing at Goodyear Tyre (another bigger factory in Faridabad) has arrived at Escorts. The scenario certainly seems to be that there will be a reduction to one shift and a production target of 100+90 tractors,
resulting in a reduction of permanent workers; all this based on a mini-
agreement and given that there is an increase of demand for tractors on
the market. Some people seem to be thinking that due to the increased
package many workers will take the VRS offer. The talks that canteen
workers will be offered jobs in the production department (which would
be an improvement in terms of wages etc. for them), seems to be a plot
in order to make them quit their jobs. Because the condition is that they
first resign and that they will be then taken on as trainees (low wages)
and only after successful completion of the trainee phase they will be
hired as new permanents (meaning that they would lose the benefits of
company seniority). As an ‘alternative’ the company only offers to take
VRS.

FMS no.220, October 2006

(An Escorts Casual Worker) Plot 3, sector 13, plant II (Farmtrack). Casual
workers are employed for six months. Each month the job check list is
extended by another month. For eight hours the wage is 144 Rupies plus
7 Rupies for food. If you take holidays, money is cut from your wage. You
have to work at two machines. Money is cut for ESI, but no card is given.
The money for the fund (PF) is deduced, as well, but you are fired before
completing six months of employment. But if you cannot complete the
required 180 working-days, you will get only half the amount of the fund
(half the amount is paid in by the worker, half by the employer). Apart
from first aid the company does not provide any medical service in case
a casual worker gets injured. The company bus always has vacant seats
for about eight people, but the casuals cannot use it for transport. The
company provides no shoes and if you do not wear shoes they will not
take you for the job. The duty card is put up at 8:05 am by the time office
(some kind of punch-in system), those workers who arrive after that time
are not taken in for work. Sometimes the people in the time office do not
put up the card, so the worker has to talk to the people from the personne
office. They reply that the card must be there and that this is the way it
happens: if you want to work, do work. If you do not want to work, we will
throw you out in a minute. The wage is paid on the 10th, there is no
overtime.

The situation in the canteen of the Farmtrack is chaotic. Sometimes
spoons are missing, sometimes they run out of salad before your turn
comes. The roti is only half done. Some people bully their way into the queue. In the queue you stand pressed against each other, you stand on each others feet, people do not take care, you start to sweat, people push and shove. The guys who dish out the food also take the money, therefore it usually takes a long time before you get your food. During the lunch break you also have to manage to drink, but you have to go and get it from the tap yourself. At the canteen door there is so much pushing and shoving going on (the door is also rather small), that once it opens people trample over each other while running inside. Only four days ago someone broke his hand in this situation. And if a casual would speak out against all this then he will be kicked out. As well, if something is wrong with the parts you work on or with the machine then the casuals are kicked out.

The permanents receive two items of hand-lotion and four pieces of soap for washing – the casuals only one lotion and two pieces of soap. The managers also abuse the casual workers. Now, for 80 tractors instead of 60 produced in eight hours at Farmtrack, the permanents’ monthly wage is increased by 4,500 Rs per month over three years while the casuals will not get a single Paisa more. The prices in the canteen have been increased – for two Rupies you used to get a tea and two Pakoras while now you pay 1 and a half Rupies for a tea and three for a Pakora.

FMS no.224, February 2007

(Escorts Workers) In the Farmtrack plant in sector 13 the assembly line runs two shifts and the heat treatment and paint shop run three shifts. In the paint shop there are 35 permanent workers, most of them on the A-shift, the rest on the B-shift. On the C-shift there are only casual workers and workers hired through contractors. In the paint shop there are 35 casual workers and 190 workers hired through four different contractors. So in the paint shop there are about 13 to 14% permanents, 13 to 14% casuals and 72 to 74% workers hired through contractors. Workers hired through one of the contractors preparing the paint also have the cleaning to do, this means four times per shift wiping, first with thinner, after that with water. These worker get 90 Rupies for an eight hours shift, they are given an ESI card and a PF slip with a Gurgaon number. The paint shop workers of the big contractor Jain Global are facing great difficulties. The
40 workers who do the spray paint work get 180 Rupies, half of the workers who put parts on and take them off the paint shop line get 164 Rupies, the others 125 Rupies, the 12 workers in CD (where material is automatically dipped in the primer) on C-shift get 96 Rupies. Whereas Escorts company pays the contractor 256 Rupies for each painter for an eight hours shift. The overtime payment is at single rate.

Jain Global took a photo of each worker, but the ESI card has only been given to half of the workers and in PF there seems to be a scam. The manager of the contractor company manager says that the PF would be deposited in Gujarat state. Five months ago a painter was sacked for a minor mistake, but the form for the withdrawal of the PF money was not being filled by the contractor company. The Jain Global manager says that there was no time to fill in the form, he already has said this 4-5 times. When night-shift workers in the paint-shop stop the conveyor belt at 7:30 am, the contractor companies’ manager told to run it till 8 am. When the workers refused to do so the manager grabbed two, three workers by the throat. Saying that they would not work in these conditions five workers quit the job. This happened two months ago and these five workers did not get their PF fund withdrawal form filled in by Jain Globals – the boss says that wages having been paid, that is more than what you deserve, so he will not fill in the form.

And at Escorts Farmtrack the contractor cuts 80 to 90 Rupies monthly from each single worker in the name of Haryana welfare fund. At GE Motors the company deducts only 1 Rupee for this Haryana welfare fund. Apart from giving the contractor 256 Rupies per painter per day the Escorts management hires painters as casual workers also. Half of these casual workers get 164 Rupies per day, the other half 125 Rupies. The permanent workers in the paint shop get 600 Rupies per day. For doing the same work in the paint shop workers receive 96, 125, 164, 180, 600 Rupies per day. In the other departments of Escorts Farmtrack the helpers amongst the casual workers get 105 Rupies and the fitters, diesel mechanics, machinists and other skilled workers get 125 Rupies, some get 145 Rupies. In all departments the permanent workers get around 600 Rupies. In the canteen the casual workers and those who are hired through contractors are facing big difficulties. There are three queues during the A- and B-shift and in each queue more than 100 people wait. The lunch break is half and hour – and it takes half an hour merely to get
In a traffic jam in a truck of India Tyres Ltd. on the NH8 highway. We are close to Hero Honda street-crossing, past the Delphi plant on the right. The truck driver has just left the new Maruti Suzuki car plant in IMT Manesar, he delivered rims, and is now on his way back to the Maruti plant in Gurgaon. All goods he transports are for Maruti, he drives 150 to 200 km per day, back and forth between the plants. It is 1 pm, it is hot. The truck in front of us transports finished Maruti cars, the truck next to us belongs to India Trim Ltd., the one ahead to Mark Exhaust Ltd., all suppliers of Maruti. A lorry of India Fuel Ltd. squeezes its way through. The drivers start shouting at each other, trapped in a slow moving metal snake, which is feeding on itself. Which is getting bigger and slower and ever more demanding, pulling frayed nerve strings of tired drivers, grinding spine-discs of women breaking rocks in the sun for the third lane, sipping fuel, poisoning the lungs of the guys who sell water to the men trapped in the jam...

At a chai stall in Gurgaon Udyog Vihar Phase One, about 3 pm. A tired truck driver, working for Anand Nishikawa Ltd. is waiting for his truck to be unloaded. Anand Nishiwari is a supplier of rubber sealings for Maruti, Toyota, Volvo, ... The company has factories in Rudrapur in Uttar Pradesh, Lalru in Punjab, and in Gurgaon in Haryana, Udyog Vihar Phase 1, Plot no. 119. The factory in Gurgaon runs three shifts, on all days of the week. About 400 people are employed. They make rubber linings, fittings, seals. The casting happens in Punjab, the further treatment in Gurgaon. The rubber itself comes from Japan. Four trucks drive constantly between Lalru and Gurgaon...

In 2005 an industrial dispute took place in Lalru, but we only know about it from the internet:

“Employees protest against retrenchment

Lalru, February 24, 2005

In protest against the retrenchment of some employees, five members of Anand Nishikawa Workers Union, Lalru, began an indefinite fast outside the premises of Anand Nishikawa, an industrial unit, located along the Kalka-Ambala highway, here today.

Mr Vinod Chugh, president of the union, alleged that the management
closed the main gate of the unit on February 3 and restricted entry of the six employees without any reason”. (The Tribune)

The truck driver is tired, because he has left Lalru in Punjab at 5 in the morning. One way takes up to five-six hours. He has a companion, but he has all the driving to do. When he reaches Gurgaon he has to wait for the unloading of the truck and then he has to drive back with some empty metal frames. He tries to sleep during the break, but the truck is small, there is not much space. He arrives back in Punjab, where he lives, at 11 at night. He does the journey every day. He gets 5,000 Rs per month. When you mock him that his wife is probably not very happy about him being on the road all the time he answers that the they have three children who are nearly grown up now...

*** “Whose security is it anyway, Part Two” –

(From FMS no.227, May 2007)

A Guard from Haryana Industrial Security Service: The company HISS has its office in Housing Board Market, Sector 7. The 2,500 guards who are employed by HISS work in about 500 different factories in Faridabad. This contractor company also supplies the factories with about 1,000 cleaners, helpers and skilled workers.

Usually a guard has to work 12 hours a day, all days of the month. There is no day off on the 26th of January, neither on the 15th of August, not for Holi or Divali (festivals in India) – if you have to take a day off during the whole of the year due to illness or any other reason then the day will be cut from your wage. If the other guard does not show up at work then you have to work 36 hours on stretch. Out of the 36 hours, 12 hours are told to be over-time, but they are also paid at single rate. HISS does not give any money for food during these 36 hours. During the 36 hours the guard has to get food from the daba (food vendor) twice, which is more expensive for him.

During a 12-hours shift you feel tiredness and your body starts to ache and stiffens. During 36-hours at work you become dead-like. When you have to work day-shift there is no time for entertainment. If you are on night-shift you have to cut down from your five hours sleep in order to get some leisure time, but this will give you a hard time during the night. When the time comes for making your rounds at the factory you will be
all shakey and staggering, as if drunk on sleepiness. Your mind and soul becomes despirited.

The fact that there is no weekly day off means a lot more difficulties for those guards who live here without family. Apart from the daily duties of getting water, fetching vegetables, making food, they also have to bear the headache of getting the weekly ration, of washing the clothes. No guards finds time for short visits or for meeting friends. Because they have to work each and every day, their mind and soul is at boiling point.

In order to be able to get hired you need a ration card (as proof of ID/residency: see glossary) and together with the certificate you also need someone who guarantees for you. For the work in the factory also youth are hired, but as security guards they are less often employed. The reason for that is that they like to show off, they like fun and nasty talks and therefore they tend to be less willing to work daily 12-hours shifts. Right at the factory gate people over 40 are refused to be given jobs. When you are over forty years old they prefer to see you as a guard. When you have crossed the 40, when you have been battered and broken, then you are made appropriate for a job as a guard. Often security guards are workers over 40 who have retired or who have been out of job for other reasons.

To open and close the gate, to check and count the arriving and leaving goods, to search the workers after the end of shift, to take care that no unknown person can enter the factory, to greet the bosses, to make the rounds during the night this is our watchman work. But we have to mark the attendance of the workers, to enter the invoice into the register, to see if the delivery is according to the invoice or not – in most of the factories we have to do this work which is normally done by the time office, as well. During the day a lot of vehicles with goods arrive and leave, a lot of bosses arrive and leave...

HISS gives the guards between 2,200 and 4,300 Rs for a 12-hours day and a 30 days month. Most guards get between 3,000 and 3,500 Rs. All get ESI and PF. The wage has to be collected from the office in sector 7 on the 14th of the month between 9 in the morning and 12 at night. They do not give a pay slip – a piece of paper is given, which shows the name and the amount of money and which has to be handed to the cashier. You have to sign in a register. For ESI 55 Rs are cut, for PF 294 Rs, that is: in the
documents an eight-hour shift, a weekly day off and the minimum wage
fixed by the Haryana government is shown.

A poor person feels everything which is going on around them. How can
you survive on the little money that you get, this worry is always there.
On the red card (ration card for those with an ‘officially low’ income) you
get 35 kilo of wheat for 74 Rs in the governmental fair price ration shop.
Last year they did not even give out sugar, because the depots guys sold
sack for sack on the market, because there the rates for sugar were high.
Out of 1,300 litres of kerosene only 100 litres are distributed. The depot
guy weights the municipal councillor with coins, he boasts that he gives
bundles of money to the officers (see glossary) and he opens the shop
only during one day of the month...

The daughter studies, the son is married – he works in a clothes shop.
For the low rent we live in a house without electricity. The building is on
low level – during rainy season the sewage water enters the house. The
wooden ceiling beam is bending, the roof leaks and during monsoon the
roof threatens to collapse... I have worked 22 years as a skilled
permanent worker in a factory.

After three cases of masters being killed by their servants within two
weeks in the Delhi area, the public media staged a spoof debate on the
matter, asking “What is going wrong with the house maids?”...

Gurgaon, 23rd of May

“The local police claimed that servant Lallan, 19 years old, had murdered
Vinod Chahal, his wife Saroj and their son Chaitanya on May 19 as he was
ill-treated by the family. When Lallan was sure that all of them had died,
he broke various almirahs and took ornaments and utensils made of
gold and silver. He then drove a two-wheeler to Sikanderpur village and
left the vehicle there. He reached Delhi railway station and took the train
to his village in Bihar, informed the SSP. However, Virender Kumar,
cousin of Saroj Chahal, alleged that there must be more facts behind
these murders. The servant Lallan alone could not murder three persons,
as claimed by the local police. He questioned that the police had stated
on May 19 that no valuables including cash and jewellery had been
stolen from the house, and now the police mentioned that they had
recovered around 40 items from Lallan’s possession”.

140
2) Collective Action

*** “If you cut the power, we block the roads” / Women in Gurgaon and
Faridabad protest against water and power shortage –

In daily life water or power cuts are seen and treated as a natural event, they are out of our reach, like the weather. And normally we talk about them in the same small-talk style, like the weather. “Ah, it is hot today”. – “Yes, and the water ran out early, as well”. The degree of our dependence on the weathermen varies. Some of us have neither a water nor an electricity connection, in Gurgaon most of us are connected, but we might share a tap, anxious not to be the last in the queue. Some more fortunate people can afford devices to save resources while they are provided – they have batteries and inverters, water pumps and tanks. Most businesses, shopping malls and factories make their own weather, e.g. Metropolitan Mall burns an average of 1,600 gallons of diesel a day to run its generators during power cuts. Maruti Suzuki has a company-owned power plant, which also generates power for its suppliers. The redirection of water meant for the irrigation of the DLF golf-course and the various country clubs would probably solve the problem of water-shortage for private households. The disparity between this distribution of power, in both meanings of the word, is often seen as quasi natural. But sometimes people challenge the social reality behind the ‘natural’ conditions...

Shakti Nagar, is not the poorest area of Old Gurgaon. It is not yet middle class, people probably do not have batteries and inverters at home. According to an India Tribune article women blocked roads in the area, protesting against severe power and water cuts.

Gurgaon, 17th of May

“At least 200 irate females of Saraswati Enclave were at their vocal best. They also took matters into their hands when they walloped four two-wheeler riders as they tried to cross their path at the Sector 10 crossing near Kadipur where they had enforced the blockade. The women literally chased the riders and dragged them down from their vehicles, all the while raining blows on them. Expletives against the officials of the two departments for their alleged apathy were used. The women blocked the
road for more than three hours. Significantly, the protest was an all-
woman affair. They alleged there had been erratic supply of water and
power for the past two months. The officials at two departments also did
not behave in a proper manner when the residents visited their offices
with their grievances, they further alleged. The situation was more or less
similar at the Pataudi-Khandsa road where women from Shakti Nagar
and Lakshmi Garden squatted for several hours, blocking the road in the
process. They indulged in abuses against the government and the district
administration for failing in their primary duties towards the citizens.
Policemen who had gone to remove the blockade also came in for
admonitions. They were served with homilies and reminders from the
agitationists that they, too, had wives and kids at homes who needed
water and electricity”.

Two days later. The men in the streets don’t talk much about the incident,
but they confirm that the protest was about the fact that there is no
water during the day. They add that the road-blockades were also about
the waste water fouling the street, the health risk. They say that the
protest happened because people started to gather, which attracted
more people, till finally the road was blocked. There was no organisation
behind the protest. There was no trouble from the police, but the
authorities have not reacted yet.

The following news item demonstrates that the electricity condition is
similarly bad in other working-class areas and that women take similar
measures in order to protest:

Faridabad, 6th of June

“About 500 residents, mostly women and youth, of Atali village laid siege
to the Ballabgarh-Mohna road this morning in protest against disruption
of power and water supply to the village. While the traffic remained
disrupted for more than four hours, several vehicles of the
administration, including that of the SDM, Ballabgarh, were damaged
after the crowd turned violent and started pelting stones (after a
policeman slapped a youth). The blockade was lifted later after
intervention by the village elders. The villagers had been demanding
immediate replacement of a power transformer that had been lying
damaged for long and action against the officials of the department
concerned. The villagers decided to block the traffic on the road to get
the attention of the authorities concerned, claimed a villager”.

Rohtak, 8th of June

“Irked over the acute shortage of irrigation as well as potable water and erratic power supply, hundreds of villagers of Kheri Meham village in Rohtak district blocked vehicular traffic on the Meham-Lakhanmajra road today morning. Villagers had started assembling at the village in the early hours in a pre-planned manner. Following this, they parked some tractor-trailers in the middle of the road, blocking vehicular traffic. The angry villagers also staged a demonstration and alleged that the farmers of the area were not getting canal water for the past four days. “Moreover, the supply of potable water as well as electricity is also highly erratic,” they maintained. The blockade continued for several hours and long queues of vehicles were seen on both sides”.

Faridabad, 8th of June

“Residents of Chandhut village of Palwal subdivision blocked traffic on the Palwal-Aligarh road today in protest against the short supply of power and water. The blockade was marked by violence as the mob pelted stones on officials trying to clear the road. A mild cane charge was resorted to by the police to disperse the people. At least 20 persons were booked by the police under various sections for indulging in violence. This is the second such incident in the district in the past three days”.

Haryana government wants to privatise most parts of the electrical power supply, partly in the name of ‘environmentally friendly’ power generation. It attracts a lot of start-up companies like Suzlon Energy Ltd, Enercon India Ltd, Bermaco Energy Ltd, Techpro Systems, companies which are into bio-mass and wind-generated energy production in the Gurgaon area. A National Centre for Hydrogen Energy and Fuel Cell Technology is being set up at the Solar Energy Centre Campus at Gurgaon. All these projects come along with much less ‘green’ and potentially hazardous new technology centres and companies investing into nano-technologies and bio-technologies. The ‘green-energy’ sector is of interest mainly as a future sector of profitable investments, rather than for current energy supply. Gurgaon gets a fair share of it’s energy from power plants like the coal-fueled thermal power station in Faridabad, which was supposed to be taken off the net already five years ago. Genco (Haryana Power Generation Corporation Limited) still runs it,
despite the environmental harm and dangerous conditions for the workers. Who has ever seen the plant will lose some illusions concerning the ‘eco-friendliness’ of the Haryana government (whoever has not seen it yet, have a look at the photo section).

We document this short note on a riot, although it did not happen in Gurgaon, but in Yamunanagar, another town in Haryana. We document it, because it could well have been Gurgaon. It could well have been any other place in this region where poverty and social stress only needs a trigger in order to explode. Sometimes it might be an explosion of anger or demands, targeting or appropriating what is hated or desired, sometimes it will be an implosion, self-destructive and scape-goating other proletarians.

Yamunanagar, 24th of May

“The trouble started when the news of the doctor’s death spread in the area [he allegedly was run over by a truck of the power plant construction site], said police sources. Soon a crowd gathered and a large number of villagers went towards the power plant, being set up by the Reliance Energy Limited (REL). The crowd set on fire several vehicles, including two trucks and property of the plant. The mob dispersed before the police reached the spot. The mob also set on fire several sheds on the campus of the thermal plant and ransacked its canteen. The cash box of the canteen containing a large amount of money was also missing. Workers and labourers in the plant ran for cover as the crowd had also started pelting stones”.

3) According to Plan

*** “The human fence post, the buried and the real estate boom, Another glimpse at urban development in Gurgaon, Part Two”

The private developer DLF is one of the biggest real estate companies in India, employing about 1 million building workers and one of the main participants in Gurgaon’s real estate market. DLF is planning on feeding the real-estate bubble by siphoning more money from the stock market. According to Economic Times from the 8th of May 2007 DLF is about to raise as much as Rs 10,500 crore (about 2 billion USD), which would be India’s biggest domestic share sale. The article shows that most of the
land which DLF owns is situated in Gurgaon, and that therefore the company is very dependent on local developments:

‘Property analysts opine that the total land bank of 10,225 acres is highly skewed in favour of Gurgaon (49%), and to some extent Kolkata (23%). Both cities together account for 72% of the company’s total land bank in the country. “This is a big concentration in one city considering Gurgaon is a satellite town and it took DLF almost 30 years to develop a 3,000 acre township–DLF city. As a result, with 49% of the total land bank in Gurgaon, DLF becomes susceptible to any adverse development in Gurgaon like change in land-use regulations, zoning laws, taxes, natural calamity and any social or political development that depresses real estate sentiment in Gurgaon,” says Sidhartha Gupta, a business analyst.

DLF has to protect its land, even if it is barren and unused. Because the land is not land, but a future asset. The asset has to be protected, but it cannot be put neither into an account nor a safe. It has to be protected against “any social development that depresses real estate sentiment in Gurgaon”. DLF cannot allow that people, who have nowhere else to live, settle down on its no-mens-land. DLF turns humans into human fence post in order to guard the future asset. On Vishwakarma Road in Gurgaon (see pictures on web-site) a foot-ball field sized plot of land is surrounded by 24 security guards, 24 during the day and 24 during the night. The security guards stand in the heat, separate, one every 50 to 80 meters, 12 hours on stretch. A colony of slum dwellers has been evicted some months ago, since then they protect an empty piece of dry earth owned by DLF, worth future millions. The security guards get 3,250 Rs per month, for a 80-hour week. The wage is hardly high enough in order to afford anything else but a slum hut, probably somewhere else on illegal grounds...

When the land price starts to rise or capital to concentrate, the impact of it seeps into every social relationship. Another example from Gurgaon Udyog Vihar, Phase One, close to the Delphi plant. This time the land in question is two square meters on a pavement. Two young guys make tea using a gas-cooker, they sell the tea to workers, but only few workers pass by, it is a small side-street. At a good corner a chai-valla, a tea-maker, might sell 200, 300 or more cups of tea a day, that is a daily turn over of 600, 900 or more Rs per day. A ‘good business’. A worker from
Nepal drinks tea in the shade, he is looking for work in a textile factory. A tractor with five guys on top stops, one of the young tea guys runs away. The other one tries to escape with the tea-pot, but two men from the tractor stop him, slap him and leave with the pot. The young guy tries to hide his tears. He has not paid his dues to the local pavement mafia, so they come to get it. Next time it might not be the mafia, but the cops, which boils down to the same. They ask for free tea, money, cigarettes in return for the temporary right to squat on the pavement...

Others are less fortunate, for them urban development does not mean to be degraded or humiliated, but to die. Two accidents in Gurgaon area which made it to become newspaper notes in May 2007.

Four labourers die in wall collapse

Gurgaon, 17th of May

Four labourers died when a wall of a building under construction collapsed in the complex of Industrial Model Township (IMT), Manesar. The four of them were migratory labourers and their native places were being ascertained by the police. The police have registered a case against the contractor.

3 Metro labourers killed in water tank collapse, two hurt

New Delhi, 6th of May

Three labourers working for the Delhi Metro died while two others were injured when a recently renovated water tank collapsed on them at a DMRC labour camp in Mayur Vihar this afternoon. “The labour camp was constructed by contractor Navyuga constructions to house the labourers working at various sites,” the police added.

When we look at the current conditions in the industrial areas of Faridabad and Gurgaon the question would come up: why do they need the set-up of a SEZ?

Because of the wages?

The wages in the area are already low, particularly in the smaller factories. The wages in the SEZ will very likely be higher than the average industrial wage in the area. This can be derived from experiences in the Export Process Zones in Bangladesh, the SEZs in China or Maquiladoras in Latin America, or from the wage level in bigger ‘international’
companies like Samsung, Honda etc. in Gurgaon.

So as to prevent unionisation?

People often focus on the union question: the SEZ will restrict the legal possibilities of unionising. The reality looks different from on paper: mainly in the bigger (foreign) companies the unions have been successful to organise workers (Honda, Sona, Delphi, G4S etc.). The SEZ will not only attract companies, but also the union efforts to get their foot in the door. Given that there will be a public focus on formal legal workers’ rights, it will be likely that the union will find an easier entry in to SEZ companies than for example in the smaller ‘local’ factories. There bosses often (have to and are able to) use ‘illegal’ measures to keep the unions out. If bigger companies or industrial conglomerations can manage to keep the unions out, they choose to do that, often with brute force. If they can not and they are confronted with continous workers’ turmoil, at least they can ‘afford’ to accept the union recognition as a kind of investment in a formalised relationship between employer and employee. Smaller ‘individual’ companies often do not have the capital clout for that kind of investment. Interestingly enough, the enormous uprising of textile workers in Bangladesh in May and June 2006 took place mainly in the EPZs (Export Zones), where wages are higher, but no union is officially recognised.

The export orientation?

A SEZ would not be necessary for export production, given that most of the textile production in Okhla or Gurgaon is for export already.

Lower taxation?

The SEZ would give some incentives for companies by lowering taxation. Big companies often get these concessions anyway, e.g. Maruti for its supplier park set-up in the late 90s. In areas like IMT Manesar, which is not registered as a SEZ, companies have to pay less taxes already. A lot of smaller companies find ‘illegal’ or ‘informal’ ways to pay less taxes (by not showing workers on the pay-roll, by fiddling with the balance sheets). The SEZ would formalise a practice which is already happening.

May be we have to focus on the actual material composition of capital and the industrial lay-out. The SEZ will bundle and concentrate a lot of capital from different sources: real estate and financial capital from the
stock-markets (see article on DLF in this issue) and the international (Singapore, UAE etc.) financial markets and industrial capital, sometimes combining small scale companies. This over-liquid capital comes together with a planned industrial lay-out: a public-privately organised land acquisition, a plan for infrastructure and for the industrial composition. If we compare the changes which have already happened in the industrial lay-out ranging from areas like Faridabad-Mujesar to Gurgaon Udyog Vihar Phase One to IMT Manesar we can see a trend: in Faridabad people live close to the factories, there are informal settlements and a quite mixed industrial structure, metal factories next to textile work-shops next to small shops etc.. In Udyog Vihar Phase One there is no space for workers' housing, but there are still some make-shift corner chai-stalls, some little meeting points at food-stalls and so on. In IMT Manesar this is also gone, no housing, hardly any chai-stalls, most of the factories have canteens (for some impressions of the different industrial lay-outs see pics on web-site). Workers have no reason and no space to hang out informally. They often depend on transport organised by the company, which is regularly used as a weapon against them. The SEZ will very likely be a further step ahead: workers will need permission to enter, there will be a special police station for the SEZ, the general surveillance will be further intensified. Probably the hiring process will be more centralised and controlled, there are indication of this, e.g. at Honda HMSI the contractors hire people centrally from their office inside the factory. This might be extended to bigger groups of companies within the SEZ. It will be a challenge to question and undermine these material trends rather than merely criticising the surface of legality.

A short up-date from the SEZ news-ticker

Farmers Road Blockade

Farmers from villages in and around Gurgaon today took to streets and blocked traffic on the Delhi-Jaipur National Highway 8 here. They were protesting against the acquisition of their land at prices below market rates by the government for a Special Economic Zone (SEZ). Traffic on the busy highway was blocked for hours as the farmers protested in a large number. The village body of Manesar in Haryana’s Gurgaon district Monday alleged that the protest by villagers against Reliance Industries’
special economic zone (SEZ) project there was led by ‘outsiders’ and anti-social elements. Haryana Chief Minister Bhupinder Singh Hooda today assured members of the Manesar panchayat of Gurgaon district that neither their houses falling within the acquired land would be demolished nor would the land alongside their houses be acquired for the Special Economic Zone coming up in the area.

(13th of May 2007)

Just as an additional note: the highway definitely becomes an attraction point for all kind of protests, on 1st of June it was blocked by Gujjar folks, angry about the caste politics in Rajasthan, on the 2nd of June it was blocked in protest against the police not investigating a murder case.

Political Instrumentalisation

The Indian National Lok Dal (INLD) has come out in support of farmers booked under various criminal charges for blocking the national highway at Manesar last Sunday and disrupting peace. The farmers have been opposing eviction from the areas that have been notified for acquisition for the IMT expansion project. The police has named 17 farmers, including the sarpanch of Gadholi village. They are among the 250 persons alleged to be behind Sunday’s agitation. Significantly, the notice under Section 4 of the Land Acquisition Act for the acquisition of land of farmers in more than a dozen villages was initiated in 2004 when the INLD was in power. President of the Haryana unit of the INLD Ashok Arora has said his party would submit a memorandum to the state governor against the land and SEZs issue. Later talking to the mediapersons, Arora alleged recently the government had allotted a piece of land to Jindal family for Rs 4 crore even though its market value is around Rs 500 crore. He alleged that some of the influential leaders of the ruling party had earned a huge amount in SEZ proposals.

(16th of May 2007)

More Political Show-Fights

Congress MP Kuldeep Bishnoi demanded the dismissal of the Bhupinder Singh Hooda-led government in Haryana for flouting the new norms set by the centre on SEZs. Bishnoi said the Reliance-HSIDC SEZ deal had become null and void under the new norms on SEZ in the country which have capped the size of the SEZs to no more than 12,500 acres. The deal
with the Reliance was for a mega SEZ of the size of 25,000 acres. Bishnoi said the new rules also laid down that the state government should refrain from acquiring land for any SEZ. It was illegal on the part of the Hooda government to hand over the 1700 acres of land in Garhi Harasru, Gurgaon, to the Reliance, he said.

(31st of May 2007)

SEZ composition

A recent commerce ministry estimate suggests that eight out of every 10 units coming up in various single and multi-product SEZs are being set up by small or medium-sized firms. Of the 1,100-odd units already functional in about 30 SEZs, 850 are small firms. It is expected that another 73 notified SEZs will get functional by the year-end, being home to another 2,000 small and mid-size units. According to sources in the Haryana State Industrial Development Corporation, most companies setting up units in Orient Craft’s 200-acre textile SEZ in Gurgaon are about Rs 50-crore garment companies.

(22nd of May 2007)

Changes in Tax Policies

State governments are contemplating levying stamp duty on non-processing areas in the special economic zones (SEZ). This would also mean that anybody leasing out space in a shopping complex situated in a zone will have to pay stamp duty when he registers the lease. In most states, the stamp duty rate varies between 8% and 12% of the registration cost. The proposal to levy stamp duty comes close on the heels of states deciding to levy value-added tax on supply of goods to non-processing area in SEZ. Non-processing areas of SEZs house social infrastructure such as houses, schools, hospitals, malls and parks. SEZ developers have to leave 50% of the total land as non-processing area.

(22nd of May 2007)

A May Day disruption

In the following we present parts of a report written by Aseem Shrivastava, who attended a meeting of angry farmers in the SEZ area. Aseem is an independent writer. He can be reached at: aseem62 – at – yahoo.com
“We were visiting Badli, a village of some 11,000 people, in the district of Jhajjar, Haryana, about 30 kms west of New Delhi’s International Airport. We were there to begin our research on the impact of the 25,000-acre Special Economic Zone (SEZ) planned in the area by Reliance Industries. Like in so many other parts of India where resistance to corporate plans is building up, farmers in the area have organized themselves into a Kisan Jagrukta Samiti (Farmers Awareness Committee) to battle Reliance.

The meeting was being held in the covered area which occupied half the courtyard. At least a few hundred farmers from about 20 villages were present. The meeting began and the pradhan (president) of a neighboring village began proceedings with a five-minute denunciation of the SEZ policy of the government. In particular, he expressed regret and anger that the government was acting as the bichaula (land broker) for a private corporation, tempting farmers here, scaring them elsewhere, to sell their land for industrial development.

Barely had the pradhan finished his speech when a group of about 20 young men from the area, dressed very differently from their elders (in colorful shirts and trousers), suddenly appeared next to us and began telling us that most farmers were happily willing to part with their lands, that the men who had organized the meeting had already sold theirs and were now wanting Reliance to pay a higher compensation. As the next speaker on the podium began to make his speech they started heckling from the side, ultimately succeeding in shouting him down. They tried to provoke a fist-fight. Fortunately, they did not get the desired response.

When we inquired into the identities of the thugs, it turned out that they were boys from the local area, many of them from Badli itself. Reliance had turned young and restless villagers into commission agents. It seems they had been given some petty sum of money and liquor the previous night to disrupt the meeting of the elders. Who had paid them off? Local agents of Reliance, it turned out. They had also been promised “jobs” with the company once the SEZ came up. No interviews, no consideration of merit, skill or qualifications. It seemed that promises, backed with some small change, was enough to buy out the restless youth, eager for urban excitement.

Many of the farmers who have sold their land are regretful, especially since land values are rising sharply in the area and they feel that they got
a raw deal. “What are Rs.15 or 20 lakhs an acre when in nearby Gurgaon the price has shot up to Rs. 2 crores an acre?”, Mani Ram, a local peasant asked. Reliance wishes to take over 22 villages in Jhajjar and 18 in Gurgaon.

“Reliance agents are getting false affidavits made from farmers, saying that they need money for their children’s education, that their land is barren: banjar zameen. It’s interesting what they call banjar zameen: last year it produced 15-20 quintals of wheat! You can check the records at the revenue office”, Azad Singh of Badli told us.

“And what will happen to those who do not own any land and work for daily wages on your fields?”, I asked Azad Singh. “Who can say? They are the most disposable of all”, he replied. There is an attempt by the farmers to draw the landless classes (30% of the population of the villages according to them) into their struggle. However, there did not seem to be enough of an effort to involve them. For instance, all the men present for the May Day meeting were farmers with land, some with a lot, some with little. There is a heroic attempt in the Samiti poster to accommodate the interests of the Scheduled Castes: it makes the demand that Reliance should give each of their families a plot of land in the SEZ! The Samiti poster also makes the demand that Reliance be leased the land by farmers rather than taking full possession of it.

A Haryana Kisan Mazdoor Sangharsh Samiti has been set up. One of its goals is khumbha ukkhado (pull out the electricity poles that Reliance has already begun putting in close to the KMP Expressway that is coming up close by). “Nandigram ki fasal taiyyar hai” (the crop of Nandigram is ready), Mahavir Singh told us”.

4) About the Project –

Updates on Gurgaon Workers News

Some words about a 45 min walk through convoluting/transforming Chakkarpur, a village in Gurgaon. The pictures of the walk can be found on the web-site.

Chakkarpur is a village situated on the way from Old Gurgaon to Delhi. Fifteen years ago it was still a medium-sized farming village like many others in Gurgaon area. The closeness to Mehrauli-Gurgaon Road in the North became the first urban boundary and access point of Chakkarpur.
In the 1980s the car manufacturer Maruti built a housing complex for its employees, which started to encircle Chakkarpur from the west. The arrival of best-paid industrial workers and staff members must have already had an impact on Chakkarpur’s social life. In the 1990s the private developer DLF started the construction of DLF City Phase One in the East of Chakkarpur. Posh villas and apartment-houses now encircled Chakkarpur from the east. DLF also set-up a golf course, which turned the street at the eastern fringe of Chakkarpur into double-lane Golf Course Road. Then the shopping-malls at Mehrauli-Gurgaon Road in the north were erected, Chakkarpur now being hidden behind towers of commodity worship. Tens of thousands of middle-class Delhites arriving at the weekends for pilgrimage. The bus stand changed its name from Chakkarpur to Sahara Mall. Behind Sahara Malls there are 600 empty apartments of the Sahara Grace Housing Estate. According to a security guard they are supposed to be sold for up to 6 crore Rs each. The security guard who secures the empty apartment bloc would have to save about 2,000 to 2,500 years of his wage in order to be able to by one. The old Chakkarpur population changed. With the rising land prices a lot of them turned from land-owning small farmers into landless millionaires, more or less overnight. They built spacious family houses with stables in the backyard, for the two-three cows which help remind them of what their life used to be. Next to the stables quickly constructed rows of single rooms, which are rented to the large numbers of newly arriving inhabitants. In those single rooms families from Orissa or Uttaranchal move in, the men looking for work in the nearby factories or offices. Chakkarpur has many migrants, now. In the nicer houses young men share flats which are empty at night, while their inhabitants are at work in call centres. But with the money, also a so far unknown poverty arrived. On the empty plot of lands between the new-rich farmers houses are many smaller settlements of plastic-tarpaulin slums. Landlords make up to 800 Rs rent per month from each hut. Mostly workers from West-Bengal live there. They work as ricksha-drivers in front of the shopping-malls, as security guards or as cleaners in call centres, as house maids for the rich. Inside Chakkarpur there is not much commodity production going on, some handycraft workers have set-up small businesses for the surrounding middle-class estates. They repair electrical appliances, they manufacture electrical stablizers on smallest scale, they mend or change...
clothes, they re-cycle waste. 3,000 to 4,000 or more people might live in Chakkarpur today. Within less than a decade the population of Chakkarpur must have quadrupled, while it has been physically enclosed by two main roads, a shopping-mall front and middle-class housing colonies. The old farming community has dissolved, hundreds of micro-communities have arrived, they are all connected by Gurgaons ruthless economic growth. The social composition of Chakkarpur has transformed from farming into a mixture of landlordism and service (less industrial) proletariat. What happened to this small village, happened in similar ways to dozens of other villages in the Gurgaon area. Chakkarpur shows that the glorification of “India, the land of contrasts” is mainly enthno-romantic bullshit. The truth is much more profane: the mystified ‘contrasts’ are just an expression of the fact that our own social productive forces have turned into an avalanche of re-locating industrial capital, international financial streams and waves of migration which transformed the life-style, source of income and local community within less than a generation. The old forms of living was not even given the time to disappear completely. If you want to see photographs of a 45 min walk through Chakkarpur, have a look at the wacky multi-media section of the web-site (Photos of Gurgaon).

(1) A clumsy pun in Hindi: chakkar = rounds, round journey, dizziness, trouble, confusion

Workers hired through contractors

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.
Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

Jhuggi
Slum Hut
Lakh
see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in March 2007 is about 2500 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.
Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)

Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made
permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanent’s wage.
Watchtower overlooking shanty huts of 2,000 building workers

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even to contribute to this project, please do so via:

In the August issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** “Motherson”: Graveyard-shifts and company supervised gender division at the international car part supplier”, Local Automobile Industry, Part Five –

Account from a young casual worker about his experiences in the Motherson Gurgaon plant.

*** “How even the poorest worker can still make him(!)self feel like a
boss” –
A rather clueless description of domestic work and violence in a
neighbourhood in Gurgaon.

2) Collective Action –
Reports on proletarian struggles in the area

*** “Delphi” – Automobile Boom and Crisis against the workers”, Local
Automobile Industry, Part Six –
Some words on the situation at Delphi, world’s biggest car part supplier,
in the North and South. Including a report on how the management of
the Gurgaon plant was able to reduce the number of permanent workers
from 750 to 250 workers while increasing the number of temps from 0 to
2,500. The reports, one given by a permanent workers and one by young
workers hired through contractors, also describe how a wildcat strike of
the temps in January 2007 was finished off by a united front of
management and permanent workers’ union.

3) According to Plan –
General information on the development of the region or on certain
company policies

*** “Dig your own hole: A Glimpse at Urban Development in Gurgaon”,
Part Three –
The article has a look at the relation between private developers and
public institutions and the outcome for the making of the city of
Gurgaon. Basically both sides -, HUDA (public developer) and private
developers – have a main interest in building up expensive housing
estates, commercial and industrial areas as fast as possible and then, in
a public show-fight, blame each other for not providing the necessary
infrastructure. The unsolved question of water and electricity supply,
waste disposal etc. leads to a situation of shortage and partial collapse.
On the one hand this is an ‘unwanted’ outcome of capitalist urbanisation,
a sign of its incapability. On the other hand capitalism is able to turn its
own situation of demise into a profitable business, it develops an
interest in maintaining its own short-comings.

*** “Corporate Watch” –
This month with news items on: Amartex, Adani, Hero Honda, House of
4) About the Project –
Updates on Gurgaon Workers News

*** “Workers’ Theory” –

On the web-site (click “Workers’ Theory”) you can find two articles on ‘Operaismo’, a marxist current which tried to understand the new generation of factory workers, their rural background and their new modes of struggle in Italy during the 1960s. Their concepts and experiences might help us in the current situation in and around Gurgaon, for the debate on the revolutionary potentials in Delhi’s industrial south...

*** “Get sorted” –

New content list including all newsletters, now on the web-site.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences

*** “Motherson: Account from a young worker about his experiences in the Gurgaon plant”, Local Automobile Industry, Part Five –

(This is an extended version of a Hindi article published in the Faridabad Majdoor Samaachaar no.228, June 2007)

The company

Motherson Sumi Systems Limited (MSSL) is a joint venture between Sumitomo Wiring Systems (Japan), Sojitz Corporation (Japan) and Motherson Group (India). MSSL is the largest producer of automotive wiring harnesses in India and one of the biggest plastic components supplier. MSSL has manufacturing bases in Noida, Delhi, Gurgaon and Manesar (located within a 50 km radius), Pune & Bangalore in India and an overseas manufacturing base in Sharjah (UAE), Germany and Sri Lanka. The company has shares in and runs joint manufacturing units with following German companies: Schefenacker Motherson Limited, Mothersonsumi Reiner GmbH, Webasto AG (sun roofs), Pudenz Wickmann GmbH, G + S Kunststofftechnik GmbH and Lisa Draexlmaier.
Motherson is an example of the dual-way internationalisation of the auto-component industries in India. Dual in the sense that on one hand there is an increase in exports of parts from India to Europe and the US (see article on Delphi in this newsletter) and an extension of the global division of labour attached to it. On the other hand we can see more and more cases of ‘companies from India’ taking over smaller suppliers in Europe and the US.

In some cases the take over of production units in the north-west lead to actual re-location of production. Webasto Motherson, a joint venture between German Webasto AG and Motherson, has relocated an assembly line from Germany to India and plans to use the facility to increase the sourcing of automotive sunroofs from its India operations.

In June 2007 Motherson took over the bankrupt rubber parts manufacturing company Empire Rubber in Australia. The take over resulted in cutting permanent jobs from 240 to 100. The Howard government introduced a law which makes it easier for companies below 100 employees to hire-and-fire them, very similar to the Indian Labour Law. Motherson took advantage of it, and hired additional 40 workers on casual contracts, keeping the permanent work-force below the 100 line.

In India Motherson runs 20 manufacturing plants, plus 18 plants as joint-ventures. 30 per cent of the annual turn-over are made from exporting parts, which is a considerably bigger share than the average in the industry. In Gurgaon the Motherson factory supplies mainly to Maruti Suzuki (27 per cent of Motherson’s Indian-wide annual turn-over in 2005) and to Hero Honda.

A worker’s report

Motherson Sumi System Worker

Plot 21, Sector-18, Gurgaon. Out of the 2,500 workers employed in the factory 100 are permanents, the rest are all casual workers. The factory in Gurgaon has been open for five years, most of the permanent workers have been taken over from the Noida plant (Noida is about 40 km away, in the east of Delhi). In the factory 1,500 girls and 1,000 boys are employed. The boys are certainly given a break after six months of employment (basically meaning that they are kicked out, some of them are taken back in after a ‘break’ of a few months, which is a measure to
avoid the legal obligation to make them permanent). Some of the girls are given a break, as well – most of them are unmarried. Only people who have passed the 10th class and are between 18 and 22 years of age are hired. People who are 23 to 24 are told that they are too old and the company refuses to hire them.

At Mothersons workers work from 6 am to 2 pm, from 2 pm to 10 pm and from 10 pm to 6 am, and they have to enter the factory by 5:30 am, 1:30 pm or 9:30 pm. For the 6 am shift the company sends buses to the first stop at Badarpur Border, Kapsahera Border, Palam, Uttar Nagar, Gurgaon at about 4 to 4:30 am. For the early shift many workers have to get up at 3 to 3:30 am... during winter this causes very big difficulties. In the darkness and without any soul around the girls have to be accompanied by their family members from home to the bus stop. The B-shift finishes at 10 pm and the buses leave at 10:30 pm. At 11:30 pm to midnight pm the girls have to be fetched from their people from the bus stop. The bus is crammed – often the boys have to stand. In the C-shift only boys work, the company does not run buses to Palam, Uttar Nagar, Badarpur Border. From these places workers have to make it to the factory on their own expenses. During the C-shift the canteen does not provide food, they give tea and biscuits at midnight and tea at 3 am. From the nearby Sarol village a lot of workers arrive on foot or by cycle.

Half an hour before start of shift the arriving workers have to clean the place while the earlier shift is still working, then a 5 to 10 minutes meeting of the area 'helping hands' (some kind of casual foremen). At Mothersons there is pressure to increase production. Most of the workers have to stand the whole time while doing the work. Every hour the production level has to be informed about. The company fixes the eight hour production target on the bases of an hourly target. The half an hour food break and the two ten minutes tea breaks are not taken into account when defining the eight hour target. By stretching ourselves and by hiding actual production numbers we manage to make up for the food and tea breaks – in order to meet the target some workers are not even able to have their meals. The area helping hands constantly shout at workers – demanding they meet the production target. The supervisor scolds if the production is less than the fixed level. And the guys responsible for the quality say that we have nothing to do with production numbers, we only want good quality – bad quality will not do,
in no way. Us workers are squeezed in from both sides.

There is only little over-time at Mothersons and they pay it at double rate. The girls of the A-shift do over-time, the boys of all three shifts. If there is over-time then the shift will be extended by eight hours, which wears you out completely. The shift changes on Sundays – when you are on A or C-shift you don’t get enough sleep. You nod off at work and get injured. Machines are only run by boys and being trapped by the target quotas, the quality control and the sleepyness, fingers get cut. When fingers get cut the company does not fill in the accident report – after some days of private treatment you get the sack. Money for ESI is cut from the wages, but a card is not given. And in order to stop people from taking days off the company gives you 300 Rs in case you do not take even one day off during three months. In the bus on the 28th of May after the A-shift a girl had blood coming out of her mouth. After the workers put pressure on the driver the bus went to a hospital and two boys and two girls stayed with the ill girl...

The food in the Motherson canteen is good – six Rs are given by the workers 12 Rs by the company. During the shift the company also gives two tea. In the canteen workers hired through contractor work from 7 in the morning till 9 at night and they receive 2,500 Rs per month. Some workers are also there to hand out tea at midnight and 3 in the morning. The workers in the canteen get neither PF, nor ESI. Motherson pays 2,400 workers the minimum wage for unskilled workers (helpers) defined by the Haryana government (the minimum wage was increased around May 2007, the new minimum wage of 3,510 Rs is not paid). The machine operators also get this wage. Yes, when they kick you out, or give you a break, then they pay a 700 Rs bonus for each month of employment. The company fills in the form for PF, but not for those who stay less than three months – where does their money end up?! We do not know.

In the Motherson factory there are Group4 security guards. During dinner time there are two guards in the canteen, as well. At leaving time at 10:30 pm there is a security guard in each of the buses which brings the workers home (1). In Faridabad, on plot 12 D, sector 38 a new Motherson factory started work.

(1) The worker later told us that this is due to the strict control of the company over the relation-ships between boys and girls. Motherson
sacked people for coming too close to the other gender. When boys and girls work next to each other at the assembly line and they are seen talking to each other too often by the supervisor, he will say 'line-out', meaning that one of them is transferred to another work-station. The company only sacks male workers after six months because they expect that the girls get married anyway and then stop working, so they ask them to sign a paper that they refuse to demand to be made permanent. Another disciplinary measure of the company took place on Holi, a carnival-like Indian festival, when people cover each other with paint. The company forbade Holi activities in the company and the company buses. Some people coloured each other anyway, some of them got sacked because of that.

He also told that most of the parts manufactured at Gurgaon plant go to Maruti, they are fetched on a daily level. He knows from a truck driver that a smaller truck drives three times a day between the plant and the nearby Maruti car assembling plant. Two truck loads go to the Motherson factory in Manesar, two bring parts from second-tier suppliers on a daily basis. The plant also makes small parts for cylinders of Honda motorcycles. Apart from that the workers do not know where the parts they produce are sent to, if they are for export or not. He also mentioned that amongst workers Manesar industrial area is seen as a dangerous zone, because more than once workers have been robbed on pay day. After being sacked from Motherson he went back to his village in the mountains for two months and then returned to Gurgaon. He went to look for jobs in the area by asking security guards at the factory doors, but he could not find any factory job which was not mediated by a contractor, meaning that it would pay less than the wage he got as a casual at Motherson.

After a month back in Gurgaon he ended up accepting a job in another smaller automobile parts supplier, Anu Industries Ltd. – Plot 102 – 103, Udyog Vihar Phase 4 – soldering parts for Hero Honda. Instead of receiving 3,000 Rs (2,500 plus bonus) for an eight hour shift like at Motherson he now gets 2,500 Rs for a six days week, twelve hours shift. He gets up at 6 am, makes breakfast for his two older brothers, leaves for work at 8:30 am comes home at 10:00 pm, then cooks dinner. At the current job the contractor tries to avoid paying the over-time, as well. The worker decides to quit the job after ten working days. When he has to
wait for his final payment for a month, then the supplier Anu Industries Ltd. paid him only 400 Rs for 110 working hours. According to the law the company would have had to pay 2126 Rs. The actual payment amounts to an wage of less then 4 Rs per hour or about 8 cents/Euro. For working at a first-tier supplier of India's biggest car manufacturer! The contractor was not willing to speak about the matter, he explained the low wage by deductions for ESI and PF, although the workers neither got an ESI card, nor PF number, not even a pay slip. Other workers waiting in front of the factory told similar stories of arbitrary wage deductions, one worker said that he got 150 Rs for fifteen working days.

After Anu Industries he keeps on looking for other jobs – one friend from Motherson now works in the Motherson factory in Faridabad, which opened in January 2007. Another young neighbour in his early twenties who works at Brake Systems India Ltd. in Gurgaon, manufacturing brakes for Maruti, might help him to get a job. The wages are not much higher, but at least the company provides lunch (though only after one month of attendance) and is nearby. Finally he decides to take the job at the new Motherson factory in Faridabad. Although it means that he has to pay another 400 Rs monthly extra for a small shared room in Faridabad plus his brothers have to continue paying the rent for the shared room in Gurgaon. The Motherson factory in Faridabad only opened recently, so the targets are not that strict yet. There is also hope amongst the casual workers to be made permanent after a while. Like at Delphi (see report in this newsletter) the new Haryana minimum wage rate caused some tension between workers and management. At one assembly line women workers refused to start work and demanded that the new minimum wage of 3,510 Rs would be paid. The manager promised to pay it and demanded to resume work. The next day ten women workers were dismissed. Motherson still pays only 2,900 Rs per month.

It was those kind of young and ‘unexperienced’ workers who kicked up the wildcat strike at Delphi automobile supplier in January 2007 (see article in this issue).

*** “How even the poorest worker can still make him(!)self feel like a boss” –

Describing cases of domestic violence always runs the danger of appearing sensationalist or voyeuristic, because what is described is
seen as a private affair. A private affair which actually often happens in the semi-public arena. Despite this danger and despite the very limited knowledge of the reasons for why the following case of domestic violence happened, it seems important to describe it for what it is: another sad aspect of proletarian daily experience. This is written from a neighbour who lived next to the family for little more than three months.

The floor of six single 10 ft by 10 ft rooms in the backyard of the landlord’s house is shared by three brothers from Uttaranchal living in one quarter; three male relatives, also from the north; a five-member family from Uttaranchal; a five member family from Bihar; a single man; and a four-member family from Orissa. The men work in factories, as security guards, drivers, helpers in a shopping-mall supermarket. The relatives from Uttaranchal used to live with their wives, but they sent them back home to the village, because the living costs in Gurgaon are too high. The three women from Uttaranchal, Bihar, Orissa do domestic work, take care of the children. They do not share their work as such, they cook separately, they clean the clothes separately, making use of the common bathroom and tap. Nevertheless they cooperate, they sit together while taking care of the children, they ask each other to bring forgotten items from the market. They rarely leave the floor they live on, so they are their only company for most of the day.

The husband from Orissa has only day jobs, working here and there (white-washing), partly for the shop of the landlord. Compared to the other men he seems to have more difficulties to adjust in the new environment. Unlike his wife, who chats a lot with the other women, he is rather isolated from the other men. Sometimes a former landlady turns up and asks the family to pay back some outstanding rent. The family purchases an old television, but two days later it disappeared again. Then another young male relative from Orissa arrives, he goes to a college in Faridabad, meaning that now five people share the room, living on an unstable income. He and the husband bond, rarely speak to the other men on the floor. There are on and off arguments, one night the husband throws things around, the two women neighbours and one of their husbands turn up and ask him to stop the noisy racket.

After a month the family from Uttaranchal moves on, the husband found a job in Okhla. A couple (and one and a half months later their two
children) move in, but, maybe because they are Pandits, they keep to themselves. The woman and children from Bihar go back to their village, maybe because of the heat, maybe because of the living costs. This leaves the woman from Orissa alone with her two small children, a toddler and a four year old. The children cannot play anywhere else, but on the floor of flats, so she has constantly take care of them. Going to the market seems difficult, carrying the little one and trying not to lose the very active four year old. These 20 min walk to and back from the market is the only time she ever leaves the floor.

Her day starts at 5:30 am, she starts washing clothes, then makes breakfast, then has to wait for the bathroom to be available, then washes up, washes the kids, feeds the little one, sit alone with them till midday, goes to the market, prepares lunch, washes up, sweeps the floor, takes care of the kids, cleans the room, prepares dinner. Her day ends at 11:30 pm, when she does the final washing up. The only people to talk to are her husband and the younger relative, who often do not arrive before 7 pm. She rarely talks to the other male on the floor.

Their economic situation seems to get worse, during the heat wave the wife and the little child become ill and the little child got medicine. The arguments increase. Usually the husband comes home and complains about the food. She argues back that there is not enough vegetables, because there is not enough money. She mentions the landlord and the outstanding rent, she accuses him of drinking. He gets into a frenzy, runs in circles in the common floor-yard, then drags her into a corner, shouts at her and starts beating her. The beatings happen in front of the children and in front of the neighbours. The neighbours do not intervene, they say that they have no right to intervene, that it is a family internal issue. They refer to a moral right, but when asked about their inner voice, they admit that the inner voice tells them that his behaviour is wrong.

Over a month the arguments and beatings become routine like. The beatings seem to have left no physical damage, but things become more threatening when one night he takes a brick, runs to the room, but then leaves the brick outside. The landlady, an older peasant woman, finally intervenes. She says that she does not want to have all this trouble in the back-yard. The young woman starts to complain angrily about the husband, about his drinking, about mobile phone bills, adultery, she
threatens to go back to her brother. The husband keeps silent most of the time. The family owes the landlord money.

Two weeks later, during another argument the woman kicks the younger relative out, throws his clothes in front of the door. She accuses him of hanging out at Sahara Mall, spending money, chatting up girls. He brings no money home. She could not have kicked out the husband. The husband beats her, she shouts and beats back, asks him to beat her more. This time four women related to the landlord arrive and intervene. They stop the beatings, but they call the woman crazy. The younger relative sleeps outside, but is back the next day. The landlord arrives and asks for the rent within two days, he as well calls the woman crazy. She knows that she will have to bear most of the hardship if they have to move out. Housework, bringing up children in a slum will be considerably harder.

Some people, asked about their opinion about what could be done, say that the family would only accept an intervention from people of their region or caste. Other people say that there is a new law which permits ‘outsiders’ to report domestic violence to the police, but that would not solve the material situation of the women (material dependence, social control, moral pressure). So far, after each argument and violent incident it takes only a short time till wife and husband sit together again, talking about daily problems, the children act as a transmitter, which brings them back together. The outside pressure to stick together is huge, the social isolation as well.

In other regions of India, where the communities are less shaken up by constant migration, women were able to fight back against domestic violence, e.g. by attacking alcohol sellers. According to ‘Down to Earth’, an NGO: “similar efforts have failed in Haryana and drinking has increased: A glaring example of the ruining effects of alcoholism is Bhondsi, a village of 2,400 households in Gurgaon district, where even children have become addicted. Forty per cent of the males between 15 and 35 and 15 per cent of the boys below 15 are alcoholics”.

If the village structure has been destroyed and there is no help to be expected from the state, where could a self-empowerment and collectivity come from, which could challenge the combination of domestically isolated work and violence? In Northern India hardly 10 per
cent of all women do wage work and most of these women are young and still unmarried (see report on Motherson in this newsletter), so the majority of women will not be brought together at a work-place. Most of the neighbour-hood communities are still fresh and re-shape constantly, but maybe collective moves like those against water and electricity cuts (see newsletter no.5) can create enough collectivity in order to tackle the even more ‘private’ question of domestic violence.

2) Collective Action

*** “Delphi – Automobile Boom and Crisis against the workers”, Local Automobile Industry, Part Six –

(Another extended version of a hindi article published in Faridabad Majdoor Samaachaar no.228, June 2007. Main piece of information are the reports from Delphi workers employed in the Gurgaon plant)

*** 1. Intro

*** 2. Delphi’s Crisis in the North

*** 3. Auto-component Industry in India

*** 4. Delphi in India

*** 5. Reports from Delphi workers employed in the Gurgaon plant

While workers at Delphi in the US and Europe have to fight against wage cuts, mass redundancies and plant closures, workers at Delphi in India have to fight under the work load and low wages of the boom. In the US General Motors and the supplier Delphi, together probably still the biggest industrial company of the world, are at the edge of bancruptcy. The enormous increase in productivity (higher work load, speed-up, automatization) during the last decades reached its consequences: the car market in the US and Europe is over-flowing, cars cannot be sold, company profits decline. When companies like Delphi blame the ‘high wages’ of the workers as the main reason for the crisis, we have to see that wages in the car industry normally account for about 3 to 6 per cent of the total costs. Even if they might be able to reduce this small share by another 0.5 points, it will not solve, but aggravate the problem in the long run: if they sack workers or cut their wages, even less people will be able to buy cars. At the General Motors plant in Germany workers hired through contractors assemble cars which they will never be able to buy:
from their monthly wages they might be able to save 50 Euros, the cheapest General Motors car costs about 20,000 Euros. The car makers next move is to re-locate work to regions where wages are even lower: Eastern Europe, Latin America, Asia. In India the car market is booming, but what does it mean for most of the workers: 80 hours weekly working-time for 2,000 to 3,000 Rs per month in the smaller supplier companies, maximum 5,000 Rs to 6,000 Rs for workers hired through contractors in the main factories of Maruti or Hero Honda. Wasting our life time and energy for a product which is harmful in every sense: road accidents, pollution, wasting natural resources.

The automobile is the best symbol for the rat-race the system puts us in:

...in Europe and the US most industrial workers are somehow connected to the automobile industry,

...without a car they cannot find a job,

...most of the kilometres driven in cars or trucks are kilometers driven to or from work or transporting material, not for travelling or leasure,

...workers have to spent more money on their cars than they can spend on their food,

...a glimpse at the traffic jams on NH8 expressway is enough in order to see, that the situation in India is heading the same way.

We work in order to enlarge the system which makes us work!

While the company attacks workers in the USA or Europe, currently Delphi depends heavily on the exploitation of the workers in the ‘boom’-regions, such as India. This might be the right time and situation to show that Delphi will not be able to black-mail and pressure us into ‘tightening belts and harder work’, neither by boom nor crisis. In the following we summarise some of the developments at Delphi in the US and in Europe.

Before 1999 Delphi belonged to General Motors. Since the 1980s General Motors in the US has down-sized its work-force. In 1978, General Motors employed 466,000 hourly workers, and as late as 1993 had 233,000 blue-collar employees, in 2005 105,000 were left. In 2005 General Motors announced plans to shut down 12 factories and eliminate 30,000 jobs across North America by the end of 2008, including 25,000 hourly workers. Like Maruti Suzuki in Gurgaon, General Motors out-sourced a lot
of work to other ‘cheaper’ companies. For example Delphi, which was spun off from General Motors. Officially Delphi is an independent company, but General Motors counts still for more than half of Delphi’s sales. In 2005 Delphi had 185,000 workers worldwide, including 50,000 in the US, out of which 33,000 were unionized. 33 of Delphi’s 160 plants are in the United States. By May 2006 the unionized work-force was cut down to 20,000, thanks to a buy-off deal made between union UAW and management. Throughout the 1980s, the UAW company-friendly policy allowed suppliers to drastically reduce wages. In 1980, an auto parts worker earned 15 percent lower wages than a worker at a Big Three (GM, Ford, Chrysler) assembly plant. By 2000, the differential had risen to 31 percent.

The question is: why did Delphi get into crisis. First of all there is a general crisis in the US and European car industry, which we mentioned above. Apart from that there are some peculiarities. In 1999 Delphi had no debts, in 2005 it declared bankruptcy. Some people speculate during that these years Delphi concentrated on buying and extending production units outside of the US (which will not be touched by US bankruptcy law) and deliberately let the US part of the company go down the drain. They then used the pressure of bankruptcy for the following attack on the workers:

October 2005 – USA

Delphi declares bankruptcy: pensions, health care costs and wages are said to be too high. Delphi announced its intention to cut wages by 60 percent and eliminate 24,000 out of its 33,000 union jobs in the US. Delphi would hold on to only 8 of the 29 plants covered by its union contracts. In addition to wiping out two-thirds of its hourly workforce, Delphi is demanding that wages for the remaining workers be reduced from $27 an hour to $12.50, and $10 for new-hires. Delphi wants to eliminate up to five paid holidays and two weeks of vacation a year, force workers to pay 27 percent of their health-care costs versus 7 percent currently. In response to the company announcement and the silence of the UAW leader-ship workers organised a slowdown by workers at the Lockport, New York plant, one of Delphi’s largest facilities, whose 4,700 workers produce radiators and other vital auto components.

February 2006 – USA
General Motors announces that it might take over some Delphi workers, given that GM workers would accept early retirement. The emerging deal follows a long-established pattern by which the auto companies and the union bureaucracy split off older workers from younger workers and future employees. GM wants to avert a strike at the main supplier. The promise of jobs at GM for transferred Delphi workers is tenuous at best, given that the ailing auto company has itself announced plans to shut down a dozen plants and eliminate 30,000 jobs.

June 2006 – USA

On March 22, the UAW forged an agreement with Delphi and GM—the “Special Attrition Program”—in June General Motors announced that 47,600 GM and Delphi workers – 35,000 from GM and 12,600 Delphi – have accepted buyouts and early retirement in the largest corporate downsizing in the history of the US auto industry. Many of the outgoing GM workers will be replaced with temporary laborers receiving wages of $19 per hour, 30 percent below the current pay scale for regular hourly employees. They will receive no benefits. At Delphi, new-hires are being offered only $14 per hour, without any benefits. The company has already hired 2,000 temporary workers to replace a portion of its outgoing employees. The newly hired temporary workers will, as part of the quid pro quo between the UAW and the auto bosses, be compelled to join the union and pay dues to the UAW bureaucracy.

July 2006 – Mexico

In summer 2006 Delphi’s Reynosa, Mexico plant fired 250 workers for failing to purchase expensive safety shoes. Workers say that the shoes were a pretext: that Delphi was cutting production and wanted an excuse to cut its workforce. Auto parts maker Delphi—famous for slashing workers’ wages in the U.S.—is among the largest private employers in Mexico. Since that time, Delphi has refused to pay the workers the severance pay they are entitled to by law. Many are single mothers. To add insult to injury, on April 27 the local Labor Board informed workers that their paperwork had “disappeared.” On May 1, a spirited group of workers demonstrated in front of the board, and then marched to join hundreds of other workers demanding an end to “protection unionism,” where the union contract protects only the employer.

December 2006 – Marocco
Delphi sacks 600 workers in Morocco after an industrial dispute. The dispute was triggered when workers asked to see if the Delphi pays money into their pension funds and demanded a weekly day off. In Tanger 4,200 workers work, about 3,000 of them are women. Women workers complain about sexual harassment by senior staff. The weekly working-times often reach 72 hours. According to the law only 44 hours are allowed. “Not one of the 598 articles of the Labour Law of Morocco is applied”, says Mokhtar Khoulhna, a Delphi worker. “They do not pay the over-time rate, and they do not pay Sundays as festivals”.

May 2007 – Spain

General strike in the Spanish province of Cadiz to support employees of Delphi. Tens of thousands, possibly hundreds of thousands, of workers in the Spanish province of Cadiz have joined a general strike to support employees of bankrupt US car parts maker Delphi. The group is to shut its Cadiz plant, wiping out around 1,600 jobs and indirectly threatening another 4,000. Additionally Puerto Real’s factory employs 2,000 contract workers and 2,500 auxiliary workers. The plant supplies Volvo, Ford, General Motors, Nissan, Mercedes Benz and Kia. On 21st of May a rather symbolic European-wide ‘Day of Solidarity’ was organised by different unions.

June 2007 – USA

A new three-cornered labor contract likely eliminates the threat of a strike against Troy-based Delphi Corp., which could have crippled General Motors Corp. According to Wall Street Journal which refers to the web-site of ‘Soldiers of Solidarity’ as source of information, the agreement will lead to the closure of ten plants, another four plants are supposed to be sold by 2009. This would only leave four Delphi plants running in the US. “The memorandum is a testament to the dedication and hard work of the union UAW, Delphi and General Motors teams,” added John Sheehan, Delphi’s chief restructuring officer in statement.

According to stats provided by the Automotive Component Manufacturers Association of India (ACMA) in 2005 there were nearly 6,400 companies in the sector, of which only about 6 per cent are organised and the remaining 94 per cent are small-scale, unorganised companies. Given that a lot of ‘companies’ are one-(wo)man enterprises in backyards (see newsletter no.3 on automobile industry in Gurgaon),
the number will likely be higher. In terms of value added the organised companies (6 percent) account for nearly 77 per cent of the output in the sector.

The major car parts manufacturers entered the market in the back-stream of ‘their’ respective car manufacturers (Suzuki brought its suppliers over, Delphi came with General Motors, Visteon with Ford etc.). They first focussed on the supply of their mother companies, then extended their ‘client’ relation-ship to other car makers in the local market and during recent years the export of parts increased considerably.

In 1998 the value of exported parts was 330 Million USD, this increased to 800 Million USD in 2002 and to 2 Billion USD in 2006. About 15 per cent of the total output of the industry is for export. 75 per cent of these parts go to the major car manufacturers abroad. According to ACMA 36% of Indian auto component exports head for Europe, with North America a close second at 26%.

Delphi started production in the mid/end 90s in four main factories:

* Delphi Energy and Chassis Systems Gurgaon, Haryana, manufactures catalytic converters and evaporative canisters
* Delphi Packard Electric Systems, Gurgaon, manufactures wiring harnesses
* Delphi Energy and Chassis Systems and Delphi Harrison Thermal Systems, Greater Noida, manufactures heating, ventilating, and airconditioning systems, gas and hydraulic shock absorbers and front corner modules, half shafts, energy absorbing steering columns
* Delphi Saginaw Steering Systems, Jigani, Bangalore, turns out steering systems
* In addition to the manufacturing units Delphi runs a technology centre in Bangalore.

Compared to the global revenue of the company, the revenue from Asia Pacific and India in particular are still minor. In 2003 the total revenue of Delphi was 28 billion USD, out of which 1 billion USD came from Asia Pacific operations (India, Australia, Indonesia, China, Thailand, Korea and Japan). In 2004 Delphi India clocked turnover of about 110 million USD (of
which exports accounted for 30 million USD). In 2005 this increased to 123 Million USD and 44 Million USD, respectively. The production of following parts have been re-located from the US and Europe and are now exported back to, amongst others, General Motors in the US: gas-filled shock absorbers, struts, and engine and transmission mounts. Workers from the Gurgaon plant also report that electrical parts are exported, as well. Apart from that the India operations supply shock absorbers to China.

In 2005, while the crisis was hitting Delphi in the US, management of Delphi India announced that the operation in India would not be affected. In the contrary, the media announced that ‘Indian workers’ would benefit by receiving outsourced jobs from the North, e.g. IT jobs to the Delphi centre in Bangalore. In 2006 the tone changed drastically. Prashant Shah, vice-president (marketing & sales) at Delphi India, told the Economic Times: “What the global transformation plan of Delphi essentially means for India is that our Bangalore steering plant and our Noida suspension plant will either be sold off or will be run by a joint partner.”

Delphi Packard Electric System, Gurgaon

(A permanent worker) “The factory is situated at the 42nd milestone on the Delhi-Jaypur Road (NH8). The plant manufacturers harnesses for Maruti Suzuki, Honda, General Motors in India and for Nissan factories in the USA. Delphi opened the plant in 1995, together with the plant in nearby Noida. In Udyog Vihar Phase One in Gurgaon Delphi has another small plant and offices. There are talks about a new plant opening in Puna...

Delphi used to hire young people for the production and the company used to make them permanent. In the seventh year of running the factory, in 2002 the number of permanents has increased to 750, this is when the company initiated a Voluntary Retirement Scheme (VRS), the permanent workers were offered 15 months wages in case they would resign. We were all young workers, nevertheless less than 50 workers gave up their jobs. At this point the union and the company got into a wrestling over a demand notice. The union said that the company has not given the Divali (festival) present, the management said that it had. The union said that members of the management had missbehaved with
the female workers, while the management accused the union of undisciplin and suspended the union president. More back and forth about the question if buses were provided by the company or not: finally on the 9th of October 2002 the workers stayed inside the factory over night. Then on the 10th of October the union said that the management is ready to enter negotiations of an agreement and told the workers to go home. When we arrived at the factory on the 11th of October there was a lock-out notice at the gate. After having the workers worn out with a three months lock-out the company put forward the same VRS. And the union president took the initiative and he made a big number of workers sign their resignation letters, as well. We were naive, many gave up their jobs seeing others leaving the job. Nevertheless still less people resigned than the company had wanted. In 2003 the company initiated the same VRS for the third time. In this way the company reduced the numbers of permanent workers from 750 to 250 and started to hired workers through contractors for production.

By 2007 the number of workers hired through four different contractors has increased to 2,500. Compared to the 8,000 to 10,000 Rupies wage of the permanents the workers hired through contractors get 2,700 Rupies. At the beginning of 2007 the workers of the four contractors suddenly refused to enter the factory and instead they sat down outside of the premises and demanded a wage increase. Us 250 permanent workers, who are in the union, went inside and kept on working. Being a tenth of the total work-force, how pathetic was the production which us 250 people could run. The wildcat strike of the 2,500 workers shook up the company. The company started to talk about the competition with other companies, about closing the plant or re-locating it – and demanded from the union to put an end to the strike immediately. The union leader said that we are on the side of the workers hired through contractors and we are on the side of the company, as well. The workers hired through contractors were all young folks, but nevertheless they only reluctantly accepted to finish the strike after two days. After two days of suspended production the union got them all back into the factory. Now amongst us permanent workers the talks about transfer to Puna rises the fears of losing our jobs again”.

When we distributed this report in front of the Delphi factory nearly all of the young guys who took a newspaper were hired through contractors.
The company management sent the security guards in order to tell the small crowd in front of the gate to leave. A group of 30 young workers chose a vacant road works in the middle of the highway in order to continue the conversation. Most of them under 25 years, angry and with the experience of having worked in various factories in Gurgaon. When one of the contractors arrived in order to see what the gathering was about, the workers fled. Many of them live in the nearby village. One worker who used to work at Delphi and who came to meet a friend told us more in a nearby tea stall. His account contradicts the report of the permanent worker concerning the strike in very important details, e.g. stating that after the strike all workers hired through contractors were first kicked out, and that the ‘ring-leaders’ were not taken back on the job. He also tells that 30 to 40 hours of the monthly over-time often just ‘disappear’ from the wage slip. The over-time payment is at single-rate, meaning that one hour over-time is paid with 12 and a half to 13 and a half Rs (about 25 cents / Euro or 30 cents / USD). The contractor company Human Resource Agency does not fill in the PF forms (Pension Fund). Money for ESI (health insurance) is cut from the wages, but when a worker cut his finger the accident form was not filled in. He did get no compensation at all. After the worker complained, Delphi said that he should address the contractor. At the beginning of 2006 two workers died in a road accident on their way home after shift. Delphi did not pay any money to their families.

Another worker we met during distributing FMS came from West-Bengal and was kicked out from a major tool manufacturing company Groz because he had an argument with a foreman. He works at Delphi for little more than one month, but he said that Delphi is the worst out of the five factories in Gurgaon he had worked in so far. The company buses run only for the permanent workers. The shift which officially starts at 8 am has to start working as early as 6:30 am. Eight – nine hours stress, no second break apart from the official ones, the assembly line runs fast. You used to have to sign a paper if you wanted to go for a piss, this has been abolished, but they still stress you about it. Many of the other guys said that the permanent workers are rather unofficial supervisors than work-mates. Delphi does not demand work experience, only a 10th class certificate. Workers usually work on one line, there is a line for Nissan, Honda, Maruti, General Motors Tata Indica etc.. They are shifted along
the line, but not between the different ‘clients’. They get a company pass documenting on which work-station they have already worked. Delphi pays much less than the minimum wage. The wage is 2,428 Rs, of which 300 Rs are cut once a worker takes a day off (except from Sunday, which is usually off, apart from when there is over-time). For a day off they have to ask the supervisor, not the contractor, who is the official employer. He says that there is no talk about the strike in January 2007, because most of the people only work at Delphi since one-two-three months. A lot of people leave Delphi because the job is bad. Later on one of his room mates, who had worked at Delphi for one and a half years, but who quit the job shortly before the strike, told us that during the prelude of the strikes there have been a small gathering of workers hired through contractors on Sundays in a nearby park. About 200 workers took part in the meeting. He shares a room with four other factory workers, a workmate from Delphi, a worker of a major machine manufacturer, a textile factory worker.

The living arrangements can become an important factor in future struggles. On the same floor live about 30 young workers, all arrived on their own without family, leaving West-Bengal. Five to six people share a room, but people walk in and out and make use of each others rooms, e.g. the only television is shared, the three-four mobile phones amongst them are shared. They all work in factories within walking distance of the back-yard quarter, dying textiles, manufacturing zips, oil pumps for Maruti at Groz or harnesses at Delphi. Some of them now work in factories were others of them worked before. Whoever arrives home first from work starts to cook for the others, people living in one room always take common meals, guys from other rooms might drop in and share the food. All expenses are noted down and everyone contributes an equal amount when wages are paid. The atmosphere is like amongst friends. He himself left Delphi shortly after, he said that after two months the mixture of low wages and stress made him leave. He stayed unemployed for about two weeks, possible through the support of his room mates, then started working in a textile dying factory, where already two other room neighbours work. At Delphi on the 30th of July 2007 the contractors gathered the workers in order to announce whether or not the minimum wage will be paid. The outcome was that the workers will only be paid 2,400 Rs like before, plus a maximum attendance bonus of 800 Rs per
month (400 for the first ten days, then 200 + 200 Rs). It is very difficult to achieve a ‘complete attendance’, often it is not in the hand of the workers.

3) According to Plan –

General information on the development of the region or on certain company policies

The following information has been summarised from an article by Nidhi Jawal in the CSE journal ‘Down to earth’, 31st of April 2004. It adds insight to the earlier article on Gurgaon urban development in newsletter no.3.

The article has a look at the relation between private developers and public institutions and the outcome for the making of the city Gurgaon. Basically both sides, HUDA (public developer) and private developers, have a main interest in building up profitable expensive housing estates, commercial and industrial areas as fast as possible and then, in a public show-fight, blame each other for not providing the necessary infrastructure. The unsolved question of water and electricity supply, waste disposal etc. leads to a situation of shortage and partial collapse. On one hand this is an ‘unwanted’ outcome of capitalist urbanisation, a sign of its incapability. On the other hand capitalism is able to turn its own situation of demise and under-supply into a profitable business, it develops an interest in maintaining its own short-comings.

a) Who is the law anyway: How private developers avoid the law to provide a certain share of developed land for the poor

b) Systematic anarchy: How non-governance can be a good deal for both government and private companies

c) Dig your own hole: On the water situation in Gurgaon

d) Waste away: On the waste situation in Gurgaon

a) Land dedicated to the poor

As per the contract between HUDA and private developer, 45 per cent of the total plots need to be carved for economically weaker sections (EWS) of the society. Out of this 45 per cent, 20 per cent should be EWS plots with a size of about 50 square metres (sq m). The rest 25 per cent should be sold by the builder at no profit no loss basis. The colonisers are free to dispose off the balance 55 per cent to the general public. Smartly
enough, most colonisers have found ways around this clause. Even the EWS plots finally end up with the rich. For example the main private developer DLF sells the 25 per cent plots to its sister concern firms. These firms further sell them on profit basis to affluent people. And within months of this operation, these firms are shut down.

b) Governance

The first sign of governance is a municipal body for a town, which is missing in new Gurgaon. A municipality fixes some common tax rates for citizens and is also responsible for water supply, sewage collection and waste collection. In the absence of a municipality, colonisers are free to charge any amount of maintenance charge. Similarly in case of street lighting, horticulture, HUDA does not charge anything from the residents. But colonisers are taking money for all these services. HUDA was established and it started developing Gurgaon, the agreement was that within five years, the municipal council would take over the new Gurgaon. This period was further extended to ten years and then 15 years. Till date municipal council is not clear by when it can take over the new Gurgaon. At present, the council does not seem willing or able to take over the new town. But be assured, once there is need for ‘governance’, it will show up in now time: during the lock-out at Honda in 2005 the state had no problems to employ hundreds of riot cops to beat up workers. No problems between ‘private’ and ‘public’ responsibilities there...

c) Water

In early 1980s, the private colonisers had hundreds of private borewells and were drawing water free of cost. Today the water table has fallen down to 40 metres below the ground level. Gurgaon depends heavily on groundwater to meet its drinking water needs. According to the Central Ground Water Board, the present total water supply is 2,100 cubic metre per day, 70 per cent of this is met through groundwater. There’s no data on how many borewells function here, or how much groundwater is being sucked out. HUDA officials also have no clue of the number of borewells operating in Gurgaon. They quote borewell numbers from anywhere between 80 and 120. But after speaking with RWAs, Down To Earth correspondents realised that DLF alone has 58 borewells, and Ansals about 50: 108 borewells alone are with just two private colonisers.
No wonder, then, the water table is falling at a rate of 1-1.2 metres annually, plummeting by 16 metres in the last 20 years. According to S K Gupta, executive engineer of HUDA, the groundwater table in Gurgaon has fallen from 12-15 m in 1986 to 35-40 m. Shopping malls, too, are into heavy-duty extraction. The Sahara Mall of the Sahara India Group has two private borewells and extracts 100,000 litres of water per day. Authorities claim that the mall has a sewage treatment plant of capacity 30,000 litres per day, but refused to show it. This situation sometimes shows up in visible perversion: in front of a slum settlement in Chakkarpur 30 women queue up with buckets in order to fetch water from a tank truck while men, may be their husbands, dig up a trench in the same street. The 400 meter trench is for a private water pipe for a single land lord...

d) Waste

According to HUDA, the total sewer line in Gurgaon should be 90 km; also some new colonies are yet to be connected to the main sewer line. For instance, only 40 per cent of the total DLF area is connected. So where is the rest of the sewage flowing? The bubble truly bursts when one looks at Gurgaon’s solid waste management. When the city was planned, no provision was made to dispose off waste. At present three separate bodies run the system. The municipal council manages the old town’s waste. HUDA manages its own sectors, and private colonisers have to manage their colonies. All three bodies function without coordination. Only 70-75 per cent of the total waste gets transported to the dumping site, leaving behind 25-30 per cent. All this waste is taken to a 3-4 ha low-lying area in sector 10 on Basai road, where it is simply dumped. The site is not fenced and there is no system for leachate collection and treatment. Further, the capacity of this area is over. At present there is no landfill for Gurgaon. Kumra accepts that at present wherever low lying area is found, waste is openly dumped. Private colonisers hire contractors, who in turn hire wastepickers on an eight hours daily basis. These wastepickers collect door-to-door in a trolley. The waste thus collected is disposed off in any open land or dumping yard outside the private developer area.

Some related and more recent news items on Gurgaon urbanisation:

Poor peoples’ homes destroyed

Gurgaon, July 18, 2007
The Haryana Urban Development Authority (HUDA) today demolished more than 300 jhuggis and other structures at two places in Sector10. More than a score of police personnel accompanied the HUDA demolition squad. HUDA officials said they would return shortly to remove the remaining illegal constructions. All the Jhuggis and unauthorised constructions were set up on the HUDA land. The deparement is said to be planning a project on the land.

(The Tribune)

Outsourcing Gardening

Gurgaon, July 24, 2007

The job of maintenance of parks in Gurgaon town has been outsourced to the private firms by the district administration. Briefing about the plan, Deputy Commissioner Rakesh Gupta informed that all the 24 parks in various areas of the town would now be managed by the private contractors. He urged the municipal councillors and representatives of resident welfare associations to supervise the work of the contractors regularly and submit a report to the Municipal Corporation for analysing their work.

Wages and Prices
Workers hired through contractors
AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.
BPO
Business Process Outsourcing: for example of call centre work, market research, sales.
CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.
Casual Workers
Workers hired by the company for a limited period of time.
Contract Workers
Workers hired for a specific performance, paid for the performance.
Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore
Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker's wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100 Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company,
according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers, uprooted by the agrarian crisis, stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about, or want to contribute to this project, please do so via:

In the September issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** “Working in the grave of Hauz Rani, a textile factory hidden in the cellar” –

*** “Working at Nutan Printers” –

Longer report of a print worker in the south of Delhi, published in FMS no.229, July 2007. The print-shop’s main client is the central government, the workers do 35½ hour shifts.

*** “Injured!” –

A mother tells about how a company tried to get rid of her son after he had been badly injured at work, published in FMS no.229, July 2007.

2) Collective Action –

Reports on proletarian struggles in the area.

*** “How to punish some and spread fear amongst thousands”, Local Automobile Industry Part Seven –

A longer overview on the situation at Honda Scooters and Motorcycles India (HMSI) factory in Gurgaon, from the repression in summer 2005 to the wildcat strike in September 2006 to the situation of workers hired through contractors today.

3) According to Plan –

General information on the development of the region and on certain company policies.

*** “Not yet special enough: Special Economic Zones, Part Four” –

Short note on farmers threatening to commit suicide against land acquisition and short article on mass factory closures in Noida, possibly related to the re-concentration of capital in the Gurgaon, Manesar area.

4) About the Project –

Updates on Gurgaon Workers News

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective.

*** “Working in the grave of Hauz Rani, a textile factory hidden in the
In the basements of Hauz Rani near Malviy Nagar there are a few too many factories. From the outside you would not realise it is a factory, upstairs are rented out residential rooms. The names of the factories are not shown, only the house numbers. Neither does the company name appear on the attendance cards given to us workers. Between 50 and 150 workers are employed in the factory; cutting clothes, sewing, embroidery, finishing and packing. This is not a hidden issue, they all know about it – but the governmental (labour) officials never come here to these factories.

In the basements the situation is worse than bad – it is hot, there is dust from the clothes floating about, smell from the chemicals, warm muggy air. In these factories drinking water is a problem, we often have to buy water. There is no space to eat inside the factories and even otherwise many workers spend up to 300 Rs per month on one daily meal at the food-stalls. The rents in Hauz Rani are very high therefore most of the male workers live in the factories. A grave in the basement... thousands of people live and work in these graves.

There are quite a lot of female workers working in the basement factories of Hauz Rani, too. The shifts for the women are from 9:30 in the morning till 6:30 in the evening, for the men they are 9:30 am to 9:30 pm. But the workers are paid at piece rate therefore for the sake of 2 RS more you not only work faster but also work longer hours. The workers who cut the threads, be it male or female, are paid a fixed wage, they get 1,200 to 1,800 Rs per month. The wage of the checker and pressman is 2,800 to 3,000 Rs. Those who are called master have worked here for a long time and those linemen, finishing men and cutting men get between 4,200 and 7,000 Rs. The wage workers get over-time payment at basic rate. No worker working in the graves of Hauz Rani gets ESI or PF.

These factories in the basements are called fabrication units. Their directors get work from companies in Gurgaon or Okhla. Recently there was a conflict between the bosses and the workers about the piece rates going on. Yesterday, on the 30th of June in one factory the workers stopped working over the miserably low piece rate. The production in this factory stopped for three to four hours. When work restarted the
director gave 6 1/2 instead of the former 4 1/2 Rs for a piece, the workers had demanded 7 Rs.

*** “ Working at Nutan Printers” – longer report of a print worker in the south of Delhi, published in FMS no.229, July 2007 –

F-89/12, Okhla Phase 1. The main work in the factory is done for the central government. NCERT (National Council for Educational Research and Training) documents and school books are printed there. There are four HMT machines which print one colour. In the basement, together with die cutting and paper cutting machines there are four colour printing machines, a Planta and a Yakyama. According to the rule there should be 40 workers for one shift, but here 25 are forced to work two and a half shifts.

At Nutan Printers the shift starts on Monday morning at 9:30 am and the work usually finishes at 9 pm. On Tuesday morning at 9:30 am work starts again... and on Wednesday night at 9 pm it finishes. On Thursday at 9:30 am work starts again... and on Friday night at 9 pm it finishes. On Saturday morning at 9:30 shift starts and on Sunday night at 9 it stops. Even if you are ill they force you to stay in the factory for 35 1/2 hours.

During the 35 1/2 hours Nutan Printers give 35 Rs for food. Food breaks are at 1 pm and then again between at 9 pm and 10 pm, then there is no break until 1 pm the next day. The company does not even give you a cup of tea during the 35 1/2 hours – the machines are running and amongst us work-mates we manage to go for a tea or a snack every now and then...

Nutan Printers company demands 30,000 prints in 12 hours and 90,000 prints for a 35 1/2 hours shift on the HMT machine. For the Planta the company demands 50,000 and 150,000 respectively, for the Yakyama 40,000 and 120,000 respectively. The company often only pays 32 out of the 35 1/2 hours under the pretext that these fixed production targets are not fulfilled. The manager lives above the factory, but although the workers are afraid they nevertheless manage to take a two-hour nap during the night.

At Nutan Printers this is the common condition, during the twelve months of the year. If there is no work on one machine, then you work on the other. The company makes 25 workers do the work of 100. Even
with some of the hours cut the monthly over-time is about 200 – 250 or 270 hours. The over-time payment is basic rate instead of double rate, but nevertheless the money for over-time for each worker is about as much as or more than his normal wage.

On the documents Nutan Printers does not show the over-time. On top of which the company fills in a register with the days off and records the time during which workers are not attending work. Actually you work 30 days per month and one person does the work of two and a half shifts every month, but the register shows only 15 to 20 days of attendance. The company only pays for the future pension fund PF on the basis of these days, whereas PF money is cut from the wage for the whole month of us workers.

In order to avoid having to pay the gratuity payment after five years of employment as per law, Nutan Printers gives people the sack three to four months before they would complete their five years of employment. Meaning that the workers still work for the company, but they do not show up on the register and no ESI or PF is paid for them. Four to six months later the name reappears on the register and money for ESI and PF is cut again. There are some people in the factory whose names were made to disappear and re-appear three times like that.

Nutan Printers pay 2,000 Rs for the helpers, for those helpers who run machines 2,500 Rs. The Planta operators get 10,000 and the HMT operators 4,500 Rs. The assistant operators get 3,500 to 4,500 Rs. Instead of the 22 days paid regular holidays the company gives only 15 and there are no casual days off given. A security guard who also makes tea is on a 24 hours daily duty and gets 4,000 Rs monthly in return. In the factory there is no electrician, the guy who cuts the paper has to do this work, as well...

*** “Injured!” –

A mother tells about how a company tries to get rid of her son after he was badly injured at work, published in FMS no.229, July 2007

Mother of a worker who got injured at Jainendra Industries:

12 to 14 years ago I came to my relatives in Faridabad to bring up the children, after my husband died. In order to help me the older son Rahul worked in a clothes shop in Chaavalaa Colony and the younger son Manu
works in a shoe shop. In January 2007 Rahul started work in Jainendra Industries factory, plot 116-117 in sector-25. It is a big factory, more than 500 workers employed, doing die casting work. Sometimes 12-hour day-shifts, sometimes 12-hour night-shifts and sometimes my son had to work 36 hours non-stop in the factory. On the 17th of February Rahul left for work in the morning and did not come back home at night. I thought that the company had made him stay longer. Rahul did not come back on the night of the 18th either. My nephew, who works in a different factory also in sector 25 arrived on the 19th and told that Rahul had been brought to hospital. He heard about it from another worker who just came from work at Jainendra Industries.

On the 17th of February while working in the factory the 20 year old was crushed by a lift – he received a cut in his stomach, his intestines were cut, the waist muscles ripped. On the brink of death Rahul was lying unconscious on the factory floor, but what mattered more to the company was hushing things up. The workers at Jainendra Industries stopped the machines and then the company brought Rahul to a hospital.

Instead of bringing Rahul to an ESI hospital the company brought him to Tanya nursing home, which is quite far away from the factory, close to the old Dabua Sabzi market. He underwent two operations – first the intestine were sewn back together, then the stomach was closed with 17 stitches. The severe waist injury was simply ignored. Workers from Jainendra Industries donated blood for Rahul...

When we relatives arrived at the Tanya nursing home on the 19th of February, the people who were appointed on behalf of the company simply vanished into thin air – to make disappear the corpses of those who died of accidental death, is their duty. The doctor seemed like a person of the company – he did not give us any documents. Rahul’s condition improved. The doctor wanted us to take him home but we thought that he should stay a bit longer because the stitches were still fresh. The company took a photograph of Rahul while he was lying on the bed in the Tanya nursing home. The stitches were cut on the 25th of February, then Rahul was sent home. On the 26th of February the Kanhaiya contractor arrived at our rented room in Chaavalaa Colony in Ballabhgarh and after he had given us a temporary ESI card he told us to
go and get treatment from the sector-7 ESI dispensary.

The company took the photo they had taken of Rahul in the Tanya nursing home, superimposed a coat and tie over it, and used this photo to make new employment documents stating that Rahul started work at the factory on the 12th of February – five days before his accident. In reality he had started work in January.

The accident report declared that Rahul was employed by Kushvaah and Company, instead of Jainendra Industries. The name was Kushvaah and Co, but the address was the Jainendra address.

The big stomach injury was obvious, but as severe were the injuries to the waist and the spine. Rahul was not a the condition to stand upright. In the room we had to hold him by the hands and help him with the daily tasks and we also had to accompany him to the ESI. After improving slightly the ESI doctor gave Rahul a fitness certificate on the 8th of May. I brought Rahul to the Jainendra Industries and Kushvaah and Company factory, but both refused to take Rahul back...

Seeing that my son had trouble to stand up and remained standing upright I ran back and forth between ESI doctors and officials. I noticed that Rahul’s spine injury is serious… Rahul needs more treatment and rest. The ESI officials were informed about this… Together with my son I go back and forth between places, some people support me, but I have to do all the running around.

2) Collective Action –

Reports on proletarian struggles in the area

*** How to punish some and spread fear amongst thousands –

An overview on the situation at Honda Scooters and Motorcycles India (HMSI) factory in Gurgaon, Local Automobile Industry Part Seven.

Intro

The repression of the workers at Honda Scooters and Motorcycles India (HMSI) factory in Gurgaon in July 2005 has influenced the ‘collective consciousness’ of the local working-class like no other recent workers’ struggle related incident. After one month of lock-out, 800 workers were beaten up brutally by the police. The pictures of already unconscious workers being beaten were repeatedly shown on national television. Till
today, two years later, many workers in and around Gurgaon remember this incident when talking about the (im)possibility of collective action against employers’ policies.

The repression of the HMSI workers was the culmination point of a longer, hidden conflict. The struggle became public when the lock-out started and when the question of union recognition became the focus, and it was then when it was taken out of the hand of the workers. At that point it became a power-play between international company management, the local and national political class, and the major union leadership. The traditional left only got involved when the struggle had already turned into a stage play and the workers into pawns. They merely focussed on the event of repression and the official demands of union recognition and thereby did not manage to help workers to find their own voice.

The attention (public and of the left) ceased as quickly as the media coverage, but the conflicts within the HMSI plant continued after the repression of 2005. There are conflicts around the question of contract labour, divisions created between ‘outsiders’ (most of the permanents are from other states) and ‘locals’ (workers hired through contractors). The local political class, which is also involved in the contract system still has its foot in the door and its middlemen inside the plant.

In the following we want to give an overview on the developments at HMSI. There has been a lot written about the events of repression in 2005, so we only summarise the most important facts. Unfortunately we still have only very limited insights of the daily debates and experiences of the workers. We can only refer to short tea stall conversations with workers hired through contractor in June and July 2007, a lot more of these kinds of conversations would be necessary to give a proper picture of the situation.

*** 1. Company Overview

*** 2. Struggle and Police Repression in July 2005

*** 3. Wildcat Strike in September 2006 and short info on the situation since then

The Honda Motorcycles and Scooters India (HMSI) factory was opened in January 2001 in the Industrial Model Town (IMT) Manesar, a huge
industrial area (3177 acre in November 2006) about 20 km southwards from Gurgaon. Manesar is a relatively new industrial development zone, constructions started end of 1990s. The industrial lay-out was developed together with Japanese planners way back in 1989. With the opening of the Suzuki plant in 2007 Manesar became an important industrial area for the automobile industry, a lot of major suppliers (Munjal Showa, Motherson, Bosch, Rico, Denso, Johnson Mathey, Napino Auto etc.) have their factories there.

The HMSI factory is spread over 52 acres. According to the company website the initial installed capacity was 100,000 scooters per year, which has reached 600,000 scooters by the year by 2007 and motorcycle capacity of 400,000 per year, newspaper sources say that the actual output is 1,400 scooters and 400 bikes per day. The total investment outlay for the initial capacity was Rs. 215 crores and now the accumulated investment is 800 crores. The factory exports scooters and cycles to other countries in Asia, Africa and Europe, but numbers are not given.

During the initial period Honda hired ITI (see glossary) workers from all over India, nevertheless asked for a training period of two years (the ITI workers had already passed a one year apprenticeship as part of their ITI course and the company asked for two years experience in a similar industry). The workers were between 20 and 25 years old. The management later on used the fact that these permanent workers come from ‘the outside’, in order to create divisions between them and the ‘locals’, which are mainly hired through contractors.

The official language in the factory is English, amongst workers it is Hindi, but people come from various language backgrounds. Because some are from Bangalore people at Honda knew quite a lot about the strike at Toyota in 2006, some union people also went to Bangalore.

The plant is divided into two buildings (Scooters and Bikes), parts for assembly come from all over the place, e.g tyres come from Indoor, but most suppliers are situated in and around Gurgaon. The engines are assembled in the plant. During one shift about 125 to 150 work directly at the scooter assembly line. The total number of workers has varied considerably, in 2005 there were 1,200 permanent, 1,600 trainees, 1,000 workers hired through contractors and 400 apprentices employed at Honda HMSI. In 2006 about 1,600 permanents, 500 to 600 trainees and
2,000 workers hired through contractors and apprentices together.

We first document an article published in Hindi in Mazdoor Samachar, August 2005, New Series Number 206, because it shows the hidden collective turmoil which went on before the lock-out took place and the conflict became official. Things were brewing at Honda, e.g. in November 2004 the workers refused a (rediculous) 600 Rs Divali – Indian festival – gift from the company. The company later transferred the money to the workers’ bank accounts anyway. Workers started to complain about the wage difference between Honda HMSI and the nearby Hero Honda plant.

“Honda Motorcycle and Scooter Workers: Plot 1, Sector 3, Manesar. The biggest problem in the factory located in Gurgaon is – work, work, work and work. The factory was set up four years ago and one thing that has been on the rise is production demand and the burden of work. The ‘saahabs’ (managers) keep the pressure of work up, and if anyone is questioned, then you are told – “You don’t have to come on your duty tomorrow. This is how things have to be done. If you can’t, then you can leave.”

Motorcycle production work is a year and a half old and production of motorcycles has reached 750 in one shift. In the newer scooter department, by using the threats, one line has been made to produce 2000 scooters in one day, by work being done in two shifts. One scooter has to be produced in 25-26 seconds. In this way, production of 1000 scooters has been fixed for one shift. But if, for some reason, this does not happen, then the B-shift has to make up to meet the 2000 figure. If, in order to make this extra work possible, production is halted for half an hour during the second shift and then continued, then no overtime is given. If production is still not completed then workers are forced to put in overtime. B-shift ends at 11:15 PM, but usually we workers have to work till 1-1:30 AM. Sometimes they have to stay at work until 5:30 AM to finish the production of 2000 scooters.

Parts are made on CNC machines, where one worker has to operate two machines at a time. Some parts have to be made in 15 seconds, others in 30, others in 50 seconds, and some heavy parts in up to 2 minutes 10 seconds. In all this time, two machines have to be operated together. There are two shifts on the line, but three shifts for production of parts. Working one shift is so tiring that overtime is impossible, but has to be
done or you will be shown the door.

Around 90-100 hours of overtime have to be put in every month. The company compensates for overtime with twice the payment, but we workers are very opposed to putting in overtime. Considering the speed at which work is being done, no one will be able to work beyond the age of 35 to 40 years.

At first glance, at a superficial level, everything is good in the Honda Factory: Any worker (even the one who has come in through a contractor) is given two sets of uniform, one pair of shoes and a cap on the very day he joins. There are 25 buses to transport workers from home to the factory and back, and if there are only a few workers then even an Indica or Qualis. There are two canteens and a meal – roti, rice, two vegetables, curd, salad, something sweet – is available for Rs. 6. Every worker is given a coupon of Rs. 200 for tea and snacks every month. It is clean. There is a doctor in the factory at all times, an ambulance, Medi-claim. Permanent workers, trainees and apprentices are all given their payment on the first of every month, and those who work through a contractor are paid through him by the 7th of every month. Trainees and apprentices are brought from far away, and they are provided with accommodation for the entire month. Some of the ITI workers brought in by the contractor work for 6, 7 or 8 months and are thereafter sometimes retained as trainees. Trainees are permanently employed once they finish their period of training (one to two years).

The scarcity of permanent employment opportunities and the desire for permanent employment post traineeship compelled us to bear anything. But after the incident in which a worker was kicked, we increased dialogue amongst ourselves.

Last year, in October 2004, at 11:15 PM in the weld-shop, during B-shift, one manager kicked a worker. The next day, during A-shift, workers stopped work at 9:00 AM, to protest against this. When the manager who had kicked the worker apologised, work was resumed – this was at 2:00 PM. B-shift workers also stopped work. The manager apologised again and work resumed at 7:30 PM. If work stops in a factory for one day, it amounts to a loss of Rs. 8 crore.

Quarrels increased in the factory. This year, on 6th February, the workers were asked to sign some papers which said that they would refuse to
claim certain rights in exchange for their annual bonus, and the
management was very forceful about this. All the workers left their place
of work and assembled in the canteen. No one ate food. No one left
when the shift ended. C-shift workers also came and sat in the canteen.
Next morning, A-shift workers made their way to the canteen as well,
instead of going to work. Workers from all three shifts – 1200 permanent,
1600 trainee, 1000 employed through a contractor and 400 apprentices –
were congregated in the canteen. No one ate or drank any tea. The
company called police in the factory. The D.C. also reached the factory.
There was no leader among us – the company asked for 5 workers from
each department to talk with. An agreement was reached by 5-6 in the
evening – there would be no suspensions, the bonds which had been
signed were returned (workers burned them) and the production would
be completed.

Work resumed on the morning of 8th February, after having been stalled
for one and a half days. Pay was not deducted for the period for
permanent employees and trainees, but workers employed through the
contractor lost a day and a half of pay.

In April, the company gave its annual increment to the workers:
Permanent employees got a raise of Rs. 2800-3500. Trainees got a raise
of Rs. 600 (even through the raise in April 2004 was Rs. 750). This meant
permanent employees were now earning Rs. 8500-10,000 per month; and
trainees, Rs. 5600. One thousand workers employed through K.C.
Enterprises did not get any increment. Their salary remained at Rs. 2,800.
They work on production and operate the CNC machines.

Apprentices get Rs. 900 from the government, and Rs. 700 from Honda
Company. Like all companies, apprentices are put to production from the
first day itself, instead of being trained first. They work all three shifts.
Most apprentices are brought in from far off places and Rs. 1,600 do not
suffice for them. They get overtime through a calculation on their 1,600,
not what other workers would get. Once a machine got spoilt because of
an apprentice, resulting in the line being out of action the entire day.
The apprentice was fired.

Things were stable for a few days. Then, a fork lift truck got spoiled and a
permanent employee was suspended. Ten days after this, workers
refused to eat. The work was heavy, and so workers would drink tea.
Trainees, apprentices and workers employed through contractors were involved in this. Despite a lot of pressure, workers employed through the contractor did not eat at the factory. When this continued for a month, the factory gave the worker back his work.

Some talk began that things would be better if there was a union. Workers would meet at the Devilal Park in Gurgaon at intervals of 15-20 days. Cronies among us would report the proceedings to the company. Some steps to align with registered and bigger unions were taken. The Honda company began to increasingly suspend workers over small matters. It began with workers employed through contractors, and by 26th June, 500 of the 1000 workers employed through contractors were fired. On 2nd June, to protest against this, B-shift workers left their place of work and went to the administrative building and shouted slogans. Production had stopped for half an hour and was compensated for later. The company fired four permanent employees the following day and suspended 25. In protest, meals were refused and overtime was stopped. Production of scooters fell from 1000 to 450-500.

On 22nd June, the company put up a notice that trainees whose training period was over would be put to test on 24th June, a Sunday. Those who passed the test and if considered necessary would be employed permanently. This, when till now the company had been employing trainees and there had been no test preceding this. No one appeared for the test on Sunday. By this time the number of suspended workers had increased to 50. On 27th June, when we reached for work, the company asked us to sign certain conditions at the gate. When we refused, the company refused to let us enter the factory. Over 300 staff, 40-50 permanent employees and workers hired through contractors on 27th June itself, entered the factory. Work continued – there were around 2000 people in the factory. Police was stationed at the gate. Four thousand workers were outside the gate.

The administration was petitioned through the union. A procession. It even came to the Parliament during the 11th July session. But nothing changed. It was in this context that there was a clash with the police on 25th July and we were beaten with sticks.

Following this, claims and announcements on TV, in newspapers and by political leaders made it look like our problems would be solved. But on
the instruction of the Central Government, the compromise struck under the aegis of the Chief Minister of Haryana has pushed us into hell. According to this, workers returned the factories on 1st August, and are filled with anger. Everyone is annoyed: permanent workers are saying that if they had to sign the conditions of Honda company afterall, then what was the point of doing all that they did. The 35 trainees who had finished their training are still out of work. The 500 out of 1000 workers employed through the contractor, who were fired on 26th June have still not been hired back. Those who had been hired through contractors on 27th will remain. The company will not pay us for the period from 27th June to 31st July. Through the deal that has been struck, the workers have been divided”.

Other sources give slightly different numbers about the wage level and the wage increase which the management used as a tactic to undermine their collectivity. According to the Citizens’ Committee the wages before May 2005 were 6,900 Rs for permanent worker, which meant that after deduction 5,000 Rs was left. They say that between 2001 and 2005 only minor annual increments of 200 to 300 Rs were given. Then in April 2005 the management granted a major wage hike of 3,000 Rs for (permanent) production workers, which increased wages to 8,500 Rs. People were informed individually about this wage hike. They were asked to sign blank papers along with it. Workers – some of them attached to the still unrecognised union – refused this and asked to hand out the signed papers. The management refused to give them back, a canteen food-strike began in response (the workers refused the food). The fact that the company started the lock-out shortly after the wage hike shows that it was part of management’s attempt to tackle workers’ unrest. Another attempt of the management was to introduce exams for trainees. The trainees work as normal production workers, so all workers understood the exam as a means to enforce discipline and increase the control over the work-force. 33 trainees were not taken on after introduction of the exam. The source is unclear about the question whether they refused the exam. In the following we summarise the further events in a chronology.

Chronology of Repression

May 2005: During the course of the internal conflict (about
management’s arbitrary behaviour and intimidation, about the introduction of an exam for trainees etc.) four people got sacked, 27 suspended. Another food boycott as protest against suspension starts (management asks workers to pay full amount of 25 Rs in case that they do not eat, because management pays 19 Rs for each meal, workers 6 Rs).

After a manager kicked a worker his work-mates started raising slogans, the manager said sorry for kick in front of workers. The management asked some 15 workers to talk about the matter, production came to a standstill for one and a half days. For the delegation of the workers the apology by the manager was not enough: demands were put forward: wage increase by 2,500 Rs, 20 per cent annual wage increase and a union office. The management offers 3,000 Rs hike in case workers will not form union. Workers reacted to refusal of their demands by slow down and refusal of overtime. They encircled management’s offices, allegedly one senior manager was beaten. Reconciliation talks in May 2005 between DLC, management and union failed

25th of June 2005

1,500 workers of the A-shift of HMSI hold a rally. During that time the state and company increase the repression on union leaders, raid their homes, some get beaten up.

27th of June 2005

HMSI declares a lock-out, company buses are not sent to fetch workers. HMSI offers an agreement or ‘undertaking of good conduct’ for signing, agreeing:

a) dismissed workers are not taken back;

b) suspension process of workers will be proceeded;

c) union will not put forward any demands during the coming three years.

28th of June 2005

The union/workers agree on signing the undertaking, but company refuses entry anyway. A sit-down starts at the factory gate, the union takes attendance twice a day – i.e. seeing who is at the picket line in order to dispense any strike pay to those people only. At that point union
leaders of AITUC and CITU get heavily involved.

29th of June 2005

After the retrenchment of 2,000 workers on 27th of June almost 2,000 local workers are recruited, a lot of them from supplying companies, on a six months contract bases, hired through one main contractor. Local/outsider division. Workers hired after 27th of June have to sleep inside the factory during the lock-out. They are not allowed to leave. They are paid 5,000 Rs. Apart from them 250 permanent workers and 500 to 600 non-technical staff stay inside the factory.

11th of July 2005

A mass demonstration of 10 to 12,000 people takes place in Gurgaon, MPs of the CPI and CPI(M) hold speeches.

14th of July 2005

Six union leaders get arrested. Management, political and union leaders negotiated. HMSI officially tries to avoid recognition of the union. Management then agrees to take workers back into factory. The management demands that not all workers are taken back at once, first says a batch of 1,400 workers could return, then reduces this number to 400.

18th of July 2005

400 workers are refused entry, despite them having signed the undertaking. A total of 800 workers sign the undertaking. One report states that the temp workers inside the plant got afraid at this point and that many fled from the premises. On 18th of July only 38 workers punched in. This is in contrast to other reports which say that the workers fled on 25th of July, after the police repression.

19th of July 2005

1,100 workers have signed the undertaking. Management says that workers would be taken back in groups of 100 per day. The union refuses that, says that these workers might have to face repression when entering in such small groups.

23rd of July 2005

HMSI workers block the NH8 highway from 6 pm to 10 pm.
25th of July 2005

3,000 to 4,000 workers (700 to 800 from companies other than HMSI) gather in a public park in Gurgaon. First fights in Old Gurgaon, a police car is set ablaze. Later on political groups and provocateurs are blamed. The demonstrating workers are called to an administration building, they are promised to meet authorities for negotiations. Instead they are beaten up brutally by a mass of riot cops. The attack must have been planned before hand. 800 workers get badly injured, the violence continues after the arrests in the police stations. 63 workers are charged with attempted murder. Out of 375 arrested workers 79 did not belong to unions or HMSI. When the workers inside the HMSI factory hear of the incident they escape from the factory (literally jumped the fences), in fear that similar things would happen to them.

26th of July 2005

More fights in Old Gurgaon. Relatives search for disappeared family members in hospitals and police stations. Only the A-shift runs at the factory.

29th of July 2005

Settlement between now recognised union and management:

a) work discipline is guaranteed after return to the factory;

b) pending collective demands are considered as withdrawn, no demands for a year;

c) in case of good conduct and productivity, management will increase wages within a year;

d) number of workers hired through contractors will remain the same as before the 27th of June (although those workers hired through contractors who actually worked before the 27th have never been taken back on);

e) HMSI considers taking the 33 dismissed trainees back on (which did not happen)

Over 50 workers got charged with ‘attempted murder’ after the police repression. Their cases are still pending in July 2007. It is very likely that the police will get away un-persecuted by using these cases to blackmail workers and their representatives.
May, June, July production went down to 10 per cent of previous monthly production (200 scooters per month instead of 2,000). This meant a loss of 1.3 billion RS due to the lock-out.

The incident at HMSI was part of, and lead to, a re-balancing of forces within the ruling class: talks took place between Japanese and Indian government representatives about FDI policies and its legal framework; the local employers’ association claimed more support from local and central state; the main unions demanded to be included in the decision making. The traditional left reacted rather helplessly, criticising FDI in their (usual) patriotic ways. For the local representatives of capital it became clear during the month of lock-out and mobilisations that the situation could turn either way. During the lock-out the Gurgaon Industrial Association demanded state intervention, if necessary by using police force, stating that the situation has ripple effects and creates turmoil in other factories in the area. There is unconfirmed information that the management of Hero Honda gave a wage increase to the workers hired through contractors during or shortly after the Honda HMSI incident. Escorts workers in Faridabad report, that the management stopped a planned re-structuring attack because of the generally tense atmosphere (see newsletter no.5).

It is clear that the lock-out was a major turn of the conflict, a moment when workers became more dependent on external support and on the official (union) organization, which had their own interests in the matter. The further mobilisation (rallies, speeches of leaders, demonstrations), unlike the actions within the factory, took place in the traditional manner, ending in workers being trapped and beaten up in a public event. The question is if workers could have avoided being victimised like that. The focus on union recognition became part of the problem: for the union to be officially recognised, the ‘public attention’ and the political stage-play became a necessary element. After the repression, the union got recognition, but their influence was restricted by the final agreement. The workers hired through contractors, who fought together with the permanents, were not and are still not represented by the union. For hundreds of them the outcome of the agreement was that they lost their jobs, while the permanents were able to go back in. When asked about
the atmosphere inside the factory after the mass-beatings and whether management had any problems with discipline and angry workers who had just been brutally crushed, a union representative said: “No, there are no problems. Now that we are accepted by the management the atmosphere is better than before”. The union got a small office inside the factory, right next to the hiring office of a labour contractor. The eight to ten union reps are young workers themselves, they have worked on the machines or assembly lines for the last years. During the mobilisation they became target of company goons, they were beaten up on their way back from work. Now they do not have to work on the shop-floor anymore, for the whole time that they are elected. Being an official union rep also means to become part of a wider organisation, they attend meetings of other representatives, they learn ‘how to organize’, and maybe use internet and computers for the first time.

After the end of the lock-out the situation in the factory has changed in some details. The wages increased slightly: in october 2005 permanent workers get 8,150 Rs (unskilled) and 11,200 Rs (skilled). There is an increased medical coverage for permanent workers’ family, it became easier for workers to get a day off (e.g. in case a family member is ill). Management started to discuss workers’ related problems with union office bearers.

A union rep said in March 2006 when asked about these changes: “Things got better after the conflict: before the strike you had to inform your supervisor before going to the toilet, now there is a guy who takes over while you’re on the loo. Another example: there are about 80 to 90 women in the factory, before the strike rules were very strict (no talking to each other), after the strike it loosened up. But there are bad changes, as well. Before the lock-out the contract workers had the chance to become permanents, after the conflict this chance is scrapped. The union wants to re-install this option”. So far this did not happen. Since the recognition of the union the numbers of workers hired through contractors has increased, and so has the productivity of the plant.

Following quote shows the difficult position of the union after recognition:

“One incident took place on 2nd September, 2005, when two supervisors in the aluminium machine shop behaved with workers authoritatively
and in a provocative manner as they used to do so earlier. The workers of this department reacted; some 150 of them came to the Union leaders seeking their intervention. When the Union leaders went to settle the issue with the Senior Manager concerned, he spoke angrily with the Union leaders. Workers of the whole shift stopped the work for some 15 minutes. A Union leader said: “We went to all the departments to exhort the workers to start the work; we did not want work to be interrupted. That day, most senior managers had gone to Chandigarh for some work. After they came back, the next day they all felt sorry for the incident and appreciated our intervention in the matter...”

Another incident occurred on 9th September, 2005. The A shift in assembly achieved its target of 1000 scooters for the first time after the Union formation. Earlier, the target used to be achieved in almost every shift. Union leaders said that the targets could not be achieved for various interruptions. However, they could not satisfactorily explain why these interruptions did not affect the target achievement earlier. On hearing the target achievement that day, Vice-President of Manufacturing, along with General Manager (GM). Production came to the shop floor during the lunch time and commended the achievement of the workers; the next day, sweets were distributed to all workers.

(MANAGEMENT CASE HONDA MOTORCYCLES AND SCOOTERS INDIA LIMITED (HMSI)* Debi S. Saini)

*** 3. On wildcat strike of workers hired through contractors at Honda HMSI, September 2006

It is difficult to get a clear picture of the wildcat strike of workers hired through contractors in September 2006. As sources of information we have some news items from the media (see below), some conversations with people close to the union and an article from Faridabad Majdoor Samaachaar. The FMS article cannot relate to first hand experiences, it was written after conversations with people close to the Honda union. In July 2007 we had a short chat with a worker hired through contractor who took part in the strike.

“Contract workers \ strike illegal: Honda

New Delhi, Sept 20: Honda Motorcycle and Scooter India (HMSI) on
Wednesday described as “illegal” the strike by contractual workers at the company’s Manesar Plant, which entered the second day today as efforts to end the deadlock failed to yield results. Around 200 contractual workers are demanding that they be absorbed as regular workers of the company, while the HMSI management said it was not possible. “Under labour laws, a worker is entitled for regularisation only after 240 days of service. Here the strikers are those who have not even spent 100 days. How can we take them on the company’s rolls,” a company official told media persons. He said the management “has nothing to do” with the reconciliation talks. “It is between the contractors, their workers and the state labour department,” he said. Asked whether production in the factory was hit due to the strike, he claimed the output was normal. “The production is as per market plan and there is no effect due to the strike,” he said. The riot police have been deployed at the plant to prevent any outbreak of violence (The Tribune).

According to first hand information from people close to the union the strike was mainly instigated by ‘ring-leaders’ and ‘trouble-makers’ amongst local workers who have a link to some anti-union permanent workers and to the management. The strike was seen as an attempt to undermine the union. They described the situation as following:

“The Honda Workers Union was about to settle a first agreement with the management and it made sure that management would agree that any vacancy within the permanent work-force would have to be filled from contract workers who currently work or used to work at Honda. The Union announced a gate meeting in order to explain the agreement to all workers. Due to misunderstandings some contract workers thought that the union reps did not want to talk to them. A faction within the contract workers (apparently those who worked during the lock-out in 2005 and who allegedly are backed by the management) called A-shift contract workers into the canteen. All contract workers went, most of them thought that the action was called for by the union. The faction of contract workers then called for a strike, the contract workers followed the call. They shouted anti-union slogans, criticising that the union would not represent them. The A-shift stayed inside the plant, B and C shift remained outside. Union officials were told not to go to the gate, they would be beaten up. The union nevertheless backed the strike, made sure that water was supplied, that the canteen was working, that fainting
workers would be brought to private hospitals. Outcome: the management agreed to sign a settlement which states that contract workers are not allowed to be used in core areas of production. The union want to use this in order to pressure management to regularise contract workers in core departments. But this is not fixed yet, it is about to happen. After the dispute the “provocating faction” of the contract workers was kicked out”.

There are some open questions: Why would the management instigate trouble against the union shortly after they came to an agreement with the union? How could a small group of ‘trouble-makers’ make 700 workers stay on strike for several days inside the plant and make the other two shifts support them from the outside? Similar questions are raised in the following article:

(FMS no.220)

Plot 1, Sector-3, Manesar, Gurgaon – Honda Motorcycles and Scooters India (HMSI). The Deputy Commissioner of Gurgaon congratulated the union, the labour commissioner and the deputy labour commissioner for a signed three years agreement.

On Monday, the 18th of September the union talked to an assembly of workers about the agreement. When workers hired through contractors and apprentices started to raise questions the leaders replied that the assembly was over because the company had only given one and a half hours for the meeting and two hours already passed and that therefore the matter should be talked about later.

On Tuesday, the 19th of September, the workers hired through contractors and the apprentices who arrived for the A-shift sat down in the canteen. The union leaders did not dare to talk to the workers who were ready to attack them physically. The company locked the canteen from the outside, cut the water supply and the electricity connection. If it had been possible for the company they would have reduced the rebellious workers to ashes (like Shiva).

Honda company had locked the A-shift workers inside, but their workmates of the B and C-shift were outside. Newspaper and TV reporters who had tactically forgotten the trouble of the 25th of July 2005 were reminded of it by workers. They arrived at the factory hunting for news.
The company refused the newspaper and TV people entry to the factory and said that it was an issue involving 150 workers. Over mobile phones the locked in workers said that the number was 1,200 to 1,500 workers. According to the union about 700 were inside. Seeing trouble to come the company opened the doors to the canteen. The workers kept on sitting in the canteen. On the 19th of September the company refused workers hired through contractors and apprentices of the B and C-shift entry to the factory. The B and C-shift workers who were gathered at the factory gate started to shout slogans.

The sly labour officers who had displayed their happiness over the agreement got cold feet. The labour commissioner from Chandigar arrived at the Honda factory on the 20th of September. Inside the factory the sahib found neither representatives of the company nor from the union! The rebellious workers who had stopped production and stayed inside talked to the labour commissioner for four hours and came to the conclusion that this sahib had come in order to check the current conditions of the workers so that the he can inform the company about the current state of affairs.

The DC of Gurgaon declared the situation as normal and ordered the police inside the Honda factory. In order to bring those workers who had fainted out of hunger to the hospital, the DC gave the instruction to place a public ambulance inside the factory.

On the 22nd of September the court declared the workers’ resistance as illegal and gave the order to police and administration to kick the workers out of the factory. He also ordered that the gate keepers should make sure that the workers kept in a 300 metres distance away from the factory premises. After the order had been ignored he repeated it on the 23th of September.

After the union has proved to be worthless some union supporter worked hard in order to check the mood amongst the workers, to transfigure information and to sniff out and isolate the ‘trouble makers’. On the 24th of September the revolt was cooled down.

Our greetings go out to those young workers who arrived at the Honda factory equipped with their experiences of having worked here and there for a short time and who started the revolt there!
Last year there were 1,200 permanent, 1,600 trainees, 1,000 workers hired through contractors and 400 apprentices employed at Honda HMSI. Today there are 1,600 permanents, 500 to 600 trainees and 2,000 workers hired through contractors and apprentices together. According to a worker last year the main problem at Honda factory was the enormous workload. At the present the company-union three years agreement increased the wages of the permanents and introduced an incentive scheme, in order to double production. According to an experienced worker from Goodyear Tyre, new workers trapped by the incentive scheme loose their minds and become like ants sticking to raw sugar-molasses. During the revolt at the Honda factory the permanent workers kept on working.

Less than a month after the strike the union and HMSI signed a pledge.

HMSI signs pact with labour union
(October 2006, India Infoline)

“We at Honda believe that the mutual trust and respect between the management and the union will become stronger in the years to come,” said Yukihiro Aoshima, President and CEO, HMSI. “We are currently producing 1.2mn vehicles per year and we hope that with the co-operation of the workers we will be successful in increasing our rate of growth in the years to come and give our workers a brighter future.”

Suresh Gaur, President, Labour Union, HMSI: “Union is a representation of the workers and we always work towards solving their problems and improving their standards of living.” “This pledge is a symbol of renewed dedication and commitment from both the management and the workers. We hope that the management and the union can work together to create new benchmarks in Industrial Relations and take the company to new heights.”

Although it might be unlikely that the wildcat strike was a mere deed of management-friendly ‘trouble-makers’, the HMSI factory nevertheless is still a battle-field of different political interests, with middle-men trying to instrumentalise workers for their political aims. In June 2007 a fight took place between workers inside the factory. One ‘local’ worker had to be taken to hospital, but was discharged on the same day. We have no first hand info about the seriousness of his injuries, but a Honda worker asked in July 2007 told us that he is still not able to work. The group of
‘local workers’ allegedly backed by the management filed a case against the main union leaders, who were charged with attempted murder. The HMSI management reacted by suspending the union leaders, who had to go underground for some time. In August 2007 they still remain suspended. There is not much use in speculating about the motives of the management. After the agreement there have been only minor conflicts about flies in the canteen food and the bus service. Usually the management is happy if the union takes care of solving such conflicts ‘in an official manner’ (representing it, writing a complaint etc.), instead of letting these conflicts boil amongst workers where they might become a trigger for bigger trouble (see question of canteen food during the strike at Shivam Autotech, newsletter no.5). On one hand the ‘fight amongst workers’ became public and the management had to confirm its authority inside the plant by taking measures. If the management had wanted to use the incident to ‘crush the union’ it would have sacked the leaders instead of suspending them. On the other hand the management must have known that by suspending the main union leaders it will create further tensions, as the following article makes clear.

As union tension worsens, Honda awaits internal report
(19th of July 2007, Indian Express)

The prevailing unrest at Honda Motorcycle and Scooter India (HMSI) plant in Gurgaon is heading towards a deadlock with the management and the workers’ union sticking to their guns.

“We want peace on the factory floor but when violence occurs, we have to act. We are forced to take the union head on and though the quarrel was between union members, we had to intervene to maintain security,” said Harbhajan Singh, AGM (industrial relations), HMSI.

All India Trade Union Congress (AITUC) played down the incident claiming it was just a scuffle. “The victim has filed an affidavit for withdrawal of the FIR and the matter has been amicably settled. The management should now withdraw the suspension orders to maintain peace and tranquillity in the plant;” said Gurudas Dasgupta, general secretary, AITUC, to which HMSI union is affiliated.

Masayuki Kato, director (general affairs), HMSI: “We are now quite clear that the enquiry would be conducted till a logical conclusion is reached
and the government should not intervene as it is an internal matter. Unless the seven workers give a written assurance that there would be no further violence in the plant, the suspension order would not be revoked.” Written assurance, for the union, is a no-no. “We are not interested in giving something in writing as there is no need for it,” Dasgupta said. “The problem was between the workers which has been resolved.”

In August 2007 the suspensions of the union leaders were withdrawn by the HMSI management. We assume that the quarrel between management and union leadership is not of much direct importance for most of the shop-floor workers, particularly for those hired through a contractor. They have their own problems. We tried to get some information about the ‘fight/incident’ from a worker’s perspective, but the young worker hired through contractor we talked to had already been ‘given a break’ (kicked out after six months) when the mentioned trouble started. He said about the situation inside the factory:

“There are huge numbers of workers hired through contractors in the HMSI factory. In production about 3,000 workers are hired through two different contractors, there are 200 cleaning workers, 100 canteen workers, more than 50 security guards, 40 drivers for the management, 150 drivers for the buses and cars of the work-force, all hired through contractors. Nowadays HMSI does not keep any trainees and the permanent workers do (only) the essential work. In production most of the work is done by workers hired through contractors. All of us have ITI, but inside the factory they do not give us work according to our trade. After six months of employment they give you an eight months break. Working here reduces as to good for nothings, but we are forced to continue working here. During the last months the contractor has engaged people in order to control and supervise us, in the Scooter plant alone there are ten of them. If they see you sitting down they will snatch away your company ID card and you will be kicked out. One is always in fear because of that.

At Honda our wage is 3,249 Rs, of this sum 1,000 Rs are deducted for whatever reason and 775 RS are added as a bonus for complete attendance. The work in the factory puts a lot of pressure on you, but eager for the attendance bonus we rarely take a day off. In the S-
department we work in the heat the whole day. And in the paint shop, the machine shop, the weld shop there are 70 to 100 hours over time each month – the over time is paid at double rate so the burden of work comes together with ‘desire’ (to get the double payment).

In the Honda factory 390 to 400 Rs from our wage is cut for ESI and PF. On the pay-slip of some of us the PF number shows on the pay-slip of others it does not. About the PF there is a full swindle going on – after the big contractor collected a huge amount of money allegedly in the name of a school in Delhi he managed to forge things in a way that 95 percent of the workers who were employed at Honda could not receive their PF money after they got their break “.

*** “Not yet special enough: Special Economic Zones, Part Four” –

Short note on farmers threatening to commit suicide against land acquisition and short article on factory closures in Noida, possibly related to the re-concentration of capital in the Gurgaon, Manesar area

After several road blockades and protest meetings the local farmers keep on fighting for better financial compensation for their land, seemingly by all means, necessary or not...

Farmers threat with suicide against SEZ
(Gurgaon, 17th of June 2007)

The local farmers’ institution failed to postpone the decision on land acquisition in seven villages in and around Gurgaon, land for the planned SEZ. The affected seven villages are Pukharpur, Saharawan, Fazilwas, Kukrola, Mokalwas, Kharkhari and Baaslambi. The developments did have a fair dose of melodrama. After the authorities did not listen to the farmers’ demand, a resident of Makrola village tried to commit suicide by strangling himself. The police took him into custody. A group of women tried to surround the deputy commissioner when he arrived at the venue. A group of persons apparently hijacked the proceedings of the mahapanchayat demanding that the deputy commissioner should come to the venue to accept the memorandum, failing which some of the participants would commit suicide.

The re-concentration of capital in the Gurgaon/Manesar area seems to have ripple effects in other industrial areas of the wider Delhi region...

Noida: 3,000 small units shut down

Gautam Budh Nagar and Noida no longer seem to attract small-scale industrial units, over 3,000 of these have been forced to close down. As per the official figure, over 3,100 SSI units have ground to a halt recently. A few years ago, all entrepreneurs were keen to set up small-scale industries as attractive terms and incentives were being offered. At its height there were more than 8,800 small-scale industrial units on the go there. But due to some restrictions and other negative factors, the number has now come down to about 5,700. The owners of small units gradually realised that they could not survive in the face of stiff competition from bigger and more prosperous companies. A few industrialists had decided to relocate to other places. According to sources, electronics and steel goods and packaging units were prominent among the SSI units, which have closed down. Some people had decided to relocate their units to other states to avail better facilities and incentives being offered there. The multinational companies had jeopardised the survival of electronics units.

Workers hired through contractors

AITUC

The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO

Business Process Outsourcing: for example of call centre work, market research, sales.

CITU

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers

Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, or industrial accidents and to provide medical facilities
(ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 39 Rs (October 2007)
1 Euro = 56 Rs (October 2007)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprenticeship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi

Slum Hut

Lakh

see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.
PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to prove your residency. Catch 22. Local politics use the ration depots and cards as a power tool, which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enables them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six month to two-year contract. Depending on the company, they are sometimes promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent into early retirement.
Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt from Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers’ services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the work force, their wage is 1/4 to 1/6 of the permanents’ wage.
Rage against the Machine at Maruti Suzuki

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant labourers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; at the outskirts of Gurgaon India’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to get to know more about working and struggling in Gurgaon, if you want more info about or even to contribute to this project, please do so via:

In the December issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** “Reports from workers exploited in the net of automobile suppliers”,

Automobile Industry Part Eight –
Some short reports from workers employed at Omax, Lumax, Breaks India and Anu Industries, all suppliers for the local automobile industry
in Gurgaon. The reports are results of short chats – with workers we met more or less randomly at various tea stalls in the industrial areas – and a short internet research session. They provide some information about the extended factories of Hero Honda (see newsletter no.4), Honda HMSI (see newsletter no.7) and Maruti Suzuki (see this issue, newsletter no.8).

*** “Three brothers” –

Short description of the long wage and house working days of three brothers who share a room in Gurgaon.

*** “Made paranoid, kicked out, and crashed…” –

We document three short articles on occupational risks of call centre workers. The first article relates to the increasing ‘safety paranoia’ in Gurgaon. IBM management in Gurgaon sent out an email to its 2,000 employees, which fosters the social psychosis, while middle-class DLF (private developer) residents make propaganda against migrant workers. The second article questions the common picture (and self-portrayal) of the ‘distinct BPO employees’ who do not share the same basic risks of being hired and fired like any other worker. The fact that the call centre workers prompted the sacking by ‘slogan-shouting outside the office’ shows that in this unknown situation they reacted like they think workers would normally react. The third article demonstrates that the attempt of the BPO companies to save money on transport not only extends the working-hours of the employees (longer tours and waiting inside the cabs), but also causes speeding and fatal accidents.

2) Collective Action –

Reports on proletarian struggles in the area

*** “Successful wildcat strike of temp workers at Delphi in Gurgaon” –

Short note on the incident. Many of the workers hired through contractors who went on wildcat strike in January 2007 have since left Delphi. In August 2007 the temp workers – not represented by any union – laid down tools again for few hours. The management first reacted by threatening a lock-out and closure of the plant, then decided to give the workers a significant pay rise.

*** “Welcome to the Machine” –

Summary on re-structuring at Maruti Suzuki, Gurgaon, Automobile
Industry Part Nine

The supply chains of Maruti are the main arteries of the local industry, they reach down into the backyards of the slums (see newsletter no.3), controlling their labour intensive work by connecting it with work-shop production, semi-automatized small factories, capital intensive ‘first tier’ factories and the main assembly lines of its plants. Being surrounded by and dependent on a vast network of factories which exhaust a low paid, mobile labour force, peace in the industrial centre is a top priority.

Maruti Suzuki more or less managed to suppress unrest in the industrial core, the assembly plants. It managed to do this on one hand by paying comparably high wages to the permanent work-force, by implementing a paternalistic management policy, by using the union and local political class as a mediator or show-fighter and last but not least by unleashing severe repression against workers after the lock-out in 2000. The following overview has the same limitations as many other (lefty) studies on Maruti: a lack of real reflection of the current situation for the young work-force hired through contractors, working in the assembly departments, paint shops and machine halls. Since 2000 Maruti Suzuki sucked in a low paid work-force, e.g. assembling the new ‘sales hit’ SX4, a compact car priced at 690,000 Rupees, while paying the workers 4,500 Rupees per month. Under the pressure of the market Maruti Suzuki decided to let these workers be employed right in the centre of the web, where they now form the majority. A real inquiry would have to be undertaken together with these workers hired through contractors and those of the suppliers, in order to discover the fragility and fractures within the moloch.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** “Reports from workers exploited in the net of automobile suppliers”,

Automobile Industry Part Eight –

The following short reports are results of random chats at chai stalls, mainly in the Manesar industrial zone. They have been published and distributed in Hindi in FMS no.229 and no.230. They give some information about the extended factories of Hero Honda (see newsletter no.4), Honda HMSI (see newsletter no.7) and Maruti Suzuki (see this issue, newsletter no.8).

Anu Industries Worker

Anu Industries manufactures electrical and electronic components (for example: coils, actuators, relay assembly starters, flasher relays) for Udyog, Hyundai Motors, Ford, Hero Honda, Honda Scooters, Fiat and others. In Gurgaon Anu Industries opened its plant in 1986, in order to supply Maruti. It later opened another factory in Manesar.

This is a translation from Hindi of an interview with a worker. He uses the word ‘madam’ in English to refer to their female boss.

In the factory situated on Plot 102-103, Sector 18 in Gurgaon all workers are gathered at 8:45 am and at 9:15 pm in order to recite religious prayers for the company. Then the female production manager speaks about the production. A whole load was rejected and returned to the factory so the Madame said: “If you want to continue working here, then work! If not, you can go and no one will force you to stay here. But don't mess up the raw material!” 15 days were cut from the wage of one worker and after the company prayer he was called in front of all workers
and he was verbally abused.

In the factory 400 female and 250 male workers are employed through three different contractors. Out of the 30 permanents most are supervisors, there are only 2 to 4 permanent workers. The women work from 9 am to 6 pm, some are made to stay one to one and a half hours longer. The men work two shifts from 9 am to 9:30 pm and from 9 pm to 9 am. The over-time payment for the newly hired workers (during the first six months of employment) is 8 Rupees per hour and for the others it is 10 Rupees per hour.

After six months of employment at the company they start to reduce money for ESI. The money for PF is deducted right from the start, but people who leave before being employed for six months do not get any of this money. One worker who left the job after having worked 110 hours was given only 400 Rupies by the contractor who said that the rest is deducted for ESI and PF.

At Anu Industries a lot of soldering work takes place, there is a Hero Honda line, a Honda line a Bajaj line, a soldering line and a rejection line. Having to stand upright during the work, the feet and the hips start to ache. You have to work very fast – at 6 pm they ask about the status of production in order to inform the madame. If you leave without having met the production target or without telling the madam the reason for it, e.g. a faulty machine, you will be marked as absent for this day.

There is no canteen in the factory. There is no space for taking your meals, so we have to eat here and there. During the meal breaks they do not let us leave the factory – if, for any reason, you have no roti with you, you will remain hungry. Yes, the company gives tea.

The worker later tells about his way to work: he has to walk about five kilometres on foot each way. On both journeys he has to cross a four lane highway, the NH8 (see pictures on web-site), which is extremely dangerous particularly at night. For a safer way to cross the highway he would have to make a four kilometres detour each way to and from work.

Lumax Worker

According to the company web-site Lumax has a 60 per cent market share of automobile lightning systems (head lights, indicators etc.) in India. The company has seven plants in India, two of them are located in
Gurgaon, employing 450 and 300 permanent employees. 35 per cent of Lumax is owned by Stanley Electric Limited, a multi-national automobile supplier based in Japan. Lumax basically supplies all automobile manufacturers in India, ranging from Maruti Suzuki (cars) over Hero Honda (motor cycles) and Asholk Leyland (trucks) to John Deere India (agro machinery). So far Lumax only exports 3 per cent of the Indian production. In cooperation with the car manufacturer Tata, Lumax plans to set up a factory in Thailand.

“The factory where I work is situated on plot 46, sector 3 in the Industrial Model Town (IMT) Manesar, near Gurgaon. In the plant 30 permanent workers are employed and 270 workers hired through one contractor. There are various shifts: in the moulding department people work from 6 am to 6:30 pm and from 6:30 pm to 6 am. In the assembling, finishing and maintenance department shift times are from 9 am to 9 pm. The quality department works from 8 am to 9:30 pm. In dispatch there is one long shift from 7 am to 11:30 pm or even till midnight. In the filter department the shift times are from 9 am to 9 pm, but on fifteen days per month the shifts are 24 hours, from 9 am to 9 am. For the workers hired through contractors the overtime rate is paid single, they get 12 Rupees extra per hour. Money is cut for PF and ESI, but people who leave the job or who are kicked out only in rare cases get the PF money.

The work load is high – every day six trucks bring finished products to the Honda Scooter factory and one truck and two smaller three-wheelers bring stuff to Maruti Suzuki car factory. Caught in the rhythm of production workers are not allowed to move away from their work station. Lumax has another factory in Manesar sector 5 producing filters for vehicles, engine parts and spark plugs, there are more Lumax factories in Gurgaon sector 18, in Dharuhera (near Gurgaon) and Faridabad.”

Breaks India Worker

Plot 873 – 874, Udyog Vihar Phase 5, Gurgaon. In the factory 30 permanent workers and 175 workers hired through Eris Corporate contractor manufacture disc breaks, drum breaks and boosters for Maruti. The wage of the permanents is about 8,000 to 9,000 Rs, after 1998 noone has been made permanent. The wage of us workers hired through contractor is 2,648 Rs – those 25 workers who were employed since a
longer time get 3,248 Rs. The parts come from the main factory in Tamil Nadu (sometimes even by aeroplane) and here they are assembled on four lines. We always have to stand while working. After a while hips and feet start to hurt. Most of the people leave the job after 2, 4 or 6 months. In the Breaks India factory money for PF is deducted from the wages but for those people who leave the job after a few months the form necessary to withdraw money from the fund is not filled in. Per month we make 50 to 80 hours over-time, which is paid at single rate.

Ten minutes before shift starts we gather in the basement of Breaks India and everyone makes five minutes exercise. Then everyday some worker has to read out loud the company quality policy, which is put up at the wall – and the rest of us have to repeat what he said. The supervisor and manager teach about quality. After the workers have been sent to work the bosses have a meeting amongst themselves.

(When a manager read this short report in the FMS newspaper he got angry and said to group of workers: “They talk about everything, but they don't say that a lot of workers of this company still consume tobacco, despite all warnings”)

Omax Worker

Omax is a kind of jumble automobile supplier, manufacturing sheet metal parts, painting and plating parts for two wheelers (for example: steering handles, oil pumps, pedal kick starters, chain cases) and four wheelers (for example: fuel filters, door beams, pistons, transmission shafts, seat assembly). Turnover-wise Omax is amongst the top ten Indian automobile suppliers, it is the biggest sprocket manufacturer in India (2003)

In the Gurgaon area Omax Group (Speedomax, Automax) runs five different plants. Omax started as a supplier for Hero Honda setting up the first Sheet Metal and Tubular Components plant in Dharuhera (industrial town close to Gurgaon) in 1985. Today Omax supplies parts for Maruti Suzuki, Honda HMSI, Hero Honda, Eicher TVS and others, though Hero Honda accounted for 75 per cent of the turn-over (2004). Apart from parts for the main automobile companies Omax also manufactures for the first tier suppliers of the very same companies, for example Delphi, Denso, Bharat Seats, Knorr Bremse. Omax also manufactures parts for European automobile production, for example
Piaggio in Italy, Rasmussen in Germany, Tenneco and CNH in Belgium or Supersprox in the Czech Republic. Omax also supplies parts to IKEA in Sweden.

In 2005 Omax bought an US based car supplier as part of the export strategy. ’s exports have grown in the past few years. The company’s exports had increased from about Rs 3.3 crore in 2003-04 to Rs 15 crore in 2004-05. In 2005 Omax was troubled by some strikes that lasted for a month between June and July, but were resolved a day before the police-protesters clash broke out in Gurgaon over the Honda HMSI issue. The strikes caused Rs 5 crore (Rs 50 million) in production losses.

In the factory situated in sector 3, IMT Manesar in Gurgaon, 200 permanent and 1,000 workers hired through four different contractors are employed. The majority of the permanent workers work in the tool room, manufacturing dies, they work on two 8-hours shifts. The workers hired through contractors work two 12-hours shifts, the over-time is paid at single rate. To have to stand upright during the 12-hours shift is the bloody rule. It is heavy work – we make 20 to 30 kilo body frames for Hero Honda motorcycles. After turning the body-frame (weighting 20 to 30 kilos) for many times you have to do welding work 12 hours constantly, which messes up your stomach. On top of it all the company increases the production target constantly and our working day only ends after having achieved this target – inside the factory getting water or going to the toilet is made difficult and after twelve hours shift they even make you stay longer for one or two hours.

*** Three brothers –

Short description of the long wage and house working days of three brothers who share a room in Gurgaon, published in FMS no.230.

The oldest brother comes back home from the factory at 9:30 pm and after having had a wash he does the washing up of the utensils used in the morning. I come back at 10 or 10:30 pm and after having had a short rest I make rice and lentils, while the oldest brother goes to the market to get veggies for the morning. The second oldest brother gets home at 11 pm. The food is ready around 11:30 pm and at 00:30 am we go to sleep. We share one room. Between the six rooms on the floor we share one latrine and one bathroom and there are many people who have to go to work in the morning and some school children, so we have to get up at
six in order to get our turn... you do not get your full sleep, so you dose off later while you are at work and you feel hungry. When I have freshen up a bit I wash the utensils from last night and we make roti and veggies. At 8 am the food is prepared. Having a wash, taking roti and veggies for breakfast. We keep roti and veggies in our boxes which we take with us when we go to work at 8:30. We go to work on foot, which takes 10, 30 and 40 minutes. The oldest brother works in a factory which makes clothes for export, he works 12 hours shifts. The second oldest brother works as a security guard for Group4, he works 14 hours every day, he has no day off during the whole month. After having come back from the village and having been unemployed for a short while I now work for a car supplier, 12 and a half hours per day. When there were only two of us brothers, the rent was 1,300 Rupees, now that I have arrived the land-lord increased it to 1,500 Rupees. There is a meter for electricity, we have to pay 100 to 150 extra per month, for the waste collection we have to pay 50 Rupees... under these conditions, how can a worker maintain a family? We have to send some money home – my mother and father work the land back home in the village, the smallest brother is still in school.

We document three short articles on occupational risks of call centre workers. The first article relates to the increasing ‘safety paranoia’ in Gurgaon. IBM management in Gurgaon sent out an email to 2,000 employees, which fosters the social psychosis. The second article questions the common picture (and self-portray) of the ‘distinct BPO employees’ who do not share the same basic risks of being hired and fired like any other worker. The fact that the call centre workers prompted the sacking by ‘slogan-shouting outside the office’ shows that in this unknown situation they reacted like they think workers would normally react. The third article demonstrates that the attempt of the BPO companies to save money on transport not only extends the working-hours of the employees (longer tours and waiting inside the cabs), but also causes speeding and fatal accidents.

Made paranoid...

The middle classes in Gurgaon develop an increasing paranoia about safety. Thousands of low paid security guards (often employed for a single household), gated residential areas and the opening of several new police stations are expression of this existential angst. The middle
class can feel that the widening gap between slum-dwelling proles and managers in their DLF villas is beginning to cause tensions. Following article published in the Times of India shows that the first victim of the paranoia are the migrant workers:

“The large, densely populated villages of new Gurgaon have emerged as a major security threat. The problem seems to lie in the unhindered migrant influx into Gurgaon. While most of them are looking for employment, there are many others looking to make a fast buck through crime. DLF executive, Anil Anand said: “About 50,000 migrant labourers are living in the villages surrounding DLF. Residents feel migrant labourers need to be identified and even removed. This, however, can be implemented only by the police, as the colonisers cannot exercise their power on gram panchayats”. And picture this: An unauthorised settlement exists between Garden Estate and S block in DLF phase III. A drain flows between S block and the settlement. If a fire breaks out here, fire tenders cannot even make their way through because of the drain. In this case, the houses of Garden Estate and the slums will be gutted with no one to save them. Another DLF resident rues, “There is a huge slum cluster behind our house as well. Why does the administration turn a blind eye towards it? They even overlook problems like electricity theft”. The police however allege that the residents are themselves involved as they employ the family members of these slums without their verification and invite trouble. The residents of DLF will meet the deputy commissioner (DC), Sudhir Rajpal, to chase the issue of removing migrant labourers from the villages surrounding new Gurgaon”. (pictures of DLF and Chakkarpur village on the GurgaonWorkersNews web-site)

The middle class fear spreads from their living areas to the work places. After an IBM employee got car-jacked at gunpoint in front of the IBM office in August 2007, the IBM management sent out an e-mail advising employees to avoid following a regular pattern of coming in and going out of the workplace. They should keep changing their timings, routes, place of parking etc. “Remember there may be miscreants watching your movement/activities,” it says. IBM has over 2,000 employees in Gurgaon. An IBM employee said that most of them were unaware of the car-jack incident. “It’s getting serious. Earlier, we felt the crime rate was low in Gurgaon compared with Noida and Faridabad. That’s no longer the case”.

236
In return for their law and order service the BPO industry in Gurgaon started to train cops how to answer the phone: “In a first of its kind private-public partnership initiative, the BPO industry in Millennium City has taken up the task of training policemen who attend calls at the control room and police stations. Training has already begun for around 100 cops. The proposal for such a training module came up at a recent meeting of the Business Process Industry Association of India, where complaints came up against cops mishandling calls, often responding harshly or indecently”.

…kicked out…

“When Jitendra Sharma, a school passout, joined a swank Gurgaon-based BPO in the last week of May, he believed he was on the high road to a stable career in the industry. Barely a month later, Sharma and many of his colleagues who had joined the start-up company are jobless. Last Wednesday, around 40 of them were suddenly asked to ‘stop’ coming to work. After a round of slogan-shouting outside the office of the BPO – Gnome Business Solutions at the Global Business Park on MG Road, Gurgaon – the management issued the sacked workers post-dated cheques by way of a final settlement. “We hadn't even got our first salary when we were suddenly told there was no work for us. Our dream has been shattered,” Sharma, still in his late teens, said.

For many among the retrenched, this wasn’t the first jolt of their young careers. Said Shyam Tyagi, who was among those sacked, “Many in this group were earlier working with another call centre, Avancore. Last Diwali, it declared a two-day holiday. When we returned to work, the call centre had vanished.”Amitoz Singh, MD of Gnome Business Solutions, said as far as the company was concerned, the sacking was a closed chapter. “All of them were engaged in a unit calling in Canada. Since the project was complete, we asked them to stop coming to work. Now, we have given them their cheques,” Singh said.

Industry leaders say the episode is part of a larger trend. According to Deepak Kapoor of BPO News, an industry-related website, a study done by the organisation shows more than 60% of small BPOs in India – those
employing between 20 and 100 people – close down within months of their launch.

(Times News Network, 4th of July 2007)

...and crashed

In the past few years, call centre cabs in the region have been involved in numerous road accidents in which many employees and passers-by have lost their lives. “Thousands of taxis operate in the region, but why is that only call centre cabs are involved in accidents? We need to find out why do they drive recklessly,” says Deepak Kapoor of BPO News, who was also the spokesman of Call Centre Association of India (CCAI). Sources in the industry say call centres spend about Rupees 3,000 a month as transportation cost on each employee but they don’t wish to increase this expense by hiring more cabs. “So, at the end of the day, the existing fleet covers more areas and ferries more people which explains their high speed,” said an industry insider. .

(TNN, 8th of July 2007)

Officially more than 2,000 people were killed and about 8,000 injured in accidents on Delhi roads in 2006. In a situation where most workers will perceive car traffic as either a thing of rich car owning people or as part of the industrial world (company cabs, trucks, buses), reactions to road accidents still have more of a distinct element of class hatred than, e.g. in the Western world. We reported about riots after fatal car accidents, which directly targeted the responsible company (see newsletter no.5). A similar situation erupted after three pilgrims got killed by a speeding truck on the 8th of August 2007. The accident happened in Manesar, close to the Industrial Model Town, a huge industrial area. After the accident pilgrims and locals burnt buses, blocked the NH8 highway and clashed with the police, forcing it to open fire and use batons to quell the violence. Though the police arrested the truck driver, the Kanwarias joined by villagers and youth of Manesar, set afire seven vehicles including the car of District Commissioner of Police (Headquarters) Gurgaon, station house officer’s car and two Haryana roadways buses.

2) Collective Action –

Reports on proletarian struggles in the area

*** Successful wildcat strike of temp workers at Delphi in Gurgaon –
Short note on the incident. Many of the workers hired through contractors who wildcat struck in January 2007 have left Delphi since then. In August 2007 the temp workers – not represented by any union – laid down tools again for few hours. The management first reacted by threatening with lock-out and closure of the plant, then decided to give the workers a significant pay rise.

Delphi Worker

Following just a short up-date, for a longer report see newsletter no. 6. In June 2007 the wages for workers hired through contractors were still only around 2,700 Rs, below the minimum wage of 3,510 Rs. There was a palpable anger amongst the workers. On 3rd of August at 3:30 pm, workers hired through contractors stopped working. At 5:00 pm the managing director held a meeting with A and B shift workers – announcing that they will not tolerate indiscipline, will lock the factory, will shift to Pune... and he started to give promises. On 6th of August 2007, the pay slips were given to the workers hired through contractors, the wages got increased to 3640, plus 800 attendance allowance (for workers who did not take a day off apart from Sundays), plus 200 on 3 months completion, another 300 on 6 month completion and 100 per year further on ... for some workers hired through contractors this meant Rupees 5000 as July wages, which is an increase of nearly 90 per cent compared to June.

(FMS no.230 – published before the strike news)

The over-time payment is still at single rate. There had been over-time of more than 200 hours per month out of which 30 to 40 hours were usually embezzled... Since the 20th of July there has been no over-time. Now there are three shifts: instead of two twelve hour shifts there are three eight hour shifts. The 108 harnesses which we used to finish in twelve hours are now compulsory target for the eight hour shift.

At Delphi company there are a lot of seedy deals going on. From all wages ESI and PF money is cut, but we don't get an ESI card. It was said that the PF number will be given after six months of employment, but even after a year it is not given. If you loose your work coat they will arbitrarily cut 200-300-500 Rupees from your wage – in the factory there are no lockers, so we take the workcoat with us on our way to and from work. If you loose your company-ID they will cut 200-300-500 Rupees... if
you lose the string attached to the ID-card they cut 50 Rupees. We are given a faked pay-slip – the contractor gets a print-out from the computer. The over-time is documented only under the condition that we have worked more than 100 or more hours overtime per month, which is paid at single rate (according to the law more than 50 hours over-time in three month are illegal and the payment has to be at double rate).

In the canteen those rotis which are cold-doughy-burnt are given to the workers hired through contractors. The permanent workers enter the canteen kitchen and take the fresh and fine rotis, but we are not allowed to enter.

*** Welcome to the Machine –

Summary on re-structuring at Maruti Suzuki, Automobile Industry Part Nine

We already published several workers' accounts describing the situation in various factories supplying Maruti Suzuki with parts. In the following we want to summarise the re-structuring process at Maruti Suzuki itself. Maruti Suzuki is Indians biggest automobile company, with a passengers car market share of still around 40 to 45 per cent. Gurgaon’s development has been driven by this industrial giant, which runs three plants on the Gurgaon campus (300 acres) and has opened a fourth plant in nearby Manesar in 2007. The total production capacity of these plants is over 730,000 cars per year. This is compared to a total production of about 1.3 million passenger cars in the whole of India in 2006. Suzuki also runs a motorcycle plant in Gurgaon, employing about 1,000 workers.

The supply chains of Maruti are the main arteries of the local industry, they reach down into the backyards of the slums (see newsletter no.3), controlling this labour intensive work by connecting it with work-shop production, semi-automatized small factories, capital intensive ‘first tier’ factories and the main assembly lines of its plants. The fact that the Maruti Suzuki power plant supplies electricity for the main suppliers is another example for the company's function as the ‘generalising’, ‘controlling’, ‘developing’ capitalist centre of this vast industrial landscape. Maruti Suzuki’s strong ties with suppliers from Japan and the planned infrastructural projects for the export drive (main cargo train lines and highways to the ports etc.) will intensify the interrelation
between local industry, the international division of labour and the global market.

Being surrounded by and dependent on a vast net of factories which exhaust a low paid, mobile labour force, it is first priority that there is peace in the industrial centre. Maruti Suzuki more or less managed to suppress unrest in the industrial core, the assembly plants. It managed to do that by paying comparably high wages to the permanent workforce, by implementing a paternalistic management policy, by using the union and local political class as a mediator or show-fighter and last but not least by unleashing severe repression against workers after the lock-out in 2000.

The following overview has the same limitations as many other (lefty) studies on Maruti: the current situation of the young work-force hired through contractors, working in the assembly departments, paint shops, machine halls is not reflected, there is a lack of first-hand reports. Since 2000 Maruti Suzuki sucked in a low paid work-force, which e.g. assembles the new ‘sales hit’ SX4, a compact car priced at 690,000 Rupees, while being paid 4,500 Rupees per month. Under the pressure of the market Maruti Suzuki decided to let these workers be employed right in the centre of the web, where they now form the majority. A real inquiry would have to be undertaken together with these workers hired through contractors and those of the suppliers, in order to discover the fragility and fractures within the moloch.

*** 1. Chronology of the re-structuring

*** 2. Maruti and the unions

*** 3. The strike / lock out in 2000 and the subsequent repression and Voluntary Retirement Scheme

*** 4. Maruti’s work-force policy

*** 5. Maruti’s supply chain policy

*** 6. Short overview to Indian car industry

1983

Opening of the plant as a prestigious political project by the state: The often quoted ‘peoples’ car’ is only a necessary by-product of major industrialisation project started in early 1980s, by linking up with a major
Japanese company (at the time the most booming industrial country).
Joint-Venture with Suzuki since 1982 (Suzuki 26 held per cent shares).
During the initial years Maruti only employed about 900 permanent workers. Nearly all parts are imported from Japan, only assembling work takes place. The assembly involves fitting low-technology and value components like tires, batteries, electric wiring, wheel rims, seats and glass into the imported cars. Until the 1990s Suzuki refused to set up a gearbox manufacturing plant in India, these crucial parts had to be imported. With the opening of the factory the company sets up a company-friendly union affiliated to INTUC.

1985 to 1987
1985: Total work-force 2,800, cars produced 48,000
1986: Total work-force 3,500: cars produced 82,000;
1987: Total work-force 3,000: cars produced 94,000 inc. export of 500 cars to Hungary (1987); Between 1984/85 and 1986/87 productivity increases from 13.7 cars per employee per year to 28.26. In 1984/1985 indigenization (share of locally produced parts of a car) is estimated to be at 23% with the weld and paint shop in operation and an increasing local content – including locally sourced parts like tuber parts, bolts and nuts, springs and plain washers. Maruti Suzuki is one of the few companies which sets up a housing estate for its permanent skilled workers.

1988
Total work-force 3,600, cars produced 105,000. Incentive scheme started, 250 Rs bonus per worker per month (this amount would increase to 6,000 Rs in 2000)

1989 to 1991
1989: Total work-force 3,700, cars produced 117,000;
1990: Total work-force 3,900: cars produced 120,000;
1991: Total work-force 3,900: cars produced 121,000.

At the end of the 80s Maruti-Suzuki’s production facilities comprise a press shop, weld shop, paint shop, a machine shop, engine assembly and testing, vehicle assembly and a testing line centre.
1991

Large investments in new production facilities on the Gurgaon campus (new weld-shop, paint-shop etc.). This extension project was undertaken in cooperation with a Tata company (Tata is a main car manufacturer itself).

1992

Total work-force 4,000, cars produced 128,000. The state reduced its own shares to less than 50 per cent, Suzuki becomes the largest share-holder. Maruti has an 80 per cent market-share in passenger cars which Maruti manages to hold till 1998. At the same time Maruti tries to re-structure supply-chain (halved the number of official suppliers from 800 to 400 in period 1992 to 1997). Maruti stops to make people permanent or hire them on permanent bases, but till 1997 no workers hired through contractors are in the plant.

1993

Total work-force 4,100, cars produced 158,000. Maruti has produced a total of 1 million cars. Achieved 90 per cent of localization. Maruti captive power plant starts running.

1994

Total work-force 4,800, cars produced 208,000.

1995

Total work-force 5,000, cars produced 277,000. Since 1985 an increase of employment of 5.8 percent and of cars produced 19.3 percent. The second plant is opened. Two days strike over incentive scheme (productivity bonus) and union representation.

1996

Maruti produces 340,000 cars per year and employs 900 apprentices (low paid production workers) which account for 15 percent of workforce. Total labour costs 1.4 percent of total expenditures. Total production since start: 2 million.

1997

Setting up suppliers park in cooperation with Haryana government, granting tax exemption, infrastructural aid etc.. Start of recruitment of
workers through contractors.

1999

The work-force is now 5,800 employees. Market-share of Maruti (passenger cars sold in India) 83 per cent. Major competitors are Hyundai, Tata, Ford and FIAT. Third plant opened, capacity increased to 350,000. Between 1998 and 2000 Maruti Suzuki reduces the number of official suppliers from 400 to 370.

2000

Struggle over incentive scheme started in October. Management plan in 1992 estimated that 4,000 workers are necessary to produce 100,000 cars per year. Between 1992 and 2000 the production has increased by 400 per cent while the work-force only increased by 65 per cent. Only 3.1 per cent of all Maruti cars sold were exported.

2001

Total work-force 5,800. 500 apprentices, who worked solely in production, got sacked. First Voluntary Retirement Scheme (VRS): Maruti forces 1,050 permanent workers to leave the company. Market share of Maruti 57.6 per cent.

2002

Total work-force 4,600. Production volume per Employee at 77 cars per year (1995: 43, 2001: 61). Suzuki in India needs 24 work-hours to produce a car while the SMC plant in Japan only needs two thirds of the time. Suzuki gets majority of shares, government share down to 10 by 2006, the rest is sold to a major life insurance company.

2003

Maruti has produced four million cars. work-hours per vehicle went down from 26.11 in April 2002 to 20.35 in March 2003. of Maruti-Suzuki’s 4590 permanent employees in 2003, 1900 employees have received training in Suzuki’s facilities in Japan.

Two strikes had an impact on the production at Maruti: In April the week-long truckers’ strike hit its production by 30 per cent at its Gurgaon facility. Production was hit again during August and September due to the strike at DCM Engineering, Maruti’s main supplier of cylinder blocks for engines.
The company issues the second VRS scheme: 900 workers and 300 executives take the leaving package. In February Maruti production was disrupted by strike at engine cylinder bloc supplier. In March, 2,999 workers were unionised by MUKU, a company set-up union. Introduction of new incentive scheme as part of a ten years wage agreement which links bonus not to productivity increase (cars per worker), but to cars sold, quality and attendance. The old union is de-recognised by management.

2004

The government holds 45.8 and Suzuki 54.2 per cent of the shares. The permanent work-force has been reduced to 2,100 production workers and 1,700 supervisors and staff. Total production: 540,400 cars. According to the companies’ annual report in 2004 and 2005 not a single day of work is lost due to strikes or disputes. The number of workers hired through contractors increases sharply. Some 10 to 15 per cent of former permanents now work as workers hired through contractors, they get a third of the old wage. There are only 15 women working in the plant.

2006

Government holds only 18.5 per cent in Maruti. Only 1,300 permanent production workers are left. There are now 3,700 workers hired through contractors in the plant. The plant in Gurgaon produces 2,000 vehicles per day. It was 1,300 to 1,400 before the VRS. In May 2006 there is trouble in the machine shop, a one-day wildcat strike, but welding department does not join in. The ‘leaders’ get sacked. The conflict was about work clothes and safety shoes.

In the third Quarter 2005/2006:
Income Gross: 322079.00 lakh Rs
Consumption of Raw Material: 239331.00 lakh Rs
Staff Cost: 5839.00 lakh Rs
Net Profit: 33901.00 lakh Rs

In 2006 Maruti Suzuki exported fewer than 50,000 cars worldwide (see chapter on supply-chain).

2007
Opening of the assembly plant in Manesar, initial production capacity of 100,000 per year, with the goal to scale up production to about 300,000 cars by 2010. In the same compound Suzuki inaugurates Suzuki Powertrain India Limited (SPIL), a diesel engine and transmission plant. SPIL is not primarily set up for the Indian market but for exports to SMC’s worldwide operations. This facility will also have an initial capacity to manufacture 100,000 diesel engines a year to be scaled up to 300,000 engines by 2010.

According to former Maruti workers only trainees and workers hired through contractors work in the production departments. Maruti has recently hired 130 women, out of which a third work on the shop-floor. In the new plant 700 trainees are employed. They get 6,500 Rupees in the first year, 8,000 second. Only staff has permanent contracts and there are so far only 25 workers from contractors. Currently the plant assembles 650 cars per day. According to a maintenance worker: 80 per cent of the machines are from Japan.

2008

Magneti Marelli, Suzuki and Maruti formed a joint-venture in 2007. In 2008 they want to open a factory for electronic control units (ECUs) for diesel engines. The industrial facilities of the joint venture will be located at Manesar in the industrial district of Gurgaon. It will be part of the Suppliers’ Park spread over 100 acres being set up by Maruti Suzuki at its campus in Manesar. As part of the objectives, the production of the plant is expected to reach 500,000 units per year.

Intro

At Maruti Suzuki, being one of the biggest companies in the area, the question of who runs the union became a major issue. The first union at Maruti was set up by the managing director himself in the early 1980s. Shortly after that the lower management ranks, who felt they were not being recognised in their position as power holders by the union, set up a competing union, trying to include parts of the workers’ discontent. Another fraction was the leading political party of Haryana, which, also tried to get their foot in the door by setting up a union in Maruti Suzuki. In the mid-1990s attempts of setting up an independent ‘workers’ union’ were made. This union got entangled in a ‘minor conflict’ over an incentive scheme at the end of the 1990s. The management made use of
the conflict and enforced a lock-out. After the defeat of the union mobilisation the workers’ confidence was crushed and the management succeeded with enforcing a major job cutting ‘Voluntary Retirement Scheme’. It de-recognized the ‘independent union’ and set up an new ‘company union’. But the major change took place within the composition of the work-force: nowadays the majority of production workers are hired through contractors and therefore not represented by any union anyway. Following a more detailed summary of union policies at Maruti:

1980s

The managing director who was in charge in the early 1980s was from a public sector undertaking, and he recruited some of the union leaders of that company. The first union was formed by these leaders with an affiliation to Indian National Trade Union Congress (INTUC). (Union membership forms were handed out together with the work contract). This was followed by a split between union leaders and upper-management on one side and smaller managers on other. Smaller management felt that union leaders ignored them. They made some workers into union leaders and set up the Hind Mazdoor Sangh (HMS).

Some members of the INTUC and bulk of the HMS unions had to prove that they could ‘lead workers’ discontent’: Gate meetings were held; members of Parliament were approached who extended support to the union members. Another group of employees tried to set-up a ‘workers’ union’, they applied to the Registrar of Trade Unions for registering their union. An appeal was also made to the High Court. As a consequence of all this, workers observed a two-day strike in 1986 that was led by a handful of leaders. The management acted tough, suspending a number of activists. Finally, workers accepted having a ‘company union’. The management also persuaded the unions to change their constitution by incorporating fresh clauses which prohibited outsiders as union leaders, no political affiliation, resort to go slow, gherao (a method of struggle: encircling the building of the questioned power) or other negative practices along with clauses of union’s cooperation with the management to develop a positive work culture and improve productivity.

1990s
In 1990, the then Janata government in Haryana did its best to prop up an outside union in the factory with a political affiliation to the Lok Mazdoor Sangh (LMS). About 20 per cent of the workers did lend credence to this union. The company did not recognize the union. However, some of the active members of this union gave their charter of demands that included, among others, 20 per cent bonus (during that year no bonus had been paid at that point) and production bonus at a higher rate. The management adopted a policy of not entering into any dialogue with them. The LMS leaders resorted to tactics of a dharna outside the factory premises boycott of canteen and even assault on a number of managers. The company went to court against the dharna. The High Court decided in favour of the company. Despite this, the dharna at the gate was not lifted, as the state government kept on instigating the agitators. The Labour Commissioner had to intervene. Finally, the state government and the leaders of LMS relented, because the company management went public with the statement that it was ready to shift the factory site from Haryana, which would have resulted in heavy loss of revenue to the government. In 1994, a seemingly management critical wing wins the union election.

After 2000

The conflict about the incentive scheme dragged on, the management tried different tactics, e.g. a major wage increase in 1997, in order to re-structure the incentives. Behind the scene a major attack was prepared, the conflict about the incentives should served as a decoy. In 2000 the union got entangled in a three-months long strike. The basic issue given to the workers was the disagreement on the incentive scheme which had been continuing since 1995-96. The management took a tough stand and kept up production with the help of casual workers since almost 20 per cent of the regular workers were against the strike. These workers were given protection of all sorts. The strike ended in a defeat and resulted in the management being ready for a major attack on the permanent workers. Their numbers had been reduced from 5,800 in 2000 to less than 2,000 in 2006.

Given its importance for the subsequent re-structuring we give an overview on the strike/lock-out at the end of 2000. Similar to the Honda HMSI repression in 2005 (see newsletter no.7), this strike entered the
The struggle started in 2000 over incentive wage scheme, demands included that all workers hired through contractors should be made permanent and that no work should be out-sourced to other companies outside the plant.

The incentive scheme

The incentive scheme began in the company in 1988 with an amount of Rs. 250 per month to the workers. This amount had increased on an average to about Rs. 6,000 per month by 2000. It was mostly based on production volumes. The management was of the opinion that introduction of new plants with updated technology had resulted in increase in production volumes per worker as well as the fact that the ensuing competition had made it difficult for them to sell their product. Their contention, therefore, was that the incentive should be linked to sales and profitability.

Till 1995 the wages were determined by the old company contract from 1986, saying that 65 per cent of all savings in labour costs are to be distributed amongst workers as incentive bonus. The norm was set at 41.5 cars per worker per year. In 1995 the management withdrew this scheme. The union did not protest and the workers said that the union at the time actually helped the management to increase productivity. In 1988 the ratio was 38 cars per worker per year, in 1999 it was 107 cars per worker per year. In the late 90s the management wants to base the incentives of the workers on numbers of sold (not produced) cars and on the attendance of the worker. The negotiation talks were called off in September 2000.

“During the course of the agitation in 2000, Maruti went public to say that each worker currently cost them about Rs. 22,000 per month. Acceding to the incentive demands would now cost them between Rs. 38,000 to 40,000 (at productivity improvements of 2 per cent to 6 per cent; Source: Business Standard 5/10/2000) while the Maruti management was offering a little less than Rs. 34,000 (Source Statesman 18/10/2000).

A look at the annual reports of the company give a slightly different picture. In 1999-2000 for example the total number of employees, including management staff, was 5,848, while the employee remuneration and benefits totalled Rs. 187.3 crores. This works out to an average of only Rs.26,690 per employee per month. Since this includes
both management and workers, it is not likely that the average for workers alone will turn out to be as much as Rs. 20,000.

According to an estimate prepared by the Centre for Workers Management, total management staff salaries in 1999-2000 is nearly twice total workers salaries. According to the figures they calculate, in 1999-2000 the company spent an average of Rs. 13,750 per direct worker per annum in 1999-2000, including all benefits such as incentive wages”. In 1999-2000 the total salaries (including management) amount to about 2 per cent of turnover.

A new incentive scheme named, Profit, Performance and Reward Scheme (PPRS) has been introduced since 2003. The incentives are linked to the increase over last years sales, profitability, productivity, quality and attendance”. (source: PUDR report – see below)

Time line of struggle

9th of September 2000 to 30th of September 2000:

The struggle officially starts with workers wearing black badges, as a sign of protest. Workers go on hunger strike at the factory gate, nine employees are suspended. The initial labour dispute widens when Maruti-Suzuki’s 900-odd contract workers initiate a sudden strike. While Maruti-Suzuki’s company union dissociates itself from this group’s demands (demanding better working atmosphere and wage benefits) the conflict over the incentive scheme remains unresolved.

3rd of October 2000:

Two hours of downing-tools strike in each of the three shifts. Downing-tools strikes continue for eight days. During strike and later on lock-out production was kept up by strike breakers (engineers, workers from suppliers, trainees, casuals etc.), who stayed in the factory, sometimes for several days.

11th of October 2000:

Management declares a new incentive scheme which is not acceptable for workers

12th of October 2000:

Hundreds of policemen block the National Highway and the factory. Maruti management issues ‘Good Conduct Undertaking’ (no go-slow
strike, no other actions which harm production etc.) and demands workers have to sign if they want to enter the factory. Workers refuse to sign and management declares the strike illegal. No wages for those who refused to sign (from 12th of October 2000 to 8th of January 2001). Start of a nearly three-month lockout. During this time contract workers and apprentices were made to work 12 hour shifts, and new apprentices were hurriedly drafted from training institutes.

16th of October 2000 to 3rd of January 2001:

Management increased pressure on people to sign the Good Conduct Undertaking, during the course of dispute about 600 out of 4,800 signed. Mid-October two employees died in mysterious circumstances. Workers accused management and their goons of killing them. On 24th of October Workers marched to Heavy Industry Minister, demanding his intervention, more demonstrations in Delhi and in front of the company HQ followed. During the protest three union leaders were bought off and resumed work. On 3rd of November the government announced the sale of its stake in Maruti, a cunning move given that at this point all workers were locked out. By end of December 2000, 92 workers were dismissed. On 13th of December a sit-in in front of Heavy Industry Minister’s office started, which continued for the next twenty-six days.

The protest ended with a tri-partite meeting (Ministry of Industry, management, union) signing agreement on 3rd of January 2001: management withdraws the Good Conduct Undertaking. Other sources put it differently: the union signed a ‘collective’ Good Conduct Undertaking, assuring that workers will not raise any new demands). In ‘return’ the workers representatives agreed on the incentive scheme suggested by the management.

The Repression and Voluntary Retirement Scheme after the defeat of the strike

After the defeat of the mobilisation and after the return to shop-floor reality, the main attack of the company against the permanent work-force started. The workers had seen much slogan shouting, speeches of politicians and union leaders and symbolic actions in Delhi city centre. They had seen that all this did not have much impact on the company. Now they were left alone, they had to put up with a four-month wage loss, they faced the full blow of the management’s re-structuring
offensive. By various measures the management tried to pressure them into accepting the Voluntary Retirement Scheme. The work-load was increased, often arbitrary targets were set. Workers who did not manage or want to achieve the targets got warning letters. After the strike 500 apprentices got sacked (out of 1,300 apprentices who worked as full workers in production). The remaining workers had to achieve the same work-load as before their sacking.

Harassment started. Department managers and supervisors got individual targets defining how many workers of their area should accept the VRS. Orders were issued that workers can visit the toilet only during official breaks (2 x 7 min, 1 x 30 min). Office workers who were active during the strike were sent to work at assembly line. Workers were video taped while working at the assembly line and had to undergo humiliating ‘teaching lessons’ afterwards. Individual workers were set idle by their supervisor, they had to sit on a chair in a corner for half of the shift. Then they were told off by a manager for sitting idle. The norms in the company for attendance were made very strict (half-day leave for coming one minute late with a resultant reduction in the incentive amount) at the same time company buses were cancelled. People were visited by managers at their home, put under pressure to accept the early retirement.

A worker who worked as a permanent at the time and who told us some of these stories was still full of emotional stress and rage six years later. He also told us that some workers in the plant committed suicide during this period. The management enforced the VRS in October 2001, pushed 1,050 workers to take the package (a total of 65 crore Rs., up to 100,000 Rupees per worker). In December 2003 the second VRS got implemented, the company got rid of another 1,251 workers.

From the beginning of production in the 1980s Maruti Suzuki imported some management styles which seemed new to many of the workers. All workers’ categories got the same uniform, staff (supervisors etc.) and workers ate in the same canteen. Workers had to sweep the area where they worked, unlike in many other factories, where special ‘cleaners’ are employed. Maruti Suzuki started quality circles were staff and workers set together and talked about production problems. Workers were sent on a trip to Japan for training sessions (travels abroad are normally
completely out of reach for the vast majority of workers in India), they were put up with workers’ families there.

Maruti workers receive their Maruti salaries during the training period as well as allowances from Suzuki. They live in a factory dorm with Japanese co-workers during their training and some stay with local families. For Suzuki, it is cheaper to pay allowances to these Maruti workers than to employ Japanese temporary workers. At the same time, it makes it easier for Maruti to upgrade technologies.

For many workers this new ‘management style’ seemed more ‘equal’ or ‘egalitarian’, at least at the beginning. Maruti Suzuki paid the highest wages for industrial manual work, a permanent worker could earn more than five, six, seven times the wage as his colleague in a smaller factory. Soon the ‘repressive’ side of the paternalistic medal started to show, particularly during the end of the 90s and after the repression in 2000. Since then Maruti Suzuki mainly hires workers through contractors, they wear different uniforms, they are excluded from most of the former benefits. In 2006 there were about twenty different contractor hiring people for work at Maruti, out of which seven employed people directly in the assembly department, in addition to that contractors are in the spare parts division, the machine shop. Officially Maruti has a license for employing only 1,000 contract workers, and only for canteen work, truck loading etc., not in main production departments. Some of the contractors are former Maruti Suzuki employees. Maruti Suzuki gives contracts for single departments, they then get the offers from the contractor and take the cheapest. The contractor presents a list of 200, 300, 400 workers, but Maruti Suzuki would not check on their history. If people turn out to cause trouble, they can be fired immediately. Compared to the wage of the permanent workers (between 25, 000 and 35,000 Rupees, including incentives etc.), the contract workers get 4,500 to 5,500.

In 1987 Maruti employed 1,500 trainees. So far a big share of the trainees were made permanent after a year. After 1987 they introduced a test which meant that more or less all trainees get fired. The management keeps the addresses of the trainees and hires them later via contractors. During the strike in 2001 they called a lot of former trainees. In 1988, Maruti stopped recruiting diploma holders in engineering for supervisory
positions; since then, supervisory positions have all been filled by promoted workers. In 1996 there were about 900 apprentices, accounting for about 15% of the total workforce. These apprentices work as normal production workers, but get only very low wages. Their number was increased up to 2000, then they were replaced by workers hired through contractors. During the last five, six years 2,200 of 4,200 permanent workers have been dismissed, today (June 2006) there are about 1,300 permanents and 3,700 contract workers employed on the shop-floor (most of them have ITI qualification).

Today Maruti Suzuki has a vast net of suppliers in the area, a lot of work got outsourced and at the same time the suppliers were tied closer to the main assembly plant, both spacially and organisationally. Given the major re-structuring of the supply chain it is difficult to say, how many workers are ‘actually’ (not ‘formally’) working at Maruti, manufacturing Maruti cars. Work which had been done by permanent workers of Maruti is now done, e.g. by workers of Bharat Seats, a factory which is located on the Maruti premises. The major production increases of Maruti might be partly due to this ‘formal’ work-force reduction by outsourcing.

When production started at Maruti most of the parts were imported from Japan. Then Suzuki’s main suppliers opened factories in the Gurgaon area, in about a dozen of them Maruti Suzuki holds a major part of the shares (for example Denso, Asahi Glass, Koyo Steering). The percentage of car parts which were manufactured locally increased steadily. In 1996/97 about 70 percent of parts come from local suppliers, steel coils still came from Japan or South Korea in 2002. According to a permanent worker Maruti Suzuki holds little storage of certain press items, bumpers, seats. The assembly line would come to a halt if the supply would cease for two to three hours. But given the proximity of the suppliers, this rarely happens.

Parallel to the re-structuring within the work-force (kicking out permanent workers, hiring through contractors), Maruti Suzuki started to re-structure the supply chain. In 1998 Maruti still had about 800 official first tier suppliers, by 2000 this number was reduced to 400, in 2003 their number was further reduced to 300. In 2000 of Maruti’s 404 suppliers, 58 firms depend on Maruti for more than 90% (in many cases 100%) of their sales. The majority of Maruti’s first-tier suppliers are concentrated in the
north of India, 248 of them in Gurgaon and its neighbouring cities in Haryana. Maruti Suzuki has many ways to control the main suppliers, partly through their mentioned dependence, partly through actually share-holding, and partly through the mere fact that the suppliers depend on electricity delivered by Maruti Suzuki. The company owned power plant generates 30 percent of Gurgaon’s industrial energy (2000). The company itself uses 50 percent of the energy, the rest is sold to other companies, e.g. the companies’ main suppliers. Their electricity bill is deducted from Maruti Suzuki’s payment for supplied parts.

With the re-structuring the responsibility for storage, quality, just-in-time and dozens of daily work accidents was passed on down the supply chain. According to a permanent worker one square foot of storage space within Maruti Suzuki costs the company 25,000 Rs per year. Maruti Suzuki tried to outsource these costs to the suppliers by demanding that the main suppliers should set up their own storage facilities within in a 10 km radius of the plant. But Maruti Suzuki has a bigger problem with the supply chain than just storage space. In total, parts and manufactured cars spend too much time circulating in the transport chain. Many parts still come from Japan, they have to be brought from the ports to Delhi, the same counts for cars which are meant for export. During 1992-97 the at-factory stock was 20 days and transit 12 days. During that period a fourth of Marutis stock was in transit, on the road or at the factories of the supplier. In 1997 the at-factory stock at Maruti was 13 days while 9 days was in transit. Maruti Suzuki managed to speed up the transport considerably during the end of 90s. Nevertheless the costs for transport alone accounted for 4.1 percent of the total sales revenue; this is compared to 2.0 percent for labour costs (1997). The total value of inventory as a percentage of sales revenue fell from 20 per cent in 1992 to 10 percent in 1997 inventory stock fell from 57 days of stock to 30 days in 1997 (in comparison Toyota in Japan in 1991 hold only one day stock). Given the infrastructure (roads, railways), Maruti Suzuki has still problems running a smooth just-in-time production. The problem intensifies with Maruti Suzuki’s pressure to increase the export of cars.

According to a Hindustan Times article, 24th of June 2007, Maruti expects to sell 250,000 cars globally by 2009, which would mean an increase of about 200,000 within the next two years.
“Maruti can take 12 weeks to transport a car from Gurgaon to shipyards on India’s western coast, says Mr.Khattar (Maruti President). [Although the average will be more like nine to ten days]. In Japan, cars are transported from factory to port in eight days. The journey from Gurgaon begins on trucks that haul the vehicles to a railway yard. A cargo train that can carry about 120 cars arrives every three or four days. The train carries the cars 1,140 kilometres to another yard about 150 kilometres north of Mumbai. The cars are again loaded onto trucks and driven to a port. There, Maruti workers touch up any paint damage. The cars wait for ships. In India, it takes workers 84 hours to unload and load cargo from an average ship. That compares with an average of 12 hours in Singapore and 10 hours in Hong Kong, according to statistics from 2005, the latest available from the Indian government and port officials in Hong Kong and Singapore. “It’s torture exporting from here,” Khattar says. By 2010, railroad tracks will run from the ports directly to Maruti’s second plant in Manesar, 25 kilometers away from the Gurgaon factory, he says.”

There are plenty of studies on the Indian automobile sector available on the net, therefore just some glimpses. The car industry, it’s exports and the local car market in India are still minor compared the car production in the US, Europe or Japan. In 2000 only 7 out of 1,000 people in India owned a car, this is compared to 500 in Western Europe.

But together with China, India is the only hope for a crisis ridden global car industry, meaning, a crisis of a capitalist cycle. Their hope is that the current expansion of about 15 to 20 per cent annually continues during the coming years. The year ending on 31st of March 2007, Indian passenger car sales climbed 21 percent to 1.38 million. The export numbers are still less than 200,000 cars in 2007.

Nearly all major car makers now have manufacturing facilities in India, mainly Hyundai, Toyota, but also GM, Ford, VW, Renault. Apart from growing local market the hope is that India can become a global manufacturing hub, e.g. Renault wants to start producing it’s ‘global cheap car’ Logan in India and export it from there (adding to the production in Romania and China).

General Motors India plans to sell 200,000 vehicles by 2010, almost triple the 70,000 cars it predicts it will sell in 2007. Toyota is also aiming for 10 percent of the Indian market by 2010, up from 3.7 percent in the year
ended on 31st of March 2007. Hyundai is investing $1.5 billion in a second plant at its site near Chennai to almost double its manufacturing in India to 600,000 vehicles from 340,000 in 2007.

The current boom meets certain shortages, e.g. of tyres and also of skilled workers. Domestic truck manufacturing companies like Tata Motors, Ashok Leyland and Eicher Motors have deals running with exporters in China for sourcing components including tyres. The country’s largest automobile manufacturer, Tata Motors, has signed a contract for importing 4-5 lakh tyres per annum with three Chinese companies, including Shandong Jinyu Tyre Company and Pearl River Tyre.

“We are in a way being forced to import radials which are not being produced here. The tyre industry has not added sufficient capacities and will have to deal with the threat of imports now,” said a Tata Motors official.

We want to finish this text with a nice quote from the Maruti President made during an interview with ‘Moneycontrol’ on the 19th of July 2007, emphasising the current power that (highly skilled) automobile workers have in the Gurgaon area:

“Q: Where is the talent crunch happening – is it on the shop floor level, is it at the managing level?
A: (Managing Director, Maruti Udyog, Jagdish Khattar, President, Automotive Sector)

But very interestingly in the last few months, I got surprised in Gurgaon, in our network, even people on the shop floor have started resigning and joining other companies, which one could never think of doing earlier. They have started getting options. So, I think this is a first signal and not a very good signal”.

*** “Not yet special enough: Special Economic Zones, Part Five” –

– Your backyard a SEZ? Short note on the inflation of SEZs in Gurgaon

“Gurgaon is on the verge of becoming a separate SEZ country with the district all set to get 52 SEZs, the highest in any district in the country. Nearly 34% of Gurgaon’s agricultural land will be covered by these SEZs. Official records show that out of the approved SEZs in Haryana state, 24 are situated in Gurgaon, and of another 28 which have got in principle approval, 18 are in Gurgaon. Out of another 21 SEZs seeking approval, 10 are in Gurgaon. Significantly, only five SEZs are in the category of multi-products/services while 36 belong to IT/ITES. There will also be four bio-tech SEZs and three SEZs in the categories of textile, apparel and jewellery. A few of the larger SEZs include the HSIIDC-Reliance joint ventures SEZ to be developed on 25,000 acres; DLF Universal spread over 20,000 acres; and Emmar MGF covering 10,000 acres. A majority of the SEZs will cover less than 500 acres and the smallest one will be developed on only 25 acres”.

(Times of India, 29th of August 2007)

DLF will spend Rs 2,500 crore to develop two IT SEZs in Gurgaon. It has already attracted clients such as Genpact and Accenture. DLF also plans to develop another IT SEZ in Silokhera in Gurgaon, with an investment of Rs 1,500 crore. The project spread over 37 acres; will be operational in two to two-and-a-half years. Out of 7.5 million sq feet, about 2.5 million
sq feet have been developed and the price is 65 to 75 rupees a square foot a month.

(Moneycontrol, 21st of September 2007)

The first IT special economic zone (IT SEZ) in north India is set to be operational by this month-end with IT and ITeS majors are gearing up to open their offices at Cyber SEZ in the DLF Cyber City in Gurgaon.

(Times of India, 15th of October 2007)

Workers hired through contractors

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state
government checks the general price development and accordingly pays
an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-
term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.
Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- Minimum dowry poor workers have to pay for the marriage of their daughter: 30,000 Rs (80,000 Rs more likely)
- One month mobile phone flat rate: 1,500 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made
permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanent's wage.
Victims of the organ trade – Gurgaon kidney business

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the February issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Mass Redundancies in the Gurgaon Textile Export Sector –

In late autumn 2007 tens of thousands of garment workers in Gurgaon were sacked. The textile exports to the US slackened, partly due to the relatively strong Rupee. In Gurgaon the paradox of capitalist boom and crisis is obvious. Private developers like DLF and Reliance thrive on the industrial and stock-market-boom, attracting billions of Rupees from
international finance capital flows and thereby increasing the value of
the Rupee. With the capital they attract these companies are heavily
involved in setting up the Special Economic Zone in Gurgaon, of which
the Textile Export Park is of major importance. Their boom, the increased
value of the Rupee, is at the same time part of the reason for the slump
in textile exports, a sector these very companies want to boost. All this
would be a mediocre math game, if it were not about the resulting
misery of thousands of working class families, e.g. like those of the
Fashion Express workers (see update in this issue). Attached are several
short reports from textile workers in Gurgaon, told to friends from FMS in
September 2007. It becomes obvious that the economic cycle of the
textile sector does not allow these workers to build up the upward
pressure on wages like workers in the local metal and automobile
industries currently do (see reports on several spontaneous actions to
enforce the payment of the new minimum wage in this issue).

*** Thoughts on Gurgaon Kidney Trade and the local Medical-Industrial
Complex, January 2007 –

Mid-January 2008 the media reported on a private clinic in Gurgaon that
during the last eight to nine years has removed about 500 kidneys,
mainly from migrant workers, for the global organ trade. Most of these
workers are very likely to be dead by now. This ‘scandal’ is just one public
secret side of the capitalist drive to open new markets by opening
bodies, be it as source or receivers of ‘new’ commodities: organs, stem
cells, drugs, fertility treatment, abortions, surgery services. In Gurgaon
the general ‘body shop’ is yet another boom sector. If you have a look at
the specific industrial composition in Gurgaon you will notice that
Gurgaon is an eldorado for bio-technology and the extension of the body
market: a constant supply of desperate and cheap bodies from the poor
parts of India (or from recently sacked garment workers?!), dozens of
private clinics and medical institutions, dozens of pharmaceutical
laboratories of major international companies, state subsidies for ‘clean
industries’, a rich career-orientated upper middle-class in need of
medical treatment or adusment, a pleasant (medical-)‘tourism
infrastructure’, well established (transport-)links to international markets,
a mafia-type collaboration between state and private sector. In Gurgaon
the capitalist production process consumes bodies on a daily basis,
without producing media worthy ‘scandals’. On a daily basis poor
labourers are mutilated and die in factories, on construction sites, on the way to or from work. Their injuries and deaths are often covered by the very same mechanisms that made the ‘kidney trade scandal’ possible: victims of industrial accidents are brought to company-friendly doctors, the official administrations turn a blind eye, the victims are victimised once more (see the report on industrial accidents in newsletter #7). First we briefly summarise the facts on the ‘kidney scandal’ and then consider some questions concerning the systemic and ‘unscandalous’ elements behind it, and conclude with a brief over-view of the medical-industrial complex in Gurgaon.

*** Short news item on police raids against ‘illegal’ migrant workers in Gurgaon, December 2007 –

In Gurgaon Workers News #8 we already covered the issue of an increasing safety paranoia of the local upper middle classes in Gurgaon. Against the background of the ‘kidney scandal’ the public (meaning ruling class!) opinion tries to turn the ‘dangerous classes’ (the moving proletariat!) either into helpless victims or individual punishable culprits. Given the involvement of the police in both anti-workers attacks – the collaboration with the kidney mafia and the raids against migrant workers – the only solution is the strengthening of mutual aid within the proletarian communities.

2) Collective Action –

Reports on proletarian struggles in the area

*** Workers’ spontaneous actions enforce the payment of minimum wage in several factories, September 2007 –

In summer 2007 the Haryana government raised the minimum wage from a monthly 2,540 Rs to now 3,510 Rs. Most of the industrial workers did not get the minimum wage in the first place, but the government’s move seems to be an anticipation of the general anger and despair amongst the workers. Friends from Faridabad Majdoor Samaachaar (FMS) collected various stories from factory workers in the area. They reported that a lot of companies try to make people sign a pay slip showing the new minimum wage while actually paying the old one. They also told us that in several factories workers refused the lower wage, organised spontaneous strikes and thereby enforced payment of the
official minimum wage. Their actions show that the question of minimum wages is not a legal one, but is about immediate power relations. While the workers in the booming automobile sector managed to put pressure on the companies, their brothers and sisters in the textile sector face massive attacks at the same time. The stories are told by workers from: Maharaani Paints, Senden Vikas, Punit Udyog, Pepsi, Shyam Elanyaz, Talbros, Ahuja Plastics.

*** Up-date on Fashion Express Factory Conflict –

In Gurgaon Workers News #3 (May 2007) we reported about a factory occupation and union conflict at Gurgaon based Fashion Express. Most workers have been working for 12-16 years at the same factory. The factory manufactures women’s garments (primarily t-shirts, blouses etc). In autumn 2007 the management decided to close down the factory. Wages were not paid. A friend sent a short update in September 2007: “Workers are also facing a lot of financial difficulties since they have not been paid in recent months. Their children have already been thrown out of school once due to non-payment of school fees. After the payment of 50 per cent of the July wages, many children have rejoined school but now the workers are facing the same problem again. We have a list of the workers and the amount of school fees each one needs to pay. The total comes to nearly 34,000”. By the end of 2007 all permanent workers at Fashion Express Udyog Vihar Factory lost their jobs, up to now the issue of compensation or severance pay is not settled.

Daily life stories and reports from a workers’ perspective

**Mass Redundancies in Gurgaon Textile Export Sector** –

First we provide a short over-view of the Indian textile and garment sector and its significance for the economy in Gurgaon. In the second part there is a short report on the mass redundancies of textile workers in Gurgaon which took place in autumn 2007. Attached are several short reports from textile workers in Gurgaon, told to friends from FMS in September 2007. It becomes obvious that the current economic cycle of the textile sector does not allow these workers to build up the upward pressure on wages like those in the local metal and automobile industries (see reports on several spontaneous actions to enforce the payment of the new minimum wage in this issue).

The Textile and Clothing Industry in India

About 40 Million workers are employed in the Indian Textile sector – about 40 Million more people work in the cotton and raw material production. In terms of numbers of people employed it is still the most important sector after agriculture. In value terms the importance for the national economy is relatively low, it contributes about five to seven per cent to the GDP. Export is the main dynamic element of the sector, about 41 per cent of the general turn-over comes from export. In 2006 – 07 the export turn-over was 19 billion USD, this is about 20 per cent of India's total export turn-over. In comparison: the Indian IT industry ‘exported’ commodities and services worth 15 billion, but only one million people were employed in the sector. India’s exports depend less on textile compared, e.g. to Bangladesh, where 70 per cent of the national exports are related to the textile sector. Initially the global re-adjustment of the textile trade in 2005 – textile import quotas in Europe and the US were partly abolished – worked in favour of the textile industry in India, while the textile industry in other countries went down the drain: Mexico, Costa Rica, Turkey, Spain, Greece etc.. The share of Indian textiles exported to the US is still only about 10 per cent, lagging behind China and Hong Kong. The global textile market overflows with cheap textiles, wages are
squeezed, capital locates from one ‘low wage country’ to the next, sparking off new aspirations and revolts of a new local working class wherever it invests in new industries. In the north of India the average monthly wage of a textile worker is around 50 to 60 USD, while in Bangladesh the last workers uprisings were about enforcing a minimum wage of about 45 USD. In China the wages are higher, the main productivity drive derives from intensive use of machinery. It becomes more than obvious that ‘national competition’ cannot be a solution for workers: gaining market shares by lowering wages further would result in slow starvation while productivity increase by using more machinery would cause the same effect due to mass redundancies. The volatile situation becomes clear in autumn 2007 when a minor increase in the value of the Rupee compared to the USD caused mass redundancies in one of the textile export hubs, in Gurgaon.

The Textile and Garment Industry in Gurgaon

About a quarter of the Indian clothes manufactured for export come from Gurgaon, another quarter from nearby Okhla and Faridabad. In Udyog Vihar Phase I we find a high concentration of textile factories, about 100 of them with an average of 400 to 500 workers employed. The total number of textile factories in Gurgaon is about 350. There are huge factories, like those of Orient Craft or House of Pearls, where 4,000 to 10,000 workers are exploited under one roof. Orient Craft alone employs more than 70,000 workers in Gurgaon. According to a source dated from 2005 Orient Craft sells a shirt for about four USD to buyers from the US, the shirt then makes 45 USD on the US market. If you take a stroll through the industrial areas you find a lot of ‘Vacancies for skilled/unskilled workers’-signs on the front factory gates. The attrition rate is high, particularly the skilled workers were used to be able to find jobs rather easily, their wages are relatively high compared to other industrial workers, between 4,000 and 5,000 Rupees per month. The working hours are disastrous, seven days per week, 12 to 14 hours a day. The ‘higher’ monthly wages have to be seen against the background of the total annual employment: employment is unstable, people take on work and quit, get hired and fired. A most recent example is the wave of dismissals in autumn 2007.

Mass Redundancies in the Gurgaon Textile Sector, Autumn 2007
According to media reports a lot of textile companies in Gurgaon decided in October 2007 to force their workers to take an unpaid 40 days leave and to sack those workers who they had hired through contractors. About 70,000 workers are said to have been affected. The reason given for the mass redundancies is the rising value of the Rupee, whose value has increased by 12 per cent relative to the USD in 2007. Most of the textile exports go to the US, sales have now cooled down because of the strong Rupee. For example, Modelama has closed down one of their six factories in Gurgaon for the time being, about 1,000 workers have been suspended. Orient Craft, which exports 80 per cent of all manufactured goods to the US, has sacked 3,000 workers. A lot of the migrant workers were forced to take their children out of school and send them back to the ‘village’. Other buyers reported that they outsourced and re-located certain orders to China, Indonesia, Vietnam or Bangladesh. Currencies in Pakistan and Bangladesh devalued slightly in 2007, but the ‘temporary competition advantage’ does not result in appeasing local workers, see links on recent struggles in Bangladeshi Textile Export Zones below.

In Gurgaon the paradox of capitalist boom and crisis is obvious. Private developers like DLF and Reliance thrive on the industrial and stock-market-boom, attracting billions of Rupees from international finance capital flows and thereby increasing the value of the Rupee. With the capital they attract these companies are heavily involved in setting up the Special Economic Zone in Gurgaon, of which the Textile Export Park is of major importance. Their boom, the increased value of the Rupee, is at the same time part of the reason for the slump in textile exports, a sector these very companies want to boost. All this would be a mediocre math game, if it were not about the resulting misery of thousands of working class families, e.g. like those of the Fashion Express workers (see update in this issue)

Link to February Report on textile workers struggles in Bangladesh:

Kaprikon Apparels Worker
(B-14, Sector 34, Gurgaon)

The wage of the helpers amongst the 50 workers hired through the
company is 2,250 Rs. ESI and PF is cut from this wage. The helpers hired through contractors get 2,000 Rs, the skilled workers are on piece work. They get neither ESI nor PF. The wages are delayed: On 31st of August the July wages had still not been paid.

Kracha Global Worker
(Plot 192, 193, 232, 239 / Udyog Vihar Phase I, Gurgaon)

The minimum wage is not paid in the factory. The helpers get 2,500 Rs, the skilled workers 2,900 Rs, the contract cuts 200-300 Rs each month. In the factory on plot 192 the bosses abuse workers. In the factory on plot 232 the night-shift is bad, from 7 pm to 3 am... at the moment there is not much work, so there is also little over-time. From October to April the shifts in the production department are from 9 am to 6:30 pm, 8:30 pm, even 10 pm. During the times of shipment we work 24 hours a day.

Kalamkari Exorts Worker
(Plot 280, Udyog Vihar Phas II, Gurgaon)

There are 300 workers hired through two different contractors, the helpers' wage for July was 1,800 to 2,200 Rs, the skilled taylors get 120 Rs daily wage. The company first put up a list with the new minimum wage, but then took it down again. In the canteen a sign says that the chai is 3 Rs, but actually you have to pay 4 Rs.

Vibha Global Worker
(Plot 413, Udyog Vihar Phase III, Gurgaon)

There are four different contractors, in total 350 workers. The helpers get 2,200 Rs, neither PF nor ESI.

Magson Export Worker
(Plot 41, Udyog Vihar Phase IV, Gurgaon)

There used to be 700 workers. As there is little work, people got the sack, now 300 are left, but only 100 workers are mentioned in the PF and ESI record. The July wage for helpers was 2,500 Rs.

Earl Global Worker
(Plot 870, Udyog Vihar V, Gurgaon)

The factory was closed on 15th of August. 4,000 workers used to be
employed, Before the closure they gave a pay slip, but they gave no money for August. The skilled taylors were initially told that they would get 4,000 Rs, but actually they got 2,850 Rs.

Gaurav International Worker

(Plot 151, 193,198,208,225,236,506, ... Udyog Vihar Phase I, Gurgaon)

In the 18 factories of the company in Gurgaon workers are paid between 2,500 and 2,900 Rs, instead of the new minimum wage.

The same is true for the following other textile companies:

WNTex (Plot 301, Udyog Vihar Phase II) 700 workers

Sadu International (Plot 321, Udyog Vihar Phase V) 200 workers

Modelama Exports (Plot 184, 20, 201, Udyog Vihar Phase I)

Mona Design (Plot 146, Udyog Vihar Phase I)

Bharat Enterprise (Plot 189, Udyog Vihar Phase I)

Mohan Clothing (Plot 76, Udyog Vihar Phase I)

During the last two years Gurgaon appeared in the international news twice. First in June 2007 when 30 female aborted fetuses were found in a drain near a private clinic. In January 2008 when it became public that a Gurgaon clinic had removed the kidneys of 500 migrant workers for the global organ trade. The fact that both news fit the media's need for commeriable 'scandals'nmight explain the sudden public interest. But what lies behind the scandal? We first briefly summarise the facts on the 'kidney scandal' and then consider some questions concerning the systemic and 'unscandalous' elements behind it.

The Kidney Scandal

Mid-January 2008 the media reports about a private clinic in Gurgaon which had, during the last eight to nine years, removed about 500 kidneys from mainly migrant workers for the global organ trade. Most of these workers are very likely to be dead by now. The private clinic was part of a wider web of local clinics, guest houses, international links and good relations to the police. The clinic is situated in DLF Phase I D-5/29, part of a privately developed town-ship. One piece of evidence for the involvement of the police is the fact that already in 1994 the main manager/doctor of the clinic was known to the police as being engaged
in organ deals. In 2000 the police officially shut down the clinic in Gurgaon, but business continued anyway. The clients are rich and international, e.g. from Greece, Australia, USA, Dubai. The victims are farmers, day labourers, building workers from Bihar, Uttar and Andhra Pradesh, the usual origins for industrial workers in Delhi’s industrial belt. They said that they needed the money to pay off farming debts or to pay dowries or simply to sustain their families. These workers were picked up from street corners, where day labourers are usually picked up for jobs. They were offered ‘a job’ and then brought to the clinic. Some of the workers said that they were threatened with violence and death and forced at gun point to give their kidneys. According to media sources the workers were given around 40,000 Rs for their kidney, while the clinic then sold it for 400,000 to 2,000,000 Rs. After a worker went to the police, the clinic was raided, but the main manager must have been warned, as he was able to flee. Just ten days before, Gurgaon police had conducted raids to expose an international kidney transplant racket. It had given the green light to the passport office to give the alleged main manager a duplicate copy of a “lost” passport.

All captured ‘clients’ were allowed to leave India without further investigations. After the scandal the victims are now under threat to have ‘broken the law’, because organ donation in India is only allowed amongst blood relatives. The government now wants to use the ‘scandal’ to liberalise the organ trade. It uses the usual arguments: if we do not allow organ trade, there will be a black market and things like in Gurgaon will continue to happen. This ‘scandal’ is just one side of the capitalist drive to open new markets by opening bodies, be it as source or receivers of ‘new’ commodities. In Gurgaon the general ‘body shop’ is yet another boom sector.

The Medical-Industrial Complex

If you have a look at the specific industrial composition in Gurgaon you will notice that Gurgaon is an eldorado for bio-technology and the extension of the body market: a constant supply of desperate and cheap bodies from the poor parts of India, dozens of private clinics and medical institutions, dozens of pharmaceutical laboratories of major international companies, a rich career-orientated upper middle-class in need of medical treatment, a pleasant ‘tourism infrastructure’, well-established
Ranbaxy

Ranbaxy is India’s biggest pharmaceutical company with a huge research centre in Gurgaon. Recently the company started to collaborate with another pharma-multi GlaxoSmithKline. “Analysts say the move reflects a growing desire on the part of major pharmaceutical companies to tap into India’s skills base and also benefit from the lower operating costs in the country. Under a previous alliance agreed in 2003, Ranbaxy carried out early stage chemical tests to take drug leads Glaxo is developing to the stage of candidate selection. Ranbaxy will now take drug candidates to the second stage, or phase II clinical trials, and will also retain the right to co-commercialise the products developed in India. Developing new drugs in India is much cheaper, as the country has a large, inexpensive pool of biotech talent.

(The Independent (London), Feb 7, 2007)

Health battle in Gurgaon

In August this year, when Fortis laid the foundation stone for its multi-superspecialty flagship hospital Fortis Healthcity in Gurgaon, it marked the entrance of another enemy in the already cluttered warzone. With the Apollo Tyre Group-promoted Artemis Health Institute and Max Hospital within a one kilometre radius and Naresh Trehan’s ambitious Medicity under construction in the vicinity, Gurgaon is preparing for a battle of sorts between some of the largest healthcare delivery players in the country.

(Radhieka Pandeya / New Delhi November 13, 2007)

Global Health Private Ltd., MediCity, is currently developing a four-million-square-foot, 40-acre facility in Gurgaon, India. This institution, backed by clinical and biotechnology research, will yield medical care to the growing middle class in India. This partnership will facilitate collaborative efforts to enhance healthcare delivery while providing international experience for students. “These Indian companies are unique partners for the University of Utah,” Brittain says. “Their leaders are innovative and eager to bring new medical technologies to their
community. Partnering with Indian companies will allow the University to benefit from their expertise and willingness to engage in collaborative research and development. Through this alliance we will be able to accelerate commercialization of University technologies and provide economic benefits to both the United States and India.”

(Economic Times, October 14, 2007)

INC

Triangle clinical research organization INC Research said Thursday it has teamed up with GVK Biosciences in a joint venture to offer clinical trial services in India. Gurgaon, India-based GVK and INC Research have agreed to equal shares in a collaboration that will offer full-service, phase I-IV clinical trials in India for both pharmaceutical and biotechnology customers.

(Financial Express, 24th of March 2007)

Agilent to set up life sciences facility

Agilent Technologies India will concentrate on life sciences and clinical analysis in the state on the back of fast growing pharma and life sciences companies. Agilent Technologies, which will be setting up its first manufacturing facility by 2009 in India at Manesar near Gurgaon, provides measurement sciences in the electronic and bio-analyticals sectors.

(BS Reporter / Mumbai/ Ahmedabad November 06, 2007)

The Daily Scandal

The capitalist production process in Gurgaon consumes bodies on a daily basis, without producing media-worthy ‘scandals’. On a daily basis poor labourers die in factories, on construction sites, on the way to or from work. Their deaths are often covered by the very same mechanisms which made the ‘kidney trade scandal’ possible: victims of industrial accidents are brought to company-friendly doctors, the official administrations turn a blind eye, the victims are victimised once more (see report on industrial accident in newsletter #7). The boundaries between selling body(parts), risking your life on the job and selling your labour power become blurry – once selling your labour power means working 12 to 14 hours daily for a wage which hardly allows you to
reproduce the lost energy. The media likes to emphasise that the labourers were ‘forced at gun point’ to have their bodies been ripped open. This is due not only to the media’s eagerness for violent stories. It is also a way to avoid the question why people might have to chose one form of self-destruction – selling body parts – over another form of self-destruction – industrial wage labour.

In Gurgaon Workers News #8 we already covered the issue of an increasing safety paranoia of the local upper middle classes in Gurgaon. Against the background of the ‘kidney scandal’ the public (meaning ruling class!) opinion tries to turn the ‘dangerous classes’ (the moving proletariat) either into helpless victims or individual culprits. The following is a summary of a newspaper article on the raids in December 2007.

Gurgaon: Drive to identify illegal migrants

Gurgaon, December 27: The Gurgaon police today launched a drive in the suburb slums to identify illegal migrants. “The raids were conducted after a rise in crime cases in the slums of Sheetla Colony near Sector 14, Ashok Vihar Phase III and Devilal Colony,” said Gurgaon city SHO Surender Singh. Illegal migrants are a menace in Gurgaon city, Singh said. “As the numbers of illegal migrants rise, the crime rate in slums also rises,” he added. Over 250 labourers were called at Sector-5 Police Station for verification. Although most had residence proof from India, the SHO said further interrogation would be carried out to find out illegal migrants. According to preliminary investigations, there were 149 labourers from Madhya Pradesh, 31 from Uttar Pradesh, 12 from Assam and 13 from West Bengal. The raids are to continue all over the city for the next week. At the police station, the labourers are asked for their residential details. Along with the addresses, the police will send a photograph of the person by post to the said village or town. According to Singh, Gurgaon is an ideal destination for most illegal migrants as they get plenty of work as semi-skilled or unskilled labour on the construction sites.

(Express News Service : Posted online, Friday, December 28, 2007)

2) Collective Action –

Reports on proletarian struggles in the area
*** Workers’ spontaneous actions enforce the payment of minimum wage in several factories, September 2007

In summer 2007 the Haryana government raised the minimum wage from a monthly 2,540 Rs to now 3,510 Rs. Most of the industrial workers did not get the minimum wage in the first place, but the government’s move seems to be an anticipation of the general anger and despair amongst the workers. Friends from Faridabad Majdoor Samaachaar (FMS) collected various stories from factory workers in the area. They reported that a lot of companies try to make people sign a pay slip showing the new minimum wage while actually paying the old one. They also told us that in several factories workers refused the lower wage, organised spontaneous strikes and thereby enforced payment of the official minimum wage. Their actions show that the question of minimum wages is not a legal one, but is about immediate power relations. While the workers in the booming automobile sector managed to put pressure on the companies, their brothers and sisters in the textile sector face massive attacks at the same time. The stories are told by workers from: Maharaani Paints, Senden Vikas, Punit Udyog, Pepsi, Shyam Elanyaz, Talbros, Ahuja Plastics.

(All stories have been published in Hindi in: FMS 231, September 2007)

Mahaarani Paints Worker

(Plot 242, Sector 24, Faridabad)

On August 7th, the time when the payment of the July wages was due, the management wanted us to sign two different pay slips: One showing the new minimum wage of 3,510 Rs, the other 2,554 Rs. We were actually given the lower wage. One or two workers took the money, but the rest of us sat down and stopped working. An hour later the general manager arrived and told us that we would be given 3,510. This then happened on the 9th of August.

Mahaarani Paints Worker

(another factory, Plot 343-344, Sector 24, Faridabad)

On August 7th the July wage was paid: 2,540 Rs. Two or three people took the money, but us workers hired through contractors forbade all workers to take the money and we stopped working. We had got to know about the action of the workers in the factory Plot 242. Due to us laying down
tools the production in the factory came to a stand-still. The permanent workers re-organised in a union and the union leader went to the general manager. The boss then talked to the chairman-managing director Baldev Raj Bhatiya. According to the order of the big boss a new pay slip was handed out and on August 9th we were paid 3,510 Rs.

Senden Vikas Worker
(Plot 65, Sector 27a, Faridabad)
The contractor made us sign a wage slip for 3,510 Rs but actually wanted to pay 2,500 Rs. We refused to take the money. As a result, the contractor paid 3,510 Rs as a wage for July on the 9th and 10th of August. In the factory 70 permanent workers and 250 workers hired through three different contractors manufacture 25,000 airconditioning systems per month for the automobile industry. The workers hired through contractors work 150 to 200 hours over-time each month. Their over-time is paid at the single rate (which is illegal in two senses: too many hours over-time, and single instead of double pay). The wage of permanent workers is 8,000 to 18,000 Rs per month, but no-one has been made permanent for the last 15 years. The hose and pipe department of the factory is a space of the ill: the department is on the third floor, but there are no windows or doors, just a staircase. All workers are ill because of the bad air. The management has talked about installing windows several times, but no-one believes them anymore. Half of the work-force is employed in this department.

Punit Udyog Worker
(Plot 37e, Sector 6, Faridabad)
The plant manufactures soap. So far, on the 22nd of August, the helpers have not taken the July wage yet. The company wanted to pay only 2,554 Rs instead of 3,5120 Rs.

Pepsi Driver
(Plot 27, Sector 24)
Pepsi company employs 54 helpers and drivers through contractors. We were made to sign the July wages showing 3,510 Rs, but actually they gave us 2,500 Rs. In order to act against this, today on the 22nd of August, we are all prepared to take extra holidays together.
Shyam Elanyaz Worker
(Plot 40, Sector 6, Faridabad)

When the company paid 2,500 for July wages, 50 casual workers demanded 3,510 Rs. “If you cannot pay, we cannot work”. On the 9th of August at 3 pm, the time when wages are paid, the casual workers stopped working. The workers sat down inside the factory until the end of the shift at 5 pm. On the 10th at 8:30 am we were stopped from entering the factory and sat down in front of the gate. At Shyam Elanyaz 40 permanents, 100 workes hired through contractors and 100 workers on piece rate are employed. Three of the permanent workers act as contractors, one of them is a union leader. At the gate, 15 casual workers were lured and their resolve broken so that they accepted the pay slip, 15 more entered the factory after they were promised an extra payment of 100 to 200 Rs. Nevertheless, 20 casuals remained in front of the gate until the evening and said that the following day they would go to the office of the DC.

Talbros Worker
(Plot 75, Sector 6, Faridabad)

On the 10th of August wages were due. The helper got 2,000 Rs, they stopped working and demanded 3,510 Rs. The helpers went on strike from the 10th of August to the 22nd of August. On the 16th of August the police entered the factory and left with the bosses. The labour department was given the following information by the company: the 190 helpers are not employed at Talbros factory. The labour department and the company have brotherly ties... 190 workers were sacked. The company runs two 12-hours shifts and hired new helpers. They were told that they would get 3,510 Rs per month for a 12-hour shift, 30 days per month.

Ahuja Plastics Worker
(Plot 20a, Industrial Area, Faridabad)

The male workers started a strike on June 5th, demanding a pay hike of 300 Rs. The female workers wanted to lay down tools too, but we told them not to giving following reason: we will find any other job anywhere, but they would have difficulties. When the director refused to increase the wage even by 200 Rs we started working again on the 9th of August.
We were forced to write that we had taken days off without having given notice.

In Gurgaon Workers News #3 (May 2007) we reported on a factory occupation and union conflict at Gurgaon based Fashion Express. The following is a short up-date sent by a friend.

Fashion Express
Plot No. 100 Udyog Vihar Phase I
Gurgaon, Haryana

Most workers have been working for 12-16 years at the same factory. There were 50 workers employed through contractors, but they were sacked during the summer. 99 permanent workers remained, 47 of them women. The factory manufactures women’s garments (primarily t-shirts, blouses etc). Fashion Express has another unit in Manesar: Plot 79-80, Sector 5 IMT Manesar.

July 2007

On the 23rd of July the management stopped giving work to the sewing and finishing department. Only the computerised embroidery machines, which are able to work on 20 pieces a time, was still operated. Wages had not been paid by 7th of August. In the last week of July there was a meeting between the Fashion Express union president, two AITUC union reps and the main company manager. The manager told them that he was closing the factory and terms of settlement with the union were discussed. It was agreed that the union would draft its terms of settlement. The union did not question the closure, but asked for the following settlement:

* Close factory according to legal rules and regulations
* Give VRS to all workers:
* For years already worked – 45 days wages per year of service
* For years of service remaining until retirement – 30 days wages per year of service remaining
* Give all dues remaining for last 3 years (arrears, bonus, increments)
* Agree that if you or your family member set up another factory you will give these workers first priority when hiring
*Give legal compensation as due – 15 days of compensation for every year of service and gratuity

Instead of a reply the management put up the following notice in the factory:

“Workers have been spreading some rumors that management is closing the factory but the reality is that for the last 2-3 months there has been no work at the factory. management is trying its best to address the situation. Due to fluctuations in the market the company has recently been unable to procure international orders. That is the reason for not giving work to the workers for the last few months and yet even without work, management made arrangements to pay the workers. Even now management is trying to revive production. management has no intention to close the factory but management hopes that keeping the trying circumstances in mind, workers will maintain peace so that we can start production as soon as orders come in. We hope that you will not take any such steps that spread false rumors and hinder work at the factory”.

Contradictions pointed out by the workers

*There was production until July 2007.

*They have proof of shipments dispatched and new orders that came in.

*The owner stopped coming to the factory after 29th of July.

*All managerial staff stopped coming to the factory after 30th of July.

*Since the 1st August the punch-in systems for workers have not been functioning as they should.

*The sole personnel manager who was coming to the factory has also stopped coming, only security guards come and open the factory and let workers in.

*In the last 4-5 days equipment and stocks of raw materials have started to be removed at night.

*It is true that a rented factory nearby in Phase V has been shut down, but there is no information about the status at the Manesar plant.

September 2007

On the 24th of September the workers found a lock-out notice at the
factory gate. The union has information of shipments sent in the name of Fashion Express during the last two months (during which time management claimed that there was no work and hence no work was being given to FE workers at the Udyog Vihar unit). At the last meeting with the DLC where the company manager was present, workers raised the issue of lack of cleanliness in the factory and the removal of sweeping/cleaning staff. The manager's response through his lawyer was that since no one from Fashion Express management or staff was at the factory and the workers were there they should clean it themselves. This is a violation of the Factories Act. Owners have to provide healthy working conditions, drinking water and toilet facilities. Especially since Fashion Express management is proclaiming loudly and with its notice that it is interested in keeping the unit open and is not engaging in a lockout.

Workers are also facing a lot of financial difficulties since they have not been paid in recent months. Already their children have been thrown out of school once due to non-payment of school fees. After they were paid 50% of July's wages, many of their children rejoined school but now the workers are facing the same problem again. We have a list of the workers and the amount of school fees each one needs to pay. The total comes to nearly 34,000.

End of 2007

By the end of 2007 all permanent workers at Fashion Express Udyog Vihar Factory lost their jobs, so far the issue of compensation or severance pay is not settled.

3) According to Plan –

General information on the development of the region or on certain company policies

***Not yet special enough: Special Economic Zones, Part Six –

– Summary on recent news items on the developing SEZ in Gurgaon

Special economic zones (SEZs) of India’s largest private sector company Reliance Industries Ltd (RIL), and real estate majors DLF and Omaxe, will get a major boost with the commerce ministry considering a relaxation of the 5,000-hectare cap on the land size of these zones. RIL was planning to build a 10,000-hectare zone in Jhajjar, near Gurgaon, while DLF had proposed an 8,097-hectare zone in Gurgaon, Haryana. Pillai
added that land owners whose land will be acquired for SEZs will also be
given the option of becoming stockholders in the SEZs that will be set up
on their land.

(December 4, 2007 / BS Reporter)

Recently Group BPTP received approvals for SEZs in Noida, Greater
Noida, Faridabad and Gurgaon. The SEZs will be located in Gurgaon’s
Sector 102 and Faridabad’s Sector 81. These will have an area of 27 acres
and 54 acres, respectively. The investment will be about Rs 550 crore in
Gurgaon SEZ and Rs 1,100 crore in Faridabad SEZ. All these four SEZs
would be dedicated to IT and IT enabling services. Citibank’s realty arm
has invested in the BPTP to the tune of Rs 322.50 crore and Merrill Lynch
real estate arm also invested Rs 112.55 crore in a joint venture project of
the company. The amount was raised to fund the development of an IT
Park that is scheduled to be set up on the Gurgaon-Expressway on 4.5
acres of land. Merrill Lynch holds 49 per cent equity while BPTP has a
balance of 51 per cent in the IT-Park project.

4) About the Project –
Updates on Gurgaon Workers News

*** Glossary –

Updated version of the Glossary: things that you always wanted to know,
but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised on party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Workers hired by the company for a limited period of time.
Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000

1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (March 2007)

1 Euro = 57 Rs (March 2007)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.
Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8 hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to prove your residency. Catch 22. Local politics use the ration depots and cards as a power tool which reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make
money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
– Flight Delhi to London: 28,000 Rs
– cheapest Hero Honda motor-bike (150 cc): around 40,000 Rs
– Ford Fiesta: 587,000 Rs
– four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
– Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the April issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Long list of short information from workers employed in over 40 different companies in Gurgaon –

Most of the reports do not show much more than the fact that the official legal working standards are not met. Most of the reports are from textile export factories, gathered in September and October 2007.

*** Accident, everything but accidental! –
A worker employed by Dheer Internationals in Gurgaon tells about how the company treated him after his work accident.

*** Short report from Motherson Sumi System Worker from Noida –

In GurgaonWorkersNews no.6 we have already published a report from a young worker employed by Motherson Sumi in Gurgaon. This time a different worker employed at the automobile supplier’s plant in nearby Noida tells us about their working conditions. The regime of international automobile suppliers extends its production chains in the region: Motherson Sumi signed a joint venture with FIAT subsidiary Magneti Marelli in January 2008.

2) Collective Action –

Reports on proletarian struggles in the area

*** Wildcat actions of workers struggling over the payment of the new minimum wage, September and October 2007 –

The series of struggles documented in GurgaonWorkersNews no.9 continue. Here we have translated more reports from Faridabad Majdoor Samaachaar 232. The example of the struggle at Alpia Paramouts shows clearly how local police and management work hand in hand in order to quell workers’ discontent. The example of Oswal Electricals indicates that the workers feel strong enough – even when facing an international automobile supplier – to stay away from work collectively in order to resist the employers’ regime. The workers – female and male workers together – exploited by the textile export company Birla VXL have to fight on a different front: like many other textile exporters the company tries to reduce the work-force due to the current market slump.

*** Short note on road-picket against power shortage in Gurgaon: Sunstroke for the poor, bar out of ice for the rich –

March 2008: Villagers from Damdama and Khedla of Sohna block stopped the traffic movement on Gurgaon-Sohna Road for an hour protesting against the two-day black out in their villages. At the same time 250 army water tankers have to be deployed in order to tackle the current water shortage in Gurgaon. According to the media “this inconvenience has been caused by the residents of Bupania village near Gurgaon who have punctured the canal that supplies water to the city”. The voices of the ruling class blame proletarian villagers – no word about
water polluting industries or water wasting golf courses.

While poor people – those who have to work outside, in stuffy factories or in rooms without AC – suffer from the lack of electricity and water, the new rich enjoy displaying that they can afford to waste loads of resources. Be it only in order to express the class difference in difference of temperature: “Gurgaon might soon get India’s first ice bar, where everything from the glasses to the décor will be made up of ice” (Hindustan Times, February 2008).

3) According to Plan –

General information on the development of the region or on certain company policies

*** Short update on medical-industrial complex in Gurgaon –

The Gurgaon body-market provides cheap offers for the international business, ranging from kidneys (see GurgaonWorkersNews no.9) to cheap highly skilled labour, e.g. in the public National Brain Research Centre in Manesar. We have a look at the job offers and wage scale of this biotech institute.

4) About the Project –

Updates on Gurgaon Workers News

*** New Video –

A friend has sent a short video clip featuring masses of workers entering the industrial area Udyog Vihar in Gurgaon on their way to morning shift. Impressive; when we imagine the individual hardship and the potential for collective unrest.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Long list of short information from workers employed in over 40 different companies in Gurgaon –
Most of the reports do not show much more than the fact that the official legal working standards are not met. Most of the reports are from textile export factories, gathered in September and October 2007. Some of them you might see – but won’t notice – on the video from Udyog Vihar (see web-site).

McExports Worker

(Plot 143, Udyog Vihar I, Gurgaon)

There are about 1,000 workers employed in the factory. The official shift-times are from 9 am to 6 pm, but when you leave at 6 pm, the will cut 1,000 Rs from your monthly wage. For a 10-hours shift we get 3,500 Rs per month. When they make you stay till 1 am in the night, they don’t even give money for food; they even make the 150 female workers stay till 1 am. The bosses abuse us and a checker slap-beats people. Money is cut for PF and ESI, but no card is given and no PF form when workers leave the employment.

Coca Cola Worker

(Plot 370-2, Udyog Vihar II, Gurgaon)

There are two 12-hours shifts; overtime is paid at single rate. 150 workers are hired through two different contractors; they get 2,000 Rs per month, no ESI or PF.

New Light Worker

(Plot 396, Udyog Vihar III, Gurgaon)

About 400 workers work on two 12-hours shifts. Overtime is paid at even less than single rate; we get 10 Rs per overtime-hour.

Madhu Chavla Design Worker

(Plot 783, Udyog Vihar V, Gurgaon)

The shift times are from 9 am to 8 pm, the helpers get 2,200 Rs per month, skilled workers get 120 Rs for eight hours.

Eastern Medikit Worker

(Plot 195, 196, 205, Udyog Vihar I, Gurgaon)

Since the minimum wage has been introduced, the payment for overtime has been reduced from 15 Rs to 12 – 13 Rs per hour.
V & S Worker
(Plot 363, Udyog Vihar II, Gurgaon)

500 workers are employed at the factory, shift times are from 8 am to 9 pm, we get 11 – 12 Rs per overtime hour. The July wage for the helpers was 2,2554 Rs. Today, on 28th of September the August wage has not been paid yet.

Viva Global Worker
(Plot 413, Udyog Vihar III, Gurgaon)

On 25th of September 2007 400 workers have been kicked out from the factory, now only 250 are left. The August wage for the helpers was 2,554 Rs for the skilled workers 3,000 Rs to 3,300 Rs.

Harmonious Export Worker
(Plot 730, Udyog Vihar V, Gurgaon)

The August wage for the helpers was 2,400 Rs, for the skilled 4,200 Rs (from which 1,200 Rs was reduced for PF and ESI, but neither ESI nor PF was given)

Chintu Creation Worker
(Plot 295, Udyog Vihar II, Gurgaon)

One day before a worker completes six months of working for the company the manager personally hands them their notice. The worker keeps on working in the factory, but does not show in the official documents. One month later he or she is issued a new company card.

Usha Pipe Worker
(Plot 451-2, Udyog Vihar II, Gurgaon)

250 workers are employed in the factory. We work from 9.30 am to 8 pm. The helpers' wage for August was 2,700 to 2,800 Rs, for skilled 3,000 to 3,200 Rs.

Radhunik Exports Worker
(Plot 215, Udyog Vihar I, Gurgaon)

The shift times are from 9.30 am to 10.30 pm, 600 workers are employed; the helpers get 3,510 Rs, the skilled 3,900 Rs.
Dheer International Worker  
(Plot 299, Udyog Vihar II, Gurgaon)  
700 workers work from 9 am to 1 am every day. The helpers got 2,554 Rs and the skilled 3,000 Rs in August.

Shivank Udyog Worker  
(Plot 671-2, Udyog Vihar V, Gurgaon)  
900 workers work from 9 am to 8 pm. Overtime is paid at single rate, only half of the workers get PF or ESI. The helpers' wage in August was 2,554 Rs, the skilled got 120 Rs per eight hours shift.

Shambhu Enterprises Worker  
(Plot 30, Udyog Vihar I, Gurgaon)  
175 workers are employed, they start working at 9 am and finish at 9 pm, sometimes till midnight. The last wage of the helpers was 2,554 Rs, the operators got 2,800 Rs to 3,000 Rs.

S and R Worker  
(Plot 298, Udyog Vihar II, Gurgaon)  
450 workers work on two 12 hours shifts. For a ten hours day, 30 days month the helpers get a monthly wage of 3,510 Rs.

Krasha Label Worker  
(Plot 162, Udyog Vihar I, Gurgaon)  
500 workers work 12 hour shifts.

Bharji Supertech Worker  
(Plot 272, Udyog Vihar II, Gurgaon)  
The helpers hired through contractor get 2,300 Rs to 2,400 Rs.

Gaurav Worker  
(Plot 633, Udyog Vihar V, Gurgaon)  
Today, on 28th of September, the August wages have not been paid yet. The last wage was 2,200 Rs for the helpers and 2,800 Rs to 3,000 Rs for the skilled.

Logwell Forge Worker
The helpers hired through contractors got 2,400 Rs to 2,800 Rs in August. In September all contractors got dismissed and the company hired all workers directly. The September wages for the helpers was then the minimum wage of 3,510 Rs.

Modelama Export Worker

No minimum wage was paid in September and normally 10 to 20 hours of monthly overtime get embezzled. People from the personnel department abuse workers.

Standard Gold Worker

The helpers get 2,350 Rs. Overtime is paid at single rate.

Gulati Retail Worker

The helpers get 2,800 to 2,900 Rs, overtime paid at single rate.

Jyoti Apparel Worker

The helpers get 2,200 Rs, the skilled 110 Rs per eight hours shift.

Mona Design Worker

The helpers got 2,554 Rs wage for August, the skilled 3,000 Rs to 3,300 Rs. Only a third of the workers get ESI or PF.

Grafty Export Worker

300 workers start work at 9.30 am. They work eight to ten hours, the helpers get 2,200 Rs. Even after three years of employment no ESI or PF.

Usha Global Worker

The workers hired through contractors got 2,500 Rs to 3,000 Rs in August.
2007.

Lara Industries Worker
(Plot 155, Udyog Vihar I, Gurgaon)
25 permanent and 700 workers hired through contractors are employed; only the permanents get ESI and PF. In September the helpers’ wage was 3,000 Rs.

Asia Handycrafts Worker
(Plot 310, Udyog Vihar II, Gurgaon)
The skilled workers’ wage in September was 3,000 Rs.

Orient Craft Worker
(Udyog Vihar III, Gurgaon)
The helpers got 2,554 Rs in September, the skilled 2,800 Rs to 3,200 Rs.

Usha Fab Worker
(Plot 435-6, 451-2 Udyog Vihar III, Gurgaon)
The helpers’ wage was 2,200 Rs in September; the skilled workers got 3,000 Rs.

Stick Pen Worker
(Plot 318, Udyog Vihar V, Gurgaon)
In September the helpers were paid 2,000 Rs.

Orchid Worker
(Plot 189, Udyog Vihar I, Gurgaon)
In September the helpers were paid 2,554 Rs.

Gaurav International Worker
(Plot 506, Udyog Vihar III, Gurgaon)
In September the helpers were paid 2,500 Rs the skilled 2,900 Rs.

(Plot 225, Udyog Vihar I, Gurgaon)
The helpers hired directly by the company got 3,510 in September, the helpers from contractors 2,500 Rs.

Shivam Embroidery Worker
For a 12-hours shift and a 26-day month the helpers get 2,200 Rs to 3,000 Rs, the skilled 4,500 to 4,800 rs.

Niti Clothing Worker

In September the helpers got 2,554 Rs, the skilled 3,100 Rs to 3,200 Rs.

Alanker Worker

The work starts at 9 am and finishes at 7.30 pm. The helpers get 3,510 Rs, for a daily 10 1/2-hours shift.

SK Fabric Worker

200 workers do two 12-hours shifts; overtime is paid at single rate. The helpers get 2,150 Rs the skilled 2,400 to 2,500 Rs.

Spark Worker

300 casual workers and 350 workers hired through contractors are employed. They don’t get ESI or PF. On 15th of October the September wages have not been given. People work from 9 am to 8.30 pm, sometimes till 1.45 am. There is no day off. There are only two toilets for all workers.

Rolax Auto Worker

The factory runs two 12-hours shifts. Helpers last wage was 2,460 Rs, the operators got 2,800 Rs to 3,500 Rs. As of the 15th of October, the September wage had not yet been paid.

Mega Export Worker

500 workers are employed, they start work at 9 am and finish by 7.30 pm. Overtime is paid at single rate, helpers got 2,410 and skilled workers 2,600 Rs to 2650 Rs.
Suri Impex Worker
(Plot 211, Udyog Vihar I, Gurgaon)
The helpers’ August wage was 2,200 Rs to 2,300 Rs. The September wage was not paid by the 15th of October. Workers are verbally abused in the factory.

B & S International Worker
(Plot 301, Udyog Vihar II, Gurgaon)
Helpers get 2,300 Rs. The August wage was given late, on 28th of September 2007.

Tahersaa Export Worker
(Plot 174, Udyog Vihar I, Gurgaon)
People work from 9 am to 8.30 pm. The helpers get 2,200 Rs the skilled workers 3,000 Rs. No ESI or PF is given.

Saan International Worker
(Plot 330, Udyog Vihar II, Gurgaon)
The helpers get 2,554 Rs; PF form is not handed out when people leave the company.

Sign Impex
(Plot 254, Udyog Vihar I, Gurgaon)
The factory runs 13-hours shifts. Helpers get a monthly wage of 2,554 Rs.

R.L. Khanna Export Worker
(Plot 289, Udyog Vihar II, Gurgaon)
The helpers get 2,200 Rs to 2,600 Rs, the skilled 3,000 Rs for September.

Premium Molding Worker
(Plot 185, Udyog Vihar I, Gurgaon)
There are 250 permanents and 250 casuals employed in the factory, which runs two 12-hours shifts. One hour of overtime is paid at 6 Rs. The monthly wage of the helpers is 2,400 Rs, the operators get 3,000 Rs to 3,500 Rs. No ESI or PF given.

*** Accident, everything but accidental! –
A worker employed by Dheer International in Gurgaon tells about how the company treated him after his work accident.

Dheer International worker

(Plot 299, Udyog Vihar II, Gurgaon)

I used to work in the washing department. Two month ago I fell from the roof. I was knocked unconscious. The company brought me to a private clinic in Dundahera. The doctor ordered two months rest in bed due to the hip injury. After two months I was not better. The company then said that I have to take care of the further treatment myself. I complained to the labour department. On the 3rd of October 2007, the first appointment at the labour department, the company representatives did not show up. On the 11th of October the company was present but refused to admit that I fell from the company’s roof. We came to an agreement concerning the further treatment and the payment of wages. When I came to the company on 12th of October the lawyer abused me verbally and he forced me to sign vouchers. He gave me only 2,200 Rs for outstanding wages and as final payment. I went to the police. I will go to the labour department again.

Motherson Sumi System Worker

In January 2008 Magneti Marelli and Motherson signed an agreement for a joint venture, which is aimed at the production of automotive components in the area of lighting and engine control systems. In February 2008 Magneti signed another agreement with SKH Metals and SKH Sheet Metal Components respectively. The industrial entity created together with SKH Metals will be located at the Maruti Suzuki Industrial Supplier Park in Manesar (Gurgaon), where Magneti Marelli is already present with its joint venture with Suzuki Motor and Maruti Suzuki India, aimed at the production of electronic control units for diesel engines, already announced earlier. With companies like Bosch, Delphi, Magneti Marelli etc. the international regime of automobile suppliers extend their production chains to the industrial areas of Gurgaon.

(Plant A-15, C-14, Y-2, Sector-6, Noida)

The factory manufactures electrical harnesses for the automobile industry, may be this is why there are not the usual two 12-hours shifts running, but three 8-hours shifts instead. On the two day shifts both
young men and women are employed, the night shift is only staffed with men. In the A-15 plant 500 women work on each two day shifts and 300 men on each three shifts. Casual workers have been sent to the new Motherson factory in Faridabad (also see report in GurgaonWorkersNews no.6). In the C-14 factory there are 4,000 workers. The company headquarter is also situated there. In the Y-2 factory 1,400 women and 1,500 men work. There are only very few permanent workers at Motherson, in the Y-2 factory there are 200 permanent female workers and 100 male, meaning that 90 per cent of the Motherson workforce is casual. The male workers are sacked after eight months employment, and then they have to wait for six months before they can apply again. They are then hired for a different plant. The women are not sacked, but they remain on casual status, even after working there for three or four years. Every second months there is loads of work for a period of 15 to 20 days. The women then work from 6 am to 10 pm continuously. In order to get to the factory in time they have to get up at 3.30 am. They don't get enough sleep. They don't give you a day off, even when you are ill. The lads are made to work a 24-hours shift, they then have a two to three hours break for washing and at 9 am they have to be at work in order to do another 12-hours shift. During that time the women make 90 hours overtime per months and the male workers 175 hours. Legally they are not allowed to let us work more than 50 hours overtime in a period of three months. Therefore the overtime does not show on the pay slip.

2) Collective Action –

Reports on proletarian struggles in the area

*** Wildcat actions of workers struggling over the payment of the new minimum wage, September and October 2007 –

The series of struggles documented in GurgaonWorkersNews no.9 continue, here we have translated some more reports from Faridabad Majdoor Samaachaar 232. The example of the struggle at Alpia Paramounts clearly shows how local police and management work hand in hand in order to quell workers' discontent. The example of Oswal Electricals indicates that the workers feel strong enough – even when facing an international automobile supplier – to collectively stay away from work in order to resist the employers’ regime. The workers – female and male workers together – exploited by the textile export company
Birla VXL have to fight on a different front: like many other textile exporters the company tries to reduce the work-force due to the current market slump.

Alpia Paramouts Worker

(Plot 60, Sector 6, Faridabad)

The Alpia factory employs 100 permanent and 400 casual workers on two 12-hours shifts. Two to three times per months the workers have to work 36-hours shifts. The overtime payment is at single rate. Between 20 and 25 hours of monthly overtime pay gets stolen from workers by the company. The drinking water is brackish, and we have been demanding better water for two weeks.

The August wages were paid on 10th of September, the permanent workers were paid the new minimum wage of 3,510 Rs, but the casuals were only given 2,000 Rs. They refused to take the money. On 11th of September the casual workers did not enter the factory, but instead sat down in front of the gate, demanding the payment of 3,510 Rs. The company called the police and soon enough two police cars arrived. The managing director told the workers that the September wage will be according to the minimum wage, but they should take the 2,000 Rs for August. After two hours of sitting down outside, the casuals entered the factory. The Alpia boss who had called the workers inside by promising the minimum wage then ordered casual workers individually into his office. There he told them that their wage would be increased by 500 Rs to a new total of 2,500 Rs per month. The Apia boss also told two casual workers to attend a meeting at the factory gate on 15th of September. When they arrived a police car was already waiting for them. The two workers were ordered to enter the car. The manager was already inside the car. Both policemen and manager started to threaten the workers. The police car drove to the remote sector 22 and the two workers were kicked out the car.

Oswal Electricals Worker

(Plot 48-49, Industrial Area, Faridabad)

The company runs two plants in Faridabad, supplying the automobile and white goods industries with die cast (aluminium) and assembled parts. Amongst others Oswal supplies: Electrolux, LG, Yamaha, TVS,
Honda, Hero Honda. The company’s machinery is mainly from Germany and Japan. Oswal had a stall at the industrial fair Euroguss, which took place in Nürnberg, Germany in March 2008. (See: http://www.oswalelectricals.com) After the minimum wage was increased to 3,510 Rs the company ordered that from now on the die-casting machines had to be operated by one instead of two workers. As a reaction against this order the operators stayed away from work together. As a result, on 10th of September 2007 only 5 of 25 machines ran. On 12th of September a foreman was driving around on his motorbike, looking for the operators. In order to strengthen their collectivity the operators had met up together and discussed the situation.

Birla VXL Worker
(14/5 Mathura Road, Faridabad)

Birla VXL exports textiles, trousers and suits (see: http://www.birlavxl.com). At Mathura Road factory 65 permanent workers and 450 casual workers are employed. On 14th of September the management announced that the factory would be shut for the next eight days. We asked what the reason was, but the bosses wouldn’t tell us. Then, on the 15th of September we found out that the company had started to remove the machines from the factory. We – female and male workers – went to the factory and stopped the removal of the machines. The company called the cops. Having already complained at the labour department, the police office and the local administrations, we are now thinking about taking other steps. We are a group of 45 female and 20 male permanent workers.

Paramount Polymers Worker
(Sector 59, Part B, Jharsentali Jajru Marg, Faridabad)

The company manufactures plastic boxes, employing 25 permanents and 130 casual workers. On 12th of September the August wages were paid: 2,000 Rs for the casuals. They refused to take the money and stopped working. When the chairman announced to everyone that the September wages would be 3,510 Rs and that we should take the 2,000 Rs for August, we trusted him. On the 13th of September the boss called the casuals individually and told them that there will be a wage increase, but that it
won’t be 3,510 Rs in September either. “Stay calm and take the money, do your work or go somewhere else”.

The electricity unrest hit the road when villagers from Damdama and Khedla of Sohna block stopped the traffic movement near Badshahpur on Gurgaon-Sohna road for an hour protesting against the two-day black out in their villages.

According to protestors, previously they were getting electricity only for a couple of hours per day. For past two days there was no power supply at all in these two villages. “We are fed up and it is unimaginable for us to live in villages without electricity and water. That’s why we have come all this way to stage our protest outside the electricity office at Badshahpur. We will not go until we get a permanent solution to our power crisis,” said Raj Kumar Nambardar. Only after police intervened and assured them of an immediate solution, did the protestors withdraw and let the traffic move on the busy road.

(Times of India, 17th of March 2008)

The electricity cuts are aggravated by the current water shortage. According to a report on NDTV in late March 2008 about 250 army water tankers have been sent to Gurgaon in order to tackle the water shortage and to secure a minimum water supply. The Hindustan Times, 21st of March, does not blame water polluting industries or water wasting golf courses and upper class estates for the water shortage, but the poor: “This inconvenience has been caused by the residents of Bupania village near Gurgaon who have punctured the canal that supplies water to the city. The 65-km long canal, that brings water for Gurgaon from Kakori (Sonepat), had been punctured to get water for fields in Bupania village”.

While poor people – those who have to work outside, in stuffy factories or in rooms without air conditioning – suffer from the lack of electricity and water, the new rich enjoy displaying that they can afford to waste loads of resources, be it only in order to express the class difference in difference of temperature:

“Gurgaon gets country’s first ice bar

Gurgaon might soon get India’s first ice bar, where everything from the glasses to the décor will be made up of ice.

Ashok Sharma, deputy excise and taxation commissioner, told HT:
“Hotels and restaurants already having bar licence would be allowed to open ice bars. They'll have to pay an additional annual fee of Rs 1 lakh.” The temperature inside ice bars is around -5 degrees Celsius. “Guests are given special attires and shoes,” he added. London, Melbourne, Stockholm, Shanghai and Dubai already have such bars”.

(HT, 12th of February 2008)

3) According to Plan –

General information on the development of the region or on certain company policies

*** Short up-date on medical-industrial complex in Gurgaon –

The Gurgaon body-market provides cheap offers for the international business, ranging from kidneys (see GurgaonWorkersNews no.9) to cheap highly skilled labour, e.g. the public National Brain Research Centre in Gurgaon, Manesar (“An Autonomous Institute of the Dept. of Biotechnology, Government of India”). To have a look at the job offers and wage scale of this biotech institute we have chosen the best paid and most skilled job vacancy (published in February 2008), a medium and the lowest paid job on offer:

01 SCIENTIST VII

Pay Scale: Rs. 18400-22400 Rs per month

Essential Qualifications/ Experience: PhD/corresponding degrees with original work as evidenced by patents or publications. Evidence of leadership with about 16 years of R&D experience.

The wage offered equals the wage of an experienced call centre worker in Gurgaon. In Dollar or Euro terms: 540 USD or 340 Euro.

12 Librarians

Pay Scale: 6500–10500 Rs per month

Essential Qualifications/ Experience: MA/ MCom/ MSc with Bachelor in Library Science or MLib with 3 years relevant experience in a Govt. Institute/University or an Organization of repute.

Desirable: One year Diploma in Computer Application and knowledge of scientific terms and experience working in Scientific Organizations.

24 Driver
Pay scale: 3050-4590

Essential Qualifications/ Experience: VIIIth pass. Must possess valid driving license for light and heavy vehicles. Knowledge of Motor Mechanism (should be able to rectify minor defects in vehicles).

Desirable: Experience of driving a CNG bus/motor car for three years.

The current minimum wage for unskilled helpers in the industry is 3,510 Rs.

4) About the Project –

Updates on Gurgaon Workers News

*** New Video –

A friend has sent a short video clip featuring masses of workers entering the industrial area Udyog Vihar in Gurgaon on their way to morning shift. Impressive; when we imagine the individual hardship and the potential for collective unrest.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
HSIIDC
ITI
Jhuggi
Lakh (see Crore)
Lay off
Minimum Wage
Panchayat
PF
Ration Card
SP
Staff
Trainees
VRS
Wages and Prices
Workers hired through contractors

AITUC

The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO

Business Process Outsourcing: for example of call centre work, market research, sales.

CITU

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (March 2007)
1 Euro = 57 Rs (March 2007)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee's Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.
Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the May issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Teaching a Lesson –
Short letter sent by a female teacher to Faridabad Majdoor Samaachaar, telling about wages and working times in schools around Delhi/Gurgaon.

*** Verbal Abuse –
Female textile worker complains about verbal harassment by supervisor at Gaurav International, Gurgaon. Gaurav International is an Indian
garment export house that works with major US companies like GAP & Wal-Mart.

*** Yet another long list of short information from workers employed at different companies in Gurgaon –

Continuation of short reports (for more see: Gurgaon Workers News no.10). Most of the reports do not show much more than the fact that the official legal working standards are not met. Most of the reports are from textile export factories, gathered in January and February 2008.

2) Collective Action –

Reports on proletarian struggles in the area

*** Wildcat strike by casual workers employed by Eastern Medikit, Gurgaon, December 2007 –

“The 3,000 casual workers employed in the four Eastern Medikit factories in Udyog Vihar, Gurgaon, stopped working during the night-shift of the 18th of December 2007. The arriving police told us to leave the factory, but we refused to do so. Instead we made our story heard: our November wages had not been paid”…

*** Police attack on striking casual workers at automobile parts manufacturer Automax, April 2008 –

April 2008: “The crisis started when hundreds of workers of Automax, a company manufacturing automobile parts, went on a march in Gurgaon, demanding that casual employees be made permanent employees of the company. “We have been working over a decade as casual employees”, a protester said. “Since other employees’ unions had also agreed to extend their support to us, we stopped outside Hero Honda Scooters and Motorcycle Ltd facility. All of a sudden, the police lathi charged us”. The police claimed they had had to resort to this “mild action” to “defuse a crisis”.

*** Protest by call centre workers against dismissals, December 2007 and March 2008 –

The protests of call centre workers against dismissals and unpaid wages continue. In the case of Voicecraft “as the situation got worse, even the police rushed to the spot and intervened to defuse the crisis”. The protests continue in the immediate spatial vicinity of textile and other
factories where manual workers have to face up to the same problems of unpaid wages – but these wage workers are still seemingly miles away from each other when it comes to their (cultural) class background. Nevertheless a situation containing explosive potentials for a completely different kind of working class movement in India...

The first article is from the mainstream press. Workers of Voicekraft Infosole staged a two-hour protest outside the call centre in December 2007. The second article is from Faridabad Majdoor Samaachaar, March 2008. A BPO Core worker tells about how the company ripped them off. The company BPO Core also runs a call centre in London, UK

3) According to Plan –
General information on the development of the region or on certain company policies

*** Village demolition by development authorities for industrial projects, April 2008 –
Under the protection of 100 policemen 50 houses in Gurgaon villages Koh and Kasan were demolished for ‘industrial purposes’. Unfortunately we only heard about it through the official media.

*** Dog restaurant opens in Gurgaon –
This is not about morality or sensation, but about the death-wishing ignorant arrogance of the ruling classes: while food riots spread across the globe and the local food prices in Gurgaon sore they open a dog restaurant right next to slums and industrial areas, a dog non-veg soup for seven times the amount of the food money a textile worker might get after having worked for more than fourteen hours on stretch – if she or he is lucky.

4) About the Project –
Updates on Gurgaon Workers News

*** German –
On the web-site you can find a structured translation of all Gurgaon Workers Newsletter in German.
www.gurgaonworkersnewsgerman.wordpress.com

*** Glossary –
1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Teaching a Lesson –

Short letter sent by a female teacher to Faridabad Majdoor Samaachaar beginning of 2008, telling about wage and working time conditions in schools around Delhi/Gurgaon.

“When I read in your newspaper (FMS) that the minimum wage fixed by the Haryana government for industrial helpers is 3,510 Rs per month I was perplexed. Because school teachers don’t get that much money. Many young women like me studied at institutions like NTT or ECCE in order to become teachers. Despite the fact that we have spent quite a lot of money for the studies, the wages we get now are low: they don’t pay more than 800 to 2,500 Rs per month. The 2,500 Rs you will only be paid once you have graduated and have teaching experience. My friends and me have worked in various schools. In the school you work from 6:30 am to 2:30 pm, full eight hours. Apart from the work in the classroom there is more work to do. The daily-weekly-monthly (home-) work and the filling in of the master register. Despite all this the wages are low, which is a fact in all schools. Just have a look:

1. Eros Convent School (NH-3, next to DAV college)
I work from 7 am to 1 pm and get 1000 Rs.
2. MD Convent (NH-5, main Market)
I start working at 7 am and finish at 2 pm, my wage is 600 Rs.
3. Little Child School (NH-5, F-Block)
I teach from 8 am to 1 pm and get 500 Rs per month.
4. Parmar Public School (Sohna Road)
My working times are from 7 am to 5 pm and my monthly wage is 1,800 Rs”.

*** Female textile worker complains about verbal harassment by
supervisor at Gaurav International, Gurgaon

A worker who is looking for a job:

“On the 25th of February at about 12:30 noon at Gaurav International factory (Plot 225, Udyog Vihar I) I met a woman who was sitting at the factory gate crying. About 15 to 20 people gathered. She told that because she had objected to the indecent talk of a supervisor she had been kicked out of the factory. Then a management person arrived and said that she should go home and come back to get her money once everyone else is paid. That she should not talk to anyone about the matter, otherwise even the general manager would get to know about it”

(FMS 237, March 2008)

Gaurav International is an Indian garment export house that works with major US companies like GAP & Wal-Mart.

“WITH STATE OF THE ART MANUFACTURING FACILITIES IN UDYOG VIHAR, GURGAON (NEAR DELHI) & HEAD OFFICE IN NEW DELHI, WE PRODUCE WORLD CLASS “NAFABS” BRAND OF NARROW FABRICS FOR GARMENTS, SHOES, HOSIERY, SURGICAL, SPORTS, DRIVING GOGGLES & AUTOMOBILE INDUSTRY. OUR “NAFABS” NARROW FABRICS ARE MANUFACTURED ON IMPORTED SWISS & TAIWANESE LOOMS”.

(from the company web-site)

Gaurav International Ltd.

Richa Group Companies

133 , Phase-4, Udyog Vihar

Gurgaon

122001

Haryana

http://www.richagroup.com/group.aspx

*** Yet another long list of short information from workers employed in different companies in Gurgaon

Continuation of short reports (for more see: Gurgaon Workers News no.10). Most of the reports do not show much more than the fact that the official legal working standards are not met (Minimum wage for helpers,
48 hours week: 3,510 Rs). Most of the reports are from textile export factories – they are put at the end of the list – gathered in January and February 2008. Currently a lot of Indian textile companies source certain textile products from China. Some of the Gurgaon companies, as well.

http://www.made-in-china.com
http://www.pennylane.in/contact_us.html
http://www.gurgaonclassified.com/export_house.html

PMP worker
(Plot 185, Udyog Vihar Phase I)
The working times are from 9:30 am to 8:30 pm, the overtime is paid six and a half Rs per hour. We do plastic moulding work and steerings for Maruti Suzuki. The helpers get 2,450 Rs and even after three to four years of employment you won’t get ESI or PF.

Rolax worker
(Plot 303, Udyog Vihar Phase II)
The factory runs two 12-hours shifts. Wages are not paid in time and there is verbal abuse happening. The helpers get 2,554 Rs, but they are made to sign 3,510 Rs. The operators get 2,950 and the welders 3,500 Rs.

“Rolax Autos Private Limited specializes in automotive components. The products are mainly tubular and sheet metal components and welded products mitigating the requirements of two and four wheeler industry. Motor cycle and scooter wheel rims are developed in such way that they are able to tolerate heavy duty loads. The decorative parts are plated in the PLC controlled Tri-nickel system. All products have fulfilled client requirements to the maximum”.
(from the company web-site)

Kuru Banks worker
(Plot 199, Udyog Vihar Phase I)
Only 80 to 90 workers are left in the factory. The company has sent 2,000 workers from its five factories in Gurgaon area to the new factory in nearby Manesar. The majority of these workers are hired through contractor. One contractor has vanished after cashing in the PF money of 1,000 workers. The company allowed this to happen. The buyer is told
that we work eight hours per shift, but actually we work nine – though the simple problem is that after nine hours we are forced to stay even longer. Every month we are forced to work 150 to 180 hours overtime (overtime is any working hour past 48 hours per week). In order to threaten us the company calls the police inside the factory. The workload is high, so is the work target. Due to being over-worked and being made to stay the whole night – particularly during winter – every year one or two people die from exhaustion. The company does not give any compensation to the families of the dead, small coins are collected from the workers. Over-time is paid at double rate, but the company embezzles 10 to 15 hours each month.

Samast Clothing worker
(Plot 13, Sector 34)

On the 20th of June 2007 the factory was suddenly closed. 500 workers have not been paid their wages yet. The machines have been moved to the Plot 8 factory in Udyog Vihar Phase V. We went there in order to get our wages and complained at the labour department. The Samast Clothing director now runs a washing factory near Shital Mandir, but the labour officers say that they do not have any information about this.

Rangi International worker
(Plot 98, Udyog Vihar Phase I)

The thread cutters get 2,500 Rs per month. We work 12-16-20 hours shifts. The overtime is paid at single rate. Rangi has another factory in Okhla, Delhi and got entangled in some excise duty legal mess-up in 2006, an example we will have a look at in one of the future issues of GWN (Rangi International: Athletic Sportswear, Promotions Caps, T-shirts, Sportswear And Accessories, Wear For Women c-58/1 Okhla Industrial Area, Phase II, NEW DELHI 110020)

Indian Hand Fabs worker
(Plot 92, Unyog Vihar Phase I)

The workers hired through contractors are told that they will be paid 2,700 Rs, but actually they get 2,200 Rs, which also shows on the pay slip.

Standard Global worker
(Plot 235, Udyog Vihar Phase I)
The helpers get 2,350 to 3,000 Rs, they work 12 hours shifts.

Radhunik Export worker
(Plot 215, Udyog Vihar Phase I)

The casual workers do not get bonus payment and the over-time is paid at single rate. The 200 casuals do not get ESI or PF. Before the buyers come the management reads a text to us telling us what kind of things we have to lie about. We work 13-hours shifts and sometimes have to stay till 2 am.

Export Marketing and Management Agency
(Plot 464, Udyog Vihar Phase V)

150 workers are hired through contractor, they are given neither ESI, nor PF. The helpers' wage is 2,000 to 2,500 Rs, the checkers get 3,500 Rs.

Krashna Label worker
(Plot 870, Udyog Vihar Phase I)

500 workers are employed through three different contractors. The factory runs nine and a half hour shifts.

Crafty Export worker
(Plot 377, Udyog Vihar Phase II)

They run 10 and a half-hours shifts, the helpers get 3,510 Rs.

Puja Apparels worker
(Plot 158, Udyog Vihar Phase I)

There is verbal abuse from the management. We work from 9:30am to 6pm, but we often are made to stay till 2am.

Bharat Export Overseas worker
(Plot 376, Udyog Vihar Phase II)

The helpers wage is 2,460 RS, the skilled workers get 110 to 115 Rs per day, but both have to sign 3,510 Rs and 150 Rs respectively.

EL India worker
(Plot 402, Udyog Vihar Phase III)

There are 25 permanents, 100 casual workers and 400 workers hired
Kandor worker
(Plot 792, Udyog Vihar Phase V)
The casuals get 3,500 Rs, the helpers through contractors 2,200 Rs. Working time is from 9am to 8:30pm, over-time is paid at single rate.

Kracha and Company worker
(Plot 239, Udyog Vihar Phase I)
The helpers' wage is 2,500 Rs; sometimes 200 to 400 Rs are cut for ESI and PF. On the documents less attendance is shown than people actually work. Although you have been working you are marked as absent.

Kosmo worker
(Plot 864, Udyog Vihar Phase V)
The thread cutters – 40 male and 20 female workers – got 3,500 Rs in September and October, but only 2,700 Rs in November. No ESI or PF. There is verbal abuse going on and workers are being threatened with violence.

Jorji Export worker
(Plot 366, Udyog Vihar Phase III)
There are 25 permanents and 400 workers employed through three different contractors. The helpers' wage is 2,000 to 2,400 Rs.

Gulati Export worker
(Plot 397, Udyog Vihar Phase III)
The helpers get 2,400 Rs to 2,600 Rs. There are two 12-hours shifts running. Over-time is only being paid at single rate. Even after a seniority of three years no ESI or PF is given. The personnel department asks for 200 to 400 Rs in order to issue an ESI card. There is no canteen. Neither October nor November wages have been paid yet (19th of December 2007).
Spirit Clothing worker
(Plot 549, Udyog Vihar Phase V)
There are 50 permanent workers and 450 workers hired through contractors. The helpers hired through contractors get 2,585 Rs, the checkers 3,200 Rs and the skilled 120 Rs per day.

Spark Overseas worker
(Plot 166, Udyog Vihar Phase I)
The working hours are from 9am to 8pm, but they make you stay till 2am. After 8pm you get 25 Rs for food. The wages are delayed, the November wage has not been paid yet (19th of December 2007). 500 workers do not get ESI or PF.

Pearl Global worker
(Plot 870, Udyog Vihar Phase V)
250 workers are hired through three contractors. No ESI, no PF and the helpers’ wages are 2,000 to 2,200 Rs per month.

Security Guard at Pearl Global
In the seven factories of Pearl Global a total of 100 security guards are employed. We are hired by the company directly. We are given ESI and PF. On the documents we sign that we work on three 8-hours shifts, but actually we work two 12-hours shifts. There is a weekly day off. For a 72-hours week they pay 4,218 Rs per month.

2) Collective Action –
Reports on proletarian struggles in the area
Eastern Medikit is a global medical supplier. The Gurgaon plants manufacture medical disposables and blood bags (see web-links below). In FMS 235 a worker reports about the strike of casual workers.

“The 3,000 casual workers employed in the four Eastern Medikit factories in Udyog Vihar, Gurgaon, stopped working during the night-shift of the 18th of December 2007. The arriving police told us to leave the factory, but we refused to do so. Instead we made our story heard: our November wages had not been paid. The management made us leave the factory building, the whole winter night we spent outside, on the factory premises.
In the Eastern Medikit factories 1,100 permanent workers work 8-hour shifts, but us casuals work on two 12-hour shifts. Before the introduction of the new minimum wage in July the overtime was paid at 15 and a half Rs per hour, this now dropped to 10.5 Rs. The work load is a huge burden: while they give the permanent workers a shift target of 500 pieces, us casuals have to finish 800 to 1,100 pieces. Due to the needles our hands are smeared with blood. The personnel manager abuses us verbally and forces us to stay for 12 hours per shift. Due to being over-worked one worker started to bleed from his mouth, he later died in his room. The company gave no money to the family of the deceased worker. Money for ESI and PF is cut from the wages, but no ESI card or PF form is given. In order to get hired as a casual you have to pay a bribe of 250 Rupees”.

Company web-sites:

http://www.medisourceasia.com/productgallery/eastern_medikit1.htm

http://www.medikit.com/

Unfortunately we don’t have any first hand reports of the incident yet. The few lines mentioned in the media does not allow us to understand the true roots of the protest. Automax is one of many companies of the Gurgaon Omax Group (http://www.omaxauto.com/history.html).

Agitating workers caned in Gurgaon

GURGAON: Tuesday saw yet another incident of employees of a company in Gurgaon being subject to a lathi charge by the police. The police claimed they had had to resort to this “mild action” to defuse a crisis in the making and disperse the gathering of hundreds of protesters. While the police said only half-a-dozen persons received minor injuries in the incident, the protesters alleged over 50 persons have been injured.

The crisis started on Monday, when some of the workers of Automax, a company manufacturing automobile parts, went on a march in Gurgaon, demanding that casual employees be made permanent employees of the company. “We have been working over a decade as casual employees. We also want our union chief to be transferred back to this facility” a protester said.

“Since other employees’ unions had also agreed to extend their support
to us, we stopped outside Hero Honda Scooters and Motorcycle Ltd facility. All of a sudden, the police lathi charged us,” said a protester.

While protesters alleged that the police have picked up over 50 of them, police officials said that about 30 persons have been arrested. “Three police officials have also received minor injuries,” said a senior police officer. However, the protesters said that their colleagues have been injured seriously and many were suffering with fractures. Over 500 policemen were deployed to avoid any crisis, police officials said. Keeping in mind the possibility of a recurrence of the incident, police commissioner Mahendra Lal decided that the force would remain there for the time being.

(16 Apr 2008, 0223 hrs IST,TNN)

Some notes indicate a traditional protest about union recognition:

“The police rounded up around 30 workers and union leaders. The trouble began when union leaders, addressing the meeting of the agitating workers near the Honda industrial unit at the IMT here, gave a call to stage a protest in front of their firm’s another unit in Sector 3, Gurgaon. The workers were agitating against the “vindictive policy” of the management, alleging that it was deliberately creating hurdles to the registration of the workers’ union at Automax. They were also up in arms against the alleged unjustified transfer of their leaders as part of the management’s plan of curbing their democratic right of forming a union”.

(India Tribune News Service, 16th of April 2008)

Others mention the attempt to connect the protest with other workers in Gurgaon, Manesar:

“The Gurgaon administration on Tuesday averted the reoccurrence of the 2005 Honda-type episode on Tuesday when over 500 workers of an auto component company marched aggressively along the NH-8, shouted slogans and tried to persuade workers of another auto giant to join their agitation. “The workers, demanding reinstatement of some of their ousted colleagues, wanted to give memorandum to me today. But on their way along NH-8, all of them suddenly turned towards IMT Manesar and gathered in front of the Honda Scooters & Motorcycle Limited (HSML). They tried to instigate the Honda workers to join their agitation,” Gupta said”.

326
Situation is “officially” back to normal one day after the protest:

“Situation back to normal at Automax plant

The situation at auto parts manufacturing company Automax in Binola village of Gurgaon district has returned back to normalcy and all the agitating labourers today returned to work. Gurgaon Deputy Commissioner Rakesh Gupta said after intervention of the district administration, the labourers and management has given undertakings to help bring the situation to normalcy. The labourers have given an undertaking that they will not create any hindrance in the work of the company and will observe peace. On the other hand, the Automax management has given undertaking that they will not punish any worker out of vengeance. The situation in Honda, Hero Honda and other companies at Manesar is also normal and all the labourers in these companies were on job, the DC said.

(Chandigarh | Wednesday, Apr 16 2008 IST //news.webindia123.com/news/Articles/India/20080416/93369)

The protests of call centre workers against dismissals and unpaid wages continue. They continue in the immediate spatial vicinity of the textile factories where manual workers have to face up to the same problem – but these wage workers are still seemingly miles away from each other when it comes to their (cultural) class background. Nevertheless a situation containing explosive potentials for a completely different kind of working class movement in India...

The first article is from the mainstream press. Workers of Voicekraft Infosole staged a two-hour protest outside the call centre in December 2007. The second article is from Faridabad Majdoor Samaachaar, March 2008. A BPO Core worker tells about how the company ripped them off. The company BPO Core also runs a call centre in London, UK. Dismissals of young workers at one of Gurgaon’s biggest call centers Sapient, as well.

BPO staffers hold protest

7 Dec 2007, (Times of India)

GURGAON: While Gurgaon has emerged as a success story with its
concentration of bustling BPO offices, small call centres sacking their employees and refusing salary payments has started sulling the industry’s name. In fact, on chilly Wednesday night, about 35 voice call executives, including women, had to stage a noisy two-hour-long protest outside their call centre office in Udyog Vihar, Phase V, demanding their salary.

As the situation got worse, even the police rushed to the spot and intervened to defuse the crisis. According to the executives of Voicekraft Infosole, they were suddenly dismissed from their services after they reached office on Wednesday. “They called us and said that we did not meet their expectations and hence we were sacked. But this seemed to be a well-conceived move by the company since the date of paying the salary was approaching. We worked all these days to get the salary and now we have to pay rent. Where will we stay, if we are thrown out of our rented accommodation?” asked one of the employees. All those who have been sacked, including women, were told to make their own transport arrangement to return home.

Finally, they called up the local police and in their presence a fleet of cabs took these employees home around 1.30 am. After the police intervened, the BPO promised that they would hand over salary cheques to the sacked employees by 5 pm on Thursday. But till late Thursday night, over 50% of them said that the promise was not kept.

Piyush, a partner of this BPO said: “All of them have not yet got the employment letter from the company. They have got the intent letter and the condition clearly says they would be employed only when they are deemed professionally fit. When they can’t work for outbound business, how can we keep them?”

CORE BPO worker
(Plot 238, Udyog Vihar Phase IV)

We are 600 workers. CORE BPO hired space from DIGITAL SYNERGY (on a per seat basis). We had vacation from 21 Dec to 1 Jan. On 1 Jan, we heard that Mrs Rashmi Jain of DIGITAL SYNERGY had got the building locked and had left with the keys.

There were guards of SLV company for Digital and of Group Four from Core. On 1st Jan 30-35 SLV guards and 40-45 Group four guards were
there. Nobody was being allowed in, but the Core GM had somehow entered and was locked in. He was calling people on phone. At 3.30 at night he was brought out on a stretcher and taken to a hospital. Rashmi Jain was said to be related to a union minister.

On 7 Jan CORE called us workers for a meeting – they said the whole thing will take some time to be resolved and asked us to find other jobs in the meanwhile. They promised that the Dec pay will be deposited in our bank accounts. But till 25 Feb. no payment was made. Now bosses say it’s difficult to get salaries, jobs are gone.

Similar situation at one of Gurgaon’s biggest call centers:

Gurgaon: Sapient sacks 160 juniors

Sapient Corp, the US-based business and technology services consultant, said its Indian business has “exited a small number” of junior and entry level employees not suited for its current operations.

The 160 employees, who constituted 4% of its Indian workforce of 4,000, were “asked to resign”. Some were designated associate technology level 1 and others were associate quality assurance employees.

The source, who was one of the employees sacked, said the management’s decision came “out of the blue”.

“They sent a mail asking us to meet them for our next assignment... and then they informed us about the situation...which was not expected,” the source said. The fired employees were asked to leave immediately and
relieved without notice. However, the company assured them they would receive severance packages and help in getting another job.

9th of May 2008, DNA MONEY

3) According to Plan –

General information on the development of the region or on certain company policies

*** Village demolition by development authorities for industrial projects, April 2008 –

Under the protection of 100 policemen 50 houses in Gurgaon villages Koh and Kasan were demolished for ‘industrial purposes’. Unfortunately we only heard about it through the official media.

HSIIDC Justifies Demolition Exercise In Koh & Kasna

The authorities of the Haryana State Industrial and Infrastructure Development Corporation (HSIIDC) today justified the demolition exercise carried out in Koh and Kasan villages as legally valid even as the affected persons protested against it. The demolition squad involving around 100 policemen and two JCB machines descended on these villages in the afternoon yesterday and demolished around 45-50 houses and temporary sheds belonging to villagers in a four-hour operation. Sarpanch of Koh village Rohtash Singh claimed that they were not given any prior information about it. The action followed rejection of a writ petition filed by the affected persons even as they said a review application was pending before the Punjab and Haryana High Court. The land in question, measuring 162 acres, has been acquired by the HSIIDC for industrial purpose. The villagers who had built houses on this land were informed in writing through the sarpanch of Koh village to vacate it before April 15. Around 300 villagers today approached Gurgaon DC Rakesh Gupta who told them to see him on Monday.

(Source: Tribune, 19/04/08)

*** Dog restaurant opens in Gurgaon –

This is not about morality or sensation, but about the death-wishing ignorant arrogance of the ruling classes: while food riots spread across the globe and the local food prices in Gurgaon soar they open a dog restaurant right next to slums and industrial areas, a dog non-veg soup
for seven times the amount of the food money a textile worker might get after having worked for more than fourteen hours on stretch – if she or he is lucky.

Soups: Rs 75 (veg) and Rs 175 (non veg)

4) About the Project –

Updates on Gurgaon Workers News

*** German –

Trainees
VRS
Wages and Prices
Workers hired through contractors
AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000
DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, and industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 42 Rs May 2008
1 Euro = 65 Rs May 2008

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprenticeship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore
Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so-called “governmental fair price shops” are shops were “officially poor” people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to prove your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enables them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and
white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rickshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs
Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100 Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs
Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs
Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the August issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Thread cutters, ironing workers, taylors, machine operators, assembly line workers for medical equipment or automobile parts, Coca Cola workers, security guards... –

Continuation of short reports from workers employed at different companies in Gurgaon (for more see: Gurgaon Workers News no.10 and no.11). The reports have been gathered between March and June 2008. Particularly the textile workers are exploited by international chains: Wal Mart, Tom Taylor, H&M, Marks & Spencers, Mexx, Karstadt, Quelle,
Neckermann and so on. Most of the reports do not show much more than the fact that the official legal working standards are not met. The various wildcat strikes at the end of 2007 (see: GWN no.10) show that only unruly proletarian behaviour can improve the situation. Given the current inflation of 12 percent and the even higher inflation of prices for “proletarian goods” – gas, grain, rice, transport – the “unruly behaviour” will become a necessary act of survival.

*** Book on working-conditions of women workers in Gurgaon and Noida –

The bulk of this book consists of four sectoral studies of women workers in Delhi and its satellite townships of Noida and Gurgaon, through a combination of structured questionnaires and individual and group discussions conducted in 2002-04.

(Women Workers and Globalisation: Emergent Contradictions in India, by Indrani Mazumdar; Stree, Kolkata, for Centre for Women’s Development Studies, Delhi, 2007)

2) Collective Action –

Reports on proletarian struggles in the area

*** Unfinished Unrest –

Three short stories of young workers on strike, Gurgaon-Faridabad industrial belt in spring 2008. They are employed at Gulati Exports factory, a major textile exporting company. They work for Action Construction Equipment (ACE), a tractor manufacturer in nearby Faridabad. They laid down tools at Ilpea Paramouts, a manufacturer of plastic and rubber parts for the automobile industry. The stories portray the arbitrary role of the labour department, the main state institution which intervenes in case of industrial conflicts. They portray the repressive function of the police and other paid goons. They show the problem of workers in struggle being replaced by workers in search of a living.

3) According to Plan –

General information on the development of the region or on certain company policies

*** 1,500 cops deployed in Gurgaon to secure the building of parts of the
SEZ boundary wall –

Summary of recent newspaper articles on India’s biggest SEZ in the making. In July 2008 the state ordered hundreds of riot cops to secure the first building procedures for the SEZ. Local villagers, most of them landed peasants, demand higher compensation for their land. Later during the week a huge police action which tried to prevent a conservative anti-SEZ group from blocking the highway caused hours of traffic stand-still, effecting the local (call centre) industries.

*** The City makes the Countryside –

On the background of the land-grab for the SEZ we summarise some articles on the changing class structure in the rural areas surrounding Gurgaon, Haryana.

The first article portrays the situation in a village near Gurgaon, affected by the land-grab for the SEZ. The author describes how the “traditional village social cohesion” is dissolved in the process.

The second article isn’t much more than a hint: the capitalist farmers in Punjab and Haryana have trouble finding migrant workers for bringing in their harvest. They cry about rising wage demands of the proletarians. They blame urban areas like Gurgaon for draining their human capital, and they accuse the state-organised work-scheme NREGA of creating an upward wage pressure. In Gujarat the state government has increased the minimum wage for rural labourers by 100 per cent in July 2008. The massive increase of wage labour in recent years plus the hikes of food prices ask for preventive counter-insurgency.

The third article examines the accused work-scheme: given the enormous transformation and turmoil on the countryside, the huge streams of migration, the thousands of debt-suicides, the growing armies of Maoism, the state has to launch a large-scale welfare scheme to try to secure social control. The scheme helps control rural proletarian reproduction by giving only one person per household a paid job, controlling their movements by implementing a system of registered enrolling and formalised applications, mobilising a cheap manual workforce for infrastructure programs, re-enforcing the power of the local village council by entrusting it with the management and payment function of the work-scheme.
The last article has a sad background: in December 2007, in a Gurgaon upper-middle class school a teenager was shot by school mates. The Indian media was full of “Americanization” paranoia. In contrast to this superficial reaction some journalists tried to understand how the violent act was a mirror of the violent transformation of medium peasants into rent-based new rural rich – and how in Gurgaon they tend to clash with their urban upper-middle class counterparts.

4) About the Project –

Updates on Gurgaon Workers News

*** German Booklet

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

———

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Thread cutters, ironing workers, taylors, machine operators, assembly line workers for medical equipment or automobile parts, Coca Cola workers, security guards... –

The following reports reveal the essential character of legal labour standards: paper tigers. They have been collected and published by Faridabad Majdoor Samaachaar, Faridabad Workers’ News (No. 236, 238, 239, 240 between February and June 2008). In most cases the minimum wage for industrial helpers of 3,510 Rs is not paid. If it is paid, then the working-times are way beyond the fixed 8-hours day and 6-days week. In most cases the over-time exceeds the legal restriction – maximum 50 hours in three months – and is paid at single rate, though according to the labour law it should be paid double. Hardly any workers receive the Provident Fund, a kind of unemployment money / pension that both workers and capitalists pay for, nor do they get ESI, medical insurance, which they are entitled to by law. In particular, the textile workers are
exploited by international chains: Wal Mart, Tom Taylor, H&M, Marks & Spencers, Mexx, Karstadt, Quelle, Neckermann and so on. The various wildcat strikes at the end of 2007 show that only unruly proletarian behaviour can improve the situation. Given the current inflation of 12 percent and the even higher inflation of prices for “proletarian goods” (gas, grain, rice, transport), the “unruly behaviour” will become a necessary act of survival.

Alankar Worker
(Plot 410, Udyog Vihar Phase III)

We do up to 200 hours over-time per month, out of which 30 to 40 get cut due to “flaws”. There is a lot of verbal abuse going on – mostly from the quality control manager.

From the Alankar company web-site:
Annual turnover – US$ 6 m approx.

We are operating from a state of the art production facility in Gurgaon with a covered area of 60,000 sq.ft. Backed by technical skill and experience of a workforce of over 500, the factory has a production capacity of 1,20,000 units per month.

Clients:
Switzerland: Migros, Manor, Athleticum
Germany: K.L. Rupert, Street-One, Karstadt
France: Quelle
Denmark: Bon A Parte, Fransa
Finland: Intrade
Portugal: Sonae
U.S.A: Bleu Bayou (Designer Label)

http://www.alankarcreations.com/

Amisal Worker
(Plot 229, Udyog Vihar Phase IV)

We produce leather bags, 50 of us, but we don’t get ESI or PF. The helpers’ wage is 3,000 Rs, the skilled get 3,800 Rs. We work from 9 am till
6:30 pm.

From the internet:

Amisal manufactures Leather Jackets (Gents), Leather Jackets (Ladies), Diary Covers/Cheque Book Covers, Ladies Handbags and Other Bags, Wallets.

http://www.leatherindia.org/spain/english/participants/amisal.html

Arvind Fashion Ayran Gola Worker

(Plot 60, Udyog Vihar Phase I)

They won't tolerate if we are one miniuted late, but when leaving the factory they hold you back for 30 minutes unpaid. We get 2,400 Rs per month, the December wages have not been paid yet (18 of January).

Bhurji Supertech Worker

(Plot 272, Udyog Vihar Phase II)

There are 50 permanents and 150 workers are hired through two contractors. We work on two 12-hours shifts. The casuals’ over-time is paid only at single rate. The casual helpers get 2,400 Rs per month.

From the Bhurji Supertech company web-site:

»In the year 1969, Mr.G.S.Bhurji & Mr.K.S.Bhurji started small set up of manufacturing unit with ten people, both the Director had a big ambition to facilitate their customers with best quality products which of course resulted this organisation from sapling to a tree, now this organisation is growing a head with committed people, ownership feeling and with one common dream to achieve the target, Today we have 3 plants, developed numerous Injection Moulds and Moulding of plastic parts, in addition to that we are manufacturing various appliances like Air conditioners, Air coolers, Water purifiers, Storge/instant water heaters last but not least Juicers, Mixers and Griders .

Our quality products, perfect finishing competitive price range has helped us to gain the trust of our domestic and international clients. Some of our renowned and valued customers are: Bajaj Elect Ltd., Yamaha Motors India (P) Ltd, Swaraj Mazda Ltd, Water Co Ltd, Australia., Hitachi Group, Carrier AirCon, TCL, Haier«.

http://www.indiamart.com/bhurjisupertek/plastic-moulded-
Break Fire / Cross Fire Worker
(Plot 30, Udyog Vihar Phase I)
We work nine and a half hours per day. Out of 150 workers only ten get ESI or PF. The monthly wage is 3,510 Rs.

From the Cross Fire company web-site:
We are one of the well renowned manufacturers and distributors of Fire Fighting Equipment in Gurgaon
http://www.mapsofindia.com/cross-fire/index.html

Chintoo Creation Worker
(Plot 295, Udyog Vihar Phase II)
We start working at 9 am and finish at 8 pm, sometimes we have to stay till 2 am. The helpers get 2,600 Rs. They threaten to cut two hours from your wage in case you are one minute late. Although workers work continuously throughout the year, the company documents show that they have handed in their notice after six months. A legal trick to prevent them claiming status as permanents. New company cards are issued each half a year. The company cuts wages for bank holidays, although they should be paid fully. The company cuts money for ESI and PF, but we receive no benefits. The January Dearness Allowance of 25 Rs has not been paid. When workers are sacked and they write to the PF office, the office returns the PF form saying that the company signature has been forged.

Chintoo Creation is a textile export manufacturer.

Classic Dials Worker
(Plot 367, Udyog Vihar Phase II)
We start working at 8:30 am and finish at 7 pm. The helpers’ wage is 2,000 Rs, the operators get 2,700 to 3,000 Rs. Out of the 200 workers only 40 get ESI or PF.

From the internet:
Classic Dials manufacturers and exports watch dials.
http://delhiyellowpagesonline.com/companies/CLASSIC_DIALS_PVT._LTD.
Coca Cola Worker
(Plot 266 or 276, Udyog Vihar Phase II)
There are 60 workers employed through three different contractors and eight permanent operators. We work on the 3rd floor. We get 2,200 Rs, no ESI or PF.

Dhir International Worker
(Plot 299, Udyog Vihar Phase II)
The PF office returns the PF form sent by the company. They say it is incomplete.

From the internet:
Dhir International runs another factory in nearby Okhla.
http://www.netexpress.co.in/yellowpages/display/Exporters/Garments/New+Delhi/Delhi/8/display.aspx

Eastern Medikit Worker
(Plot 195 and 205, Udyog Vihar Phase I / Plot 292 and 299, Udyog Vihar Phase II)
The casuals work twelve hours per day. They get 12 Rs for each hour over-time. When hired the helpers are told that they would get 3,000 to 3,500 Rs, but actually they are paid 2,200 to 2,400 Rs. There are 200 hours monthly over-time, normally 30 to 40 hours are embezzled. The money for the over-time worked in February has not been paid yet, it is end of March. Currently the company announces that the March wages will be paid no sooner than May, because a delivery was returned due to quality problems and that therefore the companies’ situation is bad. Recently there has been a wildcat strike by 2,000 casual workers at Eastern Medikit due to payment problems (see GurgaonWorkersNews no. 11).

Flowlink Worker
(Plot 141, Udyog Vihar Phase I)
The helper get 2,600 Rs, neither ESI nor PF. They work 12-hours shifts.
From the Flowlink company web-site:
FLOWLINK INDUSTRIES PVT. LTD. WAS FOUNDED IN 1974 FOR THE
PURPOSES OF DESIGN/ MANUFACTURE OF SHELL & TUBE HEAT EXCHANGERS, FINNED HEAT EXCHANGERS AND AGITATED VESSELS, PRESSURE VESSELS.

http://www.flowlink.com

Gaurav International Worker

(Plot 208/225/236, Udyog Vihar Phase I)

Gaurav International supplies, amongst others, Wal Mart in the USA. We work from 9 am till 10 pm. In the second factory on 11th of March 2008 seven male and 35 female workers were sacked. We were called to the factory three times, but up to today, 30th of May 2008, we did not receive our wages for the eleven days we worked in March. Other workers said: While going back home to the village, the payment of 10-20 days that are due, we get back only after lot of troubles and very few of us get them at all.

From the Gaurav company web-site:

With State of The Art manufacturing facilities in Udyog Vihar, Gurgaon (Near Delhi) & Head Office in New Delhi, we produce world class “NAFABS” brand of narrow fabrics for Garments, Shoes, Hosiery, Surgical, Sports, Driving Goggles & Automobile Industry. Our “NAFABS” narrow fabrics are manufactured on imported Swiss & Taiwanese Looms.

http://www.nafabs.com

Georgy Worker

(Plot 366, Udyog Vihar Phase II)

The workers hired through contractor get 2,200 Rs per month, for thread cutting work. People who quit the job have a hard time getting their outstanding money. Now it is May and i have not received the wages for December.

Graffiti Export Worker

(Plot 377, Udyog Vihar Phase II)

There are 300 skilled taylors employed in the factory, none of them get ESI or PF. The permanent helpers work ten and a half hours per day, their monthly wage is 3,510 Rs. The skilled get 14 to 16 Rs per hour. The helpers hired through contractors get 2,500 Rs, the pressmen and folding
workers get 3,000 Rs. In the finishing department they work ten and a half hours, but only eight hours are paid. Every second day we have to work till 2 am. The company document shows 100 hours over-time per month (illegal!), but these hours are paid at single rate and normally ten to fifteen hours get embezzled.

From the Graffiti company web-site:

Today, graffiti forms its backbone with two factories in Bangalore and Delhi boasts of the state of art machinery and latest computer know how. The following client profile has been served on regular basis for the last ten years.

Tom Tailor (Germany), Hema (Holland) More & More (Germany), Neckermann, Karstadt, Quelle, Marc o Polo (Europe)

http://www.graffitiexports.com/index.html

Gulati Export Worker

(Plot 397, Udyog Vihar Phase III)

We work from 9:30 am to 8 pm, but three to four times per week we have to stay till 2 am. The over-time is paid at single rate. When we are forced to stay till 2 am we get 25 Rs for food. The helpers hired through contractors get 2,400 Rs, the skilled workers get 3,000 to 3,200 Rs.

From the internet:

Gulati manufactures leathergarments and goods.

http://www.leatherindia.org/memdirlist.asp?selCat=&CompName=&selProd=&AlphaCompName=G&pageNo=9

Haryana Indication Worker

(Plot 315, 318, 322, 325 / Udyog Vihar Phase II)

There are 2,000 workers, they work 12-hours shifts. The hour over-time is paid 11 Rs. The monthly wage is 2,700 Rs.

Haryana Steel Worker

(Plot 318, Udyog Vihar Phase II)

We manufacture parts for Maruti Suzuki. We are 500 workers, we don’t have a weekly day off. The helpers get 2,700 Rs.

In Style Worker I
(Plot 378, Udyog Vihar Phase II)

We work from 9 am till 9:45 pm, two to three times per week till 00:45 am. Then we get 20 Rs for food. The female workers have to stay longer, as well. They are subjected to rude behaviour, the boss swears at workers. Two of the managers have become labour contractors themselves. The thread cutting workers get 2,400 Rs.

In Style Worker II

(Plot 140, Udyog Vihar Phase I)

There are 100 workers hired through contractors, they get between 2,000 and 2,500 Rs, no ESI or PF. They cut threads, they do the washing and ironing work. They work from 9 am till 1:30 am. Half of the February wage has been paid on 20th of March, the other half has not been paid yet (28th of March 2008).

Jyoti Apparels Worker

(Plot 159, Udyog Vihar Phase I)

The normal shift starts at 9:15 am and finishes at 9 pm, but five days per week we have to work till 2 am. They force you to stay longer, if you won’t, they will give you the sack. There is verbal abuse going on inside the factory. If you take half a day off, because you physical condition is down, you are not paid the other half of the day that you have worked.

(Annual turn-over: 80 crore Rs / jyotiapparels@vsnl.com)

Kalamkari Worker

(Plot 283, Udyog Vihar Phase III or Plot 280, Udyog Vihar Phase II)

There are female workers hired through contractors in the thread cutting department. They have no day off and get 2,500 Rs per month. They work from 9 am till 8:45 pm.

Kandor Worker

(Plot 792, Udyog Vihar Phase IV)

We work twelve hours per day, our over-time payment is paid at single rate.

Koraskom Finishing Worker

(Plot 418, Udyog Vihar Phase III)
Since April 2008 we work one shift: from 9:30 am till 2 am. On Sundays we work till 8 pm. Over-time is paid at single rate. The helpers get 2,200 Rs, the skilled 2,800 Rs. There is verbal abuse.

KBSH Worker
(Plot 300, Udyog Vihar Phase II)

The machines have been removed from the factory, now they want to turn the factory into a call centre. Us 500 permanent workers have lost their jobs and the company does not fill in the PF form – they say that there has been a fire and that the documents were burnt.

http://company.indiatradepage.com/30390/KBSH_EXPORT_HOUSE/

KIS Export Worker
(Plot 885, Udyog Vihar Phase V)

There are 200 workers, they work from 9 am till 8 pm. Only 50 of them get ESI or PF. The helpers are paid 3,510 Rs.

Kishor and Co. Worker
(Plot 344, Udyog Vihar Phase II)

The helpers get 3,200 Rs.

From the internet:

Mfrs. & Exporters Of Pharmaceuticals Cosmetics & Food Processing Machinery.

http://delhiyellowpagesonline.com/companies/KISHORE___COMPANY-159128.htm

Kracha Worker
(Plot 239, Udyog Vihar Phase I)

The 78 workers hired through contractors who do washing or thread cutting get 2,700 Rs per month, They don’t get ESI or PF. Currently there is not much work, the two daily hours over-time are paid at single rate (March). In April we worked a ten and a half hours day-shift and a twelve and a half hours night-shift. We were forced to sign the double payment of over-time, but actually only get single rate. The 300 workers on night-shift can work without being troubled too much, but the 700 to 800 day-shift workers have to put up with being screamed at and abuses by the
bosses.

Krishna Label Worker
(Plot 162, Udyog Vihar Phase I)

There are 500 workers in the plant. We have to ask for a token in order to be allowed to go to the toilet or to take water. If you ignore this rule and just go without the token you have to pay a 500 Rs fine. If you are five minutes late at the beginning of the shift, they cut one hour from your wage. But they only allow you to go five minutes after end of shift. We start working at 9 am and finish at 7:30 pm or 8:30 pm. There is no break to take food. The helpers get 3,510 Rs, there is money cut for ESI and PF, but we don't get the benefit. (A different worker two month later in May 2008) If they let you work three hours longer, only two and a half hours are called over-time, paid at single rate. Out of twelve months PF contribution only eight are paid out to the workers. There is verbal abuse.

From the internet:
Krishna Label manufactures and exports garments.
http://company.indiatradepage.com/29282/KRISHNA_LABELS_PVTLTD/

Logwell Forge Worker
(Plot 116, Udyog Vihar Phase I)

About 20 to 25 per cent of the work-force are permanents, the rest are casual workers. Those casual workers with ITI, an official professional qualification, get 3,510 Rs, like the permanents. The working times are two 12-hours shifts, the over-time is paid at single rate. About 300 to 400 Rs from the casuals’ monthly wages gets embezzled. None of the permanent workers get more than 2,500 Rs Bonus per month. There is lot of pollution in the factory, there is no air-cleaning device, no medical check on the workers, no ESI card is given. When people get sacked, they have trouble to get their PF money. From the casual workers’ wage 525 has been cut for PF, but if you ask them what for, they won’t answer you. The company intimidates workers, there are uniformed guys to do that.

From the internet:
India’s largest producer of safety and critical components for steering and suspensions assemblies. Is currently supplying as tier 1 & tier 2
supplier to all leading oems of India and also direct exports to ZF Lamforder, Jacob Vehicle Systems etc. Has comprehensive manufacturing (press and hammer forges) and heat treatment.

http://logwell-forgelimited.tradenote.net/

Magenta Worker
(Plot 261, Udyog Vihar Phase IV)
The helper are paid 2,600 Rs, they do not get ESI or PF.

Mega Fashion Worker
(Plot 202, Udyog Vihar Phase II)
There are 60 women workers working in the thread cutting department. When hired they were promised 3,500 Rs, in january they were given only 2,500 Rs. The Febrary wages have been paid late, I then left the end of March. I wanted to get my outsanding wages from the contractor, be he and his supervisor have disappeared. The February and March have not been paid yet, and it is end of April now.

Mini Center Worker
(Plot 212, Udyog Vihar Phase I)
The helpers get 2,200 to 2,500 Rs per month, there is no day off, no ESI or PF is given.

Modelama Export Worker
(Plot 201, Udyog Vihar Phase I)
The official working time is from 8:30 am till 7:15 pm, but actually you have to stay till 9 or 10 pm. The helpers get 2,600 Rs, the skilled get 3,600, but they have to sign 3,900 Rs. 50 to 60 hours over-time is paid single rate. They cut money for ESI and PF, but you will only receive the benefit after seven to eight month of work.

From the Modelama company web-site:
Ten factories in Gurgaon area (addresses see website)
One of the leading garment manufacturers and exporters in India with production units covering about 4,00,000 sq.ft. of area. Production capacity of 6 million garments per year and a turn over of 60 million USD
Clients are: GAP, Marks & Spencers, Laura Ashleys, Villeroy & Boch.
Murdian House Worker
(Plot 231, Udyog Vihar Phase I)
The helpers get 2,554 Rs, the skilled 3,510 Rs. Each month we make about 90 to 100 hours over-time. Single rate payment, no ESI or PF for the 250 workers.

Neetee Clothing Worker
(Plot 218, Udyog Vihar Phase I)
There are more than 1,000 workers in the factory. There is neither ESI nor PF. The helpers get 3,000 Rs, the skilled 3,610 Rs. We start working at 9:30 am and finish at 8 pm, 11 pm, 1 am...

Orchid Overseas Worker
(Plot 133, Udyog Vihar Phase I)
There are 150 to 200 casual workers in the plan, they earn 2,800 Rs, they are given neither ESI nor PF. Working-Times are from 8:30 am till 7 pm, the boss screams a lot, makes a lot of pressure.

From the internet:
ORCHIDS IS A LARGE EXPORT HOUSE WHICH HAS BUYERS FROM BIG NAMES LIKE CALVIN.K, NEXT, PAUL SMITH, ETC.

Poygange Worker
(Plot 686, Udyog Vihar Phase V)
Only eight women workers are hired directly by the company, the rest, about 1,200 to 1,300 are hired through contractors. We work on two 12-hours shifts. Only after three months of employment you will get ESI and PF. The company fills in the PF form no earlier than six months after the dismissal, after you left the company.

Premium Molding Worker
(Plot 185, Udyog Vihar Phase I)
We work on two 12-hours shifts. The over-time is paid six and a half Rs
per hour. The helpers get 3,200 Rs, the 250 workers hired through contractor get neither ESI nor PF.

Radnik Export Worker

(Plot 215, Udyog Vihar Phase I)

There are 1,000 workers in the factory. We work 13-hours shifts, sometimes 17-hours. Workers sign that their over-time is paid double, actually it is paid single. The helpers' wage is 3,510 Rs. You have to pay a bribe of 200 to 300 Rs in order to get hired. We were not paid the 25 RS Dearness Allowance of January. Threatening with the sack, the boss cashes in 200 Rs from each worker each month. It is hot and there is a lot of noise.

From the company web-site:

Supporting your deliveries are six production factories, covering a total area of 250,000 sq. feet, with a capacity to handle 500,000 garments per month. State-of-the-art machinery is used across all functions, which include over 2000 stitching machines in India and Nepal.

Clients: H&M, Mexx, Morgan Spencer,

http://www.radnikexports.com/clients.html

RL Khanna Worker

(Plot 289 and 373, Udyog Vihar Phase II)

There has been a wage increase in March 2008, since then we get 200 Rs more. Now the permanents get 2,600 Rs, the helpers hired through contractors get 2,400 Rs. There are 70 to 80 hours over-time per month.

From the internet:

Bedspreads, Curtain Fabrics-knitted, Curtain Fabrics-woven, Cushions & Covers, Durries, Handloom-fabrics & Products, Home Furnishing, Napkins, Table Covering/linen, Table Runners

http://www.hotfrog.in/Companies/R-L-Khanna-Co-Overseas

S&R Export Worker

(Plot 298, Udyog Vihar Phase II)

We work from 9 am till 8 pm., then often have to stay till midnight. Single rate payment, the helpers get 3,510 Rs. S&R manufacturs ornaments.
Security Guard I

(Plot 152, 210, Udyog Vihar Phase I / Plot 324, Udyog Vihar Phase III / Plot 224, Udyog Vihar Phase IV / Plot 540, Udyog Vihar Phase V)

We work at factories of Sargan Exports, there are 25 Security Guards employed by Swift Security. We work on two 12-hours shifts, seven days per week. For 30 days we get a monthly wage of 4,450 Rs. They cut money for ESI and PF, but we get nothing. Wages are paid delayed.

Security Guard II

We are employed by Countrywide Security based in Delhi. There are more than 100 guards in Gurgaon. We work on two 12-hours shifts, there is no weekly day off. We get 4,000 Rs, neither ESI nor PF.

Security Guard III

We are employed by Kiran Security, the office is situated in Dundahera. We are 150 workers, we work twelve hours a day, every day of the week. We get 2,900 to 3,000 Rs. For several months wages have not been paid, we cannot meet the director of the company.

Security Guard IV

We work for Innovation Securycor, twelve hours per day, seven days per week. We get 4,500 Rs.

Security Guard V

We work for Sasthi Security, their office is at Hanuman Mandir. We work twelve hours shifts, no day off. We get 4,200 to 4,500 Rs.

Shapoorji Pallonji Worker

(Plot 243, Udyog Vihar Phase I)

In February us 40 workers from the Steering department were sacked, but they did not pay the outstanding wages, amounting to four months. When we were working and did not receive wages we nevertheless had to spent at least 300 Rs per week. We complained at the labour department.

http://shapoorji.in/homepage.asp?p=ho

Spark Overseas Worker

(Plot 166, Udyog Vihar Phase I)
The helpers are paid 3,510 Rs but wages are delayed and paid bit by bit. We often work from 9 am till 2 am. If a worker asks for a day off, due to being shattered, the boss threatens with the sack. There is verbal abuse. If a worker leaves the job it is nearly impossible for them to get their outstanding wage. You have to come around eight to ten times and wait for two to three months. There are 500 to 600 workers hired through five different contractors. There is only one latrine for all male workers, it is always over-crowded and blocked.

http://indiayellowpagesonline.in/directory/56/readymade-garments.htm

Standard Gold Worker
(Plot 235, Udyog Vihar Phase I)
Standard Gold manufactures electronic items. The helpers’ wage is 2,350 Rs the skilled get 3,000 to 3,500 Rs. There are over 100 workers in the factory, but only 30 get ESI and PF.

V&S Worker
(Plot 301, Udyog Vihar Phase II)
The December wages have not been paid by end of January. They call workers casual although they work continuously through the year. Hardly anyone gets PF or ESI.

http://www.gs1india.org.in/servlets/Ean.CompanyDetailServlet?SelectedCompanyId=7257

Viva Global Worker
(Plot 413, Udyog Vihar Phase III)
I started working yesterday at 9:30 am and now at 7 am I leave the factory. In two and a half hours I have to be back at work. Normally the shift is from 9:30 am till 8 or 9 pm, but then the gates are closed and several people are forced to stay till 7 am. There is no weekly day off. Over-time is paid at single rate. There are 700 workers in the factory, but at nights the canteen is closed. During night-shifts the company does not even give a tea or breakfast. (a different worker)

There are 500 workers employed in the factory. Normally we work from 9:30 am till 10 or 11 pm. In March we had to stay till 2 am or even 4 am everyday.
From the Viva company web-site:

Viva Globals mainly supplies clients in the US and Europe

http://www.vivaglobal.com/customers.html

Women Workers and Globalisation: Emergent Contradictions in India by Indrani Mazumdar; Stree, Kolkata, for Centre for Women’s Development Studies, Delhi, 2007; pp xxiv + 349, Rs 550.

The bulk of this book consists of four sectoral studies of women workers in Delhi and its satellite townships of Noida and Gurgaon, through a combination of structured questionnaires and individual and group discussions conducted in 2002-04.

The first study of the garment export industry notes the dramatic transfer of employment from higher to lower-wage countries in the 1980s and 1990s.

The second study is of the electronics manufacturing industry, earlier regarded as the leading example of feminisation, although in India, automation subsequently led to a reduction in the proportion of women workers.

The third study is of women in home-based work. The concepts of the “informal sector” and “informal economy” are discussed, as well as the neoliberal promotion of this unregulated sector because of its extreme flexibility, at the cost of extreme insecurity for the workers employed in it.

The fourth study is of the information and communication technology (ICT) sector, which has been expanding with the increasing weight of services in the economy, and is integral to globalisation.

2) Collective Action –

Reports on proletarian struggles in the area

*** Unfinished Unrest –

Three short stories of young workers on strike, Gurgaon-Faridabad industrial belt in spring 2008. They are employed at Gulati Exports
factory, a major textile export company. They work for Action
Construction Equipment, a tractor manufacturer in nearby Faridabad.
They laid down tools at Ilpea Paramounts, a manufacturer of plastic
parts. The stories portray the arbitrary role of the labour department, the
main state institution which intervenes in case of industrial conflicts.
They portray the repressive function of the police and other paid goons.
They show the problem of workers in struggle being replaced by workers
in search of a living.

Gulati Export Worker

(Plot 177, Udyog Vihar Phase I)

Us 100 workers in the sampling department have a lot of trouble. We
start working at 9:30 am and are forced to work till 2 am. Wages are
delayed. Out of 100 workers only 20 get ESI or PF. The drinking water is
dirty. People often fall ill and then they get fired. On payment day you
have to give a bribe of 100 Rs. The helpers get a wage of 2,800 Rs. There
is no bonus payment, but there is verbal abuse. In order to overcome all
this we registered a union. On 15th of May we gave the notice of our
union to the management and made everyone stay outside the factory.
We then went to the labour department, they first gave us an
appointment on 22nd of May, then they postponed it to 3rd of June. We
were threatened, they told us that they would call the police. We were
told to sit in a 300 foot distance from the factory gate, but how should
you sit down in front of the gate of a different factory? Amongst us there
were also women workers, the company stopped the water supply for
the people outside and they locked the toilets. About 40 managers and
supervisors came outside and everyday the police paid us a visit.
Without having been given any written notice eight of us were called to
come to the company factory in nearby Manesar...

In the other Gulati factory (Plot 203, Udyog Vihar Phase I) there are 200
permanent workers and 300 workers hired through contractors. Two
month ago, in March/April, the company turned the 200 permanents into
workers hired through contractors, which resulted in a wage cut of 1,500
Rs. In order to act against this ten of us have stopped paying the
contributions for ESI and PF. On 16th of May 2008 we were kicked out of
the factory. The women who stay there work twelve hours per day, they
get 2,200 to 2,300 Rs per month.
Action Construction Equipment (ACE)

The new factory is based in Dudhaula village. Recently the company has delivered 150 tractors. Us 70 workers manufacture five to six tractors per shift, meaning in twelve and a half hours. On 28th of April 2008 one worker took a day off due to being ill and two other workers took a holiday because they had to attend to a wedding. On the 29th of April these three workers were not taken back on the job. This is why on 5th of May 2008 we all refused to enter the factory and sat down in front of it instead. The production has stopped and today, on the 7th of May we sit here in front of the factory again.

It was ACE itself who had hired us, after one month of work they had given us the company uniform. By 25th of April they handed out the ACE gate pass with the company name on it (something valuable in India, because it also serves as a kind of ID-card). But then all of a sudden the company started to refer to us as “workers hired through contractors”.

On the second day of our strike a guy from Panther Security arrived at the factory. He made a lot of reassuring and soothing remarks and told us to go inside the factory. We replied that they should first re-instate the three fired work-mates. He himself went inside, then came back to us saying: “Do what you want, but they will not be taken back on”. In the ACE factory in Dudhaula we have to face problems over problems. Our daily shift starts at 9 am and finishes at 9:30 pm. On Sundays we work eight hours. For the daily over-time we get only 60 Rs, for the Sunday shift only 120 Rs. On some days they force us to stay even longer, and these hours are then unpaid. The factory is quite far away from Mathura Road, but the workers are from Faridabad and Palval. When you finish work at 9:30 pm you have to walk on foot from Sunsan to Mathura Road. You might be able to stop a truck which helps you getting home, but not all trucks stop. You return home at 1 am. The police harass you on the way.

At ACE nearly all work steps are done in the factory, only the engines come from China. The name of the Chinese manufacturer is erased and the ACE company logo is pressed on. The engines are kept on trolleys, moved around, in order to work on them. All work is done manually, there are only two pressure guns. Our wages are 3,500 to 4,000 Rs (just to compare: the permanent workers at Faridabad based tractor manufacturer Escorts who were hired in the 1980s earn up to five times
this wage).

There are three fans and you have to work in the heat, the drinking water is hot, too. If people get injured on the job they have to go to the village in order to get first aid. They have to pay for that themselves. The management and the supervisors are always on our backs, their only job is to give us swear words.

On the 5th of May we did not enter the factory, then the guy from the time office arrived – GK Agraval – and said that the three would be taken back within a week or ten days. After we still did not enter the personnel hand started to threaten us again: »You come to work drunk, you steal things, from today on the gate is closed for all of you. Only because you are locals from around here that doesn’t mean that you can throw your weight around. We can hire people from outside for two thousand rupees and with the help of the police we will sort you out ...«

We met local people from Dudhaul. In the back of ACE we met workers from CNC and welding shops. We talked to workers from High Polymer Lab and other factories. On the 7th of May 2008 we went to the factory and the police was there. They did not let us sit down at the gate and they refused to let us sit down at other places around the factory – this would have been an insult to the company. We finally sat down on an empty plot of land and management people accompanied by an ASI from Dhatir police station arrived. They said: »You cannot fight with the rich, you have to come to an agreement, we will grab you and bring you inside, then you will get a court date, that will ruin you«. One of us said that we are ready to face it, then the police inspector was about to take him with him. We all went with him and when the police guy finally released him he said that we should not start trouble. The management comes around and checks the score. A guy from a newspaper takes pictures. The CID writes a report...

(On the company web-site there are some pictures of the plant and additional information)

http://www.ace-cranes.com/about-us.html

Ilpea Paramounts
(Sector 59, Part-B, Faridabad)

The factory is situated at Jharsentali-Jajru Road. There are 80 casual
workers who are employed by the company since years. Their wage is 2,500 to 3,000 Rs, they don't get ESI or PF. They work 12-hours shifts, every second day they work 36 hours on stretch. They complained at the labour department, the ministry of labour, the chief minister. On the 27th of February 2008 at 4 pm a car of the labour department arrived at the factory. The official went into the factory office while a guy from the personnel department made the casual workers leave the factory. The official wrote down names, listened to what people had to say and asked them to show their wage slips. On 7th of March 2008 the official came back to the factory. The management said that the wages would be paid on the following day and that the delay was due to money problems. The management called 40 permanent workers to the following day-shift and the 80 casuals to come to night-shift. Those who then showed their wage slips to the official of the labour department were the permanent workers... but the casual workers had gathered at the factory gates. When the personnel manager saw them standing at the gate he said that they should come back tomorrow, “take this money and go, have some tea, eat some samosas, come back in an hour”. The workers did not move and they surrounded the labour department official once he stepped outside the factory. They were reassured that the wages would be paid on the following day. On the 9th of March 2008 the labour official came to the factory, but the company said that they had no money to pay the wages. When the same happened on the following day, the official made some threatening remarks, so finally on 11th of March 2008 the 80 casuals were paid 3,510 Rs, in presence of the labour official. They also received a pay slip, but there was neither an ESI nor a PF number on it. The official left saying that the 200 to 300 hours over-time from February (illegally high amount of over-time) should be paid at double rate and the payment should happen on 25th of March, and that he would be present. On 25th of March he did not come to the factory. On 29th of March the company paid between 2,500 and 3,000 Rs according to wages for the over-time, but this meant that it was only paid at single rate.

The Ilpea Paramounts management forced the casuals to sign a wage of 3,540 Rs, but the actual wages for March and April were 2,500 to 3,000 Rs. When facing opposition the management started to kick workers out and started to pick individual people in order to hire them for replacement.

On 15th of April at 8:30 pm after the end of shift some of the newly hired
people gathered and started a row on Mathura Road. The turmoil continued until the company provided a vehicle to transport the workers to and from work. During this incident the company had some permanent workers arrested by the police and expelled from the factory. Then on 12th of May two cars with ten to twelve people arrived at the factory. The manager called the casuals singly into his office and threatened them together with these people – “if you don’t act according to what the company says, we will break your hand and foot”.

(Ilpea manufactures, amongst other things, rubber and plastic components for refrigerators, washing machines, air-conditioners and automobiles)

General information on the development of the region or on certain company policies

*** 1,500 cops deployed in Gurgaon to secure the building of parts of the SEZ boundary wall –

Summary of recent newspaper articles on India’s biggest SEZ in the making.

In July 2008 the state ordered hundreds of riot cops to secure the first building procedures for the SEZ. Local villagers, most of them landed peasants, demand higher compensation for their land. Due to political re-adjustment the quarrel about a legal curb of single SEZ size and the mounting real estate crisis the start of the construction work on the Gurgaon SEZ has been delayed. Now things seem to take shape…

After months of silence, the move by Reliance Industries to start construction work for a boundary wall in and around Harsaru village in Gurgaon for India’s largest special economic zone (SEZ) once again resulted in tension in the locality. Over 1,500 policemen, along with two DCPs and Sub Divisional Magistrate JS Sanghwan, were present at the spot. Of the 1700 acres in Garhi Hasru around 12 km from Gurgaon along the Pataudi road Reliance was able to gain control of 1,000 acres.

Haryana Kisan Majdoor Sangharsh Samiti (The Haryana Peasant and Workers Struggle Committee), the organisation opposing the state
government move to hand over 1,395 acres of agricultural land to Reliance Industries for the joint-venture SEZ, said that people from different villages would turn out at Harsaru and oppose the move. “We will not let them take possession of the land here until our concerns are addressed. Farmers have been feeling cheated by the government,” said the Samiti chief Mahavir Gulia”.

from: Times of India, 1 July 2008

Once more the new multi-lane National Highway 8, India’s most modern highway, became a pivotal point of struggle. In Gurgaon, whenever there is a group in struggle – be it workers on strike or conservative caste-based communities – they tend to block the highway. Sometimes this fact reveals a general truth about the relationship between proletarian struggle for resources and the “environmental question”: last summer, when there was a lack of drinking water mainly due to the deep wells of the industry, Gurgaon villagers blocked the highway – the symbol of India’s path towards an automobile industrial society, a polluting, resource-consuming society. As proletarians they have to take advantage of any means available in order to put pressure on those in power, even be it by making use of the very same industrial structure which puts them into misery. This time it was the attempt by the state to prevent the unruly road-blocks, which actually created the stand-still. Another incident which reveals the limits and contradictions of state control...

“It was mayhem on the Delhi-Gurgaon expressway. Traffic came to a standstill for at least three hours during the morning rush, and the tailback stretched from the 32-lane toll plaza to Mahipalpur. And it was all because the Gurgaon Police first put up barricades to stop Haryana Janhit Congress (HJC) supporters from entering Gurgaon and later blocked all the cash and tag lanes at the toll plaza. Earlier, HJC supporters and their leader Kuldeep Singh Bishnoi declared their intention to turn up at Gurgaon in full force to register their protest against the construction activities at what will be Indias largest SEZ. Apprehending unrest, the Gurgaon Police moved a large contingent to the 32-lane toll plaza. Meanwhile, all those who took the expressway to work reached close to three hours late. “At least 25 of our vehicles were caught in the jam. Many had to cancel important meetings. Since we have a good communication network, we diverted our cabs to other routes,” said
Vibhu Narayan, vice-president of Genpact BPO (the biggest call centre in Gurgaon, about 20,000 employees)“.

from Times of India, 5 July 2008

*** The City makes the Countryside –

On the background of the land-grab for the SEZ we summarise some articles on the changing class structure in the rural areas surrounding Gurgaon.

Intro

It is said that India is still an agrarian country, a country of villages. Statistically 70 per cent of the population still live on the “countryside” – but they don’t live as peasants, the majority of them live as proletarians. 40 per cent of the rural population don’t own land. Most of the “land-owning peasants” actually survive as wage workers: 80 per cent of the land-owning households own too little land to make a living – under two hectares – forcing them to turn to other sources of income. Only 35 per cent of the average Indian rural household’s income stems from working on one’s own fields. More and more rural proletarians have to find other sources of income: those who have some kind of resources – e.g. a small patch of land – can migrate to cities, those who have no resources try to find jobs in the rural industries, e.g. brick kilns, construction work or work in the “industrial harvests”. In Haryana – the state surrounding Gurgaon – in Punjab and other states of the “Green Revolution” (the “industrialisation of agriculture”) these tendencies towards “proletarianisation” of the rural population is far advanced. Leaving the old hierarchies of village life and the desolate situation, they try to find a better life in the cities. In Gurgaon the misery and aspirations of the rural proletariat can be found in the factories: most of the workers are migrants from poorer states. The fact that 12-14-16-hours shifts, slum life, malnourishment can still be enforced upon industrial workers is due to the enormous pressure from the land. The fact that the agriculture in Haryana and Punjab finds it difficult to attract a sufficient number of migrant workers for the harvest show that the aspirations within misery are growing. In the following we summarise some articles which relate to the situation in rural Haryana. Looking at the anti-SEZ protests in Gurgaon rural area we can see that the protests are lead by the landed peasantry. They don’t oppose the SEZ as such, they don’t want to keep on
letting the poor plough their land, they actually want to leave their land, but for a higher price. The landless don’t protest, but we don’t know why. They might see a chance that the SEZ or the increased construction work will provide better jobs.

The first article portrays the situation in a village near Gurgaon, affected by the land-grab for the SEZ. The author describes how the “traditional village social cohesion” is dissolved in the process. Instead of trying to understand the liberating potentials and forces of the dissolution of hierarchical village life he turns to conservative views.

The second article isn’t much more than a hint: the capitalist farmers in Punjab and Haryana have trouble finding migrant workers for their harvest, they cry about rising wage demands of the proletarians. They blame urban areas like Gurgaon for draining their human capital, and they accuse the state-organised work-scheme NREGA of creating an upward wage pressure. In Gujarat the state government has increased the minimum wage for rural labourers by 100 per cent in July 2008. The massive increase of wage labour in recent years plus the hikes of food prices ask for preventive counter-insurgency.

The third article examines the accused work-scheme: given the enormous transformation and turmoil on the countryside, the huge streams of migration, the thousands of debt-suicides, the growing armies of Maoism, the state has to launch a large-scale welfare scheme which secures control: controlling the rural proletarian reproduction and movements by giving only one person of a household a paid job, mobilising a cheap manual work-force for infrastructure programs, reinforcing the power of the local village council by giving it the management function of the work-scheme.

The last article has got a sad back-ground: in December 2007, in a Gurgaon upper-middle class school a teenager was shot by school mates. The Indian media was full of “Americanization” paranoia. In contrast to this superficial reaction some journalists tried to understand how the violent act was a mirror of the violent transformation of peasants into rent-based new rural rich – which in Gurgaon tend to clash with their urban upper-middle class counterparts.

The SEZ-village
“Pelpa is a small village in Jhajjar district in Haryana bordering Delhi and Gurgaon. A little more than a year ago hundreds of acres of land, belonging to the landed in Pelpa and neighbouring villages, was acquired by the State Government to facilitate a private company set up an SEZ. The landed have been paid “compensation” for acquisition of the land. Since then the socio-economic character of the village has undergone radical transformation. Pelpa, hitherto a typical North Indian rural settlement with agriculture as primary occupation and source of income to most of its residents, is now a hamlet of gaping oppositions: bullient nouveau-riche and jobless landless labourers. Those who once owned acres of green farmland now own hefty bank balances. The property-rich and cash-poor have overnight become cash-rich and property-poor. How long will the two, money and its current owners, stay together is debatable but with abundant money, the once landed have surely been exposed to a style of living that money alone can buy. The nouveau-riche is intent at enjoying every luxury of the ilk of gyms, fitness centers, public school education, exorbitant weddings, shopping at malls, swanky cars, SUVs, multi-storied palatial houses, latest gadgets, booze at pubs that money can procure. Parvenus strut around the rural landscape with arrogant airs and ostentatious lifestyles. Not everyone was a landowner in this village. The life of landless people and weaker sections, who worked on these fields as daily wagers, has become worse after the land acquisition. The farmland was not only the source of income and occupation for landless families but was a source of fodder for their cattle as well. Gainful employment and procuring “chara”, that is, green fodder, for cattle has become one of the major problems in daily routine as the SEZ land is out of bound for these people. Previously, though the land was privately owned, it still had a liberal symbiotic relationship with all its villagers. With due respect to the cultivated crops, the landless and peasants had a kind of moral, if not legal, right to shear fodder for the livestock and procure bathua saag for the evening rotis. The symbiosis had the baggage of history for its peaceful longevity and vibrancy. Now with land everything, including the cultural practices the mutual interdependence and the holism so typical of the Indian social set-up, is gone as there is no work or source of income for most of the people – especially the landless. With little left for natives in the village there is no option other than to sell their livestock and look for employment
elsewhere. People are forced to abandon their meagre belongings and migrate to neighbouring towns like Delhi and Gurgaon. But with little or no education or metro-friendly knowledge, skills or attitude, life for them is not likely to be easy in these cities obsessed with individualisation and upward mobility.

To begin with, why establish these SEZs in States like Haryana that not only have one of the highest per capita income and standard of living, as economists like to call it, in the country but also compare with the best in the world in terms of agricultural productivity? It is often humoured, not just for rhyme alone but for good reason as well, that the only culture that Haryana has is agriculture! Nearly 80 per cent population of the State is, directly or indirectly, engaged in agricultural activities. Haryana ranks second in foodgrain production in the country and ranks first in production of rapeseed and mustard. The State contributes about 45 lakh tones of foodgrains to the Central pool annually, besides meeting its own requirements. About 86 per cent of the area in Haryana is arable, and of this 96 per cent is cultivated. About 75 per cent of cultivated land is well irrigated through an extensive system of canals and tubewells.

Agricultural land, as we know, is a non-replenishable and non-replaceable resource. What a colossal waste of resource it would be to turn this fertile chunk into concrete! Moreover, fertile agricultural land has been the cultural and socio-economic heritage for generations of landowners and landless people in rural India. Closely-knit social institutions of villages form the fundamental structure of the Indian social milieu that has survived for centuries on this source of income and occupation. But soon this heritage would fade out of our memories. One stroke of applied logic of industrialisation would wipe out the history of generations. The future generations of these areas are likely to be “dislocated classes” of (un/semi-) skilled labour searching for jobs in the callous industrial world. The “poorly-planned” measures to accelerate growth are jeopardising agriculture making things hard for the landowners and the landless, by forcing farmers to abandon farming, relocate themselves, breaking down traditional social structures and making way for gigantic projects in which they may not have any stake.

In an attempt to circumvent some of the felt and anticipated consequences of establishing SEZs on agricultural land, the government decided to locate these zones on wastelands. But the government’s
decision to locate SEZs on wastelands has already begun to open up a plethora of problems for the landless and local populace who are heavily dependent on these so-called wastelands as in the case of Pelpa. In Pelpa, because of the proposed SEZ, people have started facing the misery that (un)mindful industrialisation is causing. This land locally termed as bani, charagah, banjar, jungle, gaucher, jhoond, padit bhomi etc. is the prime source for timber, fuel, fodder non-timber forest produce, herbs, bamboo, straw etc. villagers and is the grazing ground for cattle. What we label as wasteland from the urban and industrial perspective has multiple utility especially for the landless people inhabiting rural areas”

Lack of migrant workers for bringing in the harvest

“In what looks like the latest crisis to strike India’s food bowl, migrant labourers, who earlier came in hordes to till Punjab’s unending agricultural lands, have suddenly disappeared, forcing landlords to stop short of kidnapping them from railway stations and bus stops.

“Crisis?” asks Iqbal Singh from Bagrian in Kapurthala district. “It is a disaster.” “Today, I promised them Rs 1,500 per acre for transplanting the paddy nursery in 10 acres. Just two days days back I had paid them Rs 1,200 per acre. And this when I tell them that I will add to it if there work is good. Just imagine, the same work used to cost just me under Rs 600 per acre till last year.”

Across the paddy growing northern region, including Punjab and Haryana, farmlands have been facing a severe shortage of labourers. Ubiquitous labourers who poured in from Bihar and UP, even Jharkhand and Orissa have dried up, content to stay home and take advantage of work provided under the National Rural Employment Guarantee Act (NREGA). What has compounded the crisis is the diversion of labourers in the booming construction and real estate sectors, both in this region and in the native states of the migrants. Though there is no authentic data or official number on this, a workforce of an estimated 2-3 lakh arrive here for farm operations each year. This time, many say, not even half of that has come in. “When the migratory labourers can find equally
profitable work at their doorsteps, why should they be travelling long distances and suffer back-breaking work in other states where often they are treated as second-class citizens,” said a government official in the agriculture department.

Director, agriculture, B S Sidhu has a different explanation. “Earlier, the labour force used to come to Punjab sometime by March-end, at the beginning of the harvesting season, and would stay put till paddy sowing was complete by July-end. This assured them ample work for nearly four months. But increased mechanization of farm operations, especially in wheat production, has reduced the duration of employability for them and predictably of the work force has shown a dwindling trend since the past six years or so.”

from: Times of India, 19 June 2008

Increase of rural wage labour and minimum wage in Gujarat

“July 18: In an important development, the Gujarat government has doubled the rates of minimum wages for the agricultural labourers from Rs 50 to 100. Apart from the increasing human population, the other primary reason for the growing number of farm labourers in the last three decades or so is the “land alienation,” where small and marginal farmers are forced to sell their land due to lack of irrigation and other agriculture-related facilities. This class of farmers are thus being increasingly reduced to landless labourers. The number of agriculture labourers that stood at a little over 18.87 lakhs in Gujarat in 1971 has shot up to a staggering 51.61 lakhs as per the census conducted in 2001.

Government sources further say that seven years after the 2001 census, the population of farm labourers in Gujarat has swelled to over 60 lakhs. The major increase of the minimum wage is interesting in itself and poses further questions: why did the government opted for the increase and will it actually be paid. And to which extend does the increase function as a migration control measure: the minimum wage for industrial (urban) workers in Gujarat is about 60 to 70 Rs, considerably lower now than the wages for agricultural labour!

The NREGA and the control of rural proletariat

The misery on the Indian countryside is blatant, any sort of income is necessary. Millions applied for jobs within the framework of the National
Rural Employment Guarantee Act (NREGA), which is supposed to be implemented all over India in summer 2008. According to official data, the NREGA was employing nearly three million workers on an average day in 2006-07 (when the Act was in force in 200 districts). As the Act is extended to the whole of rural India, this could rise to 10 million or so – the largest public works programme ever. The Act “guarantees” 100 days of paid work for one person per household. The official wages vary from state to state, ranging from 60 Rs per day to 130 Rs. The Act prohibits the use of machinery. It is a labour intensive work-scheme to build infrastructure: roads, wells, canals etc.. The local village council functions as supervisor and receives the funds. The scheme is a battlefield: local activists, NGOs, Maoists fight for the proper implementations of the scheme, against the corruption of the (upper class and caste) village councils, for the full payment of wages, for providing the full amount of working-days. NREGA activists have been shot dead in this battle. Many of the capitalist farmers organisations criticise the Act as responsible for rising wages in the agriculture sector. The fact is that the Act is a state response to an increasing chaos and social turmoil on the Indian countryside, using the dependency of the rural proletariat on any sort of income to control their movements, to strengthen “local governance”, to make labour-intensive use of their work-force. Or as two NGO members put it affirmatively:

“Focusing on support structures at the panchayat (village council) and block level can actually help a working system that can allow panchayats to become an effective tier of local self-governance. The NREGS has been one of the biggest programmes to combat rural poverty. Its legal guarantees have radically altered the relationship of the poor with the state”.

from: Indian Express, 2 February 2008

Other “modernist” voices complain about the “manual character” of the scheme, demanding “better education” being part of the program:

“Absurdly, the NREGA bans machines and contractors. This was supposedly a move to prevent the exploitation of villagers. But it is only serving to keep them in the Dark Ages, even as we talk of a new urban India. Whether it is digging ponds, making or repairing roads or building check dams, all these are achieved manually. The world’s largest social
security scheme is only creating millions of labourers”.

from: Hindustan Times, 2 January 2008

A descriptive view from Haryana:

“On the outskirts of Ghukanwali village in Sirsa district in Haryana, arid, uneven land stretches out as far as the eye can see. Men and women of all ages are going back and forth carrying mud from the hillock to a depression nearby. No clang of machines at work, no roar of engines, only the quiet sound of work in progress while the sun rays beat down. The labour is absorbed in earning its Rs 135 a day under the National Rural Employment Guarantee Act (NREGA).

The women at the site of work are upbeat about “earning their living”. While some would work at home, there were others who went to work in fields of zamindars to earn a pittance.

“We used to get Rs 60 to Rs 80 after a whole day in the field. Now, we get the full payment without having to argue or haggle,” remarks Kesho Devi while Manjit Kaur adds that labouring at such sites is more respectable than working in the fields. “I wish this would go on instead of limiting work to 100 days a year,” she says.

After the work of levelling of land is complete, the labour will be again out of job and will have to wait for another project to begin. However, that does not mean that they can slow down the work for there are special appointees to keep tab on everybody’s efforts.

Job cards in hand, the labour is certain that it will not be cheated and get its day’s due. These works are primarily dominated by the fairer sex since most of the men go out of the village to work or are committed to work for zamindars.

Sarpanch (head of local village council) Kuldeesh Rani says it has revived the sagging strength of the Panchayati Raj Institutions (local council) which are central to this scheme. All projects of the village are first identified at gram sabha meetings. According to revised guidelines, the payments are to be made through bank accounts and no hard cash is to be given. The panchayats (council members) and the villagers are opposed to the move. While the panchayat is keen on making payments itself, the labour feels that it would be troublesome to get the money.”
A different voice on the systemic corruption within the scheme, this time from Andhra Pradesh.

“There are complaints of rip-offs. “We’ve been paid only Rs 30 a day,” says an angry P. Mallamma in Mosangi. The record says they got Rs 84 a day. K. Kalamma says she has “worked for over a month, without being paid.” Even a former deputy sarpanch, Saiddulu, has not been paid for a week’s work. He is well over 60 – yet another older person returning to work, driven by food costs. “Why only 100 days of work,” ask people. And they do not get those 100 days fully. The second is the rule of only one member per family being able to use it. Third are the usual local problems. Payment delays for one. Though Andhra Pradesh seems to be ahead of several other States, this remains a problem. “People here have waited four months to get much less than what was owed to them,” says Mallamma. “People are recorded as working when they did not work. Others are not recorded as working when they did,” says B. Ramaiah in Vadlaparthi village of Nalgonda”.

And finally a recent example struggling NGERA workers from Tamil Nadu Rural job scheme: wage cut irks workers

“Villagers who are the beneficiaries of the National Rural Employment Guarantee Scheme (NREGS) are complaining that the wages paid to them have been gradually reduced, much to their disappointment. On Friday last, about 3,000 workers resorted to picketing in Dindigul.

On Monday, the villagers of Chettinayakkanpatti came to the collectorate in large numbers to submit a petition against the low wages being paid to them under the programme. They said that originally, the daily wages they received was Rs 80 but it was reduced to Rs 70 and 65 and finally now they were paid only Rs 45 as wages.

Workers argue that the officials were adopting impossible measures to assess the quantum of work done by them, in order to deny them the guaranteed wages”.

The teenage guns of the new rich flashing
End of 2007 Gurgaon was big in the Indian news. In the elite-school “Euro International” a teenager was shot dead by a group of school mates. A superficial discussion about the “Americanization” of India started, all kind of culturalist-conservative interpretations were churned out. Some more serious efforts were made to understand the background of the incident: the changing structure of Gurgaon’s upper-middle classes, the internal split between the urban elite and the local rural nouveau rich, who came to money by selling their land. As a tool necessary for his profession, the gun belonged to a father of the accused school-kids. He is a local property dealer. The deals involve loads of cash and therefore life danger. As a property dealer he takes part in the conversion of landed peasants into rent bourgeoisie. The shooting can be seen as a sad biproduct of this violent transformation process...

“And that is why so many people begin their description of Gurgaon by saying, The thing about this place is its really a gaon (Gaon: village). Because of the way Gurgaon came to be acquired and built gradually, large swathes of farmland were parcelled out even as villagers hung onto their pockets of homes, which cluster in the shadows of sleekness. Some took profits and bought into new societies clinically named sectors, renting out the old place to migrants or relatives. Flush with cash or rental income, locals seek the same power, purchasing and political, as the newcomers, observes Sanjay Sharma, who runs a real estate company and the portal, Gurgaon Scoop. They shop in the same malls, attend the same resident welfare association meetings and send their children to the same schools. But they are not the same.

There is a struggle between people who are here and people who have come from outside, says Sharma, a returnee from the US. His attempt to videotape a community meeting in his sector recently resulted in a brawl and seven stitches on his upper lip. Locals here are quite bottled up. They have money but they are not well read. A new awareness is coming to Gurgaon and locals, they want their kids to learn English. By virtue of shunning government schools, the families of the three boys involved in the shooting seem to hold this aspiration. Media outlets reported that the family of the victim, Abhishek Tyagi, moved into Gurgaon city from their nearby village so he and his sister could attend Euro International. Police say the gun came from one suspects father, a property dealer.
Why so many in Gurgaon feel they even need a gun is a question as loaded as the weapon. Status symbol, yes. A response to the general lawlessness outside gated compounds, indeed. Police also say real estate agents brandish guns because so many transactions are a combination of cheque and cash (translation: illegal)

“There is an urban Gurgaon touted as India’s Millennium City and a rural Gurgaon largely seen as a cluster of villages. And though the stark divide between the old and new Gurgaon as represented in these two voices may appear to be nothing new, the recent killing of a 14-year old boy in an upscale Gurgaon school by his own classmates has brought the underlying tensions of these two Gurgaons into the open. The fact that the victim and the two accused hail from rural but well-to-do families has given Gurgaons more urban residents a chance to vent out their true feelings about their rural counterparts. The lure of skyrocketing property prices made big land owners from nearby villages of Gurgaon sell their land and move to the city to give their children a better life. But the urban residents say they have also brought along with them their own regressive mindsets”.

4) About the Project –
Updates on Gurgaon Workers News

*** German Booklet

*** Glossary
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services (summer 2007):

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone): 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgoan in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the October issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Gated Communities and Repressive Social Paranoia

With the increasing spatial concentration of wealth and misery, of upward opportunities and downward spirals, those who feel privileged tend to feel threatened. In that way Gurgaon is a landscape of mass-psychosis. The faceless dominance of exploitation – the assembly line, the export markets and real estate shares – have to congeal in physical people: the managing middle-classes, which are forced to live too close to the impoverished cogs of the game. Some notes on the consequent
urban armament: gated communities, increased repression in the local prisons, more CCTV, more police...

*** Ten Construction Workers Die after Accident in Gurgaon

The main driving force and victims of the construction boom are the construction workers themselves. In times of credit crunches real estate developers and construction companies try to squeeze margins and cut corners. In September this resulted in the death of ten construction workers in Gurgaon, ten workers deaths that we heard about that is.

*** Short Report from Orient Fan / Wal-Mart Worker

The factory is situated in Faridabad, Sector 6, Plot 11. When a representative of Wal-Mart visits the factory, all workers hired through contractors are told not to come to the factory. Wal-Mart sends its reps once a year and then it’s always this very same procedure: the ‘inofficial’ workers have to turn invisible. In the last year the factory produced 200,000 fans for Wal-Mart. The shift times in the Blade department, the paint shop, the air flow and the packing department are 12 to 12 and a half hours. Published in Faridabad Majdoor Samaachaar (FMS), July 2008.

*** Yet another list of short information from workers employed at different companies in Gurgaon

Continuation of short reports of workers from Achiever Creation, Elite Medical, Radnik Export, Rolex Auto, Viva Global, gathered and published in FMS, July 2008.

2) Collective Action –

Reports on proletarian struggles in the area

*** Wildcat Sit-Down Strike at HMSI

Short news item on yet another short wildcat action by casual workers and workers hired through contractors at Honda HMSI. The green-field factory – only opened seven years ago – has already developed a tradition of unrest (see GurgaonWorkersNews No.7). Sources said about 1,500 contractual and casual workers of HMSI have gone on a sit-in protest, on 6th of September 2008. The strike was triggered when a factory supervisor slapped and manhandled a worker after a scuffle during the night shift

*** After wild-cat strike and mass-dismissals: Factory manager of
automobile supplier in NOIDA got killed during workers’ unrest

Two weeks after the wildcat-strike at Honda, another wild-cat strike of workers hired through contractors employed by the automobile industry ended in a bloody mess, just around the corner. In NOIDA, a group of sacked workers killed the factory manager of an Italian automobile supplier, Graziano Transmissioni. The workers had gone on strike for higher wages, the management refused the demand and sacked 200 workers, a riot started, security guards fired, the manager was allegedly beaten to death. It could happen anywhere at any time again: sacked workers, a replicable dead manager, and 130 detained and charged workers – 60 of them with murder – facing legal repression.

3) According to Plan –

General information on the development of the region or on certain company policies

*** The Bloody Real Estate of Crisis

On 13th of August 2008 on a protest march in NOIDA, another satellite town of Delhi, several farmers were shot dead by the police and dozens got injured. The farmers demanded higher compensation for the land which they had sold to a public development authority some years ago. If the protests in NOIDA and the demands for higher compensations are the rock of the current crisis of the real estate sector then the rising interest rates, the rising prices for construction material and the recession of the US economy is its hard place. The current drop in real estate prices and of the shares of private developers like Gurgaon based DLF – the biggest in India – is more than a mere adjustment in the market swing of supply and demand. The situation of the sector can be described as a blocked pressure valve of the wider economy. The rising inflation of proletarian goods increased the pressure from below: workers particularly in the urban industries are getting restless. In this blocked and intertwined situation those in power are aware and afraid of any possible trigger effects, tipping points, chain reactions – and be it a small protest of farmers in a suburb of Delhi. A glimpse on the current crisis...

*** Hells Bells – Glimpses on Current Trends in Gurgaon’s Call Centre Sector
In August 2008 the newspapers announced the lay-offs of hundreds of call centre workers, many of them in Gurgaon. The reasons given for the job cuts are the recession in the US and the high costs for office rents. We summarised some news on the sector. We start with an article reporting on the attempt of the regional BPO industry to counteract the tendency of workers changing jobs too quickly – by setting up a sector-wide ‘investigation company’ which is supposed to provide a kind of ‘black list’ of the worst job hoppers. The second article was published in April 2008 and describes a potentially booming new trend from the US: cutting costs of private debt collection by outsourcing it. Following a summary of articles on various job cuts at major call centre companies in Gurgaon. We finish with two short notes, one concerning the many road deaths in Delhi-Gurgaon caused by speeding call centre cabs – a result of the enormously long working hours and time pressure which is put on the drivers. The last note is on the effect of call centre work on gender relations and the emergence of a kind of call centre workers caste.

*** Energy Crunch and Destructive Forces in Gurgaon

Machines have to run 24 hours a day in order to suck up enough of human energy for profitable consumption, but the frequent power cuts pose a serious problem to the local industry. Maruti runs its own power-plant and in the way most of the factories and call centres in the industrial belt around Delhi do: burning fossil fuels in their generators. About 350,000,000 litre of diesel are consumed each year by these industrial units. The rising price of diesel hits hard. Nearly Rs 14,000,000,000 per annum is spent on diesel for running gensets by about 40,000 industrial units in Faridabad, Gurgaon, NOIDA. This sum amounts to an annual wage sum of about 430,000 workers. The machine has to keep on running, energy is turned into destruction of human health and environment – and into business, e.g. by carbon emission trading. For good reasons the Deutsche Gesellschaft fuer Technische Zusammenarbeit (GTZ) GmbH, (German Technical Cooperation), opened their carbon emission trading office for India right in the centre of the polluting money-machine – in Gurgaon.

4) About the Project –

Updates on Gurgaon Workers News
*** Glossary

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

With the increasing spatial concentration of wealth and misery, of upward opportunities and downward spirals, those who feel privileged tend to feel threatened. In that way Gurgaon is a landscape of mass-psychosis. To rickshaw-drive your dog to dinner in a dog’s restaurant where you spend the weekly wage of the rickshaw driver’s family on your dog’s aperitif might cause feelings of socio-phobia. And also to be driven back to an apartment which costs 2,000 years of the driver’s wage. There’s evidence and reason. In front of most upper-class houses in Sushant Lok or DLF City you will find private security workers day and particularly at night. Gates close behind you when you leave home, gates close when you enter your air-conditioned work-space. Airport-like security checks when you enter shopping malls after work to have your coffee, police presence on the way back home at the NH8 highway toll-point. The faceless dominance of exploitation – the assembly line, the export markets and real estate shares – have to congeal in physical people: the managing middle-classes, which are forced to live too close to the impoverished cogs of the game. Those who are privileged suffer; those who are privileged are afraid and have the means to defend themselves. The blunt answer is physical, e.g. regular police raids of the ‘illegal slums’ and deadly neglect within the prison system; some steps are helplessly preventive, e.g. 500 new CCTV cameras in town; some outcomes of the closeness are inevitable, e.g. the increase of poverty related illnesses which spread to the areas of plenty. Some short notes on the matter.

Inside Gate, India’s Good Life; Outside, the Servants’ Slums

“GURGAON, India – When the scorch of summer hit this north Indian boomtown, and the municipal water supply worked only a few hours each day, inside a high-rise tower called Hamilton Court, Jaya Chand could turn on her kitchen tap around the clock, and water would gush out. The same was true when the electricity went out in the city, which it
did on average for 12 hours a day, something that once prompted residents elsewhere in Gurgaon to storm the local power office. All the while, the Chands’ flat screen television glowed, the air-conditioners hummed, and the elevators cruised up and down Hamilton Court’s 25 floors. India has always had its upper classes, as well as legions of the world’s very poor. But today a landscape dotted with Hamilton Courts, pressed up against the slums that serve them, has underscored more than ever the stark gulf between those worlds. The slum is as much a product of the new India as Hamilton Court, the opportunities of this new city drawing hundreds of thousands from the hungry hinterlands.

“Women and children are not encouraged to go outside,” said Madan Mohan Bhalla, president of the Hamilton Court Resident Welfare Association. “If they want to have a walk, they can walk inside. It’s a different world outside the gate.” Some 600 domestic staff members work at Hamilton Court, an average of 2.26 per apartment. The building employs its own plumbers and electricians. At any one time, 22 security guards and 32 surveillance cameras are at work. “We can’t rely on the police,” Mr. Bhalla said. Gurgaon has one policeman for every 1,000 residents – lower than the national average – and a surfeit of what Mr. Bhalla calls official apathy. “We have to save ourselves,” he said. The guards at the gate are instructed not to let nannies take children outside, and men delivering pizza or okra are allowed in only with permission. Once, Mr. Bhalla recalled proudly, a servant caught spitting on the lawn was beaten up by the building staff. Recently, Mr. Bhalla’s association cut a path from the main gate to the private club next door, so residents no longer have to share the public sidewalk with servants and the occasional cow. The Gurgaon police chief, Mohinder Lal, said the city’s new residents had unrealistic expectations of the Indian police. If a police officer does not arrive quickly, Mr. Lal rued, the residents complain. “They say, ‘You’re late. Come back tomorrow.’ “He too, said that the police could not cope with the disorder of Gurgaon’s growth.”Development comes, mess comes, then police come and infrastructure”. Gurgaon’s security guards, most of whom live in slums, likewise have little love for law enforcement. They accuse the police of raiding their shanty, hauling men to the local stations and forcing them to clean and cook before releasing them back to their hovels, often without a single charge. The police say migrant workers are a source of
Gated townships can induce psychological barriers

Even the local mainstream media mentions the mental consequences of social apartheid for the children of the rich:

“Gated townships: Malibu Towne in the IT hub of Gurgaon is one such. Round-the-clock security and limited access to entry make it the preferred choice of many. On an average populated by 50-150 families, mostly made up of corporatists and retired bureaucrats, some of these areas even boast of golf courses. No wonder most developers in the country are cashing in on the demand for secure and self-sustained abodes and are coming up with such townships, mostly in the outskirts of metropolitan areas, which cater largely to the high-end housing segment. However, psychologists feel these ‘private, gated cities’ are fraught with negative psychological consequences. According to Sameer Parekh, a psychologist at Max Healthcare, “Staying among a closed social group increases the sense of social segregation. Children staying in a community built with the same socio-economic class tend to become comfortable with people similar to them and less tolerant of the world outside their closed gates.”

(4th of August 2008 – Times of India)

Gurgaon may get some 500 odd TV cameras installed all over the city

“In an effort to implement an earlier order to install CCTVs in cyber cafes, the police in the city have taken some recent steps to check compliance. Gurgaon may also get some 500 odd TV cameras installed all over the city. These are steps which should help curb unsavoury activities of all kinds, provided all recordings are maintained and archived properly. The Gurgaon police arrested five cyber cafe owners this Monday for failing to install closed-circuit television cameras (CCTV) in their cafes and for not maintaining the identity records of customers. The action follows increased vigilance after the recent serial bomb blasts in Bangalore and Ahmedabad and increasing instances of terrorist outfits using cyber cafes to send e-mails, a police spokesman said. A police spokesman Monday said the cameras will be installed on national highways, roundabouts, parks, shopping malls, prominent high-rise buildings and
other public places across the township.”

18 inmates died without medical care in Gurgaon prison

Bhondsi jail in Gurgaon district seems to be existing in times when prisons were meant for punishment, rather than as correctional facilities. The jail is under the scanner for letting 18 inmates die without medical care during the last 33 months. A Haryana jail department investigation confirmed one death due to denial of medical care there. The probe was started after a prisoner wrote to the Chief Justice of India in May. An April 2008 report by a judge had also recorded that no doctors were available in the jail during an inspection.

(15th of July 2008 – Times of India)

The main driving force and victims of the construction boom are the construction workers themselves. In times of credit crunches (see article on real estate crisis in this newsletter) real estate developers and construction companies try to squeeze margins and cut corners. In September this resulted in the death of ten construction workers in Gurgaon, ten workers deaths that we heard about that is.

“Ten people were killed and two others were injured after a water tank that was under construction collapsed here in the National Capital Region last night. Eyewitness said that some workers were washing their utensils and others were taking a bath when the half built water storage tank came down on them. “The tank was outside, it was full of water and people drowned in it. Around 5 people died on the spot and two of us are injured,” said Jai Karan, one of the injured men. Police are investigating into the matter and have not ruled out the use of substandard material used in the making of the storage tank as the cause for its collapse. “The tank collapsed all of a sudden, maybe because of the material used, we are still investigating. But the report is that five died on the spot and five others succumbed to their injuries in the hospital, a total of ten have been killed and two are seriously injured,” said Inder Singh Seni, Deputy Commissioner of Police (DCP). The bodies of the deceased were handed over to their family members. Many chose to take the bodies to their home state of Bihar and Bengal, and only a few cremated their loved ones in Gurgaon on Saturday.”
The factory is situated in Faridabad, Sector 6, Plot 11. Today a representative of Wal-Mart will visit the factory, therefore all workers hired through contractors were told not to come to the factory. Wal-Mart sends its reps once a year and then it's always this very same procedure: the ‘inofficial’ workers have to turn invisible. In the last year the factory produced 200,000 fans for Wal-Mart.

In the Orient factory there are four types of workers – permanents, casuals, workers with a job card and workers without job cards. There are only few workers with a job card, some of them are also hired through contractors, but they are not dismissed after some months and their 18 hours of weekly over-time is paid at double rate. Everything above 18 hours is called extra-time and only paid at single rate. The permanents usually do piece work. The extra time of the casuals is paid at double rate, too. Those workers hired through contractor who haven’t got a job card are paid 90 to 130 Rs for eight hours; they don’t get ESI or PF. When they hire casuals they take 200 to 400 Rs bribe. Job cards are also only given to those with the right connections to the hierarchy – on 10th of June the union leaders made a fuss about it.

In the factory we manufacture 2.4 million fans per year. Between Mid-July and end of October there is only little work, during the rest of the year we work 100 to 175 hours over-time per month. The shift times in the Blade department, the paint shop, the air flow and the packing department are 12 to 12 and a half hours. There is also a canteen at Orient Fan factory. The permanent workers pay 50 paisa (1/5 a Rupee) for a tea and three Rs for a meal. The 450 casual workers and the workers hired through contractors pay one R for tea and six Rs for a meal.

*** Yet another list of short information from workers employed at different companies in Gurgaon

Continuation of short reports (for more see last issues of Gurgaon Workers News). Most of the reports are from textile export factories, gathered in July and August 2008.

Achiever Creation Worker

(Plot 501, Udyog Vihar Phase III)

We have to work from 9 am till 7 pm, but for ten hours work the
company pays only eight.

http://www.importgenius.com/shipments/achiever-creation-pvt.html

EMAIL: achiever@vsnl.net

Elite Medical Worker
(Plot 76-77, Udyog Vihar Phase IV)

The machine shop runs on two 12 hours shifts. The helpers get 2,800 Rs, neither ESI nor PF.

Radnik Export Worker
(Plot 294, Udyog Vihar Phase II)

Inside the factory about 1,000 workers do from 9:30 am till 10:30 pm or 2 am. We do 150 hours over-time per month. If they make us work till 2 am, they give us 15 Rs extra for food. They make us sign papers which say that we get double over-time pay, actually we get single rate. The bosses abuse us verbally. There are thugs in the factory who threaten and beat us, and more thugs are called if necessary.

From the company web-site:

Supporting your deliveries are six production factories, covering a total area of 250,000 sq. feet, with a capacity to handle 500,000 garments per month. State-of-the-art machinery is used across all functions, which include over 2000 stitching machines in India and Nepal.

Clients: H&M, Mexx, Morgan Spencer,

http://www.radnikexports.com/clients.html

Rolex Auto Worker
(Plot 303, Udyog Vihar Phase II)

Work start at 9 am and won’t finish before 8:30 pm, often till 2 am. They won’t even give you money for food when they make you stay till 2 am. The helpers get 2,800 Rs, but they have to sign for 3,510 Rs. The same with the welders, they sign for 4,500 Rs, but get 3,500 Rs. When an official comes for inspection the helpers have to leave the factory.

Viva Global Worker
(Plot 413, Udyog Vihar Phase III)
We work from 9:30 am till 11 pm, even till 2 am. We do 200 to 250 hours over-time per month. Money is cut for PF, but when they sack you after three or three and a half months they won’t give you the form or tell you the PF number. They threaten you, abuse you verbally.

From the Viva company web-site:
Viva Globals mainly supplies clients in the US and Europe
http://www.vivaglobal.com/customers.html

2) Collective Action –
Reports on proletarian struggles in the area
Short news item on yet another short wildcat action by casual workers and workers hired through contractors at Honda HMSI. The green-field factory – only opened seven years ago – has already developed a tradition of unrest (see GurgaonWorkersNews No.7).

HMSI casual workers strike, production affected.

NEW DELHI: Production at the Honda Motorcycle and Scooter India’s (HMSI) Manesar plant in Haryana has been affected partially due to a strike by contract and casual workers, who are protesting against alleged manhandling of a colleague.

Sources said about 1,500 contractual and casual workers of HMSI have gone on a sit-in protest since this morning.

The strike was triggered when a factory supervisor allegedly slapped and manhandled a worker after a scuffle during the night shift on Friday followed by another altercation this morning.

When contacted a company spokesperson said: “The dispute started with the indiscipline behaviour by a contractual worker, who then had some disagreement with the supervisor of the contractor on this issue.

“This incident mobilised 10-15 other co-workers and they stopped other contractual workers from working. Now these contractual workers are diverting the actual dispute to general demands.”

The contractor of the workers and the Labour Department of the company were trying to resolve this dispute. Efforts were on to resolve the dispute at the earliest possible, the spokesperson said.

Admitting that the production at the facility has been affected, the
spokesperson, however, said the extent of impact on production could be assessed only towards the end of the day’s work.

(6th of September 2008 – The Hindu)

*** After wild-cat strike and mass-dismissals: Factory manager of automobile supplier in NOIDA got killed during workers’ unrest

The system needs representatives who impersonalise its necessities: who announce that people are hired or fired, who call for worker-friendly laws or stricter police-enforced order. The system needs management and therefore managers: people who organise exploitation and are in touch with the exploited. These people are rewarded with money and dubious prestige for the alienating job they do. They spend a huge amount of money in order to create their own safe world apart from the misery around them: gated communities, security guards, private transport – see related notes in this newsletter. In times of turmoil these representatives of the system can become the well-paid target and functionalised victim of proletarian wrath. Like it happened on 22nd of September in Delhi’s industrial belt, when a group of sacked workers killed the factory manager of an Italian automobile supplier, Graziano Transmissioni. The workers had gone on strike for higher wages, the management refused the demand and sacked 200 workers, a riot started, security guards fired, the manager was beaten to death. It could happen anywhere at any time again: sacked workers, a replicable dead manager, and 130 detained and charged workers – 60 of them with murder – facing legal repression. The political wing of management does its mediating job. Union Labour Minister Oscar Fernandes:

“This should serve as a warning for the managements. It is my appeal to the managements that the workers should be dealt with compassion. There are disparities in the wages of permanent employees and contract workers. The workers should not be pushed so hard that they resort to what happened in Noida. It is a fact that the number of organised workers has been decreasing. It came down from seven per cent to six per cent. We are going to discuss the matter of hire and fire policy in the next Labour Congress. The workforce is unable to express its simmering discontent over the management policies.”

The managing community knows that they will have to lay off workers again and that they will not be able to compensate the working workers
for a lost life in the factories. They know that there will be trouble in the future: for them the killing of the manager is a scary sign, a peak on the scale of social tension. A scary sign, but one that they can understand and deal with. They call for armament: more cops, more security guards in the factories and in front of their houses, stricter laws, more prisons, higher gates and fences. Workers’ struggle will have to and will find ways to undermine and subvert this already lost race for repressive security...

3) According to Plan –

General information on the development of the region or on certain company policies

On 13th of August 2008 on a protest march in NOIDA, another satellite town of Delhi, several farmers were shot dead by the police and dozens got injured. The farmers demanded higher compensation for the land which they had sold to a public development authority some years ago. The necessity to quell the protest derives less from the violence used by the farmers – they tried to storm a government building and allegedly started to throw stones at the police – than from the danger that the protest might trigger a whole chain of similar unrests. In Gurgaon there have been various farmers’ protests during the last months. In recent years hundreds of acres of farm land in Gurgaon and NOIDA have been bought to feed the real estate boom. Since then the land and real estate prices have exploded, many farmers now demand their ‘fair share’ of the gamble. If the protests in NOIDA and the demands for higher compensations are the rock of the current crisis of the real estate sector then the rising interest rates, the rising prices for construction material and the recession of the US economy is its hard place. In September 2008 the Indian government announces that Gurgaon and NOIDA, these bloody battlefield of urbanisation are the new role model for India: »The government is set to create 35 new satellite townships, on the lines of Gurgaon and Noida, on the public-private partnership (PPP) model«. (Economic Times)

The current drop in real estate prices and of the shares of private developers like Gurgaon based DLF – the biggest in India – is more than a mere adjustment in the market swing of supply and demand. The situation of the sector can be described as a blocked pressure valve of the wider economy. The sector functioned as an entry-gate and container
for global capital influx after the debt crisis of 1991: in order to attract and bind capital the state orchestrated the privatisation of the real estate sector. Companies like DLF emerged. The re-location of US IT-companies and call centres fed the boom, they account for the majority of the commercial real estate. With the first signs of a slow-down the state further liberalised the sector in 2005 and allowed ‘foreign’ capital to invest in Indian real estate. Much of the foreign investment streams from Singapore and the United Arabic Emirates, passing tax havens on the way: about 40 per cent of the total FDI in India came officially from Mauritius. Like no other place in India, DLF City in Gurgaon symbolises the real estate boom and the real estate money greased the local economy. In Gurgaon one huge construction project – apartment blocks, office towers, shopping malls, SEZs – chased the next. In 2006 first voices warning of an ‘over-supply’ could be heard. DLF, Reliance, Omaxe and others reacted by accelerating the game and by competing more fiercely for new liquidity.

In June 2007 DLF Properties raised a record $2.3 billion in its initial public offering. DLF also formed a tie-up with Dubai developer Nakheel that announces investments of $10 billion to build two townships in India, one of them in Gurgaon. In July 2007 Omaxe Developers went public in order to draw money from the stock-market. In November 2007 Emaar Properties, the world’s largest listed real estate developer, has announced a more than 12 billion dollar investment with India’s MGF Developments. In January 2008 Russian Telecom giant Sistema JSFC announced that the company had acquired huge tracts of land in Gurgaon. The total investment in real estate would be around $500 million in the coming years. In the same month Emaar MGF (Dubai) said it will go ahead with its plan to enter the capital market for raising up to Rs 7,077 crore through an initial public offer. Rs 775 crore would go into development cost of a project in Gurgaon and Rs 1,450 crore in repayments of loan.

(lakh = 100,000, crore = 10,000,000)

Things heated up and the Indian economy did, too. The influx of financial capital and the rising oil prices fuelled the inflation. The Indian state reacted by increasing the interest rates. The interest rates on home loan have gone up by 2 percentage points – to over 12 per cent in 2008. The
private property market slumped. People who have bought property face difficulties due to rising interests, people who thought about buying a house are more reluctant to do so. Particularly the region around Delhi has the highest level of private property debts in India: in the average value of each loan account opened in 2005-06 NOIDA now tops the list with Rs 10.5 lakh followed by Gurgaon with Rs 10.2 lakh and Delhi with Rs 9.8 lakh. At the same time many IT and call centres in Gurgaon area announced down-sizing as a reaction to the US-recession – see article in this newsletter. This results in even more empty office space. The developers try to squeeze remaining margins, e.g. by increasing the rents in the retail sector. The picture of deserted shopping malls entered the stage. At the beginning of 2008 the DLF share price dropped below their initial selling price. Only twelve month after the biggest single share-deal in Indian history DLF announced it would buy back a chunk of its own equity, “a move construed by the market as a sign of panic on the part of controlling shareholders.” Since July 2008 the warning voices have become more audible – all from July and August 2008, published in The Hindu and the Economic Times:

* “The value of residential flats in Gurgaon has dropped 40 percent during the last nine months of 2007.”

* “A senior builder said that at present, the average land cost for the construction of one sq feet comes out to be around Rs 2,000 to Rs 3,000 per sq ft in Noida and Gurgaon. He also said that in the last one year, developers and builders have not increased the prices of their products while the input cost has increased by almost 30% to 50%. Therefore, he said, his profit margin has already been squeezed”.

* “The real estate market is increasingly behaving like the stock market these days. Just like buyers on the Street are putting off their purchases in anticipation of the market falling further, a sluggish real estate market is prompting retailers to postpone expansion plans on hopes of lower rentals”.

* “Rentals may kill 50% of malls. Eight years ago, mall developers couldn’t get enough of Gurgaon. Retail rentals have doubled in the past three years, eating away on average 22-24% of retailers’ revenues. Internationally, rentals comprise 7-8% of retailer’s revenues. Srinath Sridharan, the vice-president and head of strategic alliances at
Wadhawan Holdings presages far darker times. ‘You have to be optimistic to say only half of the malls becoming defunct. I feel 80% of them will not even see the light of day. Retailers today cannot afford the high rentals being demanded. It’s difficult to say if rentals are a part of sales or the other way round, he says.”

* India’s emergence as a leading IT and ITES destination has witnessed a huge demand for high quality office space. Again, the dependence on one sector could also have a serious impact. Knight Frank Vakil is clear when he says there is already a slowdown as far as commercial property is concerned. There is no demand for an outright purchase and a lot of people are going for the lease option. In a falling market, that is a more practical solution, says Vakil. IT and ITES, according to him, account for 80% of all commercial space in India”.

* “Part of the problem is that when the market was strong, developers piled into the most expensive properties where the biggest profits were to be made. One upmarket enclave in Gurgaon, which boasts a nine-hole golf course and a ‘cigar lounge’, has sold fewer than half the houses built in the first phase of development, even though it is now more than a year since they went on sale. HSBC reports that sales in the luxury segment have fallen by up to 70% in Gurgaon.

* “This has pushed up interest rates and turned property companies into the biggest corporate losers of India’s slowing economy. They have been kicked from several sides. Homebuyers are put off by expensive or elusive credit; banks are rationing credit to developers; prices of building materials like cement and steel have soared. The share prices of property firms are down by 40-70% from their highs earlier this year.”

* In late September 2008 DLF announces the lay-off of 300 office workers across all its centres and subsidiaries “as it decides to slow down its project execution, especially in tier II cities, in the face of shrinking demand and expensive borrowing”.

* With the crisis kicking in the state helps to concentrate and clean the market, e.g. by minimising the numbers of real estate dealers: “With Gurgaon becoming the hub of corporate India, property is one of its most thriving sectors. According to unofficial estimates, 10,000 brokers are dotted around the 2,600 sq km that is Gurgaon. It might well be the Indian city with the highest number of brokers per sq km. This may be
about to change because the Haryana Assembly last week passed a law to regulate the burgeoning but unregulated property business. Estate agents will now need a licence from the Haryana Urban Development Association.” (14th of September 2008 – Times of India)

The picture of the real estate sector being the blocked pressure valve of the wider economy is symbolised by DLF’s move of raising enormous amounts of share capital and of having to buy them back shortly afterwards. The policies of the state mirror this ‘reactive panic’, too. The state first had to encourage the capital influx by liberalisation; it now had to increase the interest rates due to over-heating. The higher interest rates accelerates the crisis in certain sectors, the state now has to further increase the diameter of the valve: the Indian government currently plans to follow other Asian countries in creating a market for real estate investment trusts (REITs). “The move would encourage foreign property funds, which are keen to join India’s construction boom but are not allowed to own finished buildings. However, REITs have not been immune from global stock market turmoil; with Singapore’s REIT index for example, dropping 20 percent in the second half of last year (2007) and a further 13 percent so far this year, in line with the broader market”.

The crisis of the real estate sector is closely linked to other sectors, e.g. Reliance is not only one of the biggest private real estate developers, the major developer of Gurgaon’s SEZ, but also big in retail, chemical industries and the energy sector. The increased interest rates will have a direct effect on, e.g. the developing car industries. Outstanding credit for the purchase of cars and two-wheelers has risen from Rs 460.2 billion in 2002-03 to Rs 1.09 trillion in 2006-07; 89 per cent of the new cars sold in 2006-07 were bought with credit, with loans covering 79 per cent of the value of the purchase. Automobile sales growth halved in the first ten months of 2007-08 over the corresponding period of the previous year. On 15th of September the Economic Times published an article concerning the relation between credit growth and local boom of consumer goods. On top of the list Gurgaon and NOIDA: “The virtuous cycle of credit and consumer market growth shows up strongly in Haryana, old-Gurgaon (credit growth 65 per cent and market growth 14 per cent) and Uttar Pradesh, Noida (43 per cent and 15 per cent)”. The question is when the “virtuous cycle” becomes a vicious circle of personal bankruptcy and market slumps.
The rising inflation of proletarian goods increased the pressure from below: workers particularly in the urban industries are getting restless. In this blocked and intertwined situation those in power are aware and afraid of any possible trigger effects, tipping points, chain reactions – and be it a small protest of farmers in a suburb of Delhi...

In spring 2008 in Gurgaon Workers News No.11 we mentioned two cases of closing call centres in Gurgaon area, triggering some mild protest. In August 2008 the newspapers announced the lay-offs of hundreds of call centre workers, some articles speak about ‘the end of the boom’. The reasons given for the job cuts are the recession in the US and the high costs for office rents in Gurgaon – see article on real estate in this issue. While call centre service seems to be the first target of cost cutting, the rest of the IT sector in Gurgaon is apparently still growing.

“The total exports from district Gurgaon in Information Technology and IT-enabled services industry has touched Rs 18,000 crore at the end of FY’08. In the year 2006-07, the software export from Gurgaon was Rs 15,000 crore whereas it was Rs 10,700 crore in 2005-06.” (The Hindu – 23rd of July 2008)

Below we summarised some news on the sector. We start with an article published in December 2007 reporting on the attempt of the regional BPO industry to counteract the tendency of workers changing jobs too quickly – by setting up a sector-wide ‘investigation company’ which is supposed to provide a kind of ‘black list’ of the worst job hoppers. The second article was published in April 2008 and describes a potentially booming new trend from the US: cutting costs of private debt collection by outsourcing it. Following a summary of articles published in August 2008 on various job cuts at major call centre companies in Gurgaon. We finish with two short notes, one concerning the many road deaths in Delhi-Gurgaon caused by speeding call centre cabs – a result of the enormously long working hours and time pressure which is put on the drivers. The last note is on the effect of call centre work on gender relations and the emergence of a kind of call centre workers caste.

Pinkerton against Call Centre Workers’ Mobility

During boom times call centre companies have to put up with a very mobile work-force. People change jobs frequently in order to improve their pay and conditions. The average wage level of call centre workers in
Gurgaon increases by 10 to 20 per cent annually. Companies try to lure people with bonus-systems and gadgets, but in times of shrinking profit margins it might become more profitable to set up lists with data on the most agile job-hopping workers. Disregarding all talk about competition this initiative expresses the common interest of companies vis-a-vis the restless work-force. In times of more collective unrests these kinds of lists could come in handy, as well.

“Giving details of the initiative, Business Process Industry Association of India (BPIAI) president Samir Chopra said that they are going to hire an investigation company to carry out this task.“It's unacceptable to the industry that people who join companies desert them within few weeks. Then the companies, which have invested so much into the training, lose the man and also the investment for no fault of theirs. We intend to stop this by initiating this step,” Chopra added.

He said that the investigations would cover all and the BPIAI would circulate the information among all the BPOs so that each one of them could refer to the list while going for fresh recruitments. In fact, frequent job-hopping has become one of the key deterrents for the growth story of outsourcing industry in India.” The attrition is high. Officially, it's about 40%, but in reality it's between 50-60%. That's why you will find the major BPOs holding interviews throughout the week,” said HR manager of a big BPO operating from Gurgaon.”

(11th of December 2007 – Times of India)

Turning the Debt Crisis into Business

At least one call centre sector in Gurgaon could benefit from US recession.

“GURGAON, India – In a glass tower on the outskirts of New Delhi, dozens of young Indians are on the telephone, calling America’s out of work, forgetful and debt-stricken and asking for cash. ‘Are you sure that’s all you can afford?’ one operator in a row of cubicles asks politely. ‘Well, how do you take care of your everyday expenses?’ presses another. Americans are used to receiving calls from India for insurance claims and credit card sales. But debt collection represents a growing business for outsourcing companies, especially as the American economy slows and its consumers struggle to pay for their purchases. Armed with a
sophisticated automated system that dials tens of thousands of Americans every hour, and puts confidential information like Social Security numbers, addresses and credit history at operators’ fingertips, this new breed of collectors is chasing down late car payments, overdue credit card debt and lapsed instalment loans. Debt collectors in India often cost about one-quarter the price of their American counterparts, and are often better at the job, debt collection company executives say.”

(24th of April 2008 – Economic Times)

Recession Re-Locates

The US recession forces companies to down-size their call centre services. Some examples from Convergys, 24/7 Customers, Hexaware, Fidelity Management and Research Company India.

“Rajeev, a Senior Customer Care Executive at Convergys has worked at five different call centres in the last seven years. He’s looking for a change again, but this time not out of choice. “This is the first time I feel I am heading nowhere. I have been asked to leave because of something I haven’t done,” he said. Rajeev is one of the 450 employees fired in the last two weeks by a Gurgaon BPO called 24/7 Customers. Reason being that this UK-based mobile phone company has decided to cut back its India operations. The Orange crisis has led to lay-offs at two other Call Centres, Convergys and EXL services.

And this comes after 400 people were let go last month by another BPO giant, Keane India, after a merger and a scaling down of size.”

(13th of July 2008 – NDTV)

“Mid-tier IT company Hexaware Technologies is in the process of shutting down its Gurgaon centre where about 130 employees currently work. Due to escalating real estate prices in the Delhi NCR region, the company has decided to merge the Gurgaon centre with its other centres. The city based company had set up its Gurgaon centre in April 2007. At that point, the company had said this centre would grow up to 1,000 employees in two years.”

(14th of August 2008 – Sify)

“Convergys is shutting down its Malad facility in Mumbai which employs around 400 people, Patni Computer Systems laid off 400 people citing
non-performance, while Fidelity Management and Research Company India plans to shut down its Gurgaon facility by September this year which employs around 350 people, according to reports.

The country's biggest player in the business and knowledge process outsourcing space, Genpact's experience indicates towards this. 'The economy is going through a slowdown and the company is also seeing delays in some contracts. The cycle-time for deals has certainly increased from 3-6 months to 9-12 months, especially for firms outsourcing for the first time.”

Deadly Speed-Up

Cutting corners is not only a deadly phenomenon on construction sites. According to management sources the average call centre company has to spend an additional fifth of the wage sum for workers’ transport. We know how they try to reduce these expenses and we know the consequences:

“Every fourth accident on the Delhi-Gurgaon Expressway is caused by a speeding call centre cab. In Delhi, police say, these speeding demons kill at least five people every month. They are probably the biggest killer on roads today after trucks and Blueline buses. The ill-trained, ill-paid and many times drunk cab drivers speed at 100 kmph to maintain their strict reporting hours. The Delhi Traffic police have arrested 1,097 drivers this year. BPOs outsource cab operations to travel agencies and do not employ drivers direct.”
(20th of August 2008 – Hindustan Times)

BPO’s Emerging Caste System

The mix-gendered employment within the call centre industry was always a thorn in the flesh of the watch-(wo)men of social norms: night-shifts, liberal dress-codes, after-work activities. The Catholic Church in Bangalore was so appalled by the debauched reputation of the city's call centres that it started offering workers religious counselling. The moralistic back-lash causes difficulties particularly for female call centre workers to find a partner within their upper-caste. This is the official version; it is as likely that these young women would not put up with any traditional village guy who is presented to them by their family. Any
which way, the problem of new forms of partnerships is expressed and commercialised in many ways, e.g. specific partnership agencies.

“Now, with growing numbers of India’s lady call centre workers reporting problems finding husbands, an IT-age problem has found an IT-age solution. A new dating agency website offers to put female call centre staff in touch with the one group of men for whom the job holds no scurrilous mystery – other call centre workers. Bposhaadi.com derives its name from BPO, which stands for Business Process Outsourcing – as call centre work is known in India – and “shaadi”, the Hindi word for marriage. Sonia Singh, 23, a single call centre worker in Gurgaon, outside Delhi, said that a spouse who worked outside the industry would have trouble accepting the endless parties, picnics, retreats, and treks in the Himalayas that she now enjoyed with her colleagues. “Even if my husband could accept this, I don’t want my in-laws cribbing that it’s not in their culture for a daughter in law to go to work at night,” said Miss Singh, who logs mobile phone complaints from Britain.”

(10th of August 2008 – Times of India)

Machines have to run 24 hours a day in order to suck up enough of human energy for profitable consumption, but the frequent power cuts pose a serious problem to the local industry. The industrial belt around Delhi on an average suffers power scarcity for eight to ten hours a day. Maruti runs its own power-plant and in the way most of the factories and call centres in the industrial belt around Delhi do: burning fossil fuels in their generators. About 350,000,000 litre of diesel are consumed each year by these industrial units. The rising price of diesel hits hard. According to a recent survey by Associated Chambers of Commerce and Industry of India (ASSOCHAM), nearly Rs 14,000,000,000 per annum is spent on diesel for running gensets by about 40,000 industrial units in Faridabad, Gurgaon, NOIDA. This sum amounts to an annual wage sum of about 430,000 workers. The combined electricity requirement of Gurgaon and Faridabad is equivalent to the total power demand of Himachal Pradesh – a state in the north with over 6.5 million inhabitants’ says Dakshin Haryana Bijli Vitaran Nigam managing director vijayendra Kumar in The Times of India, on 8th of March 2008.

In addition to those industrial units, more diesel is burnt for the air-conditioned islands of the middle-classes, for shopping malls and private
Sixty-two-year-old Vijay Malhotra, a resident of DLF Phase, says living in Gurgaon is a big drain on resources. ‘We had to buy a generator just a week back, I invested Rs 3 lakh.’ he says. That’s nearly ten years of income of an industrial worker’s family. ‘That’s a huge investment besides, I still pay a huge electricity bill. The crisis became so acute last year that my daughter-in-law had to shift to Delhi. I hold the government responsible.’ There is going to be more growth without infrastructure till the city bloats to a point of collapse, people say. The demand for power in Gurgaon is increasing by 28% and availability is much less than requirement. In March 2008 Haryana government has issued notification to all the malls in Gurgaon to close on Tuesdays. The reason is power saving and easing the traffic congestion for residents near the malls.

More diesel is burnt by the increasing traffic on Delhi streets, lots of it ‘unproductively’ due to the major traffic jams.

According to ASSOCHAM estimates, in Delhi alone there are over 6 million vehicles running in roads at present, which will cross over 7.5 million in 2010. In view of hub of services sectors in Gurgaon, Noida, Greater Noida, the total vehicles in Delhi NCR will cross to 16 million by 2010. Currently nearly 420 million (wo)man/hour are lost every month by about 7,000,000 working Population of Delhi and the surrounding industrial areas that are taking to public transport for commuting between home and their work and vice-versa as a result of traffic congestion and increasing jams during peak morning and evenings hours.

The machine has to keep on running, energy is turned into destruction of human health and environment – and into business, e.g. by carbon emission trading. For good reasons the Deutsche Gesellschaft fuer Technische Zusammenarbeit (GTZ) GmbH, (German Technical Cooperation), opened their carbon emission trading office for India right in the centre of the polluting money-machine – in Gurgaon. From their web-site: “German companies have contracted the GTZ to facilitate their access to emissions credits. Specifically for purposes of this private-sector contract, GTZ has created a central contact point, the ‘carbon procurement unit’ or CPU, in Gurgaon near the Indian capital New Delhi. “The CPU is starting up at just the right time, because the market is growing by leaps and bounds. The first customer for the GTZ contact
point was RWE Power AG in Essen, Germany, which will be permitted to expend 90 million of the certificates before 2012 to meet its greenhouse gas reduction obligations.” Outside of Gurgaon a minor hydroelectric-plant is being built which will enable RWE to produce more carbon emissions in their coal plants in Germany. Fair deal.

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

PF
Ration Card
SP
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Workers hired by the company for a limited period of time.

Workers hired for a specific performance, paid for the performance.

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month.
But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through
VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker's wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services (summer 2007):

Housing:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:

- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for
employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the work force, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

http://www.gurgaonworkersnews.wordpress.com

gurgaon_workers_news@yahoo.co.uk

In the November issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Short Reports from Workers employed in factories in Gurgaon and Faridabad

The workers told their stories to Faridabad Majdoor Samaachaar (Faridabad Workers’ News), they were published and re-distributed in the industrial areas in August 2008. At least three of the workers employed in
the textile export industry report that numbers of workers have dropped to a third of the previous level and that wages are heavily delayed. Particularly the story of the workers employed by the multinational shoe-manufacturer Bata is revealing. The workers are employed by:

Bata (shoes)
DS Buhin (automobile)
Eastern Medikit (medical equipment)
Gaurav International (textile)
Grafty Export (textile)
Hari Om Precision Tools (machine manufacturing)
Kanchan International (textile)
KRF
Lara Export (textile)
Neolight
Premium Security
Sanden Vikas (automobile)
Spark (textile)
SPL Industries (textile)
Sundari Export (textile)

2) Collective Action –

Reports on proletarian struggles in the area

*** Yet another short wildcat strike at Hero Honda plant

After a short strike at Hero Honda plant in Dharuhera plant in May 2008 and a wildcat sit-down by casual workers at Honda (HMSI) plant in Gurgaon/Manesar in September 2008, the news reported about another action early October 2008. It would be important to know more about the impact of the current slump in automobile production in India on these casual workers and their permanent struggles, given that e.g. Tata announced lay-offs of 700 workers hired through contractors at its truck plant and nearly all two-wheeler manufacturers complain about a decrease in sales this autumn.
*** Different view on the strike and killing of the factory manager at Italian automobile supplier in NOIDA

In GurgaonWorkersNews no.13 we summarised some first news items on the workers’ struggle related death of the factory manager at Graziano Transmissioni (auto parts supplier) in NOIDA, Delhi. Since then more thorough stuff has been written on the matter. First some notes about the similarity between the incident at Graziano and the police attack on Honda HMSI workers in Gurgaon in 2005 showing that workers will have to find new ways of struggle which do not focus on ‘leaders’ and which won’t result in them being expelled, replaced and finally victimised. Secondly a chronological summary based on two main-stream media articles.

*** BPO union or another form of individualisation of call center workers

Call Centres workers are under increasing attack due to the US recession, e.g. early November 2008 American Express announced to lay-off 150 workers employed in the Gurgaon call center. Apart from actual lay offs there are other crisis related cuts going on, such as cancelled taxi service, cuts in wages or abolishment of free food offers. There haven’t been many collective actions by call center workers during it’s boom time, it will show whether they will manage to act up against job and wage cuts collectively. We document a non-collective form of conflict management in the form of the ‘BPO Union’ – a kind of online-initiative which acts on behalf of call center workers also in Gurgaon area, e.g. at IBM Daksh or Evalueserve.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Global crisis hits Gurgaon

Gurgaon, the global crisis hits on all fronts: in call centers and IT offices the jobs of ‘Shining India’ are cut and pillars of the major real estate and development projects shake, e.g. of India’s biggest shopping mall and biggest Special Export Zone; only few months after several peasants were shot dead in NOIDA as a result of the struggle over SEZ land compensation, now these SEZ’s in NOIDA and Gurgaon are for sale! The textile export industry faces major mass lay-offs and the gears of the
local automobile industry crunch. We summarised some newspaper articles from mid-November 2008. The question will be whether state and employers will manage to push the laid off workers back to where they came from – the impoverished parts of Bihar, West Bengal and UP – or whether workers will build strong enough ties amongst themselves in order to stay and reclaim the immense wealth and productive forces which became reason for their mass misery.

*** Never use a needle, summary of study on local textile export industries

In the last issues of GurgaonWorkersNews we published various short reports of workers employed in the local textile export industry. Currently the textile workers in India are threatened with mass lay offs due to the world recession. In the following we summarise a long study on the very same industry, first published in March 2007, in collaboration between ‘United Students against Sweatshops’, ‘Jobs with Justice’ and ‘Society for Labour and Development’.

The study focus on six major export manufacturers:
- Modelama Exports Ltd.,
- Shahi Exports Pvt. Ltd.,
- Pearl Global Ltd., -Company G of Group R,
- Orient Crafts Ltd.,
- M/S Jyoti Apparels –

Most of them are still active in the Gurgaon area, as you can read in the workers’ reports. The researchers interviewed company representatives of the upper management and in result got some valuable insight about:

- The view of the management on the global and Indian textile market after the end of the trade quota in 2005
- The relation-ship between textile manufacturers and the US and European clients, e.g. Wal Mart
- The break down of production costs and profits
- The increased use of machinery within the apparel sector
- The work-force distribution amongst the different production departments and the wage and gender hierarchy
4) About the Project –
Updates on Gurgaon Workers News

*** Glossary –
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Short Reports from Workers employed in factories in Gurgaon and Faridabad

The workers told their stories to Faridabad Majdoor Samaachaar (Faridabad Workers’ News), they were published and re-distributed in the industrial areas in August 2008. At least three of the workers employed in the textile export industry report that numbers of workers have dropped to a third of the previous level and that wages are heavily delayed. Particularly the story of the workers employed by the multinational shoe-manufacturer Bata is revealing. The workers are employed by:

Bata (shoes)
DS Buhin (automobile)
Eastern Medikit (medical equipment)
Gaurav International (textile)
Grafty Export (textile)
Hari Om Precision Tools (machine manufacturing)
Kanchan International (textile)
KRF
Lara Export (textile)
Neolight
Premium Security
Sanden Vikas (automobile)
Spark (textile)
SPL Industries (textile)

In nearly all cases the minimum wage for industrial helpers of 3,510 Rs is not paid. If it is paid, then the working-times are way beyond the fixed 8-hours day and 6-days week. In most cases the over-time exceeds the legal restriction – maximum 50 hours in three months – and is paid at single rate, though according to the labour law it should be paid double. Hardly any workers receive the Provident Fund, a kind of unemployment money / pension that both workers and capitalists pay for, nor do they get ESI, medical insurance, which they are entitled to as per law.

Bata Worker

In a rush the company kicked out 130 to 135 permanent workers. In their confusion some of the workers who got the sack pleaded to take the sack back and expressed their sorrow. All this happened in exactly that Bata factory where over the last 20 to 25 years despite many cunning tricks the company never managed to kick out a bigger group of workers at one go. Previously the Bata management had come to several agreements with the union in order to facilitate the dismissals, they replaced the semi-automatic lines with automatic-lines, the started Voluntary Retirement Schemes, the organised an eight months lock-out, they opened a new company, to which it ‘sold’ this factory... but up to today the Bata workers managed to cut each noose which got laid around heir necks. It was this extraordinary resistance of the workers which forced the company to dismantle the automatic lines again and to re-install the semi-automatic ones. ‘Soft redundancies’ were the companies policy, e.g. by not replacing retired workers with new ones or by outsourcing more and more work to other companies. Trucks arrived at the Bata factory with shoes and sandals which had been packed by other companies, from there they went straight to the ware-house. In this situation of being cornered from all sides the permanent worker’ position got weakened. Today all permanent workers are immensely frightened and worried. In order to aggravate these sentiments the company announced that the production of air sandals will be stopped due to decreasing sales. The three lines for the air sandals were closed. The presses for soles and sheets were closed, so were the material preparing mixers and rollers. All workers were sent to the shoe manufacturing lines. There 2-3-4 times
more workers than necessary were standing around (till today the company had sent the workers of the shoe departments to the sandal department, once there was a slump in sales). And again the management announced a voluntary retirement scheme. In order to make them make workers sign the scheme the management gave money to the foremen. In all the fear and confusion some workers were given alcohol to drink, the foremen then took them to the personnel manager. The voluntary retirement scheme had been running for two weeks, it was then extended by another week and in those ways mentioned above 135 workers lost their job – today there are less than 350 permanents left in this factory. Since then the mixers and rollers are in use again – 50 workers hired through contractors have been taken on. There is an announcement that the air sandal lines will be running soon again.

http://www.bata.com/us/

DS Buhin Worker
(Plot 88, sector 24)

DS Buhin factory in Faridabad manufactures hinges for Maruti Suzuki car plant in Gurgaon. In the factory there are 22 permanent workers and 200 casuals and workers hired through contractors, working on two 12-hours shifts. All helpers, either casual or through contractor get 2,400 Rs. The operators get 2,800 to 3,000 Rs.

http://www.dsbuhin.com/

Eastern Medikit Worker
(Plot 195, 196, 205, 206, 207, Udyog Vihar Phase-1, Plot 292 Phase-2)

Us casual workers we have to work on two 12-hours shifts. Some of us got the wages for June paid on 24th of July, which is already late. The rest of us got 1,000 Rs as an ‘advance’ and we were told that the rest would be paid by the 30th of July. The 76 Rs dearness allowance (inflation compensation) which we were entitled to from beginning of January we were not paid either. Instead of paying double rate for the over-time we only get 13 to 14 Rs per hour. And the over-time payment for June hasn’t been paid yet, today it’s the 29th of July. The food in the canteen is bad. If you have a coupon you get a plate for 8 Rs, but us casual workers have difficulties obtaining such coupons, without it you have to pay 17 Rs. If the guys from the personnel department find you standing outside the
canteen during lunch breaks they abuse you – marpith par utaar aate hai.
If you complain about the wage / over-time / food / heavy work-load in
front of the big and small bosses they will sack you and pay your wage
four month later. If you complete six months of employment you get the
sack automatically. Us casual workers don’t get pension, but money is
cut from our wages in the name of Bhavishya Nidhi Sangathan (pension
fund).

http://www.medikit.com

Gaurav International Worker
(Plot 198, 208, 225, Udyog Vihar Phase-1)
The company used to pay double rate, but since June only the first two
daily hours over-time are paid double. The company forces us to work
from 9 am till 11:30 pm, on Sundays we work eight hours. If you refuse
the over-time they say: ‘Don’t come tomorrow then, take your leaving
papers’. Even if they force you to stay 14 and a half hours they won’t give
you any food money.

http://www.tradekey.com/profile_view/uid/66647/GAURAV-
INTERNATIONAL.htm

Grafty Export Worker
(Plot 377, Udyog Vihar Phase-2)
There used to be 400 workers employed in this factory, but nowadays
there are only 100 of us. The helpers who are directly hired by Gaurav get
3,510 Rs per month, but they work ten instead of the legally fixed eight
hours for this money. The skilled workers get 3,640 for the same amount
of daily hours. The helpers hired through contractors get 2,800 to 2,900
Rs, the pressmen get 3,000 to 3,200. There is no PF or ESI.

Hari Om Precision Worker
(20 Industrial Area, Dhandha Complex)
In the factory eight female workers and 30 male workers are employed.
The two or three women who operate the power press get 2,400 to 2,500
Rs the other get 1,900 to 2,000. The male workers get 2,000 to 2,400 and
the operators 2,800 to 3,000. Ten workers get ESI, no one gets PF. There
are frequent accidents – In May a work mate lost his two thumbs,
another worker who had lost three fingers previously also lost his thumb.
In the factory there are 14 power presses, but only three fans – the workers are soaked in sweat from morning till night. If you mention this to the sahibs (small or big bosses) you get the answer: ‘Then leave and go where you find fans’. For the female and male workers there is only one toilet, which is often floated with dirty water. Working-time is from 8:30 am till 9 pm. If there is less work, they send you home at 7 pm, they never give tea or snacks. Over-time is paid at single rate.

http://hpalcastings.com/customers.htm

Kanchan International Worker

(Plot 872, Udyog Vihar Phase-5)

We used to be 150 workers, now 40 to 50 are left. Those who are on a wage contract haven’t been paid the April, May and June wages yet, and now it’s the 29th of July. The stitching workers are paid at piece rate, normally each week, from Saturday to Saturday, but they haven’t been paid since eight weeks. The land-lord troubles you and the ration guy from the local shop, but the company says: do your work and don’t demand money… if you would, you have to face being beaten. If you leave the job the company forbids you to ask for your leaving document and last wage slip.

http://www.apparelandfashion.in/KANCHANE454.htm

KRF Worker

(Plot 403, Udyog Vihar Phase-3)

The helpers get 1,900 Rs and the skilled workers 2,500 to 6,000 Rs. There are two 12-hours shifts, the over-time is paid at single rate. There are 400 to 500 workers employed, but only 100 to 200 get ESI and PF. There is no canteen and the company doesn’t give a single cup of tee during the twelve hours. Instead the bosses abuse us verbally.

Lara Export Worker

(Plot 155, Udyog Vihar Phase-1)

In the factory 250 workers are employed, but only ten to eleven workers get ESI or PF. Even after three of four years of employment they won’t give it.

Premium Security Worker
The company forces us to work 12-hours shifts, we don’t get a weekly day off. The wage is 4,500 Rs, but we don’t get ESI or PF before having completed three month of employment.

Neolight Worker
(Plot 396, Udyog Vihar Phase-3)
We work from 9 am till 9 pm. There are 50 to 60 workers directly hired by the company and 350 through two different contractors. The workers hired through contractors get the minimum wage, but the over-time is paid only 10 Rs per hour

Sanden Vikas Worker
(Plot 65, Sector 27 A)
In the factory 600 workers are employed through three different contractors, there are 65 permanent workers and no casuals. To the June wages 50 Rs inflation compensation was added, though according to the official allowance it should have been 76 Rs. The dearness allowance hasn’t been paid either. Since 1st of June we are supposed to pay 35 Rs for a plate of food in the canteen, previously it was only 15 Rs. The permanents now pay 10 Rs, the price has been 5 Rs. The permanents wage is 12,000 to 18,000 Rs, while us helpers wage was 3,560 in June and the ITI workers get 3,820. In the Sanden factory you have to stand continuously while working. Those who start at 6:30 am normally work till 7 pm. Those who start at 9 am work till 9:30 or 10:30 pm, the late shift starts at 3 pm and stays till 4:30 am or even 6:30 am the next day. We work 150 hours over-time per month, paid at single rate. Even if you work 15 hours they won't give you money for food. We are given work uniforms, but no shoes, but without shoes you are not allowed to enter the factory. Even after two years of employment with the contractor ‘Superior Company’ they won't give you an ESI card and they won’t fill out the PF form when the job is finished.

http://www.sandenvikas.com/#

Spark Worker
(Plot 166, Udyog Vihar Phase-1)
The June wages have been paid delayed on 29th of July, the June over-
time payment hasn't been paid yet. Having started work at 9 am we are forced to stay till 8 pm or even 2 am. We work 200 hours over-time each month, the payment is at single rate. In the factory about 1,000 workers are employed, but only 10 to 15 get ESI or PF.

SPL Industries Worker

(Plot 22, Sector-6)

In the plant there are 320 workers hired through a single contractor working at eight different lines. We work twelve hours a day. Us helpers get 2,600 to 2,800 Rs, over-time at single rate. The stitchers are paid by piece, the contractor drops the piece rate continuously. In the companies documents it shows that the contractor gets 5 Rs per piece from the company while he pays the workers only 2.5 Rs. The wages are always delayed, the June wages haven’t been paid yet, on 18th of July. Money for ESI and PF is cut from the wages, but only ten per cent of the workers got an ESI card after having had to struggle over it for a long time.

http://www.spllimited.com/

Sundari Apparel Worker

(Plot 643, Udyog Vihar Phase-5)

Those 350 workers sewing coats and pants don’t get ESI or PF, may be the staff gets it, but I don’t know. The helpers get 2,500 Rs and the skilled between 3,500 and 4,300 Rs. Working times are from 9:30 am till 8:30 pm, over-time is paid at single rate.

http://www.easy2source.com/supplier/239/119354/

2) Collective Action –

Reports on proletarian struggles in the area

After a short strike at Hero Honda plant in Dharuhera plant in May 2008 and a wildcat sit-down by casual workers at Honda (HMSI) plant in Gurgaon/Manesar in September 2008, the news reported about another action early October 2008. It would be important to know more about the impact of the current slump in automobile production in India on these casual workers and their struggles, given that e.g. Tata announced layoffs of 700 workers hired through contractors at its truck plant. The two-wheeler manufacturers complained about a decrease in sales this autumn and the out-look seems bleak: The Indian two-wheeler industry
is likely to witness a 10 per cent reduction in sales volume next year, given the tight market conditions and the slowdown in the economy. While there will not be any fresh employment, the TVS CEO ruled out any reduction in the permanent workforce, adding: “There may be some contraction in the temporary workforce”. On average the temporary workers account for more than half of the total work-force!

3rd of May 2008

Hero Honda has been hit by a workers' strike, forcing the closure of its manufacturing unit at Daruhera, in Haryana. Work has stopped at the factory since today morning, after a strike broke out – the issue being that Hero Honda management discontinued services of about 50 contract workers. These workers had, apparently, not agreed to be shifted from one production line to another. According to some reports, Hero Honda workers have been opposing the company’s move to shift a large part of its production to its newly opened plant at Haridwar, where the company plans to produce its high volume models.

14th of October 2008

After shutting down its Dharuhera plant on Monday due to strike by workers, the country’s largest two-wheeler maker Hero Honda on Tuesday said production resumed at the unit, though some of the casual employees continued to stay way from work.

Worker sources, however, said only the permanent employees had reported for work from this morning. “Out of a total of about 4,500 workers, about 3,000 casual and contractual workers are still on strike since Sunday and we will not withdraw till our demands are met,” casual workers added. They are demanding regularisation of casual and contractual employees, wages to be paid under Haryana government norms and reinstatement of suspended workers. The workers claimed casual employees were given a basic salary of Rs 3,500 against the Haryana government norm of Rs 4,200 per month. The Dharuhera plant has a production capacity of about 5,000 units per day. The strike has come at a time when the company needs to go on full steam production to meet the festive season demands.

Call Centres workers are under increasing attack due to the US recession, e.g. early November 2008 American Express announced to lay-off 150
workers employed in the Gurgaon call center. Apart from actual lay offs like there are other crisis attacks going on, such as cancelled taxi service, cuts in wages or abolishment of free food offers. On the other hand the main companies still seem eager to keep a strong back-bone of their work-force, e.g. when the telecommunication giant Orange cancelled the contracts with the call center service providers EXL and 24/7 Customer this summer they gave the order to Convergys and IBM Daksh (Gurgaon). Instead of hiring a completely new work-force for these projects they tried to re-hire all employees who did these jobs previously with EXL etc., hoping to save training money. There haven’t been many collective actions by call center workers during it’s boom time, it will show whether they will manage to act up against job and wage cuts collectively. We document a non-collective form of conflict management in the form of the ‘BPO Union’ – a kind of online-initiative which acts on behalf of call center workers.

The BPO union mainly works as a web-site. Call center workers can complain about their problems, e.g. unfair dismissal or unpaid over-time. The ‘union’ then steps in, writes complain letters to the management or the labour commissioner. In some cases the web-site is actually used for discussions, e.g. in the case of the Gurgaon based call centers IBM Daksh and Evalueserve. The focus should be on these attempts to facilitate a debate between employees in the area. If you want to read more about working conditions at Evalueserve or the BPO Union have a look at:

http://www.prol-position.net/nl/2006/07/delhi
http://bpounion.wordpress.com

*** Different view on the strike and killing of the factory manager at Italian automobile supplier in NOIDA

In GurgaonWorkersNews no.13 we summarised some first news items on the workers’ struggle related death of the factory manager at Graziano Transmissioni (auto parts supplier) in NOIDA, Delhi. Since then more thorough stuff has been written on the matter. First some notes about the similarity between the incident at Graziano and the police attack on Honda HMSI workers in Gurgaon in 2005. Secondly a chronological summary based on two main-stream media articles, meaning that our assumptions are still more than speculative. Another summary providing
an update on the legal repression against the workers can be found here: http://www.wsws.org/articles/2008/nov2008/indi-n17.shtml

The more thorough articles on the killing of a factory manager in NOIDA state that the workers in struggle had been permanent workers, not casual workers or workers hired through contractors. Reading these articles we are reminded of the police attack on the Honda HMSI workers in nearby Gurgaon in 2005 – see GurgaonWorkersNews no.7. There are very blatant similarities showing that workers will have to find new ways of struggle which do not focus on ‘leaders’ and which won’t result in them being expelled, replaced and finally victimised:

* Like HMSI it is a multinational automobile company, Graziano Transmissioni manufactures parts for the Italian and US car industry.

* There hasn’t been a union inside the plant, in case of GT for ten years. The permanent workers complain about hiring and firing policies and arbitrary behaviour from the management. Workers hope to improve their condition by forming an official union, they approach the AITUC.

* The company and state try to delay the union formation, the company reacts with carrot and sticks: a wage increase in January 2008 and dismissals of trainees shortly after – just like in the case of HMSI.

* Workers first react with direct action, e.g. a slow-down strike. There are some conflicts behind the scene between workers and union, leading to the workers shifting first from AITUC to CITU, finally to the HMS.

* The company first dismisses some ‘leaders’, the conflict then focusses around the issue of re-installment of these ‘representatives’.

* After it became clear that the sacking of the ‘leaders’ didn’t lead to an end of unrest the company locked out the bulk of permanent workers and replaced them with 400 workers hired through contractors.

* The locked-out workers get desperate, the company wants to individualise them by allowing only small groups of workers inside the plant and only under the condition that they sign a paper of good conduct. On their own accord or under the pressure of the union, the workers refuse to sign these papers.

* The situation escalates: a manager is killed, dozens of workers are injured, over 60 are in prison facing murder charges.
* Like during the HMSI conflict there was a potential danger of affecting and instigating workers in the surrounding industrial plants. Quote from an article: “Fear pervades all of Surajpur in Greater Noida and every little factory in the vicinity of Graziano,” says Atul Ghildyal, president Association of Greater Noida Industries (AGNI). Ghildyal is HR head at New Holland Tractors located right next to Graziano.

* After the conflict the work-force at GT is re-composed: a much higher share of temporary workers. Quote from an article: “Labour officials say the company did not appear keen to resolve the issue as its production improved by 30 per cent thanks to substitute workers who were hired to replace the “locked-out” and sacked employees. Its monthly revenue grew from Rs 26 crore to Rs 34 crore. Clearly, there was no economic compulsion to negotiate a settlement in a hurry. (...) All the same, the company could reopen the factory within a week of the tragedy largely on the strength of contract workers who had been recruited earlier in the year to make up for the sudden drop in productivity from permanent employee”.

Chronology

November 2007: Workers initiate the abortive process of unionization at Graziano Transmissioni India, an automotive component plant set up in Greater Noida in 1998. They claim that 1,200 people had been fired in the last few years. The wages were poor and company policy on taking leave outright unfriendly.

December 2007: A flash strike as the management refused to reinstate an employee who resigned. Worker representatives submit a demand letter for, among other things, higher wages

January 2008: On January 24, the company signed a new Internal Labour Contract with all the workers, leaders/representatives and with the external union AITUC (All India Trade Union Congress) and registered it with the labour department. The agreement is valid for three years. The management agrees to a substantial pay hike in return for a commitment to good conduct from workers.

February 2008: Disruptions don’t stop despite the pay hike, management begins recruiting contract workers as substitutes.

March 2008: Following differences, worker representatives switch
allegiance from AITUC to CITU.

May 2008: On the 12th of May worker representatives organize a fresh go-slow strike protesting the decision to not offer regular employment to five out of 70 trainees. Since the strike continued despite the intervention of the labour department, the management suspended 27 workers a week later on 19th of May on the charge of “serious misconduct”.

Violence continued and the assistant labour commissioner, labour enforcement officer and the management decided to “lock-out” another 30 workers.

June 2008: Strike takes a violent turn as workers vandalize company property and injure some contract workers. The management locks out 65 employees. Worker representatives develop differences with CITU and again switch allegiance, this time to HMS

July 2008: Since they fail to report for work after a government-brokered pact, the management locks out 190 more employees. Under the settlement brokered by the labour department on 8th of July, the locked out workers were then being re-inducted in three phases. In the meantime the company issues an inquiry on the question of the suspended workers. It was as a result of this inquiry against the 27 suspended employees that, two months later on 15th of July, the management terminated the services of 15 of them while reinstating the rest. While the reinstated members resumed duty the next day, the striking/locked-out workers demanded that the terminated ones should also be taken back. Their justification, according to Sirohi, was that the terminated employees happened to be the ones leading the strike. Though the lockout was due to be lifted in the second phase for a batch of 55 workers on 21st of July 21, none of them reported for duty on that day as an expression of solidarity with the 15 terminated employees.

August 2008: Negotiations break down as the management objects to the idea of terminated employees representing workers. In the subsequent talks on 6th of August, it was the turn of the management to walk out as the terminated employees insisted that they would continue to represent the workers.

September 2008: As the stalemate dragged on for another month, the management returned to negotiations and on 16th of September, the factory manager offered in the presence of labour official and union
leader that, other than the 15 terminated employees, he would take back all those locked out workers if they gave individual undertakings to maintain discipline and productivity. The deadline fixed for such applications was the 22nd of September. The offer gets a poor response as the 15 terminated employees are opposed to it. The company claims that till 12 noon on 22nd of September only eight applications had come in. According to ‘official sources’, at 12.45 pm, a 120-strong group of sacked and locked-out employees forcibly entered the plant, attacked management and workshop staff and destroyed offices and employees’ cars. The factory manager gets killed. The workers’ version is obviously at variance. They state that the company was rejecting their applications and only eight were accepted. Two, in their apology letter, were being forced to own up to offences they had never committed. “Hired goons were bullying us to sign. A scuffle followed and the security guard fired in the air whereby those waiting outside rushed in,” says a worker.

3) According to Plan –

General information on the development of the region or on certain company policies

Gurgaon, the global crisis hits on all fronts: in call centers and IT offices the jobs of ‘Shining India’ are cut and pillars of the major real estate and development projects shake, e.g. of India’s biggest shopping mall and biggest Special Export Zone; only few months after several peasants were shot dead in NOIDA as a result of the struggle over SEZ land compensation, now these SEZ’s in NOIDA and Gurgaon are for sale! The textile export industry face major mass lay-offs and the gears of the local automobile industry crunch. We summarised some newspaper articles from mid-November 2008. The question will be whether state and employers will manage to push the laid off workers back to where they came from – the impoverished parts of Bihar, West Bengal and UP – or whether workers will build strong enough ties amongst themselves in order to stay and reclaim the immense wealth and productive forces which became reason for their mass misery.
* DLF puts Mall of India on hold as rentals slip

India's largest real estate developer, DLF, has put on hold construction of one of the most high-profile mall projects, ‘Mall of India’, at Gurgaon, as retail rentals fall and cash becomes precious. The proposed venture was set to be the country’s largest mall, with around 4.5-million sqft space. Till a few months ago, several workers could be seen at the project site and excavation work was in progress. Now, there is hardly any activity on the site, clearly indicating that company has slowed down the pace of the project. The ‘Mall of India’ was scheduled to be launched by 2010-end. A DLF executive admitted the project may get pushed to the middle of 2011. “There are several projects where developers have not begun construction, or have stopped construction after having done excavation work. In some cases, the proposed malls are being converted into office space, partly or completely,” says Cushman & Wakefield director (retail) Rajneesh Mahajan. According to Cushman & Wakefield, retail rentals fell by up to 20% in several markets in July-September quarter, compared to the previous quarter.

(11th of November 2008 – Economic Times)

* Export Slump: The peasants blood-stains still on NOIDA’s streets, now SEZ’s for sale

The plans of Reliance Industries Ltd, or RIL, India’s biggest private sector company by market capitalization, to set up special economic zones, or SEZs, at Jhajjar and Gurgaon in Haryana may slow due to the global financial meltdown and a fall in demand for such projects. An executive at RIL’s external public relations agency, however, said that work on the SEZs had not begun. A senior RIL executive said the project was going slow and blamed the current business environment, which he described as “bad in all areas”. The Haryana SEZs are expected to require an investment of Rs25,000 crore and have provisions for a cargo airport and a 2,000MW power plant. “A significant profit for the organization (RIL) is from polymers for which the rates have gone down” the RIL executive asked. After Reliance, other SEZ developers followed. The country’s largest real estate developer DLF is looking for a buyer for its 10-hectare IT SEZ in Noida – ten peasants were shot dead on a demonstration for higher compensation for land sold for a NOIDA SEZ, only a few months ago! Three more developers are seeking to sell their IT SEZ projects in
Noida and Gurgaon. One notified IT SEZ project, looking for a buyer, is located on the Sohna Road in Gurgaon.

(10th of November 2008 – LiveMint)

* Credit Crunch: National Highway Construction in Gurgaon delayed

India’s ambitious plans of developing and upgrading highways could further be delayed because some banks are revisiting agreements with developers and revising the terms of their loans, say infrastructure firms. An official with infrastructure firm KMC Construction Ltd said on condition of anonymity that the company’s bankers have revisited the earlier agreement, raising the interest rate and asking the company to increase its equity holding in the project, a 225km stretch of highway between Gurgaon and Jaipur.

(7th of November – The Hindu)

* Gurgaon hit by global recession, many textile export houses shut

The global economic downturn has started hitting Indian exporters. With their overseas markets, such as the US, facing a big meltdown, garment industry owners and export houses in Gurgaon are shutting shops. Says Ashwini Chachra, co-owner of Supreme Craft Export that also owns Satyam Cinemas in Delhi: “I had an annual turnover of Rs 90 crore from my four readymade garments and fabric units that employed around 2,000 people. With practically no orders in hand and due to costly labour and electricity charges, there was no alternative but to shut the units after paying the compensation for the notice period.” The four properties are up for rent or sale, whichever is earlier. According to Krishan Kapoor, chairman and general secretary of the Haryana Industrial Association (HIA), if the situation does not improve by the end of this year, Gurgaon may see “35-40 per cent companies shut down completely”. In fact, India’s exports grew at the slowest pace in 18 months in September. Over 100 companies had then packed up their units in Gurgaon and shifted to other states like HP and Uttaranchal where electricity and land rates are cheaper. Also, industries in these states are exempted from excise duty for 10 years. According to Kapoor, the orders have decreased by almost 35 per cent since the slowdown.

(9th of November – Express India)

* Melt-Down: Car Component Industry hit

With Indian auto makers facing rising inventories amid slowing demand, many component manufacturers, especially small enterprises, are increasingly facing delays in getting paid. Says a Gurgaon-based auto part vendor, who supplies critical components to companies such as Ashok Leyland Ltd, Eicher Motors Ltd and Force Motors Ltd: “The credit period given to the auto makers is usually 30-45 days. However, owing to the present crisis facing the industry, this period has got extended to as much as 90 days.” Deepak Jain, executive director of Gurgaon-based Lumax Industries Ltd, said though his company is not facing any payment-related issues from any of its customers, it has set up a special taskforce to recover outstanding debt of up to Rs8 crore over the next six months. “In the present context, with both the cost of finance and its availability becoming an issue, one has to generate cash from within the system. One of the ways can be to address ageing debts,” he said.

(11th of November 2008 – LiveMint)

In this issue of GurgaonWorkersNews we published various short reports of workers employed in the local textile export industry. In the following we summarise a long study on the very same industry, first published in March 2007, in collaboration between ‘United Students against Sweatshops’, ‘Jobs with Justice’ and ‘Society for Labour and Development’. The full study can be found here:

The study focus on six major export manufacturers – Modelama Exports Ltd., Shahi Exports Pvt. Ltd., Pearl Global Ltd., Company G of Group R, Orient Crafts Ltd., M/S Jyoti Apparels – most of them still active in the Gurgaon area, as you can read in the workers’ reports. The researchers interviewed company representatives of the upper management and in result got some valuable insight about:

a) The view of the management on the global and Indian textile market after the end of the trade quota in 2005
b) The relation-ship between textile manufacturers and the US and European clients, e.g. Wal Mart
c) The break down of production costs and profits
d) The increased use of machinery within the apparel sector
e) The work-force distribution amongst the different production departments and the wage and gender hierarchy
The companies belong to the biggest Indian apparel export houses, major in terms of production capacity, work-force and annual turn-over. If the numbers are correct and the labour input per apparel product remained similar, then the example of Modelama shows us that the prices have fallen significantly: despite the output having gone up by 400 per cent within four years, the turn-over only doubled. Examples:

Modelama Exports Ltd.
Annual turn-over in USD: 30 million (2002), 60 million (2005)
Number of factories in Delhi/Gurgaon area: 10
Total work-force: about 6,000
Total annual wage sum for production workers: about 5.4 million USD

Shahi Exports Pvt. Ltd.
Annual turn-over in USD: 120 million (2005)
Total monthly out-put of ready-made pieces: 2.8 Million
Monthly out-put of visited factory in pieces: 150,000
Total work-force: 15,000
Total annual wage sum for production workers: 13.5 million USD

Orient Crafts Ltd.
Annual turn-over in USD: 120 million (2005)
Total daily out-put in pieces: 130,000
Total work-force: 23,000, of which 5,000 are employed in the bigger factories

a) The view of the management on the global and Indian textile market after the end of the trade quota in 2005

The interviews with the management took place in 2006, a very long time for a sector which is so directly connected to the global swings of the market and currencies. In August 2007, in GurgaonWorkersNews no.9 we reported about the mass redundancies in the local textile export industry – amongst others at Orient Craft. The companies complained about an export squeeze due to the strong Rupee, contracts were given to Chinese
(higher productivity due to higher degree of mechanization) or Bangladeshi (lower wages, weaker currency) manufacturers. A year later the Rupee is on a record low, but the US consumer market has crashed in the turbulence of the debt crisis. Another round of mass-layoffs is kicking in. “Job loss in the range of 6-7 lakh is likely in the near future as units are closing down or operating on sub-optimal capacity because of fall in demand, both in domestic and international markets, and liquidity crunch,” Chairman of Confederation of Indian Textile Industry (CITI) R K Dalmia said on 5th of November 2008. “In the last fiscal garment exports was over 9 billion dollar but this year it will be in the range around 7.5 billion dollar on account of slump in demand from the US and EU countries.” The orders from the US and European buyers come in on ever more shorter notice or are cancelled last minute. The slightest movement of the currency value impacts on the industry: workers are sucked in and pushed out at an increasingly rapid pace. During the interviews all managers therefore demanded easier hire and fire policies: “Specific AEPC (employers’ association) goal is to get the government to change the law that states that workers are permanent employees after 100 days, to 200 days, so that businesses who do not get orders during the winter are not hurt by the cost of labor. For three months of the year, he stated, garment businesses do not have orders. U.S. and EU have always been strong markets in India, probably average 70% of India’s market”. Since the reform of the global quota system the competition between India, China, Vietnam and Bangladesh increased, the global prices for apparel dropped by ten per cent. “In 2005, as it was clear that Indian businesses were gaining from the phase-out and smaller countries like Bangladesh were losing instead, the investment returned”.

b) The relation-ship between textile manufacturers and the US and European clients, e.g. Wal Mart

As mentioned above the Indian textile exports heavily depend on the US market, in the case of the six companies – which solely manufacture for export – about 80 per cent of the total product goes to the US. In addition to the dependency on a single market there is a dependency on single big buyers. “GAP is sourcing worth about $1 billion from India and we are doing more than $10 million with them.” Lalit Gulati, Modelama Chairman. The example of the Company G of Group R shows the importance of single buyers:
Major Client / Origin / Since / Share of companies orders
GAP / U.S.A. / 15-20 years / 40%
Macy’s / U.S.A. / 15-20 years / 20-25%
Wal-Mart / U.S.A. / 20 years / 20%
Dillards / U.S.A. / 15-20 years / 7%
Liz Claiborne / U.S.A. / 15-20 years / 7%

During recent years the size of orders grow, while the prices drop and the time-pressure for delivery increases. In the case of Orient Craft the average order size is 10-12,000 pieces, sometimes 25-45,000 or even 100,000 pieces. The average price per piece is six to seven USD, time given for manufacturing the order is about 60 days, plus 30 days shipment.

c) The break down of production costs and profits

Short glimpse on the value chain: An example given was if the retail price of a given garment manufactured for Target (a US buyer) is 9.99 USD, 60 per cent of that is Target’s profit margin per unit (PMU). The remaining 3.99 USD is the landed cost, which includes not only the factory unit price but the duty cost (AMC and freight). Of that remaining 3.99 USD, about 2.75 USD goes to Modelama. There is no break down of the production costs and sales revenue for Modelama, but for Shahi Exports PVT.:  

Est USD 2006 / % of Sales Per Unit / Price (for Shahi Exports)
Material Cost 70 million / 50% / $3.25
Labor 16.8-23.8 million / 12-17% / $0.78-$1.11 /
Trims and Packaging 14 – 28 million /10-20% / $0.65-$1.30
Depreciation 1.4 million / 1% / $0.07
Machinery upkeep 2.8 million / 2% / $0.13
Overhead 2.8 million / 2% / $0.13
Embellishments 7-14 million / 5-10% / $0.033-$0.65
Profit 14 million / 10% target / $0.65

“These figures were estimated by the Divisional Manager of Marketing in the space of 5-10 minutes, so they can only be thought of as a rough
approximation”.

It’s a shame that we have no comparison to earlier figures, which would very likely reveal that the profit margin of the manufacturers are shrinking and the general expenditure on machinery is increasing.

d) The increased use of machinery within the apparel sector

We thought of the textile industry as an industry of very low use of machinery: one hundred sewing machines and workers, and your textile plant is ready to go. If you haven’t got any orders, just kick out the workers and you won’t lose much money on rusting technology. Or just ship them to the next low-wage region, because a sewing machine is easy to transport. The following list of machines used in the production process seems surprisingly long for a ‘low investment’ industry.

At the Shahi factory there are 750 single machines:

“The CAM based cutting department can make 75,000 cuts per day, while the 60 multi-head computerized embroidery machines have a capacity of 800 million stitches per day. The latest CAD software enables quick processing of pattern creation, grading, marker making and global electronic exchange of pattern data. The production unit boasts machines from Brother, Juki, Ngai Shing, Durkopp Adler, Hashima and Kannegiesser. It is also equipped with single needle lock stitch programmable machines with UBT, double needle-needle feed split bar machines, single needle top and bottom variable feed machines, feed-off-the-arm machines, fusing press, collar/cuff turning and blocking machines, pocket machines and automatic pocket welters”.

At Modelama we can also see the distribution of workers over the different departments:

“Production (~800 Workers)

There are about 560 tailors. The floor is laid out in dozens of assembly lines, at the front of which is displayed an “Hourly Production” dry-erase board with the line number, supervisor name, input, output, and number of workers. An example line was sewing collar parts with a total of 46 tailors and 5 helpers. The company deploys over 3000 imported sewing machines with customized workstations. Machinery includes Auto Zig Machine, Auto Pocket Welting M/C, Programmable Sleeve Setter Stations, Auto Surging Machine, Auto Dart Making Stations, Pneumatic Button
Hemming Stations, Differential Feed Machines, Needle Feed Machine, Top, Differential and Bottom Cylindrical Bed Unison Feed Machine, Blind Hemmers, Auto Belt Attaching Stations, Multifusing with Three Track of Loading (High Performance Macpee).

Cutting (50-55 workers)

The cutting department had five lines of machines laid out with worker stations. Machinery includes Auto Spreaders, Autocad (Lectra), Auto Cutter (Lectra), Band Knife M/Cs, Air Flotation Tables.

Washing (24 workers) and Finishing/Pressing (175 workers)

The finishing area had lines of workers pressing and folding clothes. This was the only department with women. Washing machinery includes a wet and dry processing unit comprised of micro processor controlled washer extractors, perc based dry cleaning machines, sand blasting, and brushing machines. Pressing and finishing machinery include multipresses, dummy presses, flatbeds, calendaring machines and range of buck shapes and steam irons from manufacturers like MACPII, Veit, Trevil, and Renzacci.

Additional Machinery

Factory has a special conveyor system that moves products from assembly lines to other departments. HR Manager boasted that Modelama was the only factory in India to have this machine.

e) The work-force distribution amongst the different production departments and the wage and gender hierarchy

Following some examples of the composition of the work-force, first in terms of different departments and hierarchies, then in terms of wages and finally some words about the gender composition. In terms of hierarchy at the Company R factory there was one supervisor per every 30-40 operators. A different picture at Shahi Export Ltd., where there would be one supervisor per every 70 workers:

Workers at production site visited

Total number of workers: 3,000

Department and category ~Number of workers Gender
Production Total 1800 Mostly female
+Unskilled 400-500 —
+Semi-skilled and Skilled sewing 1100-1300 90% female operators
+Line supervisors 25 Mostly male
Cutting Total 85 Mostly male
+Unskilled fabric spreaders 60 —
+Skilled machine operators 25 —
Centralized Storage Total 150 —
+Semi-skilled and unskilled 120 —
+Skilled workers 20 —
+Staff who manage quality control 30 —
Washing Total 150 —
+Semi-skilled 120 —
+Skilled machine operators 30 —
Finishing (incl pressing/checking) 600 Mixed
+Unskilled (heavy lifting) 50
+Semi-skilled 410
+Skilled 100
+Supervisors and dpt/line-in-charge 40
Sampling 50-150 Mostly female
Remaining marketing, merchandising,
accounts, shipping staff Mixed

After interviewing a manager at Modelama the researchers drew
following break down of wage distribution. Compared with the wages
being paid today (see reports in this newsletter) you can see that they
have more or less stagnated while inflation went up by ten to twelve per
cent:
Category Average Wage (Rs./month)

Tailors
+skilled 3500
+semi-skilled 3000-3300
+unskilled 2710
Cutters
+machine operators 3000
+unskilled 2500-2800
Washers
+sandingblasting operators 4000
+other machine operators 5000
Finishing
+pressers 3000
+skilled final checkers 3500
+semi-skilled checkers 3200
+general unskilled checkers 2700
Supervisors/Mid Mgmt
+skilled (3+ yrs experience) 7000-11000
+assistant (1-2 yrs experience) 6000

Estimated worker turnover per month was at 7-10 per cent to 20 per cent, meaning that hardly any worker stays longer than a year. In most of the Northern Indian textile factories 80 per cent of the workers are male. One main reason is the ‘availability’ of a male work-force, given that most of them are migrants who have left their families in their home towns and villages. Women don’t tend to migrate on their own. Another reason is the company transport: companies feel compelled to provide transport for their female workers (something which is not common), while male workers can do without. The only company out of six which mainly employed female workers is Shahi Export Ltd. The researcher asked why and the manager answered:
Researcher: Why are your workers mostly female? Are there significant differences in productivity?

Manager: No, no significant differences in productivity. Just, men together tend to form groups and lobbies because they have spare time.

Researcher: I don’t understand. What groups?

Manager: Oh, they get involved in politics—(phone call)

Researcher: What were you saying about the worker groups?

Manager: No—that’s not—don’t quote that. I’ll tell you, but off the record. Women are easier to handle. They’re more docile; easier to control. Also, ladies are more focused on work.

The examples of recent textile workers revolts in Vietnam, China and Bangladesh should teach them a lesson: once angry, the ‘ladies’ are revolting and rioting hard!

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.
Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000

1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 50 Rs (November 2008)

1 Euro = 61 Rs (November 2008)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay
school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi

Slum Hut

Lakh

see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return
they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):  
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services (summer 2007):

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the December issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Factory Workers’ Reports from Gurgaon

The workers’ reports have been published and re-distributed in the November issue of Faridabad Majdoor Samaachaar. There have been mass lay-offs at textile export factories of Modelama. The reports are from workers exploited by:

Anish Inc. Export

Borji Supertech
2) Collective Action –
Reports on proletarian struggles in the area

*** Building Workers’ Riot in Delhi

After a fatal accident on the Commonwealth Games construction site more than thousand building workers destroyed company offices, cars and trucks. The aggravating global crisis imposes a new social framework for incidents like this: the daily deaths and legal murders become explosive. The cops shooting a fifteen year old became the trigger of social unrest in Greece; the fatal accident of a building worker sparked the simmering turmoil in Delhi. The construction site is a prestigious show-piece of the capital city, a costly parasitic display of anti-social wealth in times of proletarian misery, desire and wrath...

3) According to Plan –
General information on the development of the region or on certain company policies

*** Crisis in Gurgaon

The two driving industries and symbols of Gurgaon’s urban development have come under crisis attack: DLF real estate giant asks for financial help from Haryana government and Maruti Suzuki scales down production output. A short summary of recent signs of the giant’s clay feet crumbling.

4) About the Project –
Updates on Gurgaon Workers News
1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Factory Workers’ Reports from Gurgaon

The workers’ reports have been published and re-distributed in the November 2008 issue of Faridabad Majdoor Samaachaar. There have been mass lay-offs at textile export factories of Modelama.

Anish Inc. Export Worker
(Plot 19-20, Udyog Vihar Phase IV, Phone: 91-124-5010374/5010375 )
Work starts at 9 am and finishes at 8 to 9 pm. The skilled workers work on piece rate. They are paid each fifteen days, but usually they are paid 300 to 500 Rs less than they ought to be. If you complain, they will abuse you verbally. The helpers’ wage is 3,510 Rs, the January DA (inflation compensation) of 76 Rs is not paid. Out of 50 workers only 10 get ESI and PF.

Borji Supertech Worker
(Plot 272, Udyog Vihar Phase II)
The helpers get between 2,500 and 3,000 Rs. Wages are paid late; the September wage was paid on 20th of October.

Gaurav International Worker
(Plot 208, Udyog Vihar Phase I)
The helpers get 3,586 Rs per month, out of which 500 Rs are taken as bribe. The company has to pay some officials money for interest payments – they are forced to do so. Every month they have to pay 600,000 to 700,000 Rs for interests. In the other Gaurav factory on ploy 236 they always say “You cannot take holiday”. I started working there on 11th of October 2007. Because I fell sick on 20th of February 2008 I had to spend ten days in Safdarjang Hospital in Delhi. I took the medical documentation to the factory on the 1st of March 2008, but they didn’t let
me return to the job. When I asked for the outstanding wage they called the guard and physically pushed me out. Even after several requests they would not pay the February wage. I talked to other work-mates and after listening to them I handed in my notice on 10th of October 2008. The company still hasn’t paid my outstanding wage and today’s date is the 21st of October. They have cut PF money from my wage, but now they don’t fill out the necessary fund form. The Gaurv International manager says that this is government rule and therefore we won’t get the fund money.

http://www.nafabs.com/

Haryana Industries Worker
(Plot 318, Udyog Vihar Phase II)

About 2,500 workers operate 300 power presses, working on 12-hour day and night shifts, producing parts for Maruti Suzuki. Every day twenty trucks leave the factory with parts for the nearby Maruti plant. The workers get 90 Rs for an eight-hour shift, the over-time is paid at single rate. Fingers are cut every day and in a month two or three work-mates cut their hands. The company doesn't fill out the accident report, it won’t pay for treatment, so workers are forced to pay for it privately. The 150 permanent workers in the factory are all supervisors, the rest of the workers are kicked out after six month of employment. The helpers are forced to operate the power presses, if the manufactured parts have flaws they are verbally abused, physically hit, kicked out of the job. There are four main entrances, three to the power press department, one to the packing area. When the labour officer [state administration] comes for inspection he wouldn’t enter the workshops, he would just sit in the office and then leave again... this time 500 workers had been kicked out of the factory (previous to his visit). For Divali the bonus paid to the workers was only 100 Rs per each month of employment. During night-shifts the management locks the latrine and bathroom. There is no day off; we work 30 days per month.

Indigo Export Worker
(Plot 574, Udyog Vihar Phase V)

We start working at 9 am and they make us stay till 1 am, without giving extra money for food. If you fall ill while being at work they won’t let you
go, if you leave before 6 pm they will scrap the whole day’s wage. If you arrive five minutes late at the factory they will send you back home. The wage is paid late – the permanents got their September wage on 18th of October while the workers hired through contractor haven’t been paid yet (by the 21st of October). If you ask for your wage they swear at you. We manufacture kids’ clothes. The stuff is send to Dubai. The production target is extremely high, if you don’t meet it, you are out. People are given ‘breaks’; they are temporarily kicked out in order to avoid having to give them permanent contracts. Out of the 250 workers in the factory only two to four old workers have ESI and PF.

Modelama Worker

(Plot 201, Udyog Vihar Phase I)

Out of the 500 workers employed at the factory 425 were kicked out from the job shortly before Divali. In the Modelama factory next door the workers had worked 110 hours over-time in September. With reference to an order from above their wages were cut by eight hours pay. Out of the 450 workers, yesterday 70 were laid off. They were not paid the obligatory bonus, instead they were verbally abused.

Racha Global Worker

(Plot 232, Udyog Vihar Phase I)

In the factory we face difficulties when it comes to drinking water and we are not allowed to take bottled water inside. During lunch breaks the female workers are not allowed to leave the factory. It is usual practice that the company suspends permanent workers without giving any written notice or paying the obligatory allowance. They won’t give you holiday and if you take a day off then they won’t let you return immediately, they send you back for another day. Before completing six or seven months of employment they make you sign your leaving letter (otherwise they would have to give you a permanent contract). And those workers who work for Racha for more than two years are called one by one to the bosses office, where the general manager, a lawyer and a police man would wait for them. They force you to sign the leaving letter – if the worker refuses they threaten with framing him or her up with some thing or the other. During such an encounter a woman worker was hit by the general manager.
Sargam Worker
(Plot 152, Udyog Vihar Phase I)
There is a lot of verbal abuse going on inside the factory, against women workers, as well. Sometimes you arrive at the factory and they say “There is no work, go back home”, they wouldn’t tell you beforehand. They cut money for PF, but they won’t fill in the PF form when you leave the job. They charge 50 Rs for taking a photograph for the ESI card, but they don’t hand out the card. About 200 to 300 Rs get embezzled from your monthly wage.

From the company web-site:

L-FASHION GROUP OY, FINLAND
3 SUISSE, FRANCE
http://www.sargamexports.com/

Shagun Apparels Worker
(Plot 369, Udyog Vihar Phase IV)
The factory got into financial trouble. The permanent workers were only given 4,000 to 5,000 Rs and then made to sign their leaving letter. Seven of us didn’t sign and opened a case at the labour department about the issue.

Vishal Megamart Worker
The company has many big outlet stores. In the factory on Plot 244 in Udyog Vihar Phase I about 2,200 to 2,500 workers sew clothes. They force you to work over-time, but they pay it at single rate and never the full
wage you are entitled to. The helpers get 3,510, no January DA, 500 Rs is cut for ESI and PF and 250 Rs is cut on top of that. They take a photo of you, but they won’t give you an ESI card. If you leave the job it is difficult to get the PF money. It is also hard to get your outstanding wages.

2) Collective Action –

Reports on proletarian struggles in the area

*** Building Workers’ Riot in Delhi

After a fatal accident on the Commonwealth Games construction site more than thousand building workers destroyed company offices, cars and trucks. The aggravating global crisis imposes a new social framework for incidents like this: the daily deaths and legal murders become explosive. The cops shooting a fifteen year old became the trigger of social unrest in Greece; the fatal accident of a building worker sparked the simmering turmoil in Delhi. The construction site is a prestigious show-piece of the capital city, a costly parasitic display of anti-social wealth in times of proletarian misery, desire and wrath...

Violence at Games village after death of worker

(15th of December, The Hindu)

A 28-year-old worker died at the Commonwealth Games Village site near Akshardham Temple on Sunday morning when a portion of the crane being used to lift materials to the eighth floor of an under-construction building in the complex fell on him.

The accident led to tension at the site as thousands of workers demonstrated against the project developer, EMAAR-MGF, and the contractors, Ahluwalia Contracts. Three of their offices were ransacked and more than half-a-dozen vehicles, including SUVs, an ambulance and a dumper truck, were damaged by the mob. The violence, which took place in phases, lasted over four hours.

A case of negligence against the contractors has been lodged with the Pandav Nagar police station. Meanwhile, a company of Delhi reserve police was deployed inside the village to control the situation.

The workers claimed that another labourer, Manish (24), was also injured in the incident. There were claims, too, that B P Singh, legal advisor for the contractors was attacked by the workers.
Police said that matters went out of hand around 9.30am. “Thousands of workers at the site suddenly went on the rampage after finding that senior officials had fled the scene. With no news on Shailendra’s condition, they barged into the adjoining three offices, broke windows, ransacked the rooms and destroyed computers. Later, they marched to the main security room and tried to set it on fire. They also attacked cars at the site,” said a senior police officer.

However, the workers were in no mood to relent. “There have been regular accidents at this site. But the management has never taken our warnings seriously. We demand immediate compensation and a proper identity-card that mentions our designations,” said Changoori Singh, a worker at the site.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Maruti Suzuki and DLF: Pillars of Gurgaon’s Urbanisation shaken by Crisis

Maruti Suzuki and the real estate major DLF are the two symbols of Gurgaon’s urbanisation. The opening of the Maruti Suzuki plant in the early 1980s accelerated the industrialisation of the semi-rural fringe around Delhi, Gurgaon village turned into an industrial city. A decade later DLF – India’s biggest real estate developer – turned Gurgaon into a bubble of private and cooperate property, a desert of gated concrete. When the global crisis kicked in these two pillars of urban and industrial development start to tremble...

Beginning of December 2008 Maruti announces that the November sales dipped by 27 per cent compared to the same month last year, while net profit slumped by 37 per cent in the second quarter this fiscal. As a consequence Maruti Suzuki has announced a five per cent production cut. The factory has an annual manufacturing capacity of 700,000 cars, meaning a cut in production by 35,000 cars. While the news report that Tata and Hyundai are sacking hundreds of temp workers, Maruti hasn’t announced any lay-offs yet. Most likely the lay-offs will happen in the vast net of unofficial employment which Maruti relies on: the thousands of workers hired through contractors in the main plant and in the
surrounding supplying industries...

End of November 2008 DLF, the role-model of private business town development, had to ask the state of Haryana to refund licence fees worth Rs 2,350,000,000 Rs. At the same time economic analysts declared that the real estate prices in second-tier cities like Gurgaon will have to fall by at least 30 per cent in order to rekindle the frozen sales. DLF has bought large amounts of land in the Gurgaon area, which are now turning sour, e.g. the land for an IT SEZ in Noida which DLF is now eager to sell. DLF is the rule, not an exception. End of November Unitech, the country’s second largest listed real estate company, put all six of its hotel projects under construction at Gurgaon and Kolksata up for sale, forced by financial difficulties to pay back loans.

There are first signs of workers’ response to the impact of the current crisis, like the riot of building workers after a fatal work ‘accident’ in Delhi, the road and railway blockades of Dunlop workers in West Bengal, protesting against the closure of the factory, the strikes and lock-outs at multi-national car part manufacturer Bosch in Jaipur...

4) About the Project – Updates on Gurgaon Workers News

*** Glossary

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.
Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state
government checks the general price development and accordingly pays
an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-
term sickness, industrial accidents and to provide medical facilities (ESI
Hospitals) to insured people. Officially the law is applicable to factories
employing 10 or more people. Employers have to contribute 4.75 percent
of the wage paid to the worker, the employee 1.75 percent of their wage.
Officially casual workers or workers hired through contractors who work
in the factory (even if it is for construction, maintenance or cleaning work
on the premises) are entitled to ESI, as well. Self-employment is often
used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 50 Rs (November 2008)
1 Euro = 61 Rs (November 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical
school), one year of apprentice-ship in a company. During the two years
at school the young workers receive no money, but they have to pay
school fees. A lot of the bigger companies ask for ITI qualification.
Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called “governmental fair price shops” are shops were “officially poor” people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which
often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services (summer 2007):

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
GurgaonWorkersNews no.16

Working Paper: Current crisis regime and impact on class struggle in India

The following is an invitation for further debate. We hope that this overview of the development of crisis in India will be refined, sharpened and widened by your response. So far it has been based on literary research and some recent experiences of living in Gurgaon and working with political groups around Delhi/ Gurgaon/ Faridabad.

We start with having a short look at the ‘Shining India’ [1] boom after the crash in 1991, whose inflated character is finally revealed by the current crisis. We then give an overview of the landmarks of the current crash and how it played out in the time between October and December 2008: Which sectors are affected and what is the state’s immediate reaction to it? The main question will then be about the material potentials of state and capital in India to counteract the crisis, to restructure exploitation in the main sectors, to secure the material and political reproduction of the working class. In the last part we risk an outlook: What kind of potentials for a wider proletarian movement – a new class composition [2] – might emerge as a result of the crisis induced social unrest? Here the limitations of this paper become most blatant, primarily because of the lack of first-hand reports about the impact of the crisis on the local working class reality in India, be it in the rural or urban areas. We therefore attach a short questionnaire [3] addressing groups and individuals interested in reporting about the local situation. We hope to be able to publish some reports in the coming issues of Faridabad Majdoor Samaachaar [4] and GurgaonWorkersNews and look forward to further exchange.

A shorter and slightly more punchy version of this text can be found here:
2. Landmarks of the current crisis in India
   a) The Crisis Blow
   b) The state’s reaction
3. Margins of the crisis regime in India
   a) The Social Unrest of the Rural World
   b) The Energy Crunch
   c) The Industrial Impasse
   d) The political consequences for the crisis regime

India is the sub-continental test case for global capitalism, the country underwent all its development models: colonial rule followed by democratic catch-up nationalism and mixed socialist/market planning economy, which was able to transform into a centralised draconic state of emergency and to become a neo-liberal regime subsequent to a severe crisis. Each phase was a test case in the sense that ‘development’ had to secure both the reproduction of the class relations; and a promise for the masses of the impoverished rural population and the growing urban proletariat, a way out for the India of malnourished peasants and labouring children of the city slums.

After the non-payment crisis in 1991 India became a role model of neo-liberalism which managed to keep up its official shine much longer than for example its counterparts in South America. Official shine not only in the sense of a rapid growth of the gross domestic product (GDP) or of foreign direct investment (FDI) or stock-market indicators; official shine also in the material form of IT hubs, growing automobile and shopping mall culture. Already during the period of this boom a closer look at both the economic figures behind the GDP and the social reality behind the glossy facades would have been sufficient to discover the ‘non-integrative’ character of the ‘Shining India’ [5].

The boom was not based on the growth of official permanent employment and working class consumption, in fact it was based on the reverse trend and therefore not even able to seriously promise anything else. On a general level it was based on a massive influx of foreign capital, most of it short-term investment on the stock-market or
investment in IT and real estate sector [6]. The IT sector accounts for a huge share of the Indian export but is minute in terms of employment [7]. The real estate sector saw a massive boom, but materialising in the form of now derelict shopping malls and gated upper-class apartment blocks, rather than industrial infrastructure, not at all in form of working class housing schemes. The state fuelled the general boom by reducing cooperate tax and excise duty [8], it financed this ‘passive credit’ by growing state debt [9], sales of government assets and shrinking state investment in infrastructure [10].

The hailed new consuming middle-class was neither a developmental middle-class of the public sector, e.g. scientists or other social managers, nor a business middle-class with an economic drive. It is mainly comprised of a relatively better waged, partly supervising workforce attached to the outsourced IT and call centre businesses, closely linked to the US financial sector. In that sense the rapidly growing sales numbers of e.g. the automobile or real estate sector, being the industrial back-bone of the ‘Shining India’, were based on a double credit bubble: first of all because the actual cars and apartments were bought on credit [11] and secondly they were paid off with wages linked to the outsourced US sectors. This would not be historically exceptional, as the industrial working class was never the first to consume their own products and regional development was often kick-start by global capital flow.

The ‘non-integrative’ character of the boom is primarily expressed in the regressive tendency of the industrial working class since 1990 [12]. Here the lock-out at Suzuki Maruti [13], India’s biggest automobile manufacturer symbolises a wider tendency: end of 2000 after a rather insignificant strike the workers were locked out and afterwards forced to sign a voluntary retirement scheme which resulted in the replacement of 2,000 permanent workers – probably the best paid industrial workers at the time – by temp workers earning about a fourth of their salary. Similar processes took place in all industries so that today the permanents account for only a small faction of the total workforce [14]. In terms of their wages these temporary workers are even further away from participating in the world of modern consumption. The textile industries are a sector of major importance in terms of employment. Here the Bombay strikes in the mid-1980s triggered a mass relocation of industry within India accompanied by deteriorating working conditions. Since
then the enormous volatility of the currency values and textile markets in recent years resulted in frequent mass lay-offs and further casualisation of the workforce.

The disintegration of the urban workforce in India can only be explained by the even more intensive process of disintegration of the rural class relations. Throughout the 1990s the process of proletarianisation on the countryside accelerated, meaning that more and more people were not able to sustain themselves by agricultural activity [15]. The average land-holding per household decreased further; more and more people moved away from a traditional village economy towards other sources of wage income [16]. In certain regions these displacements were accelerated by the regressive drive of the boom for intensified resource looting e.g. in forms of mining. The boom regions of the Green Revolution, the grain basket of Punjab or the cotton bag of Maharashtra plunged into an economic and social crisis. Increased output was counteracted by rapidly declining cash-crop prices, the dependency on (micro) credits mainly for chemical input aggravated, the numbers of mass suicides of bankrupt farmers increased throughout the 1990s up to today [17]. The market forces ripped apart the populist cohesion of the New Farmers Movements of the 1980s, which were held together by the alleged common market interest of small peasantry and large-scale farmers. With the intensified dependency of the agricultural sector on credits and global trade, a business strata and whole semi-urban trading towns emerged whose dynamic growth was mainly due to their function as financial interface between cash crops and debt misery.

The social disintegration and widening gaps between losing and winning sections of society was mirrored by increasing ‘communalism’ [18], caste-based identity politics [19] and rivalries between single states and the national centre. The ‘Hindu/Muslim’ Bombay riots took place in the aftermath of the 1991 crash, marking an increase in religious and ‘communal’ tension, climaxing in the 2002 massacres of Gujarat. These primarily took place in areas where internal competition between the new sections of semi-urban traders, money-lenders etc. was the most severe. Regions which were starved of development or only used for cheap supply of resources were plunged into low-intensity warfare; with Maoists increasingly becoming an army of a parallel state of rural backwardness, rather than an armed class movement.
The classic organisations of the labour movement turned into agents of ‘development’, thereby becoming an active force that deepened the divisions within the proletarian movement. For example the West Bengal ruling CPI(M) when it attacks rural movements against industrial projects and ‘jobless destructive growth’ or the established unions when they turn against struggles of temp workers in the name of defending the interest of their permanent members [20].

Throughout the 1990s and 2000s both Congress and Hindu-nationalist BJP had a chance to de-legitimise themselves in government, trying to mediate the various contradicting dynamics of the boom. What is left at the end of the boom? A new generation of neither socially nor politically ‘integrated’ proletarians with little option to fall back on subsistence farming. Some of them have produced the goods and promises of the ‘Shining India’, most of them are on the move away from the misery of the soil, now finding themselves in a situation where the export and FDI fuelled boom cannot continue to offer the prospect of better jobs, but nor is the state able to guarantee mass welfare. In this situation the current crisis not only takes away the last veil of the ‘Shining India’, it might also act as a spark between the unsatisfied desires of the migrant rural and urban poor – for more hopeful thinking see the last part of this text.

The inflated character of the boom can be seen more clearly when we examine the impact of the current crisis in the next part. Once we look beneath the mere level of markets and have a closer look at conditions in the respective sectors in part three, it will also become clear that the phase of neo-liberalism was not an errant move away from ‘proper growth’, but a desperate attempt to re-structure class relations and to deal with the rapidly growing rural and mobile proletariat.

In the following we have a look at the main landmarks of crisis between October and December 2008. This is necessarily limited to economical figures and numbers – which absurdly enough became the main expression of our social relationships. They can only give us vague indications about the main dynamics and the depth of the crisis in India. In the footnotes [21] you can find a blunt over-view of the Indian GDP 2007/08, the composition of state revenue and expenditure. Here just the three main figures:
Total GDP: 1076 billion US Dollars at current prices
Total State Income (tax, customs etc.): 158 billion US Dollars
Total State Expenditure: 174 billion US Dollars

This can give us a rough context for the currently announced figures of export slump, declining manufacturing output or government spending. For example we can see that a major slump in global trade would impact hard on a state which sources more than a quarter of its total receipts from export and excise duties. Major financial bailouts such as the announced 15 billion US Dollars loan waiver (non-repayment of farmers’ loans to major banks) for small farmers have a different dimension once we see that this sum accounts for nearly a tenth of the total state income 2007/08. If we can assume that the sectors most severely affected by the current crisis are finance, real estate, business and personal services, trade, tourism and transport then we have to bear in mind that these sectors account for more than a half of the total Indian GDP. State (external) debts and deficits did not increase much in recent years [22], but they remained significant if we see that out of the total expenditure of 174 billion US Dollars, about 45 billion is spent on interests and loans. In the whole debate about state debts politicians frequently remark that the external state debts are on a much lower level than before for example 1991. What they don’t mention is the major shift in sources of credits and debts from state borrowing to commercial borrowing, mirroring the privatisation of some of the former public sector companies: between 1990 and 2007 the external debts of Indian companies increased many fold [23].

a) The Crisis Blow

“Thus, the combination of low domestic absorption and high capital inflows have posed new challenges for monetary and exchange rate management in India”.

– Report of the Reserve Bank of India (RBI), December 2008

There are more blunt ways to declare the over-heating of an economy based on labour-intensive exploitation of a cheap workforce. During the last years of the boom the dependency on massive capital inflow [24] and on software-related exports led to an over-valuation of the Indian Rupee, to rising inflation and a constant increase of prime interest rates.
Under the burden of the unfavourable exchange rate and the high interest rates the traditional and labour intensive export sectors, e.g. textiles, tea or other agricultural products, got stifled. The onset of the global crisis in autumn 2008 showed that it was not a mere stock-market, currency or real estate bubble, but with the trickling down of the credit crunch it became clear that each sector of Indian economy was affected. We can see how violently the Indian economy swings within the wider crisis development, e.g. in terms of inflation rate, capital input and outflows, share prices, export figures or sales numbers of manufactured goods, finally resulting in mass redundancies of workers.

The Stock-Market Slump

The main stock-market index (Sensex) has fallen by more than 50 percent during the year 2008, from 20,800 in January 2008 to under 10,000 in mid-October. The first companies who had to digest major losses were exactly those companies who were presented as the shining symbols of the 1990s boom, for example the real estate giant DLF, the multi-sector group Reliance or bio-tech firms like Ranbaxy. In October 2008 the stock-market lost one trillion US Dollars, which is about the GDP of the year 2007/08. One of the reasons for the massive losses was the sale spree of Foreign Institutional Investors (FIIs), who basically invest short-term. FIIs held about a quarter of the floating stock of the Indian stock market. After a record influx from foreign investors in 2007, the second half of the year 2008 saw the opposite trend [24].

The Shrinking Foreign Currency Reserves and Credit Crunch

The sales of the FII shares and the subsequent massive US Dollars outflow resulted in the largest fall of the foreign exchange reserves in eight years. While in July 2008 the reserves stood still at 300 billion US Dollars, by November 2008 they had plunged down to 258 billion, showing that a big portion of the reserves do not stem from export gains, but are only stored as a result of the stock-market speculation. After a panic reaction of Indian companies to borrow from banks in order to convert into Dollar funds the market experienced a massive credit squeeze. In an economy like India this credit squeeze translated immediately down to the various micro-credit systems of the rural sector. By the end of October various micro-credit institutions were lamenting about a lack of liquidity [25].
The Currency Devaluation and Deflation

The withdrawal of capital from the Rupee caused a massive devaluation of the currency. Early 2008 the Rupee stood at 39.25 US Dollars, by end of November 2008 it had depreciated to 50.5 US Dollars. As we can see below this devaluation was accompanied by massive cancellation of orders from the US and therefore did not alleviated the problems for sectors such as textile export, but rather aggravated the situation for the main import product of the Indian economy: oil and related products like fertilizers. The depreciation was further fuelled by a surge of speculation on the future development of currency prices in October 2008. The inflation rate mirrored this development of the exchange rate. With the rising oil prices India’s inflation rate reached a peak of 12.9 percent in August 2008 and dropped to 6.8 percent at the beginning of December 2008. At the end of December the economists warned of deflation in the second quarter of financial year 2009/2010 [26].

The Trade Balance Shift and Export Decline

Mainly due to the increase in value of oil imports the Indian trade deficit stood at 14 billion US Dollars in August 2008 alone, compared to 7 billion US Dollars in August 2007 [27]. If we bear in mind that the major crash of 1991 manifested itself as a payment crisis of external debts and of depleted foreign currency reserves, this trend of increasing trade deficit in addition to the FII capital outflow the foreign currency reserves mentioned above no longer seem so ‘bullish’. The trade deficit will not easily be re-balanced by the current drop of global oil prices given the significant drop in exports since the second half of 2008. If petroleum is excluded from the bill, the merchandise exports dipped by 20 percent during October 2008, shipping rates for bulk cargo dropped by nearly 50 percent in August 2008, tonnes of iron ore for the Chinese market are reported to be stuck in Indian ports. The bitter irony of the crisis of the Indian export regime: while there was much blood shed over the opening of Special Export Zones all over the country, including the several protesting peasants who got shot dead in NOIDA in August 2008, many of these SEZ are now up for sale or the developers try to get denotified in order to be out of the deal [28]. As we can see in the next part, the trade war with China has intensified since October 2008, closing further margins.
The Decline of Real Estate Prices

Real estate was one of the driving sectors of the 1990s [29], companies like DLF, Reliance and many developers from the United Arabic Emirates fed on the spree. The first difficulties surfaced earlier in 2008 when many property owners announced problems in paying back their mortgages [30] due to rising interest rates, which in turn were a result of the state’s attempt to curb inflation and over-heating. Many voices warned of a massive over-production of IT offices, hotels and shopping malls. Private equity investors withdrew from the market [31]. The credit squeeze was the final straw; in November 2008 DLF requested the Haryana government to refund license fees worth 47 million US Dollars, basically as a bail out. The construction of India’s biggest shopping mall in Gurgaon was put on hold, many other companies and projects followed. DLF, Unitech, Omax and other real estate developers announced job cuts after Diwali 2008. In November 2008 Goldman Sachs announced in a report that a price decline of at least 30 percent would be required to rekindle the real estate business in India.

The Decline in Manufacturing

In October 2008 for the first time in more than a decade the manufacturing output of the Indian industry declined [32]. Already during the first half of 2008 investment projects worth 17.5 billion US Dollars were put on hold. Between April and August 2008 energy generation growth declined from 8.3 percent to 2.3 percent compared to the previous year. Given the unofficial nature of a huge chunk of the Indian industry and energy generation these numbers are rather blunt indicators.

The First Wave of Redundancies

The government tries to down play the actual numbers of lay-offs, e.g. in December the Labour Minister Oscar Fernandes declared that between August and October 2008 around 65,500 workers lost their jobs due to the global recession. The actual numbers will be much higher, particularly if we add all the lay offs of unofficial temporary or contract workers, the ‘unpaid holidays’, the lock-outs etc. – In part ‘3c) The Industrial Impasse’ we summarise the main announcements of crisis related redundancies.
Shrinking Remittance

Another big chunk contributing indirectly to the Indian economy are wages of workers sent from abroad. India received 27 billion US Dollars remittance in 2007, globally the highest sum for a national economy. A lot of these jobs – be it construction work in the United Arabic Emirates, service jobs in the financial districts of the North or skilled IT work – are also put at stake.

These are only first very short-term and superficial impressions on the impact of the current crisis, now followed by a short summary of the state’s reaction to it.

We can summarise the first reaction of the Indian state in few words: unlike in the US or Europe there hasn’t been a major bail-out package and unlike in China the Indian state did not mobilise or promise a major financial package to boost the economy. The first steps undertaken by the state between October and December 2008 were steps of panicky first aid, each in itself further increased the potentials for financial instability. The state:

* mobilised liquidity by cutting the cash reserve ratio [33]
* cut interest rates of state banks [34]
* further liberalised credit flow, e.g. for Indian companies to borrow on international market or for the federal states to borrow on commercial markets [35]
* further opened Indian market for international speculation, e.g. by allowing more foreign investment in retail and insurance sector [36]
* cut export duties and tax for certain goods and sectors [37]
* changed legal system to make mergers and acquisitions easier [38]
* increased state debts by further borrowing both from the World Bank and the open market [39]

All these measures induced liquidity by either reducing financial safety buffers, by opening new markets for global speculation, by postponing costs or by minimising state income (custom duties, interests) in the future – i.e. deepening the path which has lead to crisis in the first place and reversing some of the stability measures taken by the state after the crash of 1991. We can say that this was just a first quick fix and that the
main question will be whether money will be spent for productive investments. In December the state announced that it will spend 8.5 billion US Dollars (42,480 crore Rs) as an extra stimulus package in 2009. In the media this 8.5 billion was compared to the 580 billion US Dollars extra spending plan of the Chinese state. There has been criticism of such large chunks of the state's deficit spending going not into investment, but actually being used in a 'populist' way to finance loan waivers for farmers or in order to guarantee prices of agricultural products like cotton. In the following part we examine the reasons for why a huge chunk of the state expenditure flows into the rural sector.

On the background of these dubious macro government statistics we can now have a look at how the limitations of the crisis regime are set in the main economic sectors: agriculture, energy, manufacturing, where general economic figures have to confront lively class reality. We can summarise some main political thoughts:

a) The massive spending for the agricultural sector is neither populist nor an economically promising investment, but a desperate attempt to curb an explosion of proletarianisation, in turn preventing huge future welfare spending, mass starvation and/or social unrest. Here the state has to constantly juggle with the economic costs and political dimension of agricultural prices, being both guaranteed income for millions of small farmers and reproduction limit of the growing proletarian masses. While small farmers tend to individualise and localise their misery, the rural landless proletariat tends to move and behave less predictably. Only covering a few million rural proletarians the National Rural Employment Guarantee Scheme (NREGS) can be seen as such a labour-intensive work-scheme to govern their movements and reproduction.

b) Due to the dependency on oil and gas imports the Indian state has a major energy sourcing problem which, apart from enormous costs, causes political conflicts. On the supply end we see geo-political conflicts such as the quarrel about the nuclear deal with the US or the gas supply from Iran or Oil from Assam, and on the other end we see increasing pressure from various social groups agitating about oil and fertilizer prices, for example the mass strike of trucker associations in January 2009.

c) The most profitable manufacturing sectors are directly or indirectly
(e.g. via middle-class consumption) linked to the export and outsourcing market or, like real estate and construction, to the massive capital inflow. In the last decade the global relocation of the textile industry and call centre services from North to South has been completed. The labour-intensive manufacturing sectors, ranging from the metal industry, to textile production and construction, have squeezed the wage costs to a minimum and pushed working times to the maximum. Now – having fed off the casualisation of workforce, the tax and customs reductions of the neo-liberal regime and eased commercial global borrowing – they are starved of capital liquidity for a technological jump. The second half of 2008 witnessed a heat-up in the trade war with China and other Asian national economies, trying to compensate for the slump in internal demand by further cutting prices for manufactured goods.

In many senses the Indian agrarian sector underwent a successful capitalist transformation. The enclosures, the tax rule and plantation regime of the colonial times resulted, in addition to mass starvation, in tying the rural world closer to the money economy and the global market. The colonial rule was followed by mild land reforms of the 1950s and 1960s [40], which were primarily aimed at mobilising some of the unproductive big land-holdings, but were accompanied with state repression against serious land occupations. In this process the ‘peasant movements’ under the banner of the CPI were a medium to forge a class unity of medium peasants and the rural proletariat against the old zamindars – land owners – ‘for rural development’. The state intervened in price developments and took hold of the centres of agrarian processing industries, such as sugar or cotton mills and thereby linked wider areas to the state controlled market. The panchayat, the village council, turned from a body of upper caste personal rule into an extended arm of state and party management. There was a growth of infrastructure (transport in particular), a further integration into the money economy, and the struggle against personal forms of oppression and exploitation. These developments undermined not only the village caste system and generational bonded-labour, but also the long-term patriarchal village cohesion, which ideally would secure the survival of the landless labourers in times of unemployment.

The labour debt contracts became shorter and more impersonal, mediated by professional contractors. The mechanisation and chemical
input of the Green Revolution led to: further concentration of certain cash crops in certain states; the emergence of a new section of market farmers (e.g. in Punjab, Gujarat, Haryana, Maharashtra); an increase in the share of the total harvest which is sold on the markets \[41\] and further monetarisation of agricultural production enforcing economies of scale and thereby creating waves of mass social death of the small peasantry. The development of the agriculture sector solved the food question materially, providing at least potential food security for a growing population. But at the same time it has subjected agricultural production to capitalist terms: the social misery continued, not because of lack of output, but because of the lack of the growing output to convert itself into growing profits \[42\].

In capitalist terms the importance of the agricultural sector is shrinking and representing a smaller share of the total GDP \[43\]. The debts of the sector reached a level where payments of interests are higher than the actual investments \[44\]. At the same time the absolute number of people who earn parts of their income off the land is growing \[45\] while average size of land per household is shrinking drastically \[46\]. Both of the landless and small peasantry make up an increasing proportion of the population \[47\] and most of the rural households cover only a fraction of their income from agricultural activity \[48\]. There is no smooth transition from peasant to agricultural wage labour. On the contrary: overall the share of waged labour on the soil decreases, because the shrinking profit margins forced many small farmers to replace formerly paid alien labour with unwaged family labour \[49\]. Therefore the rural proletariat and the majority of small peasant households rely increasingly on non-agricultural wage labour, small business and on debts \[50\]. For a huge share of the rural population migration to urban areas is a difficult step, given that it requires resources, e.g. in form of small land-holding that can provide a small amount of money to get started, or at least a fall-back option. The fact that agricultural development has increasingly detached itself from the peasantry left roughly three different situations of rural class relations:

Market family farming

Highly dependent on cash-crop prices, agro-business, the credit / subsidy system and rural labour migration to top up family labour in peak
seas[51]. Operational costs per hectare increased dramatically during the 1990s [52]. Hundreds of thousands of family farmers exist on the brink of the social abyss; falling cash crop prices result in a steady process of land concentration [53] and of individual bankruptcy. In some areas the dependency on migrant labour during harvest period leads to the paradox of frequent labour shortages. This has various causes: many industries and large farmers shy away from employing the local population, knowing that it will be much more difficult to subject them to similarly harsh exploitation and to kick them out after the peak season. In India the poverty-stricken areas like Bihar, Orissa, parts of UP and West Bengal provide a constant stream of labour migrants. In wide areas of Punjab we can see a double dependency on migration. While most of the farming families rely on wages from family members working abroad for farm investment [54], they depend on cheap migrant labour for the seasons. Due to the increase in agricultural productivity the necessary labour time per hectare gets shorter [55], which means that for a lot of migrants the long journey is not worth the short-term employment. If we read that rural monthly wages increase [56] we have to bear in mind to relate them to an annual household wages, which might actually drop due to less paid working-days. On this background the development of rural industries and urban jobs, for example construction, have up to now offered better conditions than actual agricultural labour.

Plantation economy

Apart from commercial family farming there is the traditional plantation economy employing a mass workforce, including about a million workers directly employed in the tea districts of Assam and West Bengal, producing 85 percent of India’s tea output, India being the biggest tea producer globally. The intensified global competition with China, Kenya and Sri Lanka; the increased dependency on few major buyers like Hindustan Lever, Tata Tea etc.; and the falling tea prices have sped-up the re-structuring in this sector. This involves dismantling the old patriarchal ‘set-gardens’, which often included processing units, workers housing etc. and enforcing a ‘bought-leaf’-system which is mainly based on temporary labour. With the swings of the market the bigger tea plantations close down temporarily, leaving thousands of workers without income and living facilities like potable water etc.. Tragedies like the mass child starvations of tea workers families in Ramjhora in 2004 or Jalpaiguri
become bitter part of the economic cycle. There have been union-organised strikes, like in 2004 in Assam when 800 plantations were shut down or like the last general tea workers strike in West Bengal in 2005, followed by officially 500,000 workers on 300 plantations. But these strikes seem to have targeted the power-relations between political class and sector representatives, rather than the improvement of actual conditions. In December 2008 the newspapers published reports about the situation in the tea belt of Northern Bengal, where due to the 5 to 10 percent dip in exports over a dozen of large plantations have shut-down after October 2008, leaving “hundreds of tea labourers” unemployed.

Patriarchal regime of underdevelopment

In areas which are less integrated in the national or global market – often due to being either remote or less fertile – traditional agricultural structures persist, either in forms of caste hierarchy [57] and/or tribal structures [58]. The neglect in terms of infrastructure (irrigation, transport, etc) and employment opportunities and/or the outside pressure due to state projects like mining enforces either migration, a return to patriarchal village structures or affiliation to clans or the various kinds of political castes and their patronage. Affiliation to political parties guarantees access to credits or might help to benefit from minor land redistribution schemes. In some of these areas Maoist armed struggle often means putting pressure on local administrations to implement the planned employment or development schemes [59]. In general there is increasing danger that the local proletarian population gets caught in the shadow-boxing of different political parties and NGO interests or worse, in the cross-fire of low-intensity war-fare [60].

This rough overview helps to understand the three main aspects of the character of the agricultural sector and their relevance for capitalism in India. Firstly, the Indian state has to foster the competitiveness and profitability of agro-business [61], cash-crop production and export. Secondly, it has to guarantee a certain food price level for the rural and urban proletariat and, thirdly it has to control the reproduction of the semi-proletarianised small peasantry and landless, a mass of 100s of millions of people. The masses of rural semi-proletarianised households are the foundation of the high exploitation level of urban and rural industry, supplying it with seasonal migrant labour and a fall back option
for times of unemployment – the only real-existing welfare system in India. The increasing pressure on the reproduction of the semi-proletarianised households – by increasingly global market forces and the increasingly global desires of the rural proletariat itself – endangers the rural stability and the controlled supply of a mobile workforce. With the demise of small-scale subsistence the state has to intervene more intensively, in both its functions: to guarantee reproduction and stability. In that way the large-scale rural employment schemes like NREGS [62] are just a drop in a troubled ocean, and they are backed up with the counter-insurgency of anti-Naxalite war fare.

Under the double pressure of social unrest and crisis these three different social aspects of agriculture drift apart. They were held together by an elastic band of state subsidies, credit and labour income from non-agricultural jobs. The current crisis stretches the social cohesion to the max, e.g. by further collapse of agricultural prices, by drying up of state finance for subsidies etc., by extending the credit crunch to the local rural economy and by creating a wave of laid-off workers without reproduction guarantee in the urban setting. In the following we have a short look at announced state interventions in the agricultural sector since the onset of the current global crisis.

At the end of July 2008 we saw a symbolic confirmation of the enormous social pressure emanating from the rural south acted out on the political stage of institutionalised globalisation: the WTO talks in Geneva failed because China and India kept up the tariff barriers and thereby did not allow the over-production of agricultural products of the global north to shake up the precarious balance of agriculture product and food prices in their respective countries. The fact that the global food riots some months previous didn't find much echo in India [63] had confirmed the protectionist attitude, including enforcing a export ban on rice and by hiking the internal minimum support price [64] by 20 percent. But protectionism is not declared or legally enacted; it needs a material and financial buffer. In order to protect local farmers against the much higher productivity of the global north, while at the same time the sector depends on enormous fertilizer import and is meant to secure low prices for the local proletarian masses, the state has to pay heavily to keep the balance. The onset of global recession shakes up this balance.
We can see how much the major slump of the exchange rate – from 40 Rs / 1 US Dollars in Spring 2008 to 50 Rs in autumn 2008 – will affect the main input price for the agriculture sector in India: in the period April to July 2008 India imported fertilizer worth 4.1 billion US Dollars from the international market, in contrast to the total export of agricultural products from India at 7.3 billion US Dollars. In 2008 the bill for fertilizer state subsidies exploded to around 24 billion US Dollars. To this we can add around 17 billion US Dollars for farm loan waivers in 2008/09. The debt waivers have been topped-up after the onset of the credit crunch in October 2008, which left a lot of (micro-credit) banks dry [65]. And we can add 10 billion US Dollars for the rural employment scheme NREGS if we assume that it was actually implemented in all Indian districts in summer 2008 [66]. Just for these three schemes alone the state would have to pay around 48 billion US Dollars in 2008/09. This is compared to 158 billion US Dollars total state receipts in 2007/08! To this bill we would have to add the costs of the state’s minimum price policies for farmers.

In October 2008 traders expected the global cotton price to fall by 40 percent over the period of the year 2008. Indian cotton traders complained about cancelled orders and assume that export numbers will halve in 2008/09 [67], due to both China and India expecting an over-production of a fifth of the current harvest [68]. In September 2008 the central state hiked the minimum support price (MSP) for cotton by about 40 percent, paying tribute to about 10 million cotton farmers. The representatives of the Indian textile industry in turn announced they would import cheaper cotton from Pakistan. In Punjab the state agency Cotton Cooperation of India (CCI) was said to be the only buyer on the cotton market after commercial traders refused to pay the minimum support price. A similar picture can be drawn from the sugar cane and rice production [69]. After the crash of 1991 the Indian state and the IMF used the economic emergency to restructure the agricultural price system. Today the general price pressure, the decline of internal and global demand and dwindling financial clout of the state to mediate prices might result in downward spiral [70].

Another main variable in the Indian crisis regime is the dependency on energy imports. Around 70 percent of oil used in India is imported; oil and lubricants accounting for 40 percent of the total imports in the first half of 2008. In April – July 2008 India imported oil worth 40 billion US
Dollars, compared to India’s total exports in the whole year 2007/08 of 72 billion US Dollars. In most industrial areas oil-fuelled energy-generators have to back-up the public grid. The Indian state sets the national fuel price. The government’s price dictation – basically a state subsidy – to the three major distributors resulted in an estimate loss of 106,000 crore RS, around 21 billion US Dollars. After the general fall of global oil prices in the second half of 2008 the state did not pass on the lower prices immediately, which immediately led to protests of the opposition parties and shortly after to a mass general strike of the truckers association for lower prices and oil company employees for higher wages. The attempt to exploit oil fields in Assam – where a fifth of Indian’s total oil production takes place – are frequently endangered by separatism and local low intensity warfare; the gas supply from Burma by the demise of the dictatorship. The turn to other sources of energy seem similarly political precarious, e.g. the 7.6 billion US Dollar pipeline project which is supposed to supply India with gas from Iran via Pakistan or the nuclear deal with the US, which lead to the split up of the Indian central government in 2008.

Of course it is impossible to say how the situation of the general working class in the Indian industry will be affected. We can state that for the main export industries – IT/call centre services and textiles – the general global outsourcing of employment and industrial capacity to India reached it’s peak at around 2005.

**IT / Call Centres**

On a global level the outsourcing of call centre and IT services to India meant a drop in wages of about 60 to 80 percent. In India itself these wages were still relatively high, an 18 year old woman employed in a call centre could earn more hen her father working as a professor – which disrupted gender and generational relationships considerably. Until around the peak-time of outsourcing we saw an average annual wage increase in the call centre sector of about 20 percent. Young workers took advantage of the general demand for their work by changing jobs frequently [71]. Since then we saw a first ripple of relocation from the former call centre hubs of Gurgaon, Bangalore etc., to smaller Indian cities where rents and wages are lower. Rationalisation, such as cutting costs for provided transport, became more intense and reports about
smaller call centre companies closing more frequent. With the industry depending on US companies for 70 percent of its business, particularly of the financial sector, the impact of the crisis will be severe [72]. There are various reports of wage and job cuts affecting call centres or office workers of outsourced American banks or software companies in India. The Union of Information Technology Enabled Services (UNITES) estimates in January 2009 that between September and December 2008 10,000 jobs were lost in the IT industry and anticipates a further 50,000 cuts in the first half of 2009. As if to mimic the US Enron scandal that buried the new-economy bubble in the US, the Satyam scandal came at the right time to finish off the last doubts about the state of the sector in India.

Textile Industry

The textile sector has a long tradition of restructuring in India, starting from the destruction of the industry by Colonial custom policies and brute force, to the mass-closures of the huge mill industry in the 1980s, to the creation of textile parks after 1991. The industry is still major in terms of jobs, officially (!) employing around 35 million people in India, even more if cotton production is taken into account. About 55 percent of the total textile production is exported. Since the reform of the global quota system in 2005 the competition between India, China, Vietnam and Bangladesh increased and the global prices for apparel dropped drastically. The Indian textile industry was able to compensate for the stagnating internal demand and dropping profits by higher export outputs – benefiting from the higher production costs in countries like Greece, Spain, Egypt and Dominican Republic (and therefore the severe effect the end of the quota system had on those countries). In competition with other major Asian producers the industry in India is squeezed between the much higher degrees of mechanisation (e.g. in China) and lower wages (e.g. in Bangladesh) [73].

In autumn 2007 the industry was hit by the Dutch Disease; meaning that the over-valuation of the Rupee stifled exports and dried up credit sources. Export hubs like Gurgaon/Okhla witnessed a wave of mass dismissals. Only a year later, despite the slump of the Rupee, a massive slump in orders led to the next wave of lay-offs. From many workers’ reports [74] we can see that in terms of working-hours and wages the
reproduction limit has more or less been reached and in most cases of the Northern Indian industry the number of permanent employees reduced to lowest levels – although further casualisation seems the main short-term focus of the manufacturers. The competition with other national economies will increase, not only on the global market, but also within India itself. For example at the end of December reports about the major influx of embroidery machinery, silk and artificial silk products from China warned of the severe impact on local employment. In towns like Varanasi, where around 700,000 people depend on the weaving industry, incomes are dwindling. A closer look at the CAD embroidery machinery in the bigger Indian (export) factories would be sufficient to grasp that the main threat to the remaining artisan labour is not as far away as Shenzhen. In October and November 2008 news from Bangalore said that only three quarters of the total workforce – around 600,000 workers – are currently “utilised”. Workers report wage cuts, unpaid enforced holidays or delayed wages. In the knitting hub of Tirupur (Tamil Nadu) reports say that orders dropped by 30 percent and that 20,000 workers are at risk of losing employment; most of them now work only five instead of six or seven days per week. In Gurgaon bigger exporters like Modelama sacked hundreds of workers in October. The Confederation of Indian Textile Industry warns in November 2008 that 700,000 jobs could be lost Indian-wide within the next months. In January 2009 the Apparel Export Promotion Council (AEPC) estimates that around 500,000 jobs have been lost in the last six months of 2008.

Construction

The construction sector and the attached rural industry like quarries or brick kilns have been the productive release valve for rural unemployment. In recent years the construction sector was pumped up by international real estate business. With the slump in the real estate sector many building projects were put on hold and building workers families left without income. In October 2008 the IT park developer Quark City in Chandigarh (Haryana/Punjab) sacked 400 daily workers after the impact of the credit squeeze. The crunch in the construction sector trickled down to cement and other manufacturers. At the end of October 2008 the sandstone industry in Rajasthan announced lay-offs. About a million people are employed in this sector, either in quarries or transport and many export orders were recently cancelled.
Steel / Raw Material

The Indian steel industry still mainly produces for the internal market; with exceptions such as iron ore export through steel internationals like Posco or the merger of Arcelor and Mittal. Indian is the fifth biggest steel manufacturer in the world, but its output is only about a tenth of the Chinese one [75]. The massive slump in global steel prices of about 40 to 50 percent, the decreasing demand from the local manufacturing industries and the announcement that China plans on lifting its export tax on steel created an enormous pressure on the industry.

In November 2008 JSW Steel, India's third biggest steel manufacturer, announced a 20 percent cut in production. ArcelorMittal said it would delay the two major green-field projects in Orissa and Jharkhand worth 20 billion US Dollars and shut down production in its European plants [76]. Other steel manufacturers followed, for example Welspun in Gujarat. By the end of November 2008 iron ore mining companies in Orissa, Jharkhand and Karnataka closed down 20 mines and down-scaled production in 50 others, leaving thousands of temp workers unemployed. The mines are hit by the current fall in demand for iron ore in China and falling prices, e.g. the price for a tonne in 2007 was around 120 US Dollars, now it came down to 45 US Dollars. Other newspaper articles report about 5,000 unemployed truck drivers and cleaners in the Chitradurga district (Karnataka), who used to work for the mines. The mass unemployment of casual workers in these mining areas have a particular political significance given that it was in areas like Kashipur in Orissa where the strongest movements of small peasant and tribal communities waged a long battle against the mining industry. With the chemical industry, another up-stream industry noticed the crisis crunch. Due to the recession in the manufacturing sector, many chemical plants scaled down production, most of them major players like Reliance (petro-chemicals, polyester), Birla (viscose fibre) or Asian Paints, see [77] for summary. None of the news items stated how many workers were effected by these shut-downs.

Automobile Industry

In the 1990s a lot of the existing automobile companies (Maruti, Escorts etc.) got dismantled and its workforce casualised. Escorts in Faridabad used to employ more than 20,000 permanent workers in the 1980s, this
came down to less than 6,000, due to out-sourcing of departments and increasing employment of temp workers [78]. Along with the workforce the structure of the car part supplying industry got reshuffled, combining industrial parks with first-tier suppliers like Delphi or Bosch [79] with workshop production in the surrounding slum areas. In the last years this establishment of modern supplying industry and its higher utilisation of machinery reshaped the distinct feature of the car industry in India. Maruti reduced the number of official suppliers from 800 to 400, companies like Delphi replaced the prevailing two 12-hour shifts by three 8-hour shifts. The second and third-tier suppliers still rely on 70 to 80 hours working weeks of a migrant temporary workforce, now having to compete with (or counter-balance) the most advanced technological standards. Further relocations are made difficult by the insufficient transport infrastructure, e.g. Maruti Suzuki spending double the amount on truck transport than on workers’ wages.

After liberalisation in 1991 nearly all major global automobile manufacturer opened plants in India during the 1990s and early 2000s, attracted by the promising growth rate 80]. By 2007 the official direct and indirect employment in the Indian automobile industry stood at 13.1 million employees manufacturing around 8 million two-wheelers, 2 million cars, 300,000 tractors and 480,000 commercial vehicles and trucks. Attached to the dozen new passenger car assembly plants – employing between 4,000 to 5,000 workers – most global car part manufacturers opened factories. The ratio between output and workforce in the main assembly plants doesn’t vary much from the plants in the global North, indicating a similar degree of mechanisation, e.g. in the body-works, welding departments or paint-shops. This also means that most plants will run profitably only under full utilization of around 300,000 passenger cars per year. Consequently passenger car sales in India would have to go up to at least 3.5 million. Less than ten percent of the total production is for export. This means that most of the output depends on industrial investment in India (tractors, trucks) or increasing middle-class income, given that the gap between workers’ monthly wage – around 5,000 to 10,000 Rs for a temp worker in the assembly plant – and product price – around 400,000 to 600,000 Rs for a passenger car – remain considerable.

With the onset of the crisis the car sales fell drastically. Basically all
automobile manufacturers reported a 20 percent sales decline (passenger cars) in the last quarter of 2008, the biggest decline for eight years, and subsequent production cuts, dismissals of hundreds of temp workers – 2,000 at Hyundai alone and cancellation of investment plans (see [81] for a more detailed summary). The production of trucks saw an even steeper slump of 25 – 40 percent indicating the worsening wider investment climate. The supplying industry followed; all major tyre manufacturers scaled down production. There has been a first surge of lock-outs, for example at Dunlop and Bosch. Here, as well, the industry starts to suffer from Chinese cheap car parts and tyres start flooding the Indian market. For us, the main political question will concern the impact of the crisis and lay offs on a new generation of workers who displayed their confidence in form of various strikes and material victories; at Honda HMSI, Hero Honda, Toyota, Skoda, Bosch, Delphi and many other suppliers.

On this background of a likely recession in agriculture and industry resulting in a tighter state budget we can make some broad assumptions about the consequences for the crisis regime in India. Stating the obvious: compensating for falling state income through tax and customs the state will have to continue selling state property or outsourcing costs. The privatisation of the last decades, for example of public transport (such as the Delhi buses) or sub-contracts (for example public road works, hospital or university maintenance) will accelerate and with it the worsening of conditions of the affected the workers [82]. Similarly the liberalisation will continue, for example opening the insurance and retail sector for FDI, thereby putting extra-pressure on the masses of small traders.

In this sense the crisis will deepen certain tendencies of segregation and division. The state will have fewer resources to appease various conflicting interests. One recent example is the attempt of the state to secure the collaboration of the rural elite after the cotton minimum price hike, by using the falling oil prices to regain some income through not adjusting prices immediately. This resulted in the day long Indian-wide strike of the All India Motor Transport Congress (AIMTC) demanding lower fuel prices and fees, allegedly stopping 600,000 trucks.

The question of distribution of state money and jobs will also strain the
relation between central governments and states. Shortly after the major slump in October 2008 we saw Maharashtra Navnirman Sena (MNS) nationalist activists attacking Bihari job seekers who applied for national railway jobs in Mumbai. The attacks triggered further riots and inter-state tensions and finally a Supreme Court notice issued to Maharashtra government. In November 2008 the governments of West Bengal and Kerala complained about the crisis effect on the relation between central government and the states, demanding higher shares of central tax for the states and debt relief [83]. Finally the rekindled threat of a Pakistan-Indian war after the Mumbai terror [84] displayed the various separatist or nationalist channels which the ruling class might drag the proletariat into.

The main enemy to confront will be the working class itself. We can also see that both state and companies are trying to reassure a certain section of the working class – the small backbone of the existing regime – that they won’t face the full brunt of future restructuring. To this section of the working class belong the middle-management of state administration who benefit from the recommendation of the Sixth Pay Commission which was brought into effect in various states in November 2008 [85]. Another significant group are the permanent workers with mainly supervisory tasks: Tata Steel and Tata Workers Union announced a wage deal for the permanent staff in Jamshedpur in October 2008 while at the same time Tata sacked hundreds of temps in its car plants. The official established unions and employers also start to form ‘interest alliances’ for certain industries, asking the state for debt relief, for example in the textile or diamond industry. The main unions want to demonstrate their ability for more responsible co-management [86], which will inevitably involve meeting the employers’ demand for further casualisation of the workforce. The first public announcements of crisis related lay-offs were immediately converted into play-fights on the political stage, for example the case of the dismissals at Jet Airlines in October 2008 [87].

In the following section we have a short look at struggles that took place since the onset of the crisis [88]. We then highlight the struggles of diamond workers in Surat, asking how the crisis – instead of eradicating the recently gained confidence – might rather change the course of unrest. We finally focus on some of the arenas of workers’ struggle that
seem politically crucial to us.

This short summary is limited in two ways, first of all because it relies on information of the public media, which in most cases only covers official labour disputes. Secondly, because it covers the limited time-frame of October 2008 to December 2008. Out of the total 50 to 60 strikes and protests that were mentioned by the wider media during this period by far the most disputes were taking place in the public sector, mainly over the question of wage increases [89]. A similarly high portion, and this seems more relevant for the future, are struggles of casualised workers, like those who do daily wage work sub-contracted from the public sector, demanding higher minimum pay and/or regularisation [90], or in some cases, battle for the payment of delayed wages [91]. There have been struggles in the traditional agriculture-related sectors [92] and in strikes in the sectors of the new economy [93]. There have been spontaneous walk-outs after accidents, and riots on prestigious construction sites of the crisis regime [94]. There are much fewer reports of struggles in the private manufacturing industry, and those mentioned are divided between struggles for higher pay and those against job cuts [95]. There are some struggles that directly relate to the impact of the crisis or resist further re-structuring [96]. Something that has posed and will increasingly pose a problem for workers in industry are lock-outs. In winter 2008/09 the lock-outs increased, e.g. at tyre makers MRF Ltd. and Apollo Ltd. (Kerala) [97] and at Bosch in Jaipur. In the past there have been frequent incidents where small strikes were provoked – with the complacency of the official unions or not – in order to legitimise a lock-out, in order to facilitate restructuring and cost cutting. Workers will have to find new ways of avoiding this trap.

The impact of the crisis hits hard on a generation of workers who regained their confidence in various struggles over the last few years, particularly those in the booming industries and new industrial clusters. In October 2008 casual workers at Hero Honda went on wildcat strike for better conditions and pay [98]; only a few days later all major two-wheeler manufacturers announced that sales will probably drop by 10 percent in 2009. We find a similar situation in a very different sector, the diamond industry in Surat and Saurashtra regions in Gujarat, where the industry depends on the work of roughly 700,000 workers and their families. The region witnessed a major strike wave in July 2008 with
workers demanding a 20 percent wage increase. Diamond factories were pelted with street stones; security guards shot at protesting workers. This movement was then hit by the crisis. Undertaken after the onset of the recession in November 2008 a study comprising 1,000 diamond units in Surat revealed that over 600 have been shut down. In Amreli 60 percent of the total 1,500 units were said to be closed. On 20th of December workers gave an ultimatum of 10 days to the government to support laid off workers and their families and give a 20 percent electricity subsidy to the crisis stricken units – otherwise they would resort to strike action.

The actions of diamond workers continued despite the looming threat of work-time or even job cuts [99].

The tragic element of this crisis is that it has enforced in some parts what the workers’ struggles haven’t been able to – but on terms of capital: in the textile industries in Bangalore or the diamond polishing factories in Surat the working-week was reduced to five days and many units operate on eight-hours shifts. But this will be only a temporary situation before actual further job cuts take place. Currently workers’ wages are being cut and they are forced to sign that they will make up for the lost working-time in the future. In that sense two major questions arise: what happens to the sacked migrant workers, i.e. will they be able to stay in the industrial areas, will they have to go back to their respective villages and how will this affect the economically drained rural areas, of Orissa, UP, Bihar etc.? And will the crisis wash away the little gains of the boom – in terms of minor wage increases, but more importantly, in collective experience of struggle?

In the following we want to dare an optimistic outlook on the possibly unifying or at least reshaping impact of the crisis. We will focus on three terrains of the proletarian unrest which have been politically decisive over the past few years: the new industrial and urban clusters, the movements against destructive industrial projects and the battlefields of the rural proletariat.

The new urban and industrial clusters

During the 1990s various new industrial clusters developed – or older industrial areas were restructured by FDI inflow and new industries such as call centres. The industrial belt around Delhi (NOIDA, Faridabad, Gurgaon), Bangalore, Chennai, Pune became mass concentrations of a
very mixed new generation of industrial workers in the wider sense. They became a magnet for a migrant workforce; they became signs of future promises. In the industrial areas of Gurgaon textile export factories run next to car suppliers, next to mass call centres and IT office blocks, surrounded by slum settlements, serviced by masses of drivers, security guards, rickshaw wallahs. So far these different sections of the working-class – from proletarianised middle-class kids in the call centres to rural peasant-workers in the metal workshops – existed next to each other. The hundreds of employees of the call centre opposite the Hero Honda plant watched the factory occupation of temp workers, the arrival of the police, the mass gatherings on the premises in April 2006 – but their situation seemed too different to allow for more practical relations. The crisis hits all these sectors more or less at the same time; closures of call centres become more frequent, cutting of wages and certain services are common now. During the last few years the workers in these areas have seen the possible – the automatic embroidery machines, the data-highways, the world’s leading architecture, the tourism – and they have felt the real – the 12 hour shifts in the export units, the burn-out after night-shift, the contract work and slum evictions, the kidney trade [100]. They have learnt how to survive collectively, sharing sleeping rooms and resources, changing jobs, migrating back to the village for a while, returning and reconnecting with city-life. They have made experiences in struggle; they have made experience with the official politics and hierarchies [101]. If under the impact of the crisis the betrayed hopes of a lost academic call centre generation, the productive mass experience of temp workers, and the vast informal networks of the service proletariat find points of fusion or repercussion the possible might become real.

The movements against destructive capitalist development

In recent years there have been various local rural movements against industrial or infrastructure projects including those against: the Narmada dam; the Posco steel plant and mining in Sundergarh district in Orissa; aluminium processing plants in Kashipur; a chemical industrial complex in Nandigram; the Tata car plant in Singur West Bengal and various SEZs in the country [102]. The backbone of these movements were local small peasant families whose land and livelihood was put at stake, either by land acquisition and displacement, or by the industries’ destructive effect
on the environment. The movement also criticised ‘the jobless growth’, saying that the number of jobs created by the industrial projects were far less than the number of displaced and destroyed livelihoods of peasant households [103]. The representatives of corporations and state played the job card, promising immediate jobs on construction sites and future investments of the supplying industries. They were able to tap into actual local divisions of land ownership; for example the landless Dalit labourers in the tribal areas of Kashipur had no land to defend and the wages paid on the industrial construction sites were said to be two to three times higher than those paid by local farmers. In Singur and Nandigram the ruling CP was also able to mobilise a Stalinist ideology of ‘progressive industrial development’ against the ‘rural backward petty peasantry’, partly on the bases that right-wing opposition parties voiced their support for the displaced people. When ideology wasn’t enough they mobilised their Stalinist para-police to quell the movement. In reaction to this state propaganda of ‘development for the people’, some of the lefty supporters retreated into a false rural romanticism and tribal identity politics. In that way – on the basis of actual divisions between land-holding peasantry / landless and urban / rural proletariat – these movements got caught in the crossfire of various political parties and local interests of different factions of the ruling class. The current crisis hits hard, particularly in these very same mining and steel processing areas; thousands of temp workers, drivers and cleaners were laid off in the second half of 2008. The higher prices for land compensation gained by the local movements and the additional costs caused by it are now intensified by the current slump in steel and car sales and the further development of several SEZ are put on hold. We will have to see whether the local struggles against destructive development, the uprisings of large communities of impoverished semi-proletarianised peasants like the one in Lalgarh in November 2008 [104], and the struggles of laid off workers in these semi-rural areas will be able to find moments of practical solidarity on the bases of their common proletarian existence [105]. The coming together of knowledge of rural movement organising – such as the mass decision-making assemblies during the Lalgarh uprising – and the workers’ experience of cooperating and struggling within the destructive mining and manufacturing machine could be a blow for capitalist industrialisation – and its flip-side, for rural
backwardness. A blow even more severe than the current crisis.

The battlefields of the rural poor

After the food riots in spring 2008 the think tanks of the ruling class – including the Food and Agriculture Organization of the UN – talked about the need to strengthen small peasantry and subsistence farming. We think that this new emphasis is not a humanitarian move towards food security and democratic small-scale development, but a strategic move to contain and individualise mass misery. Those who drop out the rat-race of the cash crop sector are supposed to survive on their own plot of land, backed up and controlled by micro-credit schemes and NGO management. Those who cannot be tied to their own soil are supposed to enrol in the labour intensive rural labour schemes, becoming dependent on political leaders of the village council or the ration shop regime [106]. The question is how to break out of either the misery of individual subsistence or the subjection to state welfare schemes. Struggles over land-ownership or distribution used to be bloody and those land-occupations we read about are often long drawn out and tend to get stuck in the division between ‘landless ex-farmers’ and ‘rural labourers’ [107]. More frequently we can read about struggles within the NREGS [108], which demonstrate that the rural poor do not see themselves as individual claimants, but as waged workers. The NREGS might turn into the opposite of what the state had intended. I.e. into an Indian wide generalisation of struggles along two main proletarian questions: how much do we earn, not based on an individual harvest or individual relation with the local land-holders, but in a power-relation with the state as the general manager of social surplus; and what kind of work do we have to do, why should it be labour-intensive and what kind of ‘infrastructure’ are we supposed to construct with our work. Their struggles will turn dry as long as the state manages to isolate them from those struggles in the material profit production of rural industry and agro-business, e.g. the struggles of plantation workers. In many cases the struggle of plantation workers has gone in a similar direction, cutting out the middle-men of individual plantation proprietors and addressing the state with their demands. We can only hope that these ‘proletarian’ struggles – through the massive waves of rural migration – will mix with or at least influence the experience of small farmers’ struggle and their attempts of, e.g. cooperative farming and permaculture.
We hope that the daily organisational forms of the people in struggle – their cooperation at work, their exchange as neighbours, their experience and mobility as migrants – will become the foundation of a wider movement. In order to understand and support this process we have to see beyond the existing representative forms of political or union organisations. We also hope that the miserable boom of the recent years and the current crisis will show up in new desires within the coming struggles: the boom has shown us the enormous social productivity and wealth; the crisis is just the boom’s other face, showing us that as long as this productivity and wealth has to express itself in money terms; in GDP growth, in share prices or plan targets, it will consequently be based on mass misery. The automated welding departments will automatically produce the 14-hours shifts in the slum workshops or rising numbers of unemployed workers and sick units [109]; the rise in cash-crop in some areas will be based on the general social demise of the rural poor.

If we want to be of help for these struggles and understand their full potentials we need a wider debate about actual changes in the daily conditions of the rural and urban proletariat. As a small step we attach a questionnaire for local use, as a platform for a wider exchange of experience.

Footnotes

[1] ‘Shining India’ was the slogan of the Hindu-nationalist BJP during the elections in 2004.

[2] We use this term in order to emphasise the non-monolithic character of the working class. We put together some material about the theoretical and historical debate on the notion of class composition: https://gurgaonworkersnews.wordpress.com/workers-theory/

[3] Crisis and workers’ response in India – Questionnaire

Did the financial crisis and credit squeeze affect the situation of indebted farmers or workers in your region, e.g. due to lack of funds or as small share holders? Did the state loan waivers (non-payment to official banks of farmers loans) etc. come into effect?

Has there been a considerable change in prices for main proletarian
goods (food, fuel, rent) during the last six months?

Have market developments (price, import, export) recently influenced the income of small farmers or artisans in your region?

Have there been any wage cuts, job cuts, factory closures, evictions etc.? In which sectors? How many people were affected?

What was the reaction of the workers?

How do people compensate for the fall in income? Are there new individual and collective forms of survival?

Have migrant workers been affected by the job cuts etc., do they return to their respective homes?

Has there been a change in state policy towards workers’ living standards, e.g. social security, work schemes, ration shops, minimum price policies?

Has there been a change in the repressive policies of the state, e.g. raids on ‘illegal settlements’, police or goondas against workers’ resistance?

Have there been changes in the official union policy, have there been mobilisations around the question of crisis?

Has there been a change in tensions or divisions within the proletarian population, e.g. between local population and migrants?

Have there been any other collective struggles, which might not be directly related to the crisis?

[5] Probably the most thorough analysis of the state of Indian economy was provided by the group Rupe, ‘Aspects of India’s Economy’
http://www.rupe-india.org/44/contents.html
http://www.rupe-india.org/36/contents.html

[6] After the 1991 crash, and a part of the IMF credit program, various legal reforms opened the Indian economy for foreign direct investment. The size of net capital flows to India increased from 7.1 billion US Dollars in 1990-91 to 108 billion during 2007/08. Gross capital inflows to India, as a percent of GDP, have increased five-fold from 7 percent in 1990-01 to 36.6 percent in 2007/08, in absolute numbers the foreign direct investment increased from 107 million US Dollars in 1990-01 to 35,000 million US Dollars in 2007/08.

[7] The IT and call centre sector accounts for about 30 percent of the total export, roughly 35 percent of the total FDI flow and 5.4 percent of the GDP in 2006, while directly employing only about 1.5 million people, which is less than 0.3 percent of the total working population. The sector’s exports depend to 70 percent on US companies.

[8] Between 1993 and 2005 cooperate taxes were cut by 10 percent to then 30 percent, custom duties as part of the GDP have fallen from 3.6 percent in 1990-01 to 1.8 percent in 2002-03. The gross tax – GDP ratio fell from 10.3 percent in 1991-92 to 8.2 percent in 2001-02. The state revenue from custom duties as a ratio of imports witnessed a decline from 47.8 percent in 1990-91 to 10 percent in 2006/07. For a more detailed view on tax cuts see:

[9] The revenue deficit (state borrowing for mere expenditure, not investment) has risen from 4.2 percent in 1990-01 to 6.7 percent in 2002-03.

[10] Between 1980 and 2001 the public development expenditures as a percentage of the GDP fell from 16 percent to 6 percent. The share of state’s capital expenditure (infrastructure, military etc.) declined from 25.7 percent in 1990-08 to 17.0 percent in 2004-07 and under 10 percent in 2007/08.

[11] About 90 percent of all private property is bought with loans, the
same is true for purchases like cars.

[12] According to official statistics the industrial growth was much smaller than during previous decades of mainly ‘domestic industrialisation’ (agricultural machinery, chemical, textile and steel industry). This might also be due to the tendency towards casualisation: a lot of industrial employment today is ‘off the records’ while during the 1970s and 1980s many workers stood on official wage lists who actually were not employed (or paid).

[13] For a detailed summary of the lock-out and further development at Maruti Suzuki see GurgaonWorkersNews no.8 https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no8/

[14] In the industrial belt around Delhi permanent workers account for 10 to 30 percent of the total workforce, often assigned with supervising tasks.

[15] About 40 percent of the rural population is landless. The proportion of marginal peasants (defined as those owning less than 0.4 hectares) increased, in 1992 these marginal farmers accounted for 71 percent of the peasantry, owning 17 percent of the land. These households are only statistically ‘peasant families’; they actually depend on other sources of income. Only 35 percent of the average rural household’s income stems from agricultural activity, the rest on other kinds of waged work, small business or debts.

[16] A good account on how this process of proletarianisation takes place in the rural region of Gujarat is given by Jan Breman.

Jan Breman, “Industrial Labour in Post-Colonial India”
Jan Breman, “Footloose Labour – Working in India’s informal economy”

[18] In India ‘communalism’ mainly refers to tension between religious groups.

[19] Partly reinforced by the ‘positive discrimination’ policies since 1990, a kind of liberal flip-side of neo-liberalism, increasing the competition within certain ‘under-privileged’ communities by giving career chances to the best, betting on the productivity boost of upward-mobility.
The Faridabad and Gurgaon industrial zones have seen many cases where the official unions turn against strikes of temp workers, e.g. during the wildcat strike at automobile supplier Delphi at the beginning of 2007. https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no6/

GDP and State Expenditure

The following figures are taken from the Reserve Bank of India Report December 2008. We use the exchange rate of 30th of September 2007 (1 USD = 40Rs).

*** The Gross Domestic Product 2007 – 2008 in Crore (10,000,000) Indian Rupees

Gross Domestic Product at Factor Cost (at 1999-00 Prices): 31,22,862 (780 billion US Dollars)

GDP (at current prices): 43,03,654 (1076 billion US Dollars)

*** Sector contribution to GDP

Agriculture: 7,64,083 (191 billion US Dollars)
Mining: 1,18,711 (29.7 billion US Dollars)
Manufacturing: 7,05,103 (176 billion US Dollars)
Construction: 3,66,945 (91 billion US Dollars)
Finance, Real Estate, Business service: 6,14,067 (153.5 billion US Dollars)
Social and Personal Services 5,73,949 (143.5 billion US Dollars)
Trade, Hotels, Transport, Communication 10,85,467 (271.3 billion US Dollars)

*** State income April – September 2007

We doubled the amount for the US Dollars figures in order to get a rough notion of the annual figures.

Total Receipts: 317,892 (158 billion US Dollars)
Revenue Receipts: 197,956 (99 billion US Dollars)
Capital Receipts: 119,936 (60 billion US Dollars)
Fiscal Deficit 81,200 (40.6 billion US Dollars)
Gross Tax Revenue 223,491 (112 billion US Dollars)
Cooperate Tax 70,176 (35 billion US Dollars)
Income Tax 41,057 (20.5 billion US Dollars)
Custom Duties 48,098 (24 billion US Dollars)
Excise Duties 44,889 (22 billion US Dollars)
Tax Revenue (Net): 160,500 (80 billion US Dollars)

*** State Expenditure April – September 2007
Total Expenditure: 349,081 (174 billion US Dollars)
1. Revenue Expenditure:
   a) Non-Plan Revenue Expenditure: 229,484 (115 billion US Dollars)
   Interest Payments: 86,061 (43 billion US Dollars)
   Major Subsidies: 54,916 (27.5 billion US Dollars)
   Defence Revenue: 27,393 (14 billion US Dollars)
   Pension: 12,247 (6 billion US Dollars)
   b) Plan Revenue Expenditure: 93,727 (47 billion US Dollars)
   Social Services: 19,077 (9.5 billion US Dollars)
   Grants to states: 33,671 (17 billion US Dollars)
   Other Economic Services: 40,916 (20.5 billion US Dollars)
   (as part of plan expenditure/economic services)
   Dept of Rural Development 24,577 (12 billion US Dollars)
2. Capital Expenditure: 25,870 (13 billion US Dollars)
   Loans: 5,167 (2.6 billion US Dollars)
   Non-Defence Capital Outlay: 12,316 (6.2 billion US Dollars)
   Defence Capital Outlay: 8,387 (4.2 billion US Dollars)

*** State Income and Expenditure as percent of GDP
Income
Gross tax revenue as percent of GDP: 12.5
Indirect tax as percent of GDP: 6
of which Customs 2.1
of which Excise 2.7
Expenditures
1. Non-plan: 10.7
   of which
   Interest Payment: 3.7
   Defence: 2.0
Total subsidy: 1.5
Food subsidy: 0.7
2. Plan expenditure: 4.0
3. Revenue Expenditure: 12.5
4. Capital expenditure: 2.6

[22] Ratio of India’s external debts to GDP declined from 38 percent in 1991-92 to 18.8 percent in 2007/08.

[23] After further liberalisation and legal reforms the share of external commercial borrowing (external credits of Indian companies) increased rapidly: from 2.5 billion US Dollars in 2005-06 to 22 billion US Dollars in 2007/08, meaning that external commercial borrowing accounted for 20.5 percent of the net capital flow to India.

[24] In 2007 there was a record influx of 17.4 billion US Dollars; during the second half of 2008 foreign investors sold 13 billion US Dollars worth of Indian shares. But it’s not only about the big investors. Similar to Pakistan, where after a slump angry small share holders rioted in front of the Karachi stock-market in summer 2008, there are many small share holders in India, many of them worked abroad, e.g. in Dubai, and will now have lost their savings.

[25] At the same time many farmers, who on average have to pay
interests ranging between 15 and 24 percent to these institutions and who have to borrow from unofficial money-lenders to be able to pay them, announced their bankruptcy. Shortly after the government had to announce another massive loan waiver.

[26] The drop in prices of, e.g. oil and steel explain the deflationary tendencies, which does not mean that the main area of proletarian consumption – food – became cheaper. While wholesale price inflation dropped from 12.9 to 8.4 percent between September and December, food inflation went up from 8.8 to 10.4 percent.

[27] The trade deficit of August 2008 is confirmed by the general trend: between April and October 2007 it was 45 billion, during the same period in 2008 it was 72 billion US Dollars.

[28] For example in November 2007 newspapers reported that DLF wants to get out of a contract to develop a 10-hectare IT SEZ in Noida.

[29] The real estate sector contributed 7.3 percent to the 2006/07 GDP directly, indirectly (used steel, cement etc.) 14 percent.

[03] The interest on home loans went up drastically from around 7.7 percent in 2004 to 12.7 percent end of November 2008. From 2005 till October 2008 the prime lending rate, e.g. for business investments, increased from 10.25 to 14 percent.

[31] In August 2008 private equity funds invested only 12 million US Dollars in the Indian real estate sector, compared to an average of 400 million in the preceding months.

[32] In October 2007 manufacturing output grew by 12.2 percent, on an annual level the average growth was around 10 percent, in October 2008 it declined by 0.4 percent.

[33] Following the first massive slump after the 10th of October the Reserve bank cut the cash reserve ratio several times. The cash reserve ratio is the ratio of the amount of money banks have to keep as a reserve with the central bank. The cut of this reserve resulted in a first liquidity wave of 13 billion US Dollars, a rather small amount compared to the liquidity input of other national economies. In addition the state released 5 billion US Dollars to banks who had to battle with non-payment of farming debts.
[34] In November the Reserve Bank of India cut the interest rate (repo rate) at which it lends short-term money to the commercial banks by 0.5 percent to then 7.5 percent; a further 1 percent cut followed in December. In October the biggest national money lender, the State Bank of India, cut the prime lending rate by 0.75 percent to then 13 percent. At that time commercial loans of private banks stood at around 16 percent. The state hoped that these rate cuts would trickle down to the commercial banks, resulting in fresh and cheaper credits for industries, the rural sector, the home owners. Actually most private banks announced that they are not able to pass on the cheaper credits due to current lack of funds.

[35] In mid October the Reserve Bank of India further liberalised the rules for external commercial borrowing (ECB) for Indian companies. So far Indian companies were allowed to take credits overseas, but there were quite strict rules, e.g. fixing a maturity period of seven years and prescribing that the credit money had to be parked overseas until actual investment takes place. This was an attempt to regulate money flow, in the current situation the state is forced to accept money inflow at any risk. At the end of November the central state announced that it would raise the open market borrowing cap for the federal state governments, meaning actually that it would outsource the risk to the states: get your money from the open market, the central government will not be able to bail you out. In November the government also eased the restrictions on interest rates paid by Indian banks to non-resident Indians. The state hopes that by increasing these rates the money outflow can be stopped.

[36] In mid October the finance ministry first doubled the limit for investment of Foreign Institutional Investors to 6 billion US Dollars and then announced plans to liberalise Foreign Direct Investments in retail and insurance sector. These sectors are known to attract quick capital flow. Foreign investment in retail is highly disputed, given the millions of small traders whose lively-hood would put at risk. Increased foreign investment in the local insurance sector is criticised as a further opening to global speculation.

[37] In November the government announced various cuts in export duty, e.g. a 15 percent cut for long steel products and iron ore and duty refunds for the cement industry. At the same time export bans for
various products were lifted. In December the Board of Excise and Customs (CBEC) announced that the state will lose 8.1 billion US Dollars (40,475 crore Rs) of indirect taxes due to duty cuts announced after the budget. Previous to the announced cuts excise collections fell by 8.7 percent in October 2008 compared to October 2007.

[38] In late October 2008 the state pushed a legal reform that simplifies mergers and acquisitions. The changes in the Companies Bill pay tribute to the future prospects of bankruptcies and resulting capital mergers.

[39] In December 2008 the World Bank announced a lending plan for India of about 14 Billion US Dollars. In January 2009 the Indian government announced to extend the additional state borrowing from the market to a total of 10 billion US Dollars (50,000 crore Rs).

[40] These land reforms officially curbed the maximum size of landholdings at a time when the zamindars increasingly turned towards other sources of accumulation anyway, e.g. trading or transport. Some insightful information can also be found in “Political Economy of Contemporary India: Some Comments on Partha Chatterjee’s theoretical framework”, by Dipankar Basu and Debarshi Das, Sanhati http://sanhati.com/front-page/1045/

[41] Indian-wide the share of a households’ harvest that is commodified is around 57 percent. In the states of the Green Revolution this share is much higher, up to 80 percent.

[42] Therefore food security is increasingly put at stake again. In the attempt to produce for the market the actual products move away from grain towards more markable products: which then appears as if there was hunger in India because the soil would not nourish the ‘masses of people’. It should be noted that the total area under foodgrains has been steadily declining in India: it was 116 million hectare in 1961 before the Green Revolution and it went up to 128 million hectares in 1990-91 but declined to 113 million hectares in 2002-03.

In the Hunger Report 2008 it says: “India has more people suffering hunger – a figure above 200 million – than any other country in the world. India scored worse than nearly 25 sub-Saharan African countries and all of South Asia, except Bangladesh”. Studies which did not take the price development as an indicator for poverty, but the calorie intake,
report that in rural India 75 percent of the rural population consumed less than 2,400 calories in 1999-2000, as against 56 percent in 1973-74.

http://www.cpiml.org/8th_congress/resolution_agrarian_crisis_and_the_way_out.html

[43] In 1983 the share of the agricultural sector as part of the GDP was 37 percent, in 2004-05 only 21 percent and in 2007/08 around 18 percent. In Punjab, the wheat and rice basket of India and one of the centres of the Green Revolution, the agriculture share of the state's GDP shrank from 54 percent in 1970 to 34 percent in 2005.

[44] “Indebtedness per farmer household comes to around Rs 22,000, and total farmer debt rises to around Rs 1.95 trillion. Interest payments on this figure (at an average interest rate of 21 percent) would be around Rs 410 billion. This comes to nearly 10 percent of agricultural GDP for 2002-03. Let us compare this figure of interest payments to investment in agriculture. Gross investment in agriculture in 2002-03 was Rs 33,5.08 billion, and net investment (i.e., net of depreciation of assets) was Rs 78.74 billion. Thus the figure of interest payments was larger than gross investment in agriculture, and more than five times net investment”. – Rupe (http://www.rupe-india.org/44/impasse.html).

[45] The share of agriculture as part of total official (!) employment decreased to 56.5 percent in 2004-05, which was then 257 million people out of a total rural population of about 800 million. In Punjab in 1983 about 82 percent of the total rural workforce worked in agriculture, this share came down to 67 percent in 2005. The Indian-wide population growth during that period was relatively higher, meaning that in absolute numbers more people depend on agriculture income.

[46] In 1961 the average size of land per household was 2.6 hectares in 1992 it was 1.3.

[47] The share of marginal peasants (owning less than 2 hectares) increased from 62 percent of rural landowners in 1971 to 71 percent in 1992. These 71 percent owned 17 percent of the land. The medium and big farmers account for 5 to 6 percent and own around 45 percent of the land. Around 40 percent of the rural population don’t own land at all.

[48] The average rural household covers less than half of its income,
some sources say a mere 35 percent, through agricultural activity.

[49] There are certain areas where rural agricultural labour increases rapidly, such as the sugar region of Gujarat. Here the full dependency on wages forced the Gujarat government in July 2008 to double the rates of minimum wages for the agricultural labourers from Rs 50 to 100 per day. The number of agriculture labourers that stood at a little over 180,000 in Gujarat in 1971 has shot up to a 510,000 as per the census conducted in 2001.

[50] The degree of household debt varies between different states, e.g. in Punjab 73 percent of all households are said to be in debt, which is average for the states with a high share of marketable crop. In Punjab in 2003 the average farmers debts were around 100,000 Rs, the average total income 280,000 Rs.

[51] The local agricultural sector in Punjab depends on an influx of about 300,000 to 600,000 workers each year. Migrants constitute 60 percent of the rural workforce. On average these migrants find 50 days of paid work per year in the Punjabi agriculture. In June 2008 local farmers complained about an acute labour shortage, pushing wage levels up by up to 100 percent. At the same time there are about 2.4 million ‘local’ people reported unemployed in rural Punjab.

http://epw.in/uploads/articles/13066.pdf

[53] With falling prices the cash-crop farming requires more land in order to be profitable. Different sources state that, e.g. for cotton farming, around 6 to 8 hectares are a necessary minimum for profitable production – around 80 percent of rural households own less than 2 hectares. In Punjab the numbers of marginal and small farmers is decreasing drastically, e.g. there were 300,000 marginal and 200,000 small farmers in Punjab in 1990-91. Ten years later these numbers decreased to 173,000 and 175,000 respectively. (EPW)

[54] There are about 8 million Punjabis working and living abroad, most of them sending money home.

[55] In Punjab in 1985-88 the average needed (wo)man/day input per hectare of rice was about 103 days. This has come down to 56 days in
Labour input for wheat per hectare declined from 55 days in 1970 to 20 days in 2004-05. (M. Raghavan, EPW June 2008)

[56] As already mentioned in Gujarat in July 2008 the state government doubled the minimum wage. Apart from the fact that minimum wages are rarely paid it shows that even the state has to acknowledge that due to the shrinking numbers of annual work the wage decreased below subsistence level.

[57] The extend of caste violence in these areas is still considerable, e.g. in Bihar in the time between 1982 and 1986 there were 16,000 registered cases of murder of landless people by gangs of the land-holding class/ caste, which also explains the rise in gang or guerrilla formation within these areas.

[58] Even in the tribal belt and local resisting tribal communities like in Kashipur the tribal agricultural production is largely based on individual family farming and rural labour of the landless Dalit population, less on commons and communal production.

This might still be different in other tribal areas like for example around Niyamgiri Hill in Orissa, where the struggle against Posco and other bauxite mining continues and where communities are less farming based and more dependent on what the forest provides.

[59] For an interesting report from Andhra Pradesh about the influence of the Maoist Peoples’ War Group and its links with local separatists see Singha Roy, “Peasant Movements in Post-Colonial India”

[60] In January 2009 the Chief Ministers of Andhra Pradesh, Orissa, Maharashtra, Jharkhand, Chhattisgarh, Bihar and West Bengal announced a new joint offensive against Naxalism. The degree of this low-intensity war-fare is described in a report on anti-Maoist violence in Chhattisgarh (http://www.pudr.org/index.php?option=com_docman&task=doc_details&Itemid=63&gid=1)

[61] Two examples of agro-businesses becoming more and more intertwined with global (financial) capital and equity firms are Blackstone
who in 2008 invested 50 million US Dollars in Hyderabad-based Nuziveedu seeds, which is one of the largest hybrid seeds companies in India, and Morgan Stanley’s investment in 2008 in castor oil maker Biotor Industries.

[62] According to official data, the NREGS was employing nearly 3 million workers on an average day in 2006/07 (when the act was in force in 200 districts). As the act is extended to the whole of rural India, this could rise to 10 million or so – the largest public works programme ever. The act guarantees a 100 days of paid work for one person per household. The official wages vary from state to state, ranging from 60 Rs per day to 130 Rs. The act prohibits the use of machinery. It is a labour intensive work-scheme to build infrastructure: roads, wells, canals etc.. The local village council functions as supervisor and receives the funds. The scheme is a battlefield: local activists, NGOs, Maoists fight for the proper implementations of the scheme, against the corruption of the (upper class and caste) village councils, for the full payment of wages, for providing the full amount of working-days. NREGS activists have been shot dead in this battle. There have been strikes. And NREGA is the state’s foot in the door of rural village class relations. Focusing on support structures at the panchayat (village council) and block level can actually help a working system that can allow panchayats to become an effective tier of local self-governance. The NREGS has been one of the biggest programmes to combat rural poverty. Its legal guarantees have radically altered the relationship of the poor with the state. quote from: Indian Express, 2 February 2008

[63] There have been cases of rioting, but more related to the political fight over the ration shops (state minimum price shops)

[64] For main agricultural products the state sets certain minimum prices and, at least officially, guarantees that the state will pay this price in case the traders would not. Actually a lot of peasants are forced to sell below this guaranteed price – also due to the unofficial credit system – or certain groups, like the sugar lobby, enforce legal decisions to lower the official minimum price.

[65] The total debt waiver bill is actually higher given that some single states announced additional schemes, e.g. the state of Maharashtra
considered a 5,000 crore (100 million US Dollars) top-up in November 2008, in order to cover more than central debt waiver campaign, which claimed to have covered 3.7 million farmers in Maharashtra. The additional spending of the Maharashtra government is ambitious given the official total state debt of 1,35 lakh crore RS (27 billion US Dollars). The loan waivers only refer to the official debts. Most of the debts of small farmers are unofficial, they cannot get bank loans, so they have to turn to money-lenders.

[66] There are no official figures yet, but some people did the following accounting work:

There are around 64.2 million rural labour households who have the legal right to apply for NREGA. If 80 percent actually apply this would mean 50 million people on the scheme. If we apply a minimum wage of 70 Rs per day the costs would amount to 35,000 crore Rs plus 15,000 crore RS for non-wage costs. Currently, in January 2009, there are strike going on, e.g. in Karnataka, to increase the minimum pay to 150 Rs, which is still less than the minimum reproduction level of a household. Actually newspapers reported at the end of December 2008 that 52.7 million NREGA accounts have been opened so far.

[68] India harvested about 5.3 million tonnes of cotton in 2008/09, the internal market is saturated at 4 million tonnes. China, which used to be the main cotton importer for India, reports an over-production of 1 million tonnes now entering the global market.

[69] In Uttar Pradesh the sugar mill associations announced in November 2008 that they will not be able to pay the minimum support price of 125 Rs per quintal, the harvest is delayed, the sugar mill owners hope to force either the state to jump in or the farmers to accept lower interim cane prices. Since September the price of global Thai Rice plunged from 700 US Dollars/tonne to around 450 US Dollars in December 2008. Between April and December 2008 the basmati price fell by 50 percent.

[70] The pressure to sell surplus product abroad and to allow cheaper
agricultural products to enter will increase. In mid-October the Indian state lifted the Maize export ban and considered lifting the rice and wheat export ban in early 2009. This will have different impacts on different agricultural product prices. Internal wheat prices might drop further. In the case of Thai rice the internal Indian price was about 300 US Dollars compared to 400 US Dollars on the international market in December 2008. An opening of the market would therefore result in an immediate export wave due to the price difference, which would slightly lower global prices and increase the internal consumer prices considerably.

[71] We put together some reports and interviews with call centre workers in Gurgaon and write short up-dates about the sector regularly: https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no1/

[72] Apart from call centre services the organised retail sector also had to face a massive slump, despite the hope of the Indian ruling class that it could attract major global players like Walmart etc.. For example in December 2008 Reliance Retail cut 600 support jobs. The sector itself is accused of leaving thousands of small traders redundant.

[73] A study on textile companies in Gurgaon reveal some of the major problems in terms of client orders etc. and gives an impression of the technological level in the advanced sections of the industry

https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no914/

[74] A longer report about working conditions in the export industry given by a young worker

https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no4/

[75] World crude steel production for the 66 countries reporting to the International Iron and Steel Institute (IISI) was 696 million tonnes in the first half of 2008. The Indian production stood at 27 million tonnes, while China produced 263.2 million tonnes.

[76] Apart from shares in European steel companies the major steel manufacturers of Indian origin have bought shares in various mining projects around the globe, which have obviously turned into risk capital, too. Tata Steel acquired stakes in Riversdale Mining, Mozambique, JSW Steel acquired mining assets in North Chile. Tata Power also acquired 30
percent in coal mining unit in Indonesia worth 1.3 billion US Dollars. Coal prices have fallen from their peak of 300 US Dollars per tonne in mid-2008 to about 200 US Dollars per tonne. Iron ore prices have also seen a sharp decrease from 130 US Dollars per tonne to about 65 US Dollars per tonne. Under the current scenario, these investments turn out to be bets that have gone wrong.

[77] In October 2008 Grasim Industries cut production of viscose staple fibre by 30 percent, due to slow-down in the textile industry and financial difficulties. At the same time Reliance shut down half of the polypropylene plant in Gujarat, due to decreasing demand in the packing industry. Reliance has a 70 percent share in this market. In India the plastic industry employs around 3.3 million people. Reliance also shut down five of its seven polyester and petrochemical units near Mumbai. Asian Paints temporarily shut down its plant in Gujarat in November 2008, mainly manufacturing paint for the car industry.

[78] A longer summary about the re-structuring at Escorts in Faridabad: https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no5

[79] Reports from young workers at first tier car plant manufacturers (Delphi, Anu Industries) in Gurgaon: https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no6/

[81] List of automobile companies and the respective crisis impact:

GM: Deferd capacity expansion at new Talegoan unit in Maharashtra. The plant would have a daily capacity of 300 passenger cars on two shifts, but the introduction of the second shift has been postponed. At the end of December GM announced extending the shutdown of both plants by two weeks. The two plants employ around 17,000 people.

TVS: Third largest two-wheeler manufacturer scales down investment plans. The sector expects a 10 percent dip in sales 2009.

Suzuki: Maruti Suzuki, the biggest passenger car manufacturer, witnessed a net profit slump of 37 percent in the second quarter of the 2008/09 fiscal year. Production cut in the Gurgaon plant by 5 percent, meaning 35,000 to 50,000 cars less per month. Maruti was the first company to announce price cuts after the government cut excise duties and central value-added tax in November. A passenger car (300,000 to 400,000 Rs)
would now cost around 12,000 Rs less.

Tata Motors: Reduces production of truck chassis from 8,000 to 5,000 per month and sacks 700 temporary workers and shut the Jamshedpur plant for several days in November. Contracts of 1,600 workers were not renewed at Pune plant. In the last quarter of 2008 sales of commercial vehicles were down 30 percent compared to previous years, passenger cars sales down by 6 percent. At the end of January 2009 the Jamshedpur car plant was closed again for five days.

Mahindra&Mahindra: Reports 17.8 percent sales decline in October 2008 compared to the previous year.

Hyundai: Second largest car manufacturer in India scales down sales target for 2008 from 600,000 to 515,000.

Ashok Leyland: Commercial vehicle manufacturer introduces three-day working week after sales have halved at the end of 2008.

Dunlop: Tyre maker shuts down plant in Sahagunj, near Kolkata and sacks all 1,100 workers.

Renault-Nissan: Scales down production in Chennai plant, now using one common instead of two separate assembly lines. Renault will run only one instead of two shifts. The sales of the ‘world car’ Logan was down by 80 percent in 2008, selling only 300 units. The start of production of Nissan trucks in a joint venture with Ahok Leyland will be postponed by half a year to mid-2011.

Toyota: Reports a 30 percent production cut due to sales declining by 40 percent at the end of 2008.

Honda: Defers expansion of plant in Rajasthan and cuts production in second plant in NOIDA, Delhi, in December 2008.

Hyundai: End of december Hyundai announces to lay off 2,000 temp workers. The total workforce is 8,400 out of which 3,300 have temp contracts.

[82] There are various reports on the working-conditions in these formerly public sectors. See for example
Shortly after these increasingly desperate criticisms of the central government’s budget policy, in January 2009 after some post-election quarrels, the state of Jharkhand was put under central ‘president rule’ – which might well be understood as a general hint to other states. The competition between states increases, another sign of it being the tax regime, for example states like Uttarakhand offering tax exemption for companies trying to attract or divert investment.

For example both Haryana and Bihar state governments assured a 7 percent Dearness Allowance to the state employees in January 2009 – which is just enough to cover the current inflation, but seems looks better in the light of the tendency of job and wage cuts in the wider class reality.

For example on 1st of December 2008, Sanjeeva Reddy (INTUC president) said in an interview with the Business Standard: “In the past few weeks we have met top leaders of the United Progressive Alliance (UPA) government in New Delhi on behalf of the employers. The employers wanted us to appeal to the government on their behalf for financial assistance and easy loans to bail them out of this current crisis”.

In October Jet Airlines announced the dismissal of 1,900 workers. We then were shown some symbolic protests by the unions, fiery speeches by various political representatives, a state intervention, a repenting general manager and the public reinstatement of the workers. At the end of October a planned strike by Air India employees was consequently called off. After this populist demonstration of the various leaders the actual restructuring continued behind the scene, e.g. shortly after the Jet Airline case, the biggest airline Air India announced that it would ask 15,000 employees to take unpaid leave for up to five years. In December 2008 media reported that Jet had sacked 1,000 people in September, which has never been disputed on the political arena. At the same time the government put the new ground handling policy for Indian airports back on the agenda, which would, once implemented, result in around 67,000 airline and airport workers losing their job.
Here we rely heavily on the official media. We used labourstart as a fairly comprehensive source for getting a first picture.

http://www.labourstart.org

For example: 400,000 government employees, including teachers and health workers, went on a day-long strike in Kashmir in November 2008; in West Bengal over 250,000 teachers, paramedical staff, contract workers, health workers, anganwadi sevikas, state secretariat employees and non-gazetted state government employees, have begun preparations for an indefinite strike in January 2009; 80 percent of the 50,000-strong village civil servants went on an indefinite strike demanding wage increase in Andhra Pradesh; more strikes or dharnas (manifestations) have been carried out by State Road Transport Corporation Employees Association (Karnataka), State Government employees (Gujarat), All-India State Bank Officers’ Federation (AISBOF), Reserve Bank of India officers and employees, All India Federation of University and College Teachers’ Organisations (AIFUCTO), Federation of Central Universities Teachers’ Associations, Southern Railway Mazdoor Union (SRMU), All India Postal Employees Union.

For example: City Municipal Daily-wage Employees’ Association (Kanataka), contract security guards of a Medical College Hospital (UP), Telecom Contract Workers’ Union (Tamil Nadu), State Anganwadi Employees’ Association (Karnataka), State Marketing Corporation Employees Union (Tamil Nadu).

For example: ‘The social forestry department (SFD) employees were taken aback when a group of 43 ‘van majoors’ (daily wage forest workers) confined them inside the office for around four hours to protest against non-payment of wages for the past four months. The workers are affiliated to the Maharashtra State Forest and Social Forestry Department Daily Wagers Sanghatana’. In Gujarat in November 2008 over 1,000 employees of the Gujarat State Road Transport Corporation (GSRTC), staged a dharna at GSRTC head office after its authorities failed to pay for working employees’ leave since 2005.

For example: Beedi workers laid siege to the office of the Assistant Commissioner of Labour demanding the reopening of branches of Bashai Beedi Company at Chinnapur, Khanapur, Kanteswar, Goopanpally and at a couple of other places in the town and payment of salary arrears.
(Andhra Pradesh); there have been strikes by cashew workers in Kerala for wage increases.

[93] For example: In October 2008 the Bollywood industry was crippled by a strike of casual technicians and a short while later an indefinite strike by thousands of workers in India’s thriving TV entertainment industry disrupted the broadcast of popular soaps in Winter 2008. The striking workers, who include technicians and assistants on set, are demanding a pay rise. They want a raise of up to 20 percent in their daily wages. At the moment some earn as little as 12 US Dollars a day. In winter 2008, drivers for call centres and information technology industries went on strike for better conditions in Karnataka.

[94] For example: Thousands of building workers destroyed company property after a fatal accident on Commonwealth Games construction site in Delhi. In Jamshedpur in December 2008 contract labourers of Adhunik Alloys & Power Limited closed the company gate and staged a dharna demanding compensation for the family of a worker who was killed on the premises.

[95] For example: In October 2008 temp workers at Hero Honda (Haryana) went on strike for higher pay, so did temp workers at Rashtriya Ispat Nigam Ltd in Andhra Pradesh in protest against the steel plant management’s refusal to hike the salary by Rs 1,000 a month as promised by the Union Steel Minister. Workers at car part supplier Bosch Ltd went on strike – and were locked out – in November in Rajasthan. KEC power equipment workers walked out in Nagpur. In Bangalore a section of garment workers planned a strike in November 2008, urging the State Government to fulfil their demands, including increase in minimum wages. A union rep stated We demand minimum wages to be fixed at Rs. 6,000 a month and there should be 10 percent increase annually in the wages. In West Bengal Dunlop workers blocked road and rail traffic in winter 2008, after the closure of the plant.

[96] For example: In October 2008, 400 building workers at IT park Quark City in Haryana protested against their sudden dismissals; the developer had been hit by the credit crunch. We have already mentioned the symbolic protests of the Jet Airline workers in October 2008. In October over 350 Bata employees across 70 outlets in Mumbai and Thane stopped work. The decision came a day after the management decided
to put permanent employees on temporary contracts, due to the prospect of a slump in sales. In December around 150,000 public sector insurance employees struck in protest against the government’s move to amend the Insurance Act and the General Insurance Business (Nationalisation) Act, which would allow FDI in the sector. In December 2008 ground-handling staff of Air India staged a demonstration at Bengaluru International Airport (BIA) in Devanahalli in protest against the Civil Aviation Ministry’s new policy on outsourcing ground-handling work, which is likely to come into force in January 2009.

[97] At the end of January 2009 after more than seven weeks the lock out at Apollo was still dragging on.

[98] For a short summary on the strike at Honda:
https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no914/

[99] For example news from 30th of December 2008: “Bhawani Gems, a diamond polishing unit at Ashwani Kumar Road in Varachha, was the scene of commotion when hundreds of jobless diamond workers assembled outside the unit and demanded jobs. The unit owner, Manji Patel, told the assembled crowd of 400 workers to come in January as he did not have a stock of rough diamonds. He, nevertheless, announced a relief kit comprising Rs 1,500 in cash and other household items for each diamond polisher who was working in his factory and at present jobless. But anger was writ large on the faces of the workers as they turned down the offer and said they will be content only with a job and not money. The news soon spread like wildfire”.

[100] Gurgaon became one of the international hubs for kidney trade; mainly migrant workers selling their kidneys to the rich.
https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no9/

[101] The strike and/or lock-out at Maruti in 2001, the police attack on the Honda HMSI workers in Gurgaon in 2005 and the workers’ unrest and consequent death of the factory manager of the Italian automobile parts manufacturer Graziano in NOIDA in 2008 were not only the most publicised clashes, but also bitter lessons for the local working class. For a short summary of the protest and the solidarity forum see:
https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-
A very good account on the mode of agricultural production, land-distribution and the movement against the mining project in Kashipur: People's Union for Democratic Rights – Halting the mining juggernaut (July 2005)

For example supporters of the struggle against the Singur plant reckon that the lively-hood of 15,000 people would have been destroyed by the car plant, which will create only 1,000 new jobs.

In November and December 2008, after a brutal police raid tens of thousands of impoverished ‘tribals’ set up road blockades and encircled police stations in the West Bengal district of Lalgarh. After a month of partly violent confrontations with CPI(M) cadres and state forces, the rank-and-file dominated movement won their demands for compensation and withdrawal of the police presence in the area. Interestingly enough at the same time when roads were blocked in Lalgarh, railroads were blocked in Kolkata. At the Dunlop plant management had issued an order of temporary closure at the Sahaganj factory. A large number of Dunlop workers and supporters attacked the management, forcing the officials to leave the factory premises. The irate workers organised blockades on the railway tracks and access roads. Workers were told to collect an ad hoc amount of Rs 2,000 every month till the company's present financial crisis was over and the normal work at the factory began. But, the workers refused to accept that and instead they approached the state government to intervene. A detailed account on the Lalgarh uprising can be found at:
That there are potentials for this kind of class movements is confirmed by a day-long strike called for by Maoists in eastern India in January 2009. The strike shut down factories in the three states of Jharkhand, Bihar and Orissa, and saw work at mines affected and highways blocked. The strike was called to protest against rising prices and what the rebels said were police atrocities against villagers.

Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to prove your residency. Catch 22 for many poor. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders are answerable to the local political leaders and in return they receive this privileged position, which often enables them to make money on the side.

For example a news item from the Times of India, December 2008: “The struggle of close to 5,000 landless tribals continues and reaches the 500 day mark at a rubber estate in Chengara (Kerala). The tribals formed a Sadhu Jana Vimocha Samyukta Vedi (SJVSV) and have been demanding land from the government. But 170 families of plantation workers who have lost their livelihood due to the occupation of the estate are opposing them and staging another protest.

For example: In Karnataka in January 2009 the Pranta Krishi Coolikarara Sangha (KPKCS) threatened the government with a strike, demanding a wages rise for workers engaged in works taken up under the National Rural Employment Guarantee Scheme (NREGS) from 83 Rs a day to 150 Rs. Some general sources about the struggle around the implementation of the NREGA

http://www.righttofoodindia.org/rtowork/ega_articles.html
http://sanhati.com/articles/908/
According to government figures of December 2008 there are currently 85,000 ‘sick units’ in India, meaning factories that are not fully utilised due to financial difficulties.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** I am not in a cage anymore

Auto-biographic story of a 49 years old driver about his experience as a working-class Sikh in Delhi since the 1970s, his experiences as a proletarian militant in a religious organisation, the shock of the anti-Sikh riots, his disillusionments and revelations...

The story was told to FMS and published in issue 247, January 2009. In FMS longer stories about the (daily) life of workers are published under
the heading “Aap-Ham kya-kya karte hain”, asking “So what are you-we doing”. The series emphases the need to talk about ourselves regaining a sense of importance of our experiences and make them heard – against the big noise of the public life of stars, leaders, cooperate identities...

*** Math and Wrath of Misery –

The workers’ reports tell us about average daily wages for workers in modern industries of about 100 Rs. This short note puts this wage in a context of daily expenditures. Followed by a short impression of distributing the Faridabad Majdoor Samaachaar in Gurgaon, Udyog Vihar.

*** Long list of short workers’ reports –

About wage and working conditions in Gurgaon factories. The reports are gathered/spread during the monthly distribution of ‘Faridabad Majdoor Samaachaar’ (Faridabad Workers’ News). The reports were gathered/spread between November 2008 and March 2009. We can see an impact of the economic slump, particularly in the automotive manufacturing sector, where shift hours have been reduced.

*** Proletarian Poverty and Common Wealth Games –
After a deadly work accident on the huge Common Wealth Games construction site in Delhi workers struck and destroyed company property. The accident was just the last straw – the general working-conditions are bad enough and the credit and profit squeezed construction companies (see short summary) have to pass the squeeze on to the workers. People’s Union for Democratic Rights has just published a report on the conditions on the site:

*** Another fatal factory fire –

On 1st of May 2009 the Lakhani shoe factory in Faridabad Sector-24 caught fire, six workers were killed, 30 more were injured severely. According to workers, a blast in the boiler next to the basement of the two-storey factory caused the fire. The police claim that the factory owner has disappeared.

2) Collective Action –

Reports on proletarian struggles in the area

*** Tecumseh Workers’ Report –

About re-structuring process and workers’ resistance at Tecumseh compressor manufacturing factory, formerly belonging to the multi-national Whirlpool.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Real Estate of Crisis in Gurgaon –

Short summary about current real estate crisis in Gurgaon. The gold rush is over, the makers of neo-liberal bubble/town Gurgaon leave behind concrete-steel skeletons, tomb-stones of their unfinished business.

*** Security Fears –

Private-Public Re-armament in Gurgaon. One of the main real estate developers DLF now ventures into the boom sector of crisis, profiting from the post-Mumbai-attack upper-middle-class paranoia: in Gurgaon DLF sets up a training camp for it’s Terra Force, a security company
based on low-paid labour of a migrant-peasant work-force.

4) About the Project –

Updates on Gurgaon Workers News

*** Help from some friends –

People in Delhi area who are up for helping with the newsletter, who have stories to share or who want to give a hand, heart and mind for distributing Faridabad Majdoor Samaachaar in the area, please get in touch.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Auto-biographic story of a 49 years old driver about his experience as a working-class Sikh in Delhi since the 1970s

The story was told to FMS and published in issue 247, January 2009. In FMS longer stories about the (daily) life of workers are published under the heading “Aap-Ham kya-kya karte hain”, asking “So what are you-we doing”. The series emphasises the need to talk about ourselves regaining a sense of importance of our experiences and make them heard – against the big noise of the public life of stars, leaders, cooperate identities...

“I get up at 5:30 in the morning. I wash and get ready, which takes till 6:30. At 7 my daughter leaves the house to study. My son studies trade in Ahmedabad. I talk to my wife, having gotten up at 4:30 am she goes to have a rest – I read a book. My relatives have subscribed to two newspaper, but although I take them inside I don't read them, there is so much bad news in them. At 8 o'clock I go and wash the car of my boss. I return, have breakfast and wait for the phone call from my boss. After 9:30 you already start to feel the tension of waiting for the phone call. Three days per week the boss is in the Delhi office, three days he is out of office. If he goes to the office then he wants to leave by 10:30 am. There I again I sit in the room for the drivers...
My parents got engaged at the frontier (Pakistan) and came here to Faridabad when they got married. My father and his associate ran sawing machines and a workshop – he drank a lot which saddened my mother. But I experienced no lack of anything. In the house there were neem and guava trees and grapes. My paternal grandmother raised goats and chicken. There was a lot of space to play...

In 1974 my father’s work and professional life came to an end. I was the oldest of his sons – when I was sixteen and a half years old I started working in a factory...

I stay in the office until the boss returns from Faridabad, normally at 7 o’clock in the evening. When the boss has to go on more distant trips by aeroplane I drop him at the airport at 5 or 5:30 pm and I accomplish other tasks for his family afterwards. If he goes by car then I have to drive for twelve hours and I return home after 15 hours of work. When I drive my brain falls into driving mode – if I would start thinking about other things there would be chaos. All I can concentrate on is to save me or other people from accidents. In 2001 it took me four hours to get from Faridabad to Chandigarh. Today he has a good and big car, the roads are wide and well maintained, there are so many fly-overs, nevertheless the same trip now takes me six hours, because of all the traffic and the many stop-and-goes. On the highways you go 120 to 150 kilometres per hour – if you don’t drive that fast the cars behind you would beep at you: drive at the side or drive fast. I have seen many accidents. Once I had a small crash – after a short while you drive at the same fast speed again. The boss has to travel fast – the meeting times are fixed.

When he is out of Delhi the boss stays in five star hotels. The room rent is 8 to 11,000 Rs per night, if he cannot get these rooms he also pays 14,000 Rs. I look for a 150 to 200 Rs room for the night. You have most trouble when the boss is in a discussion and the drivers have to wait in the car. The bosses are quite shrewd they say that they keep valuable stuff with them so that the drivers won’t leave the cars. The drivers laugh about such talk, but they are forced to do their job. When the coin drops on head, the boss wins, so does he when it drops tail. Once in a while when you have to sit alone in the car for three or four hours, what kind of things do come to your mind!

In 1977 I became a permanent worker at Gedor Hand Tools (a company
with headquarters in Germany) and I joined a religious organisation. After work I left the house at 5 in the evening, on the bicycle together with my friends from the organisation and I would come back at 10 or 11 at night. We read and taught Gurugranth and had religious debates. I was just about to return from Ropar, when the anti-Sikh riots in 1984 started. The Pipali bus stopped at half the way and returned to Ropar, where I stayed for 17 days. My little brother had to go to Patna for work when he was attacked in a train – he received 70 slashes. My fathers shop here in Faridabad was set on fire. Three special friends of mine lost their lives in Delhi. A relative was burnt alive in Delhi. On his way from Faridabad to Delhi the father of a friend was burnt alive at Tugalkabad station. Two of ten friends who arrived from Mumbai were killed at Mathura station. A friend who came from Delhi was caught and his hair cut. In the factory some guys said: “Go and throw the guy with the black turban into the furnace”. There was bitterness before, but the killings increased my hate towards the government and the Hindus. I became even more active in the religious organisation. I was married in 1987. Despite my wife and later the children I became more active. But ten years later things started to change... Now the thought of taking revenge does not cross my mind anymore. Revenge against whom? It is the question of a whole system. Having long hair or a shaved head – this is not of importance.

There was a lot going on in the place were I used to work, but at that time I did not spend much thoughts on this. In 1996 when the company stopped paying wages I did not go there anymore. With the support of my wife I tried out various kinds of work – for little money in return. I started fruit-sweet shops at two places. I supplied the tea-stalls with home-made sweets. Grocery stores. I transported rice onrickshaws and sold it in the area. I put up a drill machine in the house and did outsourced work for bigger work-shops with it – when my wife and me finished work worth 40 Rs we took break-fast – the children were little and for that while we could not give much time to the organisation. In 1999 I was told to start working for the organisation – 1,000 Rs would go to the organisation and 1,000 Rs would go to finance the work-shop of a guy who held a position within the organisation. I started to drive the school car of the organisation. While driving I also collected the dues for the organisation. I thought that I would serve the organisation, but everyone saw me as their servant. I had to do all work – it was a 24 hours
job. I had no time left for my family. Therefore I started driving for a boss in 2001.

I am a worker. This is something I have understood. I started to move away from the religious organisation. Now they call me every now and again, but I keep myself distant. I am not in a cage anymore, I now watch the sky.

If the boss stays in the Delhi office I return home at about 7:30 pm. I go to the bazaar with my wife and daughter. If I come back from a tour I am tired. I rest. I don’t go anywhere. You have to go and see your relatives. You have to go in bad or good times. It is wrong to stay in trading, this finishes love and joy and laughter within and between each other. Someone who becomes a trader laughs on one side and makes money on the other.

At 9 o’clock at night, I watch some TV after the meal and go to sleep at 11 o’clock. On Sundays I get up earlier than at the other days. I prepare the breakfast myself. I prepare the veggies for the meal myself. To cook, to eat and make food for other people I like a lot.

The workers’ reports tell us about average daily wages for workers in modern industries of about 100 Rs. This short note puts this wage in a context of daily expenditures. Followed by a short impression of distributing the Faridabad Majdoor Samaachaar in Gurgaon, Udyog Vihar.

In the following reports workers talk about the basic working conditions, the long working times, the meagre wages. In daily life these ‘economical’ conditions become instantly political: the feeling of physical exhaustion next to fast running modern machines, the pondering over each single Rupee on the background of one’s own experience of mass production of export and consumer goods, on the background of Gurgaon’s urban wealth. An industrial worker will get about 100 Rs daily wage. If you share the most basic 9 sqm room with two friends your daily rent will be around 20 Rs. If you have to travel to work by bus or auto it will cost you 10 Rs at least. 70 Rs left. If you cook yourself and you want basic, but nutritious food these 70 Rs will not take you very far. A kilo of rice can cost you 20 to 30 Rs easily. One kilo carrots may well be 30 Rs. If you reduce your diet to rice, lentils and the occasional vegetables and dairy product you might get by with 30 Rs, plus 100 to 150 Rs for gas each month. This is less than 40 Rs left for your day. How much will your train
ticket be to make a visit at home, which might be 1,000 km or further away – easily 500 to 1,500 Rs? How much might the doctor take or the medicine cost if you get ill? How much should you save and on what? A new pair of sandals is around 100 Rs, a new shirt not cheaper. Visiting a friend in Delhi would be 30 Rs for an hour bus drive. What about a treat? The smallest fresh fruit juice from the roadside hand-presses are around 15 Rs, a small packet of peanuts in the shop around 20 Rs. A beer is 50 Rs, the cheapest 10-pack of cigarettes 28 Rs – beyond the budget. And how to pay back one’s debts? Arriving in a new town requires expenses. A most basic mattress to sleep on can easily be 300 Rs, a plastic bucket to wash your clothes 60 to 70 Rs, a new 5 kg gas cylinder around 400 Rs... All this becomes even more difficult once you have children or other family members to take care of. Math of misery...

...Wrath of Misery

Since about one and a half years around 2,000 copies of Faridabad Majdoor Samaachaar get distributed each month in Gurgaon Udyog Vihar Phase 1, one of the various industrial areas in Gurgaon. Around 300 factories are based there. Here are some impressions from a morning of distributing the paper:

“Between 7 am and 9 am a constant stream of workers enter Udyog Vihar Phase 1, it is difficult to guess how many: may be 50,000, may be 100,000. Three people are not enough to distribute the newspaper. Although we stand passively at the road side, not offering the newspaper, merely showing it, the 2,000 copies are gone within less than an hour. A friend does not distribute the paper, he writes down what workers tell about their jobs. There is always a huge crowd of people around him, 20 – 30 people, many want to talk about their experiences. Most of them are very vocal, they talk about their personal conditions, but they soon talk about the conditions in general. One workers was sacked after a day of illness. Another one was beaten up after demanding to return his work documents. Many of them say: this social condition cannot go on any longer – everyone knows that everyone else is at their limit, both of their physical capacity and their patience. You can see and hear both, the enormous despair and anger – and a reflection of the social situation: how can we change this society? People recognize the friends from Faridabad Majdoor Samaachaar, they ask them when they will come next
time. They arrive with letters about their conditions and they want to see them printed. They come and ask for practical advice, often about legal matters. The three – four friends try to give some direct help, tell people to write an anonymous complain to the labour office or to meet a supportive legal advisor – but the acting is left to the workers themselves. We leave Udyog Vihar this morning with the certainty that there is social unrest in the making, and we wonder what will happen after the explosion, will it be an outburst of pent up violence, will there be a new form of collectivity within? The fact that people are keen talk about their situation to others gives hope”. Please get in touch if you want to give a hand, mind and heart for helping with the distribution.

About wage and working conditions in Gurgaon factories. The reports are gathered/spread during the monthly distribution of ‘Faridabad Majdoor Samaachaar’ (Faridabad Workers’ News). The reports were given between November 2008 and March 2009. We can see an impact of the economic slump, particularly in the automotive manufacturing sector, where shift hours have been reduced (see Logwell Forging and Mag Filter reports)

Alankar Creation Worker
(December 2008)

About 1,000 workers in the factory, situated on plot 410 in Udyog Vihar Phase 3 are forced to stay for over-time. Since season-time started the factory is locked at night and workers are not allowed to leave. You have to work 36 hours on stretch. They abuse you verbally and 25 to 30 hours worth of wage are cut forcefully each month.

http://www.alankarcreations.com/

Anand Nishikawa Worker
(November 2008)

In the factory, situated on plot 119 in Udyog Vihar Phase 1, more than 300 workers are employed – all hired through one single contractor. The minimum wage is paid and ESI and PF is given. There are two 12-hours shifts, but the over-time is paid at single, instead of double rate. It is rubber parts production for Maruti Suzuki. Each month one or two fingers get cut. The company does not fill in the accident report and sends the worker for treatment to the private Sethi hospital. A worker who got his hand cut did not get any compensation. Only in the mixing
department workers get gur (sugar molasses). The wages are always delayed – the October wage was paid on 24th of November.

(March 2009)

The company itself employs seven workers, 500 of us are hired through a contractor. We have worked in the factory for 12 months non-stop, but the documents say that we worked only ten. They do this since years. They don’t give you an attendance card, they just give you a number which they change every three months. They cut money for ESI and PF, but you won’t get neither. The helpers wage was 3,510 Rs till January, now it is 3,665 Rs.

http://www.anco.anbros.com/

Bharat International Worker

(March 2009)

The factory is situated on plot 189 in Udyog Vihar Phase 1. The company manufactures leather jackets. The documents of the skilled workers amongst the 300 workers hired through contractors show a wage of 14,000 to 15,000 Rs, actually workers are paid a daily wage 140 to 160 Rs. The work load is oppressing – 5 piece in 2 hours would be more than enough, but the target is 14 piece. Overtime is paid at single rate.

http://www.indianapparelonline.com/

Campari Export Worker

(February 2009)

The factory is situated on plot 517 in Udyog Vihar Phase 3. The shift times are from 9 am till 11 pm. Sometimes people have to stay till 4 am or 6 am. Around 150 to 175 hours over-time per month, paid at single rate. If you get ill from being overworked and you cannot turn up they will sack you. Eight workers who have been dismissed and not been paid their January wages were threatened – the company called the police. We have not seen the over-time payment of December and January yet, today is the 18th of February. Helpers are paid 90 Rs for an eight hours shift. Out of the 200 workers employed in the factory only 10 get ESI and PF.

Chintu Fashion Worker
The factory is situated on plot 295 in Udyog Vihar Phase 2. The helpers get neither ESI nor PF. The factory has been shifted from Delhi to Gurgaon two years ago, but the ESI card has not been given. A worker has been given a penalty of 500 Rs for consuming tobacco, he has been verbally abused and hit and was made walking around with a sign around his neck.

From the wages of the helpers 300 Rs is cut, allegedly for ESI and PF. When you arrive late at the factory they give you the sack – you won’t be paid your outstanding wages.

Condor Worker

The factory is situated on plot 792 in Udyog Vihar Phase 5. The monthly wage of the helpers is 2,500 the skilled workers get 3,500 Rs. Amongst 100 workers only 10 to 12 have ESI or PF. There is a lot of overtime, about 250 to 300 hours, paid at single rate. The managers verbally abuse workers.

Dhir International Worker

The factory is based on plot 299 in Udyog Vihar Phase 2. 500 workers are hired through three different contractors, the skilled tailors are paid piece rate, the helpers are paid 2,200 Rs, neither ESI nor PF is given. Currently workers employed through contractors work from 9 am till next day 4 am. There is no day off. If you take one day off, they will cut two days from your wage. If you refuse to stay for over-time they will abuse you, sometimes even hit you. The over-time is paid at single rate. If a helper would get 2,000 Rs based on single rate for over-time, the actual payment will be 1,500. 500 Rs are embezzled.

Workers have not been paid their December wages by 22th of January. The factory produces for GAP.

(March 2009)
The helpers hired through contractors haven't received their February wages of 2,500 Rs yet, today is the 28th of March. Helpers and workers in the finishing department are forced to stay at work from 9 am till 4 or 6 am. If you ask for the outstanding wages they made take away your gate pass or hit you.

Eastern Medikit Worker

(December/January 2008)

In the six factories in Udyog Vihar the casual workers have been paid their October wages as late as 25th of November, the overtime pay of October has not been paid as of 29th of November. We work on two 12-hours shifts. The casual workers are given bad canteen food during night-shifts. December wages have not paid to the 500 casual staff on 22nd of January.

(February 2009)

The 100 permanent workers in the factory on plot 292 in Udyog Vihar Phase 2 work on three 8-hours shift, the 250 casual workers on two 12-hours shifts. The over-time is paid at even less than single rate, 12 Rs per hour. The over-time of December and January has not been paid yet, on 18th of February. The work pressure is enormously high. In the STL department the 12-hour target is 20,000 blood bags. If you don’t meet the target you have to stay longer: 13-14-15 hours.

http://www.medikit.com

Evergreen International Worker

(November 2008)

In the factory situated on plot 756 in Udyog Vihar Phase 5 the 30 helpers hired through contractor get 2,500 Rs per month, the skilled workers 3,000 Rs. There is neither ESI nor PF. There are 100 hours monthly overtime, but they are paid at single rate. The October wages have just been paid on 20th of November.

Femme High-Fashion Garments Worker

(January 2009)

The factory is situated on plot 488 in Udyog Vihar Phase 3. The workers work on two 12 hours shifts, over-time is paid at single rate.
Gaurav International Worker
(December 2008)
The factory is situated on plot 208 in Udyog Vihar Phase 1. Workers are made to work from 9 am till 11:45 pm or 0:45 am. You are forced to do over-time – if you refuse you are sacked. Only the first two hours over-time are paid at double rate. Workers who work 15 hours on stretch are neither given tea nor money for getting food. There is verbal abuse. The other factory, plot 236 in Udyog Vihar Phase 1, employs 500 workers. Over-time used to be paid at double rate, now only the first two hours. To clients like GAP the company shows that all hours are paid double rate as per law. The doors and windows of the toilets are broken, at night there is no water.

(January 2009)
The general manager keeps the company cards of workers and forces them to stay longer for over-time.

http://www.tradekey.com/profile_view/uid/66647/GAURAV-INTERNATIONAL.htm

GOM Worker
(February 2009)
The factory is situated on plot 356 in Udyog Vihar Phase 2. The 30 workers hired through contractor get 2,800 Rs, neither ESI nor PF. Working-times are from 9 am till 8 pm, five or six times per month you have to stay till 1 am. January wages have not been paid yet, today is the 18th of February.

Grafti Export Worker
(November 2008)
The workers employed in the factory situated on plot 377 in Udyog Vihar Phase 2 are not given any gate passes – due to which workers are hassled by the police on the street when they leave the factory at 2 o’clock in the night. The company calls the time between 9:30 am and 8 pm “duty time”, the time after that is declared as overtime. The monthly wage for a helper, based on a 10.5 hours day is 3,586 Rs. On top of the 10.5 hours there is a monthly overtime of 150 to 175 hours. For a single hour “overtime” the company pays 16 RS. About 300 skilled workers in
production and finishing department get ESI and PF, amongst the thread cutters none of the workers get ESI or PF.

Gulati Export Worker
(February 2009)
The big factory is in Sarol Gaon, Sector 18. The 400 women workers who cut threads are paid 2,400 Rs per month, they don't get ESI or PF. The wages of November, December and January have not been paid yet, on 18th of February. The workers are employed by various contractors. The shift-time are from 9 am till 9:30 pm, the male workers are made to stay till 1 or 2 am. If they have taken on lots of work they call you to start at 8 am and also the women workers have to stay till 1 am – a car brings them back to their homes. The wage of the male helpers is between 2,400 and 2,800 Rs.

Instyle Worker
(February 2009)
The factory is situated on plot 378 in Udyog Vihar Phase 2. Normal working-time is a 12-hours shift, but workers are made to work 16 hours since the company took on a new order. They don’t care about the rouble of the workers. Sometimes the foremen (incharges) follow the workers in to the toilets, swearing at them.

Krishna Label Worker
(March 2009)
The factory is situated on plot 162 in Udog Vihar Phase 1. The ‘normal’ working times of the 2,000 workers are 9 hours – the company pays the minimum wage of 3,510 Rs, but this wage should be based on an 8 hours day. Over-time is paid at single instead of double rate. No ESI or PF.

http://company.indiatradepage.com/29282/KRISHNA_LABELS_PVTLTD/

Lara Export
(January 2009)
The factory is situated on plot 155 in Udyog Vihar Phase 1. 400 workers start working at 8:30 am and 20 days during the months they work till 2 am in the morning. The helpers hired through contractors in the finishing department get 2,500 Rs, neither ESI nor PF.
Logwell Worker

(December 2008)

The factory, situated on plot 116 in Udyog Vihar Phase 1, ran on two 12-hour shifts for the last 10 to 15 years, non-stop. But since 20th of November the day shift was reduced to 8 hours and the night-shift to 10 hours. The two hours over-time at night are not paid: instead the Saturday to Sunday night-shift is scrapped (the two hours should be paid double-rate, so the lost shift is a bad deal for the workers). The outstanding payment of 54 hours over-time accumulated till 20th of November was first promised for 12th of December, then for 15th of December, now on 23rd of December the management told us that we should give up hope of seeing this money at all. From 25th of December till 1st of January the factory is closed completely.

(March 2009)

Since February the factory runs on two 12-hours shifts again.

Mag Filter Worker

(December 2008)

The factory is situated on plot 88 in Udyog Vihar Phase 1. The moulding department runs two 12-hours shifts, the other departments run a 12-hours day-shift, but one or two days per week the workers have to stay throughout the whole night. There are 110 to 120 hours over-time each month, they are paid at single rate. The factory manufactures parts for Maruti Suzuki. Today, on 22nd of December the shifts in the moulding departments were reduced to 8 hours. The helpers are paid a wage of 3,000 Rs. The drinking water in the factory is dirty, so are the toilets.

http://magfiltersindia.com/

Mass Enterprise Worker

(February 2009)

In the factory situated on plot 370 in Udyog Vihar Phase 2 about 1,000 workers work from 9:30 am till 11 pm, sometimes till 2 am, sometimes till 6 am. There is no weekly day off. The over-time is paid at single rate. The 150 helpers hired through contractors (out of which 60 women who cut threads) are paid 2,200 Rs per month, they get neither ESI nor PF. Monthly about 10 to 20 hours of over-time ‘disappear’ from the wage.
From the tailors wage 500 Rs is cut, saying it is for ESI and PF – if you are sacked after three month of employment they would still not give you an ESI card or the PF money. From the skilled workers’ wage two or three days worth of wages ‘disappear’.

Modelama Worker
(December 2008)

In the factory, plot 105-106 in Udyog Vihar Phase 1, 150 tailors were employed on hourly wage basis. Today, on 23rd of December the company sacked 100 of them. Recently the company has hired 3,000 people – tailor, pressmen, all on piece rate. The shift times are from 9 am till 8:30 or 10 pm. One contractor hired 200 workers, none of them get ESI or PF. The thread cutting women workers get 2,300 to 2,400 Rs per month. The factory produces a lot of textile goods for GAP and Old Navy.

In the other Modelama factory on plot 200 in Udyog Vihar Phase 1 four contractors hired 200 tailors, all on piece rate. Every month workers do about 100 hours over-time, out of which the contractor cuts 40 hours for himself. The November wages have not been paid yet, today is the 23rd of December. The factory makes a lot of stuff for GAP, Runner, Home Finishing and other brands. The company has not paid the Dearness Allowance of January 2008 and July 2008 to the helpers yet. The latrines in the factory are dirty.

(February 2009)

The current working-times are from 9:30 am till 2 am. You accumulate about 150 hours of over-time, out of which only 50 are paid at double rate. Some work, which had been commissioned by a supervisor has been declared faulty by some ‘incharge’... as a result of which 15 workers have been sacked. In the sampling department there used to be 300 workers, now 50 of us are left. Those who are sacked are waiting and asking for their outstanding wages for two months – when you ask for money they won’t let you inside the factory and if you phone and ask for money they will say that the computer is defunct. They also won’t give you gratuity bonus, they say that it goes into a life insurance and that you will get the money later.

(March 2009)

In plant 5, Sector 4 in IMT Manesar 150 workers work on CNC embroidery
machines on two 12-hours shifts. They sack you when you want to go back to your home town. By 28th of March Modelama has not paid 125 hours of over-time for December and 17 days worth of wage plus 65 hours over-time for January. If you go to the factory they won’t let you in, they say that there won’t be any payment and they chase you away. Half of the workers inside don’t have ESI or PF.

Mod Syrup Worker
(March 2009)

The factory is situated on plot 558 in Udyog Vihar Phase 5, shift-times are from 9 am till 7:30 pm. Over-time is paid at single rate, neither ESI nor PF, although money is cut form workers’ wages.

Modern Lace Worker
(December 2008)

The factory is situated on plot 231 in Udyog Vihar Phase 1. The thread cutters get 2,500 to 2,600 Rs per month, no ESI, no PF, overtime is paid at single rate.

MY fashion Worker
(March 2009)

The factory is situated on plot 488 in Udyog Vihar Phase 3. The 3,000 workers employed in the factory work from 9 am till 9 pm, on 20 days of the month till 2 am. The 200 hours of over-time are paid at less than single rate, 12 Rs per hour. Money is cut for ESI and PF, but neither is given to the employees. There are 800 workers hired through contractors in the finishing department – sometimes people are sacked after two or three days.

Omega Design Worker
(March 2009)

The factory is situated on plot 863 in Udyog Vihar Phase 5. There are 300 workers hired through contractor. The company does not employ a single worker itself. We have to pay for ESI and PF, but we are neither given an ESI card nor the PF money.

http://www.trademart.in/OmegaDesignsGurgaon.htm

Orient Clothing Worker
The company runs factories in Khandsa, Sector 37, on plot number 294, 296, 298, 299, 436 and 437. In the factory on plot number 296 the helpers hired through contractors work from 9 am till 10 pm, so the contractor pays the monthly minimum wage of 3,510 Rs, but for 13 instead of 8 daily working hours. The people from the management take commission. The contractor also does not pay the correct wages to the skilled tailors, but if you complain, the bosses will threat you in return. The wages are always paid delayed, sometimes on the 15th, sometimes on the 20th of the month. The outstanding dearness allowance of January to June 2008 is not paid and forged signatures are used to prepare the files. When you are sacked it will take you two to three months in order to get your outstanding wages. Someone came for inspection once, but on that day all workers without a company card were sent on holiday. There is a lot of verbal abuse going on in the factory.

Pearl Global Worker

The company has stopped production in it’s factories, situated on plot 138 and 222 in Udyog Vihar Phase 1 and plot 870 in Udyog Vihar Phase 5. The production keeps on running in the factories in Narsinghpur, Khandsa and in the plants on plot 446 and 592 in Udyog Vihar Phase 5. All guards in Pearl Global factories are employed by the company itself. The security guards work on two 12-hour shifts, but in the company documents it says 8 hours – the overtime is not paid. The production workers get the first two hours overtime paid at double rate, after that single rate.

Premium Moulding and Pressing Worker

The workers hired through contractors working in the Pearl Global factory on plot 446 in Udyog Vihar Phase 5 are only issued a working hour card after ten to fifteen days. If they quit the job or are sacked before that they won’t see their outstanding wages.

Premium Moulding and Pressing Worker

The factory is situated on plot 185 in Udyog Vihar Phase 1. The factory
runs every day, but Sunday work is not seen as over-time. One shift starts at 8 am and finishes 6:30 pm, the other runs from 11 pm till 7 am. Over-time is paid with only 6.5 Rs per hour. Out of 300 workers only 100 get ESI and PF. A supervisor said that workers won’t be able to do anything about it, given that the managing director Gurpal Singh is a friend of the prime minister. The personnel manager threatens people who would inform the health and safety authority would be sacked. The latrines in the factory are dirty, some don’t have doors, others no catch.

http://www.alibab.com/member/pmpsteeringwheels/aboutus.html

Radnik Export Worker
(March 2009)

The factory is situated on plot 294 in Udyog Vihar Phase 2. Work starts at 9 am and finishes at 2 am. They give you 18 Rs for food. Every month 2 – 3 days are marked as unattended – a worker who has been at work every day was paid only 18 days. The company said that the computer was broken down and that the money will be paid, actually they did not. Neither ESI nor PF, although money is cut from wages for it.

http://www.radnik.org/

Rangi International
(November 2008)

The thread cutters in the factory, situated on plot 98 Udyog Vihar Phase 1, get 2,400 Rs per month. There is neither PF nor ESI. Even if they have the wages, they would not pay them: after a lot of demanding you get 100 to 200 Rs for your expenses. After September and October wages have not been paid on 27th of November, us 35 men and women in the thread cutting department took a day off on 28th of November. Today on 29th of November there is a board at the factory gate saying: “Thread Cutters Wanted”.

Richa and Company Worker
(December 2008)

The factory is on plot 193 in Udyog Vihar Phase 1. Working times are from 9 am till 10 pm. There is no weekly day off. If you take a day off, you are fired. There are 150 hours over-time per month. The managers in charge abuse you verbally.
Richa Global Worker  
(November 2008)

In the factory, plot 232 in Udyog Vihar Phase 1, those workers who have been transferred from the company factories in Kirtinagar and Delhi are pressured to quit the job. This year in March workers have been sent from Delhi to Gurgaon, the company does not provide transport facilities to these workers, neither did they get a wage increase to cover the additional costs. In result some of the workers from Delhi filed a complaint at the labour department and refused the transfer to Gurgaon. The complaint is still pending. Out of the permanent workers only 13 accepted to shift to Gurgaon. The management put pressure on them and made 10 of them signing their notice letters, while two women workers and one male worker keep on refusing to leave the job. These workers have to bear trouble like being denied access to the factory without being given notice. The management isolates them from the other workers, they are asked to achieve a higher production target, the management abuses them verbally.

(February 2009)

Recently a worker has fallen from the factory roof and died.

Ridhima Worker  
(March 2009)

The factory is situated on ploy 662 in Udyog Vihar Phase 5. The working-times are from 9 am till 8:30 pm, but we are forced to stay till 1 am. There are 200 workers employed, but no ESI, PF or attendance card. If you are sacked you have trouble to get your money. 20 days worth of wages are still outstanding, they always give me new dates, now they say that it will be paid on 31st of March 2009.

Rolex Auto Worker  
(November 2008)

In the factory, plot 303 in Udyog Vihar Phase 2, since August 2008 ESI and PF is being issued and the helpers’ wage was supposed to be increased from 2,400 Rs to 3,586 Rs. But, may be due to the bureaucratic procedures, we haven’t received our August wages yet. So far we have received only 2,000 Rs advances.
S&R Export Worker
(November 2008)
In the factory – plot 298 in Udyog Vihar Phase2 – it says on a board that the working times are from 9 am to 6 pm, actually people have to stay till 8 pm. You get one hour break for taking your meals. You get the minimum wage based on the 11 instead of 8 daily working hours. Instead from the first working day ESI and PF only come into effect after three months of employment. After leaving the job the workers won't get PF money. In the factory parts for Shisho are packaged. For the 500 workers who produce the steel stands there is only one tap for drinking water. After official end of shift you are forced to stay half an hour longer. There's a lot of verbal abuse going on.

(January 2009)
Since January the 30 minutes meal break and the 15 minutes tea break have been scrapped. During work-times they give you two breaks for going to the toilet, if you have to go more often they treat you badly. When the representatives of the clients are about to visit the factory the managers give us lessons in how to lie to them.

(February 2009)
The management closes the main gate in order to make people stay till 10 pm. Instead of giving an ill worker a day of the general manager told the supervisor to make him “work fast like a lightning”. On some days they switch off the punch machine for the hour-cards, so that two days per month are shown as days off. A personnel manager did not like this practice, but he was removed from his job.

Sargam Export Worker
(February 2009)
The factory is situated on plot 152 in Udyog Vihar Phase 1. The minimum wage is paid in the factory and over-time is paid at double rate. There is a lot of verbal abuse from the supervisors and ‘incharges’.

(March 2009)
Another factory is situated on plot 210 in Udyog Vihar Phase 1. Working-times are from 9 am till 2 am. Over-time is paid at double rate.
Shahi Export Worker
(January 2009)

The factory is situated in IP-1, Sector 28 and manufactures garments for GAP, Old Navy, Target, Spirit and Hugo Boss. When representatives of the clients come to the factory the management hands out gloves, masks and badges saying “trained in first aid”. The management hides the chemicals, the devices to remove stains, they also hide the register of worked hours and tell us to say that there is no over-time worked in the factory: this is when even the permanent workers are frequently made to work 24 hours shifts and people accumulate up to 250 hours of over-time per month. The production targets are always too high – in order to achieve it you won’t find time to drink tea or go to the toilet. In order to be able to go to the loo you have to get a token – there is one token for 150 workers. You have to swap your gate pass for this token – if you don’t do this they will not let you enter the factory for two days. In order to meet the target they let you stay two hours longer, but won’t pay this over-time. They won’t give you a day off even when your health is bad and for small things they make you to ask for forgiveness in written form – some workers start to cry. From all this work we get ill.

Spark Worker
(March 2009)

The factory is situated on plot 166 in Udyog Vihar Phase 1. Out of 1,000 workers may be 2 or 3 get ESI and PF. Work starts at 9 am and finishes at 2 am, sometimes at 5 am. 200 Rs is cut from the over-time each month, if you complain, they abuse you verbally.

Viva Global Worker
(November 2008)

The company situated on plot 413 in Udyog Vihar Phase 3 didn’t pay the obligatory bonus for Diwali (Indian bank holiday). When asked for it the management said that the company is at loss. Nevertheless, even if the company is at loss they have to pay one monthly wage worth of bonus, as per law. They also did not give a box of sweets for Diwali – the boss
said that the mother of the companies’ chairman had died. In the factory shift starts at 9:30 in the morning and ends at 9 or 10 in the night. During this time they don’t give you time for drinking tea. They don’t give you money for buying food. The boss had made it his law to take 100,000 to 150,000 of wages, he also ordered to come at 8:30 am instead of 9:30 am. The contractor takes a commission of the skilled tailors wages. If there is a lot of work the boss subcontracts work to workers on commission basis who are then termed “fabricators”, if there is less work he sacks them without paying them PF money. When inspectors come to the factory those workers without a company card are told to leave the factory with the promise that they will be paid for the day, actually the day’s wage is later on cut from the monthly payment.

http://www.vivaglobal.com/customers.html

Winter Wear Worker
(March 2009)

The factory is situated on plot 352 in Udyog Vihar Phase 2. There are 20 male and 10 female workers hired through contractor, cutting threads and checking the garments. Our monthly wage is 2,600 Rs. No ESI, no PF, over-time paid at single rate. In February the contractor made a runner and we were laid off. The wages for the 13 days worked in February we demand from the company, but they refuse to pay.

2) Collective Action –

Reports on proletarian struggles in the area

About re-structuring process and workers’ resistance at Tecumseh compressor manufacturing factory, formerly belonging to the multi-national Whirlpool.

The factory, situated at 38 milestone on Mathura Road manufactures compressors for refrigerators. Whirlpool took the factory over from Calvinator, and after sacking 2,500 workers in 1997 passed the compressor department on to Tekumseh. When there was still the other production plant in Industrial Area there were altogether 1,420 permanent workers. In 2000, after a lock-out and receiving permission from the government to shut down a certain department, the company sacked 500 permanent workers and shifted the whole production to the current location. 50 workers refused to sign the so-called “Voluntary
Retirement Scheme”, they were sent off to a company factory in Hyderabad. Then in 2004 another VRS was issued and 280 workers out of 900 were made redundant. Now there is yet another VRS running! On 1st of November the company put up a notice saying that if at least 150 workers would hand in their notice by 15th of November then a VRS would be put into effect. During this year the company had closed the lamination department, the wire winding department, the tool room... When management started to remove machines from the factory, the workers stopped them. After having come to an agreement with the labour department that “no job would be lost” the union told the workers to let the machines go. Between management and union existed a long-running deal. Over-qualified workers were put at the assembly line to put on / take off parts, they were constantly shifted from one place to the other. When off-season started all casual workers were sacked. And two months later VRS... During the first week the management did not put any pressure on workers. The number of workers who actually showed willingness to hand in their notice was very little. On 10th of November a flock of lawyers armed with a register entered the production department, names were mentioned and it was said that no worker aged over 50 would remain in the factory. When the bosses could not see any impact on 13th of November they started to threaten people. Hand in your notice, otherwise you will be shifted to Chennai, Hyderabad, Silvasa, Sileeguri or be suspended. On 15th of November the bosses stayed inside the factory till 9 pm: “Till 15th of November you can chose, after that you are at will of the company – everything is possible after that”. Despite all that the company did not manage to come anywhere close to the minimum of required notice letters. The bosses then extended their “offer” to the 17th of November, 10 am and left... After Tecmuseh took over the factory the number of permanent workers were reduced to a third and production numbers has increased four-fold. The situation regarding VRS in the Hyderabad factory is even worse for the company – by 14th of November only 9 workers had filled in the application for voluntary retirement.

3) According to Plan –

General information on the development of the region or on certain company policies
Real Estate companies like DLF and Unitech – the main makers of neoliberal model-town Gurgaon – are hit hard by the crisis. After 2005 money became easily available, when the government allowed foreign direct investment in real estate. In 2007, when the stock market was booming, many developers raised money from the ‘public’. DLF Ltd, the country’s largest developer, raised about $2 billion in June 2007 in what was then the largest-ever initial public offering in the country. By mid-2008 the party was over, real estate prices in Gurgaon fell by up to 40 per cent and real estate profit dropped. DLF reported a record 93 percent decline in fourth-quarter profit. Net income fell to 1.59 billion Rs (32 million USD) in the three months ended 31st of March 2009, from 21.8 billion Rs a year earlier. In March 2009 DLF announced a net debt of 13,000 crore Rs.

This situation results in companies cancelling ongoing construction projects. Unitech abandoned IT-SEZ in the Delhi industrial fringe, DLF has suspended construction work of a Mega-Mall in Gurgaon and of an IT-park in Mihan SEZ. “With workers withdrawn, a frame of steel bars and some concrete pillars are all that is seen on the vast area allotted to DLF India. A skeletal staff remains at the site office”. In March DLF announced that it will approach India Infrastructure Finance Company Ltd (IIFCL) to seek lower cost funds for the 742 crore Rs project of building 6.1 km of metro rail tracks in Gurgaon and Faridabad. DLF also has to struggle with irate upper-middle class buyers of flats in The New Tower Heights apartment block, given delays in construction and financial quarrels about re-funding – thin air in high towers nowadays.

Next issue: Young architects report about the future material collapse of Gurgaon real estate, given its weak foundations. Sandy soil, rapidly dropping ground water levels and proximity to earthquake-prone areas doesn’t allow high-rise building – which real estate companies consciously ignore.

Public-Private Re-armament in Gurgaon. Encircled by mass poverty and attacked in their Taj Hotels the paranoia of the upper class increases. Security is a booming business – both on private and state level. In Gurgaon there are thousands of security guards ‘protecting’ private and corporate property. Gurgaon authorities launch the set-up of thousand of CCTV cameras, all internet café owners have to install a camera and
officially they have to ask for proof of address of the customer. DLF, after neo-liberal town-making, now ventures into setting up a private police force. A short excerpt from the New York Times, 2nd of March 2009 about the matter:

“DLF-Terra Force sets up Security Guard Training Camp in Gurgaon – Security guards have long been a sleepy presence here, but a string of fatal attacks, culminating in the siege of three Mumbai hotels by terrorists last November, have created a demand for new and better trained guards, state-of-the-art equipment and guns for the guards and businessmen themselves. Capsi, an industry trade group, estimates that India's $2 billion private security sector will add a million employees this year, even as other industries lay off workers while the economy cools. Already, it employs about 5 million people, 1.3 million more than India's police and armed forces combined. Many guards were farm workers in small villages just a month ago. Through job fairs and local offices in rural states like Rajasthan, Bihar and Punjab, companies sign on thousands of young men at a time, put them through training camps, then send them into urban centers. Some companies, like the real estate giant have started their own private security forces. Terra Force will patrol DLF's thousands of Indian properties. Terra Force uses bomb-snooping dogs, night-vision goggles and I.B.M. surveillance systems and is importing instructors from the Israeli army and the United States Marine Corps. Still, much of the business revolves around training fresh recruits from rural areas of India in camps like one on the outskirts of Gurgaon, a slapdash boomtown city south of New Delhi. On a recent visit to the camp, located where Gurgaon's glass towers and malls peter out to low-slung buildings and open lots, a batch of young men in creased navy trousers stood at attention. Their superior barked an order and they saluted and yelled in unison “Good morning, sir” again and again”.

A security guard from ABS Security in Gurgaon told friends from Faridabad Majdoor Samaachaar that he works 12-hour night-shifts without days off since months now. Another security guard employed by Unique Security gets neither medical insurance cards nor PF. He is paid about 10 Rs per hour, that's around 16 cents. The state cannot rely on the dutifulness of low paid 12-hour-shift-tired proletarian security force. Adding to the various army bases around Gurgaon the Indian army announced in February 2009 to set up a Military Academy in Gurgaon:
“India will soon have a dedicated defence university on the patterns of the West Point Military Academy in the United States, a senior Indian Defense Ministry official told the The Hindu. The university would conduct post graduate courses for officers serving in the defence, paramilitary forces and civil services”.

Next issue: Struggle of former Group4 security workers at Delhi Airport.

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
HSIIDC
ITI
Jhuggi
Lakh (see Crore)
Lay off
Minimum Wage

Ration Card
SP
Staff
Trainees
VRS
Wages and Prices
Workers hired through contractors
AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are
promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:

- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors
Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from
whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

Daily life stories and reports from a workers’ perspective

*** Lakhani Shoes Fire, the Unknown Deads and a Riot –

Some reports from local workers indicate that the official number of fifteen dead workers at Lakhani Shoes is untrue, it could be as many as 100. In Gurgaon, Udyog Vihar Phase 1, less than a week after the Lakhani disaster another factory burnt down: Bhurji Supertech, a cooler manufacturing plant full of polystyrenes – officially no one came to harm. On the same day in Gujarat workers had enough of fatal accidents...
*** Rural-Urban Migration Reversed? –

Short introduction to the National Rural Guarantee Scheme (NREGS), reference to a new publication by ‘Perspectives’ on the Agrarian Crisis, followed by a poem on the rural plight. Finally a story of a factory worker who became unemployed in Gurgaon and Faridabad industrial areas, who decided to apply for a job with the National Rural Employment Guarantee Scheme (NREGS) ‘back home’ in the village, and who found out that nothing is guaranteed. Translated from Faridabad Majdoor Samaachaar issue 250.

*** One and a half years and a global crisis later… –

Rather subjective snap-shots about changes in and of Gurgaon, after a longer absence from the disaster-zone of progress. How did the urban land-scape convolute further, what happened to our old neighbour, who are the new friends we meet...

*** Short workers’ reports from Gurgaon industrial area –

Reports from workers collected during Faridabad Majdoor Samaachaar distribution in Gurgaon, May 2009. Workers are employed by following companies:

- Dhir International
- Food Gallery
- Laxmi Embroidery
- Orchid
- Polypack
- Rolex
- Spark
- Taurus Home Furnishing
- Viva Global

Reports on proletarian struggles in the area

*** Rebel Voices from Female Worker and Friends at Boni Polymers –

Woman Worker’s refusal to be victimised by the crisis in the automobile
sector. After having been sacked from work in an automobile parts manufacturing factory in Faridabad industrial area she and her friends fight back and they are fighting fit...

*** Impressions from demonstration for locked-out and jailed Musashi workers –

The fate of many traditionally lead workers’ struggles in the area: first locked out, then locked-up. On 11th of May 2009 around 400 people-most of them members of the official unions in Gurgaon, Manesar area – protested against the lock-out of Muasashi workers and against subsequent police repression. Musashi is a gear manufacturer for Honda HMSI. Since 50 days the workers hold a protest sit-in in front of the factory. Please drop a line of rage at: http://www.musashi.co.in

3) According to Plan –

General information on the development of the region or on certain company policies

*** Babylon will fall eventually: Shaky Grounds of Gurgaon High Rise Real Estate –

The real estate sector in Gurgaon is not only shaken in its money-form, the weak foundation of its high-rising concrete-steel-glass form corresponds to the thin base of its inflated share-holder value. Construction companies and real estate developers consciously ignore the shaky grounds of their Babylonian towers: falling water levels, crispy-sandy-moving soil and increasing earthquake dangers. Short chat with two architects.

*** The upper-class is revolting –

Thin air on the top. The first half of 2009 saw various protests of the middle class: students at a management college and parents at private schools agitating about high fees and other forms of tighter selection processes. Not that we can put much hope in these ‘revolting future managers’, but the protest shows the enormous pressure within the new formed ‘business-class’, aggravated by the crisis – a pressure which inevitably will be channelled into all kinds of political reactions and reactionary dynamics. Or not? Of course we support the struggle of students to be able to wear long hair and to hold hands...
4) About the Project –

Updates on Gurgaon Workers News

*** Delhi Film Screening –

We plan to screen a series of workers’ documentaries from various times and spaces. If you are interested in the screening or getting hold of the films (see list below), please get in touch.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

On 1st of May 2009 the Lakhani Shoes factory, plot 122 in Faridabad Sector 24 caught fire, the newspapers first wrote of six, then of ten, then of fifteen dead workers. Lakhani is said to be the country’s largest maker and exporter of canvas and vulcanised shoes, has two dozen units in the district. A younger worker who is employed in a neighbouring factory came to Faridabad Majdoor Library three days later. He said that it is more than likely that 50 – 100 or more workers have been killed. A boiler on the first floor exploded, the floor collapsed and buried many workers who were waiting for their over-time payment in the basement. He said that he saw at least 100 burnt bicycles outside the factory. He met a landlord in industrial village Mujesar who said that his three tenants, employed at Lakhani haven’t returned. He met an older woman whose son is still missing. Most of these workers were not officially employed, their names were not on the Lakhani pay-roll. Many of them were from Nepal and single, meaning that they were not immediately reported missing by their families. From the reported 38 workers who were brought to various hospitals – in Faridabad there is no hospital for severe burn treatment – only one worker had an official ESI health insurance number. The rest is unknown. Some people from NGO’s try to find out what has happened on this sad day.

Fire at Bhurji Supertech

Only five days later, on the 6th of May 2009, the sky over Gurgaon is black
with smoke – see photos on web-site. A factory in Udyog Vihar burnt
down: Bhurji Supertech, a cooler manufacturing plant and supplier for
Bajaj Electronics. The factory was full of polystyrenes – officially no one
came to harm. A friend from Faridabad says: “There are said to be
around 20,000 factories in Faridabad – and each one of them is a bomb”.

Enough is enough: On the same day when Bhurji Supertech was on fire a
worker in Mundra (Gujarat) died after a work accident in the Siracha
power plant, which is under construction by the building company Adani
Group. 500 workers started to burn company trucks and destroyed
offices. They said that the work-mate died due to improper maintenance
of the crane which moved suddenly when the worker was cleaning the
chimney. The police used tear-gas and gun-shots to stop the riot which
went on till the following day.

The National Rural Employment Guarantee Scheme (NREGS) is supposed
to guarantee rural population 100 days of paid work per family – a way to
control proletarian rural migration and to curb the worst outcomes of
peasantry’s social death: mass suicides, Maoism, insurrection. NREGS
jobs are labour intensive – use of certain machinery is ruled out by law –
and they are supposed to be for infrastructural development. Meaning
road-building, well-digging etc. with simplest tools. For further reading
about the NREGS see part on Rural Crisis in GurgaonWorkersNews no.16
and follow links.

If you want to read more about the rural crisis in India you should get
hold of a copy of ‘Harvesting Despair – Agrarian Crisis in India’, published
research and fieldwork on questions of land-distribution, agrarian
technology, rural financial streams. Unfortunately the political analysis is
rather narrow: instead of trying to understand the rural crisis / agrarian
revolution as something intrinsic to capitalist development in each and
every country ‘Perspective’ blame external forces – the US and developed
countries, the multinationals – for the rural misery, which necessarily
leads to a (Indian) state focussed view when it comes to the question of
solutions. To get hold of a copy:

—–
This harvest of hopes, my friend
Cut down
All these wilted plants
Don't leave them thirsty and sobbing
Tear down
These restless blossoms
Don't leave them weeping on the bough
This harvest of hopes my friend
Will go waste once again
All toil, of mornings and evenings
Will still again go in vain
In every nook and corner of the field
Feed again the manure of your blood
Yet again water the soil with your tears
Yet again agonize over the season to come
Agonize, yet again over the season to come
When we are to be uprooted once again
Once this yield is harvested we will be done
Till then we do what thus remain
Faiz Ahmed ‘Faiz’
(Translated by Perspectives)
—–

Story of a factory worker who became unemployed in Delhi industrial areas, who decided to apply for a job with the National Rural Employment Guarantee Scheme (NREGS) ‘back home’ in the village, and who found out that nothing is guaranteed. Told to and published in Faridabad Majdoor Samaachaar issue 250.

NREGS Worker
(March 2009)
I am from an artisan family from a village in Mathura district. I have an ITI qualification (two-three years of technical apprenticeship). I have done my internship. In order to find work I roamed Mathura, Agra, Ahmedabad, Gurgaon and Faridabad. I started work in a factory in Faridabad, but I was ‘given a break’ (kicked out in order to avoid having to give a permanent contract) after six months. After the lessons of having been unemployed for some time and the trouble it means, when I got unemployed again I was ready to apply for a job with the NREGS. The first work started in July 2008: digging earth out of a pond for the agriculture panchaayat (village council/authority). The second job was in August and September: digging earth out from an irrigation canal of the irrigation department. In total I worked for 21 days, the documents showed 22 days. The work was done by 35 workers, but the documents showed 50, the other 15 were sitting at home and faked attendance. A lot of earth moving work, all measured in meters – us 35 instead of 50 workers. No payment in November and December. They said that they will open a giro bank account for transferral. They took 20 to 50 Rs in order to open this account. When the first payment was due they kept the 200 Rs in this account. At the time of the second payment they also kept the 200 Rs “for keeping it in the account” – as some kind of fee. They called all of us to come to the bank at 8 am and made us wait till 3 pm. They told us to come back the next day, without having paid out the money. When we said that we won’t accept this they asked for 20 Rs from each of us for expenses. We then had to sign with our finger-print and money was given to the local temporary school teacher and the official from Gram Vikas (Agriculture Institution). From that money 800 was paid to us 35 and 400 to those who stayed at home. The same happened with the second payment, just that this time they asked for 50 Rs instead of 20 Rs for expenses. When we resisted they started to threaten us – “you will come here again and want to work, and then we will see”. Our pass book was kept with the guy from the bank, our job card was with the temp school teacher. We had been promised a daily wage of 100 Rs, we were actually paid 70 Rs and only after several months of hassle. In the meantime we all took time off from the NREGS work, so that when there was gardening work offered in January no worker in the village would lay their hands on it. The temp school teacher and the official from Gram Vikas gave us to understand that we should give money to the area, district and block officials,
because they have to drive around a lot on the motorcycles in order to
arrange things for us – which obviously cost money. In November –
December, when our wages were distributed, the temp school teacher
had received his wages from the government for ten months.

Back in the disaster-zone of progress after one and a half years – Delhi’s
satellite of awe. While walking through the area the brain blips back and
forth, having to fill memory gaps with new concrete, steel and glass.
More office space, more retail space – leaving less space. Some building
sites seem deserted or at least little work is done on them. The 5-Star
hotel at IFFCO Chowk seems unfinished business – dried up funds from
last year’s crunch?

The old devouring concrete snake. You have to pay now for driving on
the NH8 highway. There has been too much blood on the tarmac, they
have built two-three foot-crossings – it seems pro forma. Beyond Hero
Honda Chowk people still have to play Russian Roulette when crossing.
The newspapers report that there is still one fatal accident every ten days
– on a 30 km stretch. On 21st of April a 24 year old worker lost the deadly
game.

A second concrete snake ploughs through town now – the Metro line.
Consumer conveyor belt for the starving shopping malls. Million tons of
steel and concrete, 20-30 kilometre over-ground track, on 15 meters high
concrete pillars. You could think of German Autobahn construction or
Stalinist heavy infrastructure programs – building workers living in make-
shift huts on or next to the site. But no Gulag or forced labour necessary,
the rural crisis makes the best watchdog.

The Rajasthani family – goat shepards and metal artisans – has finally
disappeared. For twenty years they have lived on a spot on Mehrauli-
Gurgaon Marg – first in a bigger tribe, the they got surrounded by road
works and shopping malls. Three years ago they were still 20 people, last
year they had to leave – the space of their tents, goats, washing and play-
area is now a groomed-pathetic patch of grass in front of Vipul Mall. The
family now lives scattered all over the place, three younger men – skilled
blacksmiths – now sell ready-made matkas (earthen pots) Vishwakarma
Road. They live in make-shift huts at the road side. They are hassled by
‘big people’ from the adjoining apartment houses and malls.

Disappearance of the unofficial: during election time it turned out that
around 250,000 ‘nomadic’ people in Gurgaon area – most of them from Rajasthan – are not registered. They have lived in the local (slum) areas for 20 years or longer, but they couldn’t vote even if they wanted. The same is true for the thousands of ‘illegal’ Bangladeshi workers in Gurgaon.

Chakkarpur village. Still becoming more of an island of former-peasant land-lordism, scratch-a-living small shop-owners and service-proletarian dormitory for the surrounding upper-class fortresses. The local village temple got bigger – the local middle-strata pay their tributes to the Gods or Prosperity. Still very much a ‘Hindustani village’, but some Nigerian people have been seen walking around – big news. During election time the traders and peasants gathered once or twice for election speeches of various candidates. Very few, not more than a hundred, but representing the local elite. First experience of drunken open young men’s aggression during a Congress gathering. The temple got bigger and the beer-and-wine shops spread like mushrooms. Who drinks? Who can afford to drink? The internet cafes have CCTV now – the Mumbai attacks are used as an excuse for the surveillance re-armament out of wider social fear. The small shop-owners still talk about money a lot. Paying 3,000 Rs monthly rent for a garage-like shop or bike repair-shop, the shop’s stock hardly worth half of it. They sleep in the shop, but have a telly now, shackled to their business and status appearance. Watching TV in a small hardware shop – the trickle down effect of second-hand televisions in chai stalls, small shops, back-yard proletarian rooms is noticeable, so is the equipment of young proletarians with Chinese mobile phones – a tele-shop program is on: “English Guru”, an English course, the advert plays on the flute of non-english speakers feelings of inferiority, promising salvation and betterment through anglo-ism. More adverts: Mystical necklace on offer, against the ‘evil eye’, in order to avoid accidents and to make good business. The plastic ornament is sold for 2,400 Rs. Proletarians still cannot afford superstition.

The landlord’s parents – ex-farmers who cling on to the past – still snorkle the hukka and wash the buffalo early mornings – the last remnants of hundreds of years farmers traditions soon to be washed away. The landlord’s son himself has a brand new Hyundai and hardly gets his hands dirty. Over the last one and a half years the rent in the 20 – 30 back-yard rooms went up from 1,600 to 1,800 Rs for two people
sharing a room. Gas and transport doesn’t seem to have become more expensive, and food prices seem not much higher than 18 months ago. Though the last years’ moral price of chai has been broken at a chai stall in Udyog Vihar: 4 Rs instead of the usual 3 Rs. No Tea Party in sight though.

The fence between our backyard and the groomed garden of Sahara Appartments has been finished – it is five meters high. The old neighbours are still there in the backyard. There is still the old daily concern over water-supply, the arguments with the land-lord about when the water will be passed on from the tanks, the speculations about the daily electricity cuts. What has changed for the three women over the last one and a half years? They still sit in or in front of their family rooms 23 and a half hours a day. Some kids go to school now.

All neighbours are still there apart from Kamlesh. He used to work at Motherson Sumi, a car parts manufacturer, he is currently in the village – after having worked as a security guard like his brother. Tinku got a new job, as well. One and a half years ago he worked in a factory manufacturing break-systems for Suzuki – earning less than 3,000 Rs. Now he takes care of the stock in the business of a friend: they install CCTV and security systems. He has to do data entry, process orders. He has done a computer course for 8,000 Rs – a bargain, normally people pay 40,000 Rs or more. Basic Excel and Windows stuff. He now earns 5 – 6,000 Rs per month. People who have some resources and who manage to stick it out in Gurgaon. There are steps on the ladder.

Imran Khan, Bengali, he lives in Chakkarpur since eight years. He still cycles rickshaws, but he also owns ten – a new one will cost you about 9,000 Rs. Other rickshaw-drivers give Imran 30 Rs for rent, if they are lucky they make 150 Rs a day. Nazrul remembers Chakarpur when he arrived in 2001: “A jungle, man. And the now fat farmers were poor sods then, selling lassi. They became rich and they started to give Bengali people shit – for any reason”.

I meet an old friend by chance on a stroll near Maruti factory. Two years ago he used to sell watermelons. You could see that he wasn’t doing well, a small push-car full of watermelons worth less than 400 Rs, he was standing at the corner 12-14 hours a day. Our friendship ailed, because of the watermelon trade and my under-consumption. Today he works as
a packer in a textile export factory – he is in his late 40s – he seems happier and better fed. But our conversation is short – this time he is short of time, because work starts soon.

Samar still hangs out at the chai stall after call centre night-shifts. His accent got more American. He is a quality checker now, supervisor. A US process for a medical insurance. His wage increased by 85 per cent over the last two years. Some win, many lose. He looks tired though.

“Around 20 per cent of the migrant workers in the export industry have left Faridabad since October”, says a friend. A rare estimation about the actual impact of the crisis on the industrial working-class. The remaining mass of workers in the textile industry still work on 12-14-16-hours shifts – wages have not increased since the last one and a half years. The textile factories in Udyog Vihar still have signs out: tailors wanted. The automobile production experienced a slump in November, shift-times got reduced, people got kicked out – but now things seem ‘back on track, meaning 70-80-hours working-week track’. Maruti Suzuki didn't sack people, that’s what friends from Majdoor Ekta Manch Gurgan (Workers’ Unity Platform) say – their new office is opposite of the car plant. NGO-based, they want to organise a union amongst local textile workers – a new development in Gurgaon. A call centre worker, employed by Convergys in the Vipul complex, the company which displaced the Rajasthani artisans: “Work got cut down in the call centre sector, but not on a mass scale. Sapient sacked 500 people. But you notice the crisis. Companies scrap free meals and even more people are squeezed into the company cabs. Profit squeeze”. Young workers from West-Bengal, who worked and fought at Delphi do not live in their old place anymore. Have they returned? Moved within Gurgaon? The whole back-yard was buzzing with young guys one and a half years ago, now it seems deserted. Newspapers report that Delphi is about to sell their Gurgaon factory assets to the Mexican company Bienes Turgon. The young worker from Venus Electronics, a company manufacturing electronic switches for Hero Honda says that workforce has been reduced by a third during the last six months. Too small pieces for the bigger picture of the crisis impact – too many pieces when it comes to the individual impact on people’s life. Compared to one and a half years ago the ex-army security guards at Hero Honda seem much more jumpy and aggressive when facing people distributing dubious workers’ newspapers – let's hope they
have good reasons...

Reports from workers collected during Faridabad Majdoor Samaachaar distribution in Gurgaon, May 2009.

Dhir International Worker

The factory is situated on plot 299 in Udyog Vihar Phase 2. We work 170 to 180 hours over-time per month. There is a lot of embezzlement, often 100 hours get cut from the over-time, you lose 1,200 to 1,500 Rs per month. The company clock for example shows 11:45 pm while the computer for time-records says 11 pm. If you are a minute late, they cut an hour from your wage. Even when you are ill you are forced to keep on working. They threaten and beat you. The tailors have neither PF nor ESIU. I guess about 5,000 people work there, but I don't know the buyers (clients). The drinking water is bad, the latrines are dirty.

Food Gallery Worker

The factory is situated on plot 418 in Udyog Vihar Phase 4. 150 workers work on two 12-hours shifts, preparing meals and breakfast for factory and company canteens. No ESI or PF. For a 12-hours shift and a 26 days month you get between 2,000 and 3,500 Rs. The wages are paid delayed.

Laxmi Embroidery Worker

The factory is on plot B-35 in Udyog Vihar Phase 5. They run two 12-hours shifts, 26 days per month. For this working-time you get 2,200 Rs as a helper and 4,000 Rs as a skilled worker. No ESI, no PF, but verbal abuse.

Orchid Worker

The factory on plot 189 in Udyog Vihar Phase 1 employs around 3,000 to 4,000 workers. They work 250 to 300 hours over-time per month, but 20 – 50 hours get embezzled. Yes, they give you 15 Rs for food and at 8 pm some tea. The casual helpers get 2,800 Rs. The 70 female thread cutters are employed through contractor, they get 3,000 to 3,200 Rs. We produce garments for Charley and other clients. There are only five latrines for so many workers, they are dirty.

Polypack Worker

The company is situated on plot 194 in Udyog Vihar Phase 1. The factory management cuts ESI and PF from wages, but you won’t get ESI or the
fund money when you leave the job. The annual bonus wasn't paid either.

Rolex Worker

The factory situated on plot 24 in Sector 4, IMT Manesar runs a long shift, starting at 9 am, finishing at 2 am. Monthly you are forced to work 200 to 300 hours over-time. The payment is at single rate – and only 180 hours are paid, the rest remains unpaid. If you are two minutes late they abuse you verbally – and say that you can come back the next day, that they won’t let you in. If you take three days off per month they would kick you out. The general manager uses any opportunity to give people shit. The 150 workers directly hired by Rolex get ESI and PF – the 1,000 workers hired through contractor don’t. Their wages are paid delayed.

Spark Worker

The factory is situated on plot 166 in Udyog Vihar Phase 1. The March wages have not been paid yet, on 30th of April. If you arrive a minute late, they send you back home. There are 125 to 150 hours over-time each month, they are paid at single rate and delayed – the February over-time was paid on 28th of April. Each month 500 to 600 Rs get embezzled, if you complain the ‘incharge’ abuses or beats you. If you leave the job you won’t get paid the last 20 – 25 days of work. There is only one toilet for male and female workers. No ESI, no PF.

Taurus Home Furnishing Worker

In the factory – plot 418 in Udyog Vihar Phase 3 – the helpers get 2,400 Rs and the skilled workers 3,000 to 3,200 Rs per month. There are 300 workers, no one gets ESI or PF. If there is little work they send you home for eight – ten days. Two and a half months ago an inspector was to come – before his arrival we were sent home and the factory was shown as closed.

Viva Global Worker

The drinking water for the workers in the factory on plot 413 in Udyog Vihar Phase 3 is bad. If you ask for a day off they tell you to hand in your notice. During hiring process the female workers are downgraded by people who examine their work – they say that the women have no experience in tailoring work, despite the fact that they actually are experienced workers. The company does not pay the Dearness
Allowance. You won’t get a pay-slip, so it is difficult to tell how much you get for over-time. You get PF money cut from your wage, but no fund money when you leave the job. Such a factory should be locked up.

2) Collective Action –

Reports on proletarian struggles in the area

Woman Worker’s refusal to be victimised by the crisis in the automobile sector. After having been sacked from work in an automobile parts manufacturing factory in Faridabad industrial area she and her friends fight back. Boni Polymers runs four factories in Faridabad and Gurgaon.

Boni Polymers Worker

(December 2008)

The factory on plot 37 P in Sector-6 in Faridabad runs 360 out of 365 days. In the main department, where the moulding work is done, they run two 12-hours shift. In the other departments workers work on a single 12-hours shift which can be extended to 36-hours if necessary. To work 150 to 200 hours of over-time is normal and it is not unusual to work more. The over-time payment is even less than single-rate, around 12 to 13 Rs per hour. The factory manufactures rubber parts for Hero Honda, Yamaha, Maruti Suzuki, JBC, Tata Motor, Delphi, Svaraj Mazda, Mundal Showa and for export to Italy. In the factory there are 4 permanent workers, 100 casual workers, 400 workers hired through contractors and 125 workers who are called ‘staff’. The work-load and pressure is very high – meal breaks are often postponed. In each spot of the plant there are cameras. In the moulding department the temperature is 150 to 200 degrees Celsius and only one fan per four machines. There are 5 latrines for 500 workers. The drinking water is brackish. Coughing is common, the sand blasting department is a house full of illness. Hands are burnt, crushed, fingers cut on a regular level – and workers are made to write letters of apology afterwards. According to the official documents the factory is accident free... When the electricity panel caught fire the managing director Raj Bhatiya ordered to make a ritual fireplace inside the factory. The casual workers are continuously employed, but their documents show a break after six months and they are forced to fill in the form for claiming PF – as part of their ‘official end of employment’. The wage of 50 workers hired through
contractors is 2,500 to 3,000 Rs, no ESI, no PF, instead a lot of verbal abuse...

Then at beginning of November 2008 Boni Polymers started to lay off people. Every day two or three people were sacked. Then they closed the factory on two days of the week, Monday and Tuesday. After having kicked out 150 male workers the management started to have a go at the women workers. Two were sacked on 17th of December and four more were told that next Sunday will be your last working day. Despite this order one of the women came back to work on 24th of December. She was not let back in. Her brother also arrived, one manager then said that it is due to the market, that there is no work, that they cannot take her back on, but that they will call her once there is work to do. They would refuse to give this in written form: “You are not laid off, we will call you once there is work”. The brother also brought his children and they all sat down in front of the main gate and they sat down to stay. The management got nervous. They managed to push the brother aside, but the woman worker and the children remained seated in front of the gate. Manager: “Is this your father’s factory that you think you can enforce to work here?” Woman Worker: “Yes, it is my factory! We have built this factory with our blood and sweat!” The brother started to take pictures, the management people started hitting him and tried to snatch the camera. During the lunch break the workers came outside the factory. They started shouting slogans. The group of workers got bigger. The management went back inside the factory and called the police. “We won’t allow anyone to stir up trouble in our district”, said the policemen and took the woman worker and her brother inside the factory for having a talk with the management. The management then went to the labour department by car. Back at the factory – the official of the labour department arrived and told the woman worker to accept an additional monthly pay in order to settle the conflict. The woman worker refused and went back home. On 25th of December the woman worker returned to the factory together with her children and some male and female friends for support – she had written about her story on cardboard which they hold up. They sat down in front of the gate in protest. The management of this glittering factory got fairly nervous. The men were pushed away and the children, too, but the women stayed put. The management brought over a truck to try to hide the women behind it.
They abused them verbally and threatened them with jail. After the management did not succeed they called the cops. Then they called the labour department again. “She is not a company worker, but a contract worker”, were some of the statements. In the end the woman worker and her support accepted an additional payment of 11,000 Rs. On 29th of December the company came to the labour department with 6,000 Rs in cash and a check of 5,000 Rs and handed both over to the worker. The labour department and the company had engaged an arbitrator for the required paperwork.

After having heard the story of the rebel worker, the statement from the company website either reads like a sour joke or a call to turn our perverted ‘human capital’-collectivity into collective rebellion:

“Man power is the most crucial factor in the growth of an organization. The capability of the organization is actually the collective capability of its manpower. Bony Polymers boasts of a skilled workforce which is committed to take up any challenging work”.

http://www.bonypolymers.com/infrastructure.html

*** Impressions from demonstration for locked-out/up Musashi workers in Rewari, 11th of May 2009 –

The NH8 highway turned into a 70-80 kilometres long industrial corridor. The Maruti Suzuki factory and supplier park borders the highway in Gurgaon; then Hero Honda bicycle factory, then a stretch of international suppliers like Mahle or Delphi; the NH8 stretches further to the industrial area Manesar with the Honda HMSI plant situated at the Highway; further on towards Daruhera, where the second Hero Honda plant is located; then further on towards Rajasthan border area, where many metal parts manufacturing companies opened their plants.

Workers’ experiences circulate within this corridor, some experiences seem like repetitions, at least from a superficial point of view. In Juli 2005 Honda HMSI workers were locked out during a dispute about union recognition and then latthi charges – see Newsletter issue no.7. In October 2008 about 1,800 workers of Hero Honda’s Daruhera factory (motorbikes) were sacked. Reason for the dismissals – apart from the economic downturn – is the attempt to get permanent contracts for the
long-year temporary workers. Since then the workers have experienced various incidents of police repression. End of March 2009 several hundred Hero Honda workers were arrested on a protest march.

On 6th of April 2009 – after the suspension and dismissal of 40 union leaders – over 200 workers of the multi-national parts manufacturer Musashi were locked out. They have been asked to sign an individual undertaking ‘of good conduct’. This is basically an attempt of the company to prevent union demands, but more than that a move to create an excuse for the lock-out due to the workers’ refusal to sign it: the usual game. Musashi is located at Plot 33 – 35 and 46 – 48 in Sector 7, Industrial Growth Area in Bawal, Rewari. The company did not send the buses to fetch the workers for shift, instead hired new workers through contractors for keeping production running inside the factory. Musashi manufactures about 24,000 gears per day – for, amongst others, Honda HMSI. The locked-out workers started a protest sit-in in front of the factory. According to estimations of young permanent workers the production went down by 50 per cent. Musashi delivers the rest from its various other plants, some from Japan, some from Indonesia. Apart from the 200 permanent workers there were 200 workers hired through contractors employed in the plant, mainly in the assembly department, lots of them women workers. The young permanent workers said that about half of these workers still support the struggle, 30 per cent have left the scene and looked for a new job and 20 per cent still work in the factory together with apprentices, the middle management and the newly hired workers. Unionists in the Honda HMSI plant support the struggle, e.g. by going to demonstrations. They say that the production inside Honda HMSI is not affected by the lock-out at Musashi.

On 2nd of May the Musashi workers were attacked by the police with lathis (long batons) – around 15 were injured and over 50 were put in jail. Muslim workers were abused as “Pakistani terrorist” by the police. In order to protest against this attack a demonstration was called on 11th of May 2009 – when 51 workers were still in jail. The demonstration went according to plan: marching and speeches from union officials. The police stood on alert in riot gear, but did not intervene. By 20th of May all workers were released from jail.

Musashi permanent workers also said that the workload inside the
factory was enormously high, particularly in the assembly department; hardly any time to drink water or go to the toilet. Permanent workers would start as trainees and get around 2,800 Rs. After a year they would get a 200 Rs wage increase. After two years of being trainee – meaning full-time production worker – some are made permanent. After five years their wages are 5,000 Rs. Workers also told that Musashi trainees were sent to work at Honda HMSI for several months...

Since 50 days the workers hold a protest sit-in in front of the factory.

Please drop a line of rage at:

http://www.musashi.co.in

3) According to Plan –

General information on the development of the region or on certain company policies

The real estate sector in Gurgaon is not only shaken in its money-form, the weak foundation of its high-rising concrete-steel-glass form corresponds to the thin base of its inflated share-holder value. Construction companies and real estate developers consciously ignore the shaky grounds of their Babylonian towers...

Young architects working in Gurgaon: “There are various reasons why Gurgaon soil is not suitable for high rise building. First of all the ground itself. Gurgaon is built on one of the oldest mountain ranges, the Aravalli ranges. This ground is too weak to hold major concrete foundations. On top of that the rapidly falling water levels, about six metres within the last two years, cause shifts in consistency and actual sub-ground movements. The eradication of forest land in Gurgaon district accelerates the drying-up process: forested area has been reduced, from 4.6 percent in 1980 to a mere 1 per cent in 2004. (Statistical Abstracts of Haryana 1980 to 2004). If that wasn’t enough, in recent years Delhi area shifted from zone 4 to zone 6 in terms of earthquake risk areas, meaning that earthquakes are more likely to happen. There was a strong one two years ago. Builders and developers ignore this fact, the high-rise buildings are not planned according to earthquake safety norms. With the enormous amount of money flowing into real estate, they seem to be able to get away with it – if necessary with bribes“.
Thin air on the top. The first half of 2009 saw various protests of the middle class: students at a management college and parents at private schools agitating about high fees and other forms of tighter selection processes. Not that we can put much hope in these ‘revolting future managers’, but the protest shows the enormous pressure within the new formed ‘business-class’, aggravated by the crisis – a pressure which inevitably will be channelled into all kinds of political reactions and reactionary dynamics. Or not? Of course we support the struggle of students to be able to wear long hair and to hold hands and some comments by students on YouTube (obviously a rather dubious source) read like a liberating revolt:

“a revolt was inevitable and of course necessary. We will escape from this jail...”

“For the first time it felt like “College Life”... it was fun breaking the windows panes and whacking up the lawn...”

From newspaper reports:

At the beginning of February 2009 the Institute of Technology and Management (ITM) in Gurgaon had to close for several days due to student protests. Students complained that the management subjected them to ‘mental torture’ and heavy arbitrary fines for ‘misconduct’.

‘You have to pay Rs 20,000 even if you are one lecture short. Students have to pay parking charges every time they park their vehicles on college premises. There is a barber shop on the college premises, where the students having long hair are forcibly sent to get a haircut for Rs 100.’

Students alleged that they were made to pay heavy fines for things like holding hands, walking on lawns, running or talking loudly in the college corridors and other such things.

However, the college authorities said the students and certain outsiders had resorted to hooliganism and vandalised the college campus in the name of protest.
At the end of March 2009 parents blocked traffic in protest against a fee hike by private schools in Gurgaon. Parents have been demanding a revision of the school fee since January this year after most schools introduced a steep hike of 30-40 per cent. ‘During the economic meltdown when our salaries are being cut, it is no less than an atrocity on the parents, Some schools have even doubled the fee making it difficult for middle class parents to send their children to private schools.’ said Gaurav Sahoo, a parent who works in a call centre.

4) About the Project –

Updates on Gurgaon Workers News

We plan to screen a series of workers’ documentaries from various times and spaces. If you are interested in the screening or getting hold of the
films (see list below), please get in touch.

Film / Discussion – Night

1. The Heart of the Factory

After ‘The Take’ a more recent documentary on the occupied factory Zanon in Argentina and the struggle of the Zanon workers. The documentary rises important questions for the current times of crisis and factory closures: What is the relation between an occupied factory and the wider social movement? What is necessary to be able to maintain an occupation? When does ‘workers self-management” turn into ‘workers self-exploitation’?

2. The Last Firebrands

Documentary on workers struggle in the chemical hub of Porto Maghera in Italy in the 1970s. The workers struggle’s in Porto Maghera managed to attack the factory in its totality: as a place of exploitation and of destruction of bodies and the environment. The struggles also tried to spread from the factories into the proletarian living areas, rising issues such as rent or health. The documentary also describes the emergence of the Italian ‘Operaismo’, the re-discovery of a practical proletarian Marxism after the political decadence of the Italian CP.

3. China Blue / Taxi Sisters of Xian

Two documentaries on female urban / industrial work and life in China. A generation of women leaves the patriarchal background of their villages and is confronted with the tight social control of the factory and dormitory regime. How does gender change with wage relations and ‘enforced collectivity’ of the industrial world.

4. The Year of the Beaver

Documentary on the 1978 strike at Grunwick factory in England. The documentary is an artful historical document, it portrays continuity from Labour regime to Thatcherism, the long-standing struggle of mainly female migrant workers, their relation to the official British unions, the changes in production technology and consumer patterns.

5. Jari Mari

Documentary on slum production in Bombay – on the background of textile mill closures. What kind of subversive collectivities can arise from
the informal organisation of production and daily life in the urban
slums? What is the future of the global ‘slum cities’ in times of food price
speculation, small scale production, water scarcity – and is the ‘slum’
actually a social cohesion?

List of films:
Bostrobalikara / Garment Girls of Bangladesh
– Documentary on garment workers and their conditions in Bangladesh.
Strike / A flickering Flame
– Documentary on the Liverpool Dockers strike
Blind Shaft
– Chinese Movie on the background of mining workers misery
Gamo de Arena
Maquilapolis –
– Documentary on Mexican industrial border area (2007)
Mardi Gras / Made in China
– Another documentary of working conditions in Chinese export industry
Getting Home
– Chinese Movie about migrant workers daily life and adventures
Amandla
– The importance of music in the South African struggle against
Apartheid
Behind the Cables
– SEZ in the United States of America (2001)

Updated version of the Glossary: things that you always wanted to know,
but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.
BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee's Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.
Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:
Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon Workers' News no. 19

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Thermo Workers Power to Quit Work –

Short report by a worker who was employed on a site of the Rashtrya Taap Vidyut Nigam / NTCP (National Thermo-Electricity Corporation). The biggest contractor on site is the multi-national construction company Larson and Tubro.

*** Worker who works his machine in various textile export factories –

Short report from a worker who is shifted from factory to factory –
together with the special sewing machines he runs. The machines are owned by a contractor who gets orders from various textile export companies.

*** Short report by older daily wage worker drudging for Food Corporation of India since 30 years-

One of 30,000 daily workers employed by the public Bhartiya Khadya Nigam. For several years he has worked in a huge storage hall in Delhi industrial area.

*** Supply Chain Gang: Five short stories of workers manufacturing parts for Maruti Suzuki, Honda and Hero Honda in Gurgaon –

The workers are employed by Motherson Sumi, Denso, DM, Super Auto and Hightech Auto in Faridabad and Gurgaon industrial area. The parts they manufacture end up at the assembly lines of, amongst others, Maruti Suzuki, Honda HMSI and Hero Honda in Gurgaon and the German company Knorr Bremse.

2) Collective Action –

Reports on proletarian struggles in the area

*** Report on struggle of temp and casual workers at world’s biggest motor-bike factory Hero Honda in Dharuhera (Gurgaon/Manesar) –

The story and outcome of their struggle reminds us of many similar conflicts in the area’s recent past: angry casual and temp workers, a collective action, some tactical negotiations and repression from the company, the attempt to form a union, a mass lock-out and dismissals, hundreds of replaced workers hoping for a legal solution...

3) According to Plan –

General information on the development of the region or on certain company policies

*** The Gurgaon Model and a Murder –

Documentation of an older article on the legal adjustments which were undertaken in order to convert Gurgaon farm-land into real estate assets throughout the 1990s. It gives an idea of the collaboration between village and rural hierarchy, the local political class and (multi-national) real estate developers. The outcome of the sudden money inflow is
brutalisation...

*** Water Wars –

Short glimpse on the waterfront. Short summary of a newly published report on global water privatisation. Then a look at the local water crisis. A dyeing worker reports on how water-wastage in the dyeing industry in the Delhi industrial belt is covered by police and officials. A friend from Faridabad tells us how water gets to his slum-area – followed by a description of how water supply expresses social hierarchies in a Gurgaon back-yard.

4) About the Project –

Updates on Gurgaon Workers News

*** Workers’ Film Documentary about Proletarian Life and Struggles in Gurgaon: Help needed! –

A workers’ film documentary on life and struggles in Gurgaon and wider NCR area is in the making comprising many interviews with workers from different generations and sectors. Given that we either have mothers whose tongues did not make use of Hindi or English language or that we do not have regular access to computers we want to ask you for help with translating the Hindi-spoken words into English subtitles. We started with the rough work, but need help with the subtleties. If you want to give us a hand, please contact us!

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

Short report by worker who was employed on a site of the Rashtrya Taap Vidyut Nigam / NTCP (National Thermo-Electricity Corporation). The report was sent to Faridabad Majdoor Samaachaar and published in Hindi in FMS no.251, in May 2009.

“

We were 30 workers, all of us employed through two different contractors on the Uttar Pradesh plant of the NTCP. We were given gate passes for the period between 30th of January and 28th of April 2009. The
biggest contractor on the site is Larson and Tubro, we were hired through a smaller contractor named AIM Constructions. We had to fit a cable tray for the boiler at a height of 56 meters and also attach the conduct pipe. The supervisor gave us a little money for expenses three times and said that the wages would arrive soon. When wages were not paid on 25th of March we all quit work. We also complained to the official of the NTCP, but we haven't seen the money for the accomplished work yet – today is the 30th of April 2009”.

Larson and Tubro is an international construction company, which is also heavily involved in the Delhi Metro construction:

The story was published in Faridabad Majdoor Samaachaar no. 251, in May 2009. “The contractor from Tugalkabad has fifteen Kanzai Smoking machines. He sends these machines and workers to various textile factories to perform elastic sewing work. As a helper I get 80 Rs for an 8-hours shift. In the last four months I have worked in factories in NOIDA, Piraghari, Faridabad (Shahi Exports) and in Okhla Phase 2. The daily working hours vary between 12 and 16 hours – the over-time is paid at single rate. No ESI, no PF”.

*** Short report by older daily wage worker drudging for Food Corporation of India since 30 years-

In the depot situated in C-135, Okhla Phase 1, there are 138 daily wage workers employed by Food Corporation of India (FCI).

All over India there are 30,000 of us. All of started to work for FCI before January 1994, we have worked day in, day out since then, but we are still daily workers – none of us has a permanent contract. We load and unload 50 kilo sacks of rice and wheat – heave them up on piles – our knees and backs are done in and ache. There are a lot of accidents, too. The Bhartiya Khadya Nigam neither insures the daily workers nor does it care about medical treatment if the worker falls ill. There is a legal process pending at the National Tribunal in Mumbai. We are tired of the (union) leaders repetitive promises that there will be a decision anytime soon. We get a quarter of the wage the permanent workers get. I started working at FCI through a contractor, that was in 1979. Since 1994 I am on
daily wage work, The Sixth Pay Commission (which decides about wage increase for public workers) doesn’t have anything to do with us.

*** Supply Chain Gang: Five short stories of workers manufacturing parts for Honda and Hero Honda in Gurgaon –

The workers are employed by Motherson Sumi, Denso, DM, Super Auto and Hightech Auto in Faridabad and Gurgaon industrial area. The parts they manufacture end up at the assembly lines of, amongst others, Honda HMSI and Hero Honda in Gurgaon. The young temp workers in this industry are self-confident. We published reports about a series of wildcat strikes to enforce the minimum wage in GurgaonWorkers News no.9, also the struggle at Delphi in GurgaonWorkers News no.6. Some things have changed, e.g. the Delphi factory was closed in December 2008 and re-opened some 30 kilometers down the National Highway 8. Most of the 2,000 temp workers have lost their jobs.

Motherson Sumi Worker

In GurgaonWorkers News no.6 we already published a Motherson Sumi worker’s report. This worker had to leave the Gurgaon factory after six months of employment. He was offered a job in the Faridabad plant – he worked there for some time, then as a security guard, now he is back at home in his mountain village. The following report shows that not much has improved at Motherson Sumi.)

The factory is situated at Plot 21, Sector-18, Gurgaon. The main client of Motherson Sumi is Maruti Suzuki – the assembly plant is only two or three kilometers away from Motherson. We do wiring work – I have to cut around 9,000 cables per shift. You can achieve the target if the machine works well. If you don’t achieve the target, the supervisor tortures you verbally and you might have to work four hours longer. You will not get paid for these four hours. Out of the 2,000 casual workers about 1,100 are women, they do the harness wiring work at the assembly line. They only work two shifts a day, the machine departments work around the clock. Sometimes the supervisor hassles us more, he says that parts are needed urgently. In these moments more accidents happen. Motherson will only pay for one day treatment after an accident. You get some time training on the machines, but if you leave during the first 15 days of employment, these days will not be paid. Nearly three quarters of all people leave the job after two months. We get 3,800 Rs per month, for a
six day week. Sometimes we work Sundays, as well – but I refuse to work Sundays. After six months of employment they issue you a new company card, so that they won’t have to give you a permanent job. I come from a more or less middle-class family from Bihar. I am 23 years old. Till the age of 21 I didn’t work much, I played a lot of cricket. Then my father got ill and I had to support the family, I first went to Delhi and then to Gurgaon. The atmosphere in the factory is bad, also amongst the workers. People are rather selfish.

Denso Worker

The factory is situated on Surajpur-Dadri Road in NOIDA. The work is done at assembly lines, you have to stand upright throughout the day. The night-shift starts at 1am and is supposed to finish at 8 am, but we are often forced to work till 4:30 pm. After eight hours you are tired, but they make you stay longer – 125 hours of over-time each month, paid at double rate. They manufacture parts for Hero Honda, Yamaha, Suzuki Motorbikes and for Maruti Suzuki and other four-wheelers. The casuals, which the company calls temporaries, are hired for six months – there are 1,500 temps and they come from Bulandshahr, Kanpur, Agra, Mathura, Noida, they all have ITI qualification. The company runs ITI courses for the operators, but instead of having one year of learning period they have to do normal production work. The operators get 3,000 Rs the temps get 4,500 – if you take a day off in a month they cut 500 Rs from your wage. Day-shift starts at 8 am, you have to be inside the factory at 7:50, if you arrive at 7:51 you can go home – if they are eager for work the foreman will take you inside, but they cut half a day’s wage for the ‘delay’. They make you stay till 1:30 or 1:45 am, but will pay only till 1 am. If you work on the screw manufacturing machines you not only have to show your cards, but also give finger-prints – the guards also checks you and your belongings – both on the way in and out. There is always a huge crowd and lots of pushing and shoving. Most of the 2,500 permanant workers are locals, their wages are 15,000 to 20,000 Rs. Management and workers have a joint canteen.

DM Worker

The factory is situated in Sector 25. There are 2,000 workers working from 8:30 am till 11 pm or midnight. If you work 12 and a half hours a day, 30 days per month they will pay you 5,000 Rs. If they make you stay longer
after 9 pm at night you won't get paid for these hours. We run power presses, manufacturing parts for Honda and Hero Honda. They won't give you an ESI card and PF is a question of believing in god.

Super Auto Worker

The factory is on plot 80 in Sector 6. There are two 12-hours shifts, though the packing department only works day-shifts. Over-time is paid at single rate. We make parts for Yamaha, Honda, hero Honda.

Hightech Auto Worker

The factory on 4 Nehru Ground runs two 12-hours shifts, manufacturing parts for Hero Honda and Knorr Bremse. The wages of the helpers is 2,500 to 2,800 Rs. Out of 40 workers only 16 have ESI and PF and eight workers are between 15 and 16 years old. The drinking water is not ok and the latrines are dirty.

2) Collective Action –

Reports on proletarian struggles in the area

*** Report on struggle of temp and casual workers at world’s biggest motor-bike factory Hero Honda in Dharuhera (Gurgaon/Manesar) –

The following report was given by suspended Hero Honda workers. They were employed in the second Hero Honda factory, situated on the NH8 Highway, in about 30 kilometres distance from the Hero Honda Gurgaon plant. The story and outcome of their struggle reminds us of many similar conflicts in the area’s recent past: angry casual and temp workers, a collective action, some tactical negotiations and repression from the company, the attempt to form a union, a mass lock-out and dismissals, hundreds of replaced workers hoping for a legal solution...

The factory is situated at 69 Milestone on the NH8 highway. About 16,000 bikes are manufactured every day. In April 2008 about 1,400 permanent workers, 1,500 casual workers and 3,500 workers -hired through four to five different contractors – were employed in the plant. The wages and working conditions of these workers differed considerably. The permanent workers earned between 30,000 and 40,000 Rs including incentives and seniority bonus. The casual workers would earn between
5,000 and 6,000 Rs, the workers hired through contractors between 2,800 Rs and 4,800 Rs. Some of the workers hired through contractors worked in the factory for 5, 10 or 15 years. The workers hired through contractors doing canteen work received 3,500 Rs per month, but about 1,500 Rs were cut, allegedly for PF. While permanents got a 50 Rs voucher for the canteen per day, the other workers got only 5 Rs. Not only wages differed, also working times. The permanents would work on three 8-hour shifts, while the majority of casuals and temps would work on 16-hour shifts on a regular level. Over-time was paid less than single rate. While permanents often had supervisor positions, most of the production and assembly line workers were casuals and workers hired through contractors.

In order to improve their situation the casuals and workers hired through contractors asked to become members of the permanent workers union. The union refused. A superficial explanation could be that the majority of the work-force were non-permanent, so the existing union leadership might lose the next election when allowing everyone to participate. The more important reason is the deal between management and union to keep a small section of the work-force in a slightly better position and thereby separating it from the rest.

On 14th of April 2008 the company organised a cultural program for the workers and their families. Only permanent workers were allowed to attend. The anger amongst the rest of the workers grew. On 3rd of May 2008 all casuals and workers on the A-shift hired through contractors struck work inside the factory. The permanents did not join them, but were not able to keep up production. The B-shift joined the strikers. Production was stopped for two days. Police waited outside the factory. While the strike was a collective decision the negotiations were lead by a small group of workers. The workers who told us this story said that “these comrades are not with us anymore for some reason or other”. Management and this delegation of workers agreed on a deal which promised some improvements in the future. Workers accepted the deal and restarted work. The permanent workers union did not support the strike, but gave vague promises to accept casuals and workers hired through contractors as members in the future. In fact they again refused to let them take part in the union body election in May 2008. Room meetings and open meetings amongst casuals and workers hired through contractors
through contractors started. On 29th of June the Hero Honda Mazdoor Sangathan (Hero Honda Workers Union) was formed and an application for registration issued. The registration is still in process in July 2009. On 2nd of July 2008 union delegates handed over a general demand notice to the management. The management reacted by threatening individual workers, trying to prevent them becoming union members. Nevertheless 1,200 to 1,500 out of 5,000 workers joined the new union.

On 12th of October – at a point when international automobile industry was facing a sharp slump – the Hero Honda management announced a lock-out. All workers had to stay outside the factory. On 14th of October the permanent workers were allowed inside. Some casuals and workers hired through contractors started a sit-in protest in front of the factory. Negotiations between workers’ representatives, management and the labour commission took place. Workers agreed to lift the sit-in protest, management made promises to accept future negotiations with the workers’ representatives. The management started a selection process: some of the casuals and workers hired through contractors were let inside, others had to stay outside. In the end 1,200 workers remained outside the factory and Hero Honda hired 700 to 800 new workers. About 60 workers were suspended. Their protests and demonstrations continued. In July 2009 about 600 out of the original 1,200 workers still come to Sunday meetings, the other workers went back to their villages or found other jobs. The workers hope that once the union is registered and the pending demand notice is back on the negotiation table they will get back their jobs.

3) According to Plan –

General information on the development of the region or on certain company policies

Documentation of an older text on the legal adjustments which were undertaken in order to convert Gurgaon farm-land into real estate assets throughout the 1990s. The text forms part of a longer article by Amita Singh, published in 2004: “Deliberate Democracy and Electoral Fallacy: The Logic of Coexistence / A Comparative Study of Two Globalizing Cities in India”. The text is difficult to digest, due to many legal quotes, but we find it worth documenting. It gives an idea of the collaboration between village and rural hierarchy, the local political class and (multi-national)
real estate developers.

A Murder...

The sudden money inflow into the farmers’ communities and the decomposition of village structures lead to a classical ‘wild west’-mentality: increasing drug abuse amongst the young landlord generation, increasing brutalisation. On 26th of May 2009 the former farmers’ village Chakkarpur became a crime scene of such violence. After trying to extort money from a Bengali small shop owner two local ‘farmers’ sons’ killed the family father with two gun shots. The problem is systemic, as Gurgaon’s rich re-arm. The number of firearms licenses has tripled in the past two years. According to some estimates, up to 40 percent of households in Gurgaon have at least one firearm, it’s about five times the gun-owning rates of India’s biggest cities. Officially the gun possession is justified by rising crime rates, often the Bangla speaking proletarians are portrayed as criminals. The Chakkarpur murder questions this and the following article shows that law itself is relative and relatively adjustable to the rule of profit...

... the Gurgaon Model

To understand the shrinking deliberative power of panchayats (village councils elected by the registered village population) in Gurgaon, it is important to assess their status since the beginning of global marketization in the early 1990s. In the 1991 census, Gurgaon had 688 inhabited villages, which increased to 700 in the 2001 census because of the explosive increase of 44.64% in its population; but the number of so called “uninhabited villages” mentioned in the Director of Census Operations records fell from 42 in 1991 to 26 in 2001. This is reflected in the creation of a new town in Gurgaon district: the number of towns increased from 11 to 12 during this period. These so-called uninhabited villages were the grazing grounds of cattle- and sheep-rearing rural inhabitants, who gained little out of a global spread of business process outsourcing companies. Gurgaon being a district with a dominant rural population, the workforce largely arrived from cities outside Gurgaon. The massive housing and construction boom that followed took place on the land acquired from villages.

The 2001 census of Gurgaon shows rural and urban populations as 1,288,365 and 369,304 respectively, as compared to 913,386 and 135,884
in the 1991 census. The maximum increase of population has occurred in central Gurgaon town, where the urban population in 2001 shows a substantial rise to 249,403 of the total of 369,304. This part of Gurgaon, which forms the industrial region, is contiguous to Delhi and therefore is the hub of the multinational corporations’ expansion (Director of Census Operations 2004:36, 40, 51).

The District Town and Country Planner (TCP) claims that the controlled areas that fall at the rural-urban fringes are real centers of planning for further industrialization. In Gurgaon alone it comprises something like one third of the total land in the district, out of which only 9.5% of the areas are urban, thereby leaving more than 90% of the state’s area free from any of the controls of Acts enforced by the Government. There has been a substantial amount of infrastructure mismanagement, since the Municipal Committee and the panchayats are not obliged to function within this area and the TCP cannot undertake work without an officially declared plan for that area. They may more reasonably be termed as the “areas of diluted governance.” The land purchased within the controlled areas needs a change of land use (CLU) Certificate from the District TCP, which the land purchased outside the controlled areas does not require. Since the industrial townships have not been able to develop plots, these industries have started buying plots directly from the farmers and managing to obtain CLU certificates from the Directorate of Town and Country Planning. This process was guided by a colonial legal system defined under the Land Acquisition Act of 1894. In 1995, on 9 February, the government constituted a committee comprising the following officers as a process to decentralize the power hereby concentrated in the Divisional Commissioner’s office:

• Divisional Commissioner as the Chair,
• Deputy Commissioner as the Member Secretary,
• Representative of the Concerned Member Department, and
• District Revenue Officer as the concerned Member.

This also restricted the District Commissioner’s discretion to determine the market price of land, not on the basis of 5 years’ sale average but only on the basis of 1 year’s sale average. Section 5A of this New Land Acquisition Act of 1995 also enabled the landowner to refer to the court
under Sec. 18 of the Act. At the peak of this globalizing exercise in Gurgaon, another amendment was undertaken on 8 September 2003. Into Section 22 of the Punjab Scheduled Roads and Controlled Areas Restriction of Unregulated Development Act 1963, after clause (a), an amendment (aa) clause was added to increase the “abadi deh areas” (inhabited areas around the village) and reduce the controlled areas where numerous restrictions on construction activities apply. The explanation for the amendment given in the statement of objects and reasons by the TCP Minister of Haryana was the need to exempt construction activity in abadi deh areas.

Parallel to liberalizing the process of laws related to ceilings on agricultural land acquisition and disposal of surplus area 6 has also been a systemic restraining of the decision-making autonomy of local bodies. The 73rd Panchayat (Amendment) Act 1992 had given a constitutional status to panchayats and the Haryana Panchayati Raj Act 1994 had adopted this provision for better administration of rural areas. With the globalization of the market, certain amendments were made to the state act that raise questions about the democratic imperative of these local bodies. Three provisions may be mentioned here. First, the Act of 1994 says that “If the whole of the sabha area is included in a municipality or a cantonment, the Gram Panchayat shall cease to exist and the assets and liabilities of it shall vest in the municipality or cantonment as the case may be” (Part II, 7 [4]). Taking their cue from this, the developers constructed urban areas on village lands and thus were given the benefit of not having any taxation regime like that of cities. But the price for this anomaly is extremely high, as these villages are at the verge of extermination by real estate developers in business here, such as DLF City, Unitech City, Ansal City, or Ardee City. These areas, exempted from the restrictions imposed by the 1963 Act mentioned above, have not been included in the Municipal Council of Gurgaon for fear of losing a vote bank, since their inclusion into a municipality would mean their subjection to a taxation system on property and land transfer deeds. But besides this tax exemption, these residents of multinational corporation-led urban areas also become entitled to vote in panchayat elections without being physically residents of the villages, historically or emotionally. This is a total turnaround on the very idea of panchayats as a system of selfgoverning institutions for village communities, as
recognized by the Constitution of India (Article 243 G). The urban voters almost outnumber the rural communities living in these village areas, who have lost their land and occupations, as well as access to their community governance systems. Second is the series of amendments to the 1994 Act that have systematically weakened the checks and balances system embedded in the Act. Part II Art 8 (2b) of the Act, which provided for six to 20 panches (representatives) from wards in a panchayat area in the manner prescribed so that the despotism of the sarpanch (headman) could be restrained, has been omitted (vide Haryana Act No. 10 of 1999). This has abolished the power of the panches to call a special meeting with notice to the sarpanch and has also led to the Haryana Act No. 14 of 2003, in which the obligation upon the panchayats for having a circle supervisor from among the existing gram sachivs (village secretaries at the local body) to supervise the work of gram vikas sahayaks (village development volunteers) was substituted. The third concern is that such measures becoming common in India also raises questions of constitutional propriety. In a case pending in Haryana High Court against a major colonizer in this area, DLF Ltd., and a few other minor developers, it has been recognized that a clear violation of Articles 243X and 243W exists, read with Schedule 12, in which the developer was to undertake the responsibility of maintenance under agreement between DLF and the District TCP. The contesting Resident Welfare Association of urban settlers charges it as the “Biggest Land Scam in the Country.”

People’s awakening has led to the demise of the regime of former Chief Minister of the state, Om Prakash Chautala, and his sons in the last Assembly elections of 2004, who were instrumental in importing an uncontested rule of colonizers and land mafias in the district of Gurgaon (Amar Ujala 2003).

In this society you can see water-level social hierarchies: the degree of access and consumption becomes a measurement of your status. Not surprisingly industrial production gulps the biggest share, leaving a fair bit for golf course irrigation and the upper-middle-class water-coolers. The report below given by a textile worker illustrates the industrial wastage clearly. The little rest trickles down to the proletarian households and is privatised on the way, becoming a means of sustaining power-relations. They make the proletariat pay for their water consumption. Recent industry figures from India indicate that sales of
bottled water grew from 189 million USD in 2003 to 599 million USD in 2008 – a growth rate of 216 percent. For a recent study on commercialisation of water see:

http://www.polarisinstitute.org/a_new_battlefront_against_water_privatization_in_the_global_south

Autopin Jhuggi (Faridabad) is an alley of brick-huts squeezed in between factory walls and an open sewage canal. The settlement is formally illegal, but exists for about twenty years. The inhabitants are industrial workers and their families, about a hundred people live in the alley. For two decades there was no public water supply for this settlement. Nowadays the families obtain their water through various sources. A chronology of water.

a) It started with an illegal connection, a tap fitted into the main public water pipe-lines. A plumber employed by the public water cooperation would fit such a tap for a bribe. The workers would pay for the maintenance of the tap, a little amount every now and again, but the water itself is free. The problem is that water in these public pipelines gets mixed. Sometimes the water is so bad, that you cannot even use it for washing, sometimes it is suitable for washing, only sometimes – may be every two or three days – it is potable. There used to be long queues in front of these taps, arguments and sometimes fights. Mainly women queue up for taking water, sometimes men after coming home from work, at 3 or 4 am in the morning. The water place is a social place, sometimes for joking, sometimes for expressing the tensions within the settlement. The uncertainty of whether and when drinking water will arrive forced the workers to look for different sources.

b) An illegal borewell pump was installed, but two or three years ago, this pump would only supply yellowish water. The borewell was not deep enough and the groundwater in Faridabad industrial area is contaminated. The handpump is useless today.

c) Four or five years ago a worker in the slum alley dug a deeper illegal borewell. He sells the water for 150 Rs a month to other inhabitants – they can take as much water as they like and it is even delivered to their homes, but the water is not drinkable. About 15 to 20 families pay for this water. The worker has to pay bribes to the authorities. The borewell was installed when there was no borewell from the public water cooperation.
d) One year ago the public water cooperation installed a borewell not far from the settlement. There is water in the morning and evening. The queues in front of this borewell are not long, because it does not supply drinking water either.

e) If there is no drinking water supply from the illegal tap into the mains people have to source their water from more far away places. They put big cans and bottles on their cycles and go 1.5 or 2 kilometres to different water stations. Queues their can be long, people used to wait as early as 3 or 4 am for water.

d) These long queues got diffused – and, with the queues, the possible discontent and tension – by supply with drinking water from private and illegal tankers. The informal working class settlements of Delhi, Gurgaon, Faridabad highly depend on these tankers. An individual might own 20 to 30 of these tankers – often local people, ex-farmers, who found a new business line. The tankers are put behind tractors and driven around. People have to pay 2 or 3 or 4 Rs for a 30 litres can. The prices went up. People call these “companies” a water mafia, because they often source public water and then sell it. The supply is officially illegal, but a lot of companies and political parties and local politicians are engaged in it. For example the politician Ram Singh Netaji, who used to be a Congress member, who now is a candidate for the BSP. His slogan is “Free Water”, and he supplies it as part of his election campaign and for his local reputation. Other tankers have “Sonia Gandhi” written on them. Others are sponsored by companies or temples: it is a way to show populist engagement.

e) The most recent development is packaged water. It is packaged either in large 25 litre bottles or in little plastic 200 ml pouches for 1 Rs. Even in the slum settlement people buy this packaged water more often. The 1 Rs pouches are popular, because they are chilled. The big bottles are a way to avoid the long queues – so mainly workers with a higher income and/or no family members buy them. Still a minority.

So we can say that the sources of water got more diffused and somehow more hierarchical and commercial – but the market forces provide. The tankers have diffused the long queues, but made people dependent either on commercial groups or the populism of the local oligarchy. The public water cooperation can wash their hands of it: they are out of the...
fire-line. With the upper-middle class sourcing their drinking water increasingly from packaged water, the quality of the supply water deteriorated drastically. Now workers are split along income lines: some can afford bottled water, some can afford the 150 Rs for nearby water, others have to put up with lower qualities or spend more working-time in getting hold of water...

In Gurgaon we can see similar developments. The massive unofficial population growth is presented as the main reason for water shortage. There was a newspaper report in May 2009 that many areas of Gurgaon experience an acute lack of drinking water – tanks are used to supply people, but they have to pay for the water. Water supply is one of the main points of tension between landlords and proletarian tenants. For example, in our back-yard the ex-peasant landlord uses his power to decide when to open the roof-tank for water in order to interfere in the relations between his tenants. Every morning the same struggle: he checks who takes water first and who takes how much water from the single tap. He particularly shouts at the women: “Let the men have their bath first, they have to go to work. Don’t wash up the dishes now, let others take their water first” – extending his patriarchal role to his back-yard – including the occasional grope at one of the women. So the young men are first in the line. Then the social hierarchy decides who of the women can clean the dishes and wash the clothes first and for how long. For the pandit family the fact that they take longer time and more water to wash and clean seems a rather helpless half-psychotic ritual to sustain their status in the very modest environment of a back-yard compound. There is tension and discussion amongst the tenants every single day, only rarely extending to the question of whether the German shepherd dog or the buffalo or the car of the landlord deserves more water than their family – not mentioning whether the largest amount of water is to be sacrificed for industrial production. Those who work in the industry know where human and natural resources are wasted...

Globe Tex Worker

(FMS no.251, May 2009)

In the factory on Plot 2, 13/3 Mathura Road textiles are dyed around the clock, on two 12-hours shifts. In the company documents the night-shift doesn’t show and the day-shift is shown as eight hours. We work 30 days
per month, but the papers show a weekly day off. In the factory 65 workers are employed, but only eight have ESI cards or get PF. For the 12-hours day / 30 days working month we get 2500 to 3200 Rs – on the papers of the eight ‘official’ workers the minimum wage for operator guards is noted down. Besides the official papers they fabricate all kinds of unofficial documents. If you leave the job they don’t pay the outstanding wages of the last 15 – 20 working days. You have to deal with dangerous chemicals and liquids, but there are no safety measures, no gloves, no safety glasses. You get eye and skin problems.

In DLF Industrial Area there are 40 dyeing mills. Because of the pollution and falling water levels the residents welfare association of Sector 30 and 31 has filed a case at the court in Chandigarh in order to remove these factories from the area. In order to draw out the legal process and to keep the factories running the managing director of Color Fab collects 12,000 Rs per month from each of the 40 dyeing companies. The factories need a lot of water. They pretend to source all water requirements from the public supply, they also set-up big tanks, but most of the water is actually drawn from the ground-water through illegal bore-wells. The government officials know about this common practice. When the officials from the municipality, the labour department or the chief police arrive at the factories, they leave with 5 to 6000 Rs in hand.

4) About the Project –

Updates on Gurgaon Workers News

A workers’ film documentary on life and struggles in Gurgaon and wider NCR area is in the making comprising many interviews with workers from different generations and sectors. Given that we either have mothers whose tongues did not make use of Hindi or English language or that we do not have regular access to computers we want to ask you for help with translating the Hindi-spoken words into English subtitles. We started with the rough work, but need help with the subtleties. If you want to give us a hand, please contact us!

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated
with the Communist Party of India.

BPO

Business Process Outsourcing: for example of call centre work, market research, sales.

CITU

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers

Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.
Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive
neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders' jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other
remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

**Housing:**
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

**Food:**
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

**Utensils:**
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

**Transport and Communication:**
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the September 2009 issue you can find:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Short workers’ reports from various factories in Gurgaon –
Reports were given to and re-distributed by Faridabad Majdoor Samaachaar in June/July 2009. Most of the 22 reports are from textile export companies.

*** A nocturnal roof-top conversation: Skilled textile workers talk about changes in technology and work-organisation undermining their power –
A roof-top in Kapas Hera, Gurgaon. Surrounded by 80 sleeping work-
mates, old and young textile workers talk about changes in the local textile industry since the 1980s: comparing exploitation in work-shops to exploitation in factories, describing the deterioration of the position of skilled workers due to new division of labour and computer-controlled machines.

*** The daily railway bad trip to work –

Report by a worker about the conditions and an accident on his daily railway journey to work.

2) Collective Action –

Reports on proletarian struggles in the area

*** The Youth is Getting Restless / Hidden Struggles in Okhlas Textile Factories –

The following reports are given by skilled textile workers. Their experiences of rebellion take place on the background of a level of exploitation reaching human physical limits (see short reports), and the efforts to further increase productivity through changes in work-organisation (see roof-top conversation). Squeezed between these two front-lines of ‘capitalist progress’ the youth in the export factories are getting restless. Unistyle and Liliput textile workers are strike happy and Wearwell workers not only know how to fist-fight, they also know how to deal with police and management repression afterwards.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Future Deads for Sure –

Dozens died in the Lakhani factory fire – see GurgaonWorkersNews no.18 - dozens are injured every day either at work or at home. Town planners ignore the crumbling foundations of their high-rising buildings and they gamble with future dead by neglecting their own pathetic-helpless urban fire safety measures. A summary of a main-stream article on the issue.

4) About the Project –

Updates on Gurgaon Workers News

*** Some Video-Interviews with Workers from Faridabad/Gurgaon now
Online –

You can find some interviews with workers from Faridabad/Gurgaon on http://www.visions-of-labor.org. They will be part of a documentary coming out in late autumn this year. If you can give us a hand with translating subtitles from Hindi into English for a workers’ experience focussed documentary on Gurgaon/Faridabad please contact us.

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

Reports were given to and re-distributed by Faridabad Majdoor Samaachaar in June/July 2009.

Aina Fashion Worker

(Plot 893, Udyog Vihar Phase 1)

The helpers get 2,500 Rs, the 60 tailors are on piece rate; they don’t get ESI or PF. The drinking water is bad, the latrine dirty. If you leave the job you have trouble getting your outstanding wages.

Alankar Creation Worker

(Plot 410, Udyog Vihar Phase 3)

All 500 workers in the factory are hired through contractors. The quality manager and the general manager swear at you, they make you work longer, the general manager sometimes hits workers. We currently work from 9 am till 5:30 am the next morning. This is 300 to 400 hours of overtime per month. If they make you work till 5:30 am they won’t let you leave the factory afterwards, at 9 am work starts again. Over-time is paid at single rate. If the clients come for a visit the management displays on a board that 3,841 Rs is paid, while the wage is actually 3,590 Rs. From this money is cut for ESI and PF. 200 to 400 Rs is embezzled from your wage each month.

http://www.alankarcreations.com/aboutus.html

Brown Swick Investment Worker
(Plot 629, Udyog Vihar Phase 5)

The 350 workers working in the factory are hired through a contractor. Work starts at 9 am and the end of shift is not fixed; we often work till 2 am. We do about 150 hours of over-time a month, paid at single rate. The wages of the helpers is 3,840 Rs the tailors get 4,100 Rs to 4,300 Rs. Money is cut for ESI and PF... but after two to four months the company card is changed, the name of the contracting company changes, and when people leave the job only few workers actually get PF. The drinking water is bad, latrines are dirty and the bosses swear at you a lot.

Eastern Medikit Worker

The factory is situated on plot 292 in Udyog Vihar Phase 2. The work load is extreme. People have a lot of accidents with the needles they manufacture. The company does not pay the January DA of 176 Rs. The over-time pay for May hasn't been paid yet (27th of June 2009). This is the case in all four factories. The casuals are dismissed after six months – if you complain that 500 Rs have been embezzled from your last wage they insult you.

http://www.medikit.com/

Gaurav International Workers

One of the factories is situated on plot 208 in Udyog Vihar Phase1. In the finishing department 100 workers are employed, they always work 12-hours night-shifts, without the obligatory change to day-shifts. Many workers are ill, but they neither get ESI, nor PF. A lot of verbal abuse and pushing around is going on. In the computer embroidery department 150 workers work 12-hours day and night-shifts. In this department the shifts change and workers get ESI and PF. But they also won’t get days off, and they also have to face a lot of verbal abuse. The drinking water is bad. Another factory is on Plot 225 in Udyog Vihar Phase 1. The company hired 400 workers through contractors – and they don’t pay for their work. In January I went back to my village after having worked 25 days. When I came back I asked for my wages, but they refused to pay.

http://www.nafabs.com/

Grafty Fashion Worker

(Plot 377, Udyog Vihar Phase 2)
The helpers get 3,665 Rs for a 10-hours day and 26-days working month. According to the minimum wage fixed by the government they should get 3,840 Rs for an 8-hours day.

Instyle Worker
(Plot 140, Udyog Vihar Phase 1)

They added the 176 Rs DA to the April wage, but did not pay it for the time from January till March 2009. They won’t give you time off. If you fall ill they stop issuing you a gate pass. There is a lot of verbal abuse going on. The latrines are very dirty.

Jyoti Apparels Worker
(Plot 159, Udyog Vihar Phase 1)

Working-times are from 9:15 am till 1 am, on 30 days of the month – this amounts to 150 to 200 hours of over-time per month, paid at single rate. Only half of the 650 workers get ESI and PF. The drinking water is bad. The 176 Rs DA from January 2009 onwards have not been paid. The company does not pay the obligatory bonus. Workers who leave the job don’t get the fund money.

Kalamkari Worker
(Plot 383, Udyog Vihar Phase 3)

The main problem for the 500 workers in the factory is drinking water. We work 80 to 100 hours of over-time per month, at 1.5 rate.

http://www.gurgaonchamber.org/Members_GurgaonChamber/List_K.htm

Kamal Enterprises Worker

The factory is on plot A-122 in Udyog Vihar Phase 5. The daily working-times are from 8 am till 1 am, on thirty days per month. In March 2009 I worked 222 hours over-time, in April it was 228 hours and during the first half of May 110 hours. The over-time is paid at single rate and each month 8 to 16 hours get embezzled. When you arrive ten minutes late they swear at you and cut one hour from your wage. If you leave work after the lunch break they mark you for the whole day as absent. They say they pay 3,500 Rs to the helpers, actually they give 2,500 Rs. The wage of the operators is 3,000 to 4,500 Rs. Here 30 workers do the finishing
work for Sandhar Components, situated in Sector 7 in IMT Manesar, a company that supplies Hero Honda. No ESI, no PF and bad drinking water – we have to go to a different factory to get water. There is no latrine – if you go to your room during working hours they mark you as absent for the day, so you have to find a spot on the road.

Kanchan International Worker

The factory is on plot 872 in Udyog Vihar Phase 5. There used to be 150 workers employed, now there are 50 left. Throughout the year the wages are delayed. The May 2008 wage and the wages of the following months were not paid, only after a complaint to the labour department they were paid in October 2008. In December 2008 the delays started again. They paid 500 to 1,000 Rs, not the whole wage. Some got their January and February 2009 wages on 21st of May. We haven’t received our March and April wages yet (24th of May 2009). The over-time money for 2002 hasn't been paid. We produce clothes for Ambos, Walter and Soma. No ESI, no PF.

http://www.alibaba.com/member/kanchanint.html

Karigars Worker

(Plot 251, Udyog Vihar Phase 1)

We work 150 hours of over-time per month, paid at single rate, the ‘in-charge’ threatens us, sometimes hits people.

http://yellowpages.b4uindia.com/Karigars.html

Niti Clothing Worker

(Plot 218, Udyog Vihar Phase 1)

The 650 workers employed in the factory don’t get ESI or PF. The 100 female workers get 2,600 Rs per month. The latrines are very dirty. When the clients turn up everything is very clean, suddenly there are masks and gloves available and the First Aid Kit is re-stocked. When they have left, everything is back to how it was.

Orchid Overseas Worker

The factory is on plot 133 in Udyog Vihar Phase 1. The helpers amongst the permanent work-force get 3,840 Rs, the casuals 2,800 and the helpers hired through contractors get 2,400 Rs. Amongst the 1,450 workers 50
might get ESI and PF. Shift-times are from 8:30 am till 9 pm, over-time is paid less than single rate, about 12 to 15 Rs per hour.

Richa and Company Worker

(Plot 239, Udyog Vihar Phase 1)

They used to pay the first two hours of daily over-time at double rate, since April all over-time is paid at single rate.

Riddhima Export Worker

(Plot 662, Udyog Vihar Phase 5)

The helpers get 3,000 to 3,200 Rs. No ESI, no PF. If you ask for the minimum wage they insult you. If you leave the job they won't pay the last 20 to 25 days of work.

http://www.company400.com/company/indusud.html

S&R Export Worker

The factory is on plot 298 in Udyog Vihar Phase 2. I have worked at S&R for one and a half years and during all that time they pay the minimum wage for 8 hours for a 10-hour day. It is heavy work with glass and brass, they swear at you, sometimes hit you.

Sahiba International Worker

The factory is situated on plot 75a in sector 18 in Gurgaon. Working there was a bitter experience. You had to start working at 9 am and would finish work at 10 pm – but on 12 to 18 days per month they would make you stay till 2 am. On Sundays they would let you go at 4 pm or 6 pm. Over-time was paid at single rate. It was very hot inside the factory. The managers shouted a lot, swore, would sneak behind you to the toilets and have a go at you if you stayed there to long. No worker got ESI or PF, I don't know about the staff. PF money was cut arbitrarily in the name of Shalu Internationals; a lot of money disappeared. The attendance was noted down on unofficial documents, there were no wage slips, only vouchers. The helpers got 80 – 85 – 90 Rs for an 8-hours shift. The drinking water was bad. There was only one latrine for female and three for male workers – you always had to queue up. When clients arrived from Italy, France or Japan everything was made look clean and the managers were always with them – those workers who looked younger than 18 years were sent to the third floor. Even when you were ill you did
not get a day off. One worker who had been sent to the factory in Manesar got seriously injured in a fire accident; we all donated some money for his medical examination – because the management was afraid that the accident would become known they sent him for treatment. Later on the management told the contractor that this worker wouldn’t be employed in the factory anymore, because everyone would be able to see his burn marks.

http://www.asklaila.com/listing/Delhi-NCR/Sector+18/Sahiba+International/0MFFQ6GC/

Security Guard

I work for Pentagon Security – the office is in 74/2 Chattarpur Road, Maidan Garhi, Delhi. We work 12-hour shifts, 30 days per month. For these working-hours the guards get 3,000 Rs per month, the supervisors 4,000 Rs. Out of 400 guards 20 get ESI and PF. Managers swear at us, sometimes they push us around.

Security Guard

(Office: L-194 Mahilpalpur, Delhi)

I work for Delta Security. Delta Security employs 30,000 guards, from Agra to Mumbai. In Gurgaon 1,500 Delta guards work in Five Star hotels, in shopping malls, in factories. We work 12-hours a day, 30 days a month. If you work 30 night-shifts they pay you 5,000 Rs. During the first 3 to 4 months of employment ESI and PF is not given, then they say that ESI and PF will be given, actually 288 Rs per month gets embezzled for the funds.

Spark Worker

(Plot 166, Udyog Vihar Phase1)

Currently we work from 9 am till 4 am next morning. This way we do 200 hours of over-time per month, paid at single rate, 200 to 300 Rs get embezzled. The helpers’ wage is 3,510 Rs. The money for over-time worked in May has not been paid yet (27th of June 2009). Out of 1,000 workers may be 2 to 4 get ESI and PF. And there is only one latrine.

Superior Graft Worker

(Plot 531, Udyog Vihar Phase 5)

The 80 tailors in the factory do not get ESI and PF. Due to the shrinking
demand of the market the tailors on piece rate or in trouble. Out of 1,500 workers only 30 are permanent. They get double rate payment for their over-time, the rest do not.

Viva Global Worker

The factory is on plot 413 in Udyog Vihar Phase 3. The tailors have to work in extreme heat, the drinking water is warm, as well. If you fall ill they kick you out. On 22nd of May 2009 an over-worked worker fell unconscious. Working times are from 9:30 am till 8 pm. Over-time is paid at single rate.

http://www.vivaglobal.com/

*** A nocturnal roof-top conversation: Skilled textile workers talk about changes in technology and work-organisation undermining their power – Kapas Hera, a former village in Gurgaon in walking distance to the huge industrial area Udyog Vihar Phase 1, now home of many factory workers. A roof-top. In the house below live 400 factory workers, three to four share a room, the rent is about 1,000 Rs. The rooms have no windows, so many people decide to sleep on the roof. People sit in circles and talk, some sleep, some arrive late from work. In our circle sit four friends aged between 19 and 55, all skilled tailors, working in different companies in Gurgaon. They tell us about their experiences.

“I come from Bihar, I arrived in Delhi in the early 1970s, since then I work as a tailor. Most of these years I worked for ‘fabricators’, in small unofficial workshops, like you still find them, for example, in Hauz Rani (see newsletter no.7). The work-atmosphere in these workshops was much different from the atmosphere in the factories now. We basically all lived in the workshop – so we also did not have to pay rent. We would cook and eat and work and sleep there together. The working-time was not that fixed. Today you are sent back home from the factory gate or your half-day’s wage get cut when you arrive one minute late at work – even when you are on piece rate work. In the workshops you would have your breakfast and bath and start working when you like. You are on piece-rate, so you are master over your time. You can take a break in the evening and go to the cinema, if you like. You might then work till 3 am and sleep in”.

“I arrived in Delhi in the late 1970s, but then I decided to move to Nepal
in the 1980s, I worked in textile factories there for about ten years. Then
the political turmoil caused a lot of factories to close down. I moved back
to Delhi, then to Gurgaon. My friends told me to come with them to
Madras, they say that you can earn 8,000 Rs as a tailor there, but I don’t
want to move again. In Madras people don’t speak Hindi, and it’s far away
again. But even Manesar, which is only 20 or 25 km away seems like too
far. Maybe not because of the distance, but because the factories are
new there and there are even less facilities for workers. Here you find a
room quickly, you know some people, the drinking water is ok. In
Manesar I heard that you are not safe, that people get robbed and so on”.

“I then worked in factories in Okhla, that was in the 1990s. There people
would not have that time and space like in the ‘fabricators’ workshops.
They live in rented rooms nearby, you have to arrive at the factory in
time, take your breaks in time. We then still worked ‘full-piece’, meaning
that one tailor would sew the whole piece. We started hearing about
‘chain-systems’ in the late 1990s, but this system was not implemented in
the factories in Okhla. It was only when I came to Gurgaon Udyog Vihar
in 1998 when I actually worked in ‘chain-system’ for the first time. Now
there might be 400-500-600 textile factories in Udyog Vihar Phase 1, in
1998 there were two or three, like Gopal Clothing or Fashion Express.
Then a lot of factories moved from Delhi to Gurgaon. I worked at
Modelama as a permanent worker for quite some time. During that time,
from 1998 to 2001, the chain-system’ became dominant in all factories.
Now 20 to 25 tailors work on one piece. They might still be on piece rate,
but they would just do the collars, just do the pockets and so on. The
piece-rate for the whole piece came down a lot. Less people are
necessary due to the increase in productivity. In 1998 I earned something
like 2,200 Rs, now I earn around 4,000 Rs. A cup of tea in 1998 was 1 Rs,
now it is 3 Rs, even 4 Rs. Another difference between ‘full-piece’ and
‘chain-system’ is the fact that you don’t need that much experience.
Nowadays you find dozens of schools in Kapas Hera and the surrounding
areas, where you pay 700 Rs for a week’s course in tailoring. After that
you can work in the ‘chain system’. It takes much longer – a year or
longer – to become a proper tailor”.

“And it is not only the ‘chain-system’ that puts pressure on people.
Together with this system more and more tasks are done by computer
controlled machines, like cutting and embroidery. Nowadays you have
even thread cutting machines, which replace all the women who used to do this ‘unskilled’ work. If you want to work as a full-piece tailor you have to try to get a job in the sampling departments, this is where the first pieces are made which are then mass-produced in the production departments. Or you have to go back to the ‘fabricator’ workshops, but there the rates are low. I just quit a job at Orient Leather after only 18 days. It is a huge factory, around 1,000 workers, but the offered rates were just too bad”.

For six years I have been commuting between Faridabad and Delhi every day. Stampedes and huge crowds, jumping onto moving EMUs (commuter trains), hanging outside of the train carriers... In these years I have seen many accidents. On Friday, 29th of May 2009, a student crashed his head against a signal shortly after the train left Ballabhgarh station. His friends and me dragged the student inside the carrier. His head was bleeding and he was unconscious. We immediately informed the railway police at Old Faridabad Station. But when we arrived at the station there was no police on the platform. We lifted the student off the train and the train left. At this point he was alive. In the station there is no ambulance, no doctor, no First Aid. We waited next to the injured for ten minutes, then some railway staff arrived. He was still bleeding...

While for us the whole situation was very unsettling, for them everything seemed rather like business as usual. The railway police guy was rude. They put the injured onto a stretcher and carried him outside the station. In a hired auto-rickshaw the student were brought to a hospital. The atmosphere in the hospital was extremely harsh... The student later died.

Deaths on the tracks and deaths in order to build them: on 12th of July 2009 several construction worker – exploited to build the Delhi Metro line – died, crushed by a huge steel part. The accident only made it into the news because the steel part also crushed the main water lines of the area. At least two more fatal accidents on the Metro site had happened by end of July.

2) Collective Action –

Reports on proletarian struggles in the area

The following reports are given by skilled textile workers, their experiences of rebellion take place on the background of a level of exploitation reaching human physical limits – see short reports in this
newsletter – and the efforts to further increase productivity through changes in work-organisation – see rooftop conversation in this newsletter. Squeezed between these two front-lines of ‘capitalist progress’ the youth in the export factories are getting restless. Unistyle and Liliput textile workers are strike happy and Wearwell workers not only know how to fist-fight, but also how to deal with police and management repression afterwards.

Liliput Workers

On 11th of April 2009 about 600 skilled tailors struck work in the Liliput Kids Wear factory (D-3 Okhla Phase 1) in order to increase the piece-rate payment. Two managers were beaten up after they tore a cardboard on which another skilled worker had written the demand “25 Rs per hour”. The factory kept on running, but on 12th of April the tailors did not resume work. On Monday the police stopped the skilled workers at the gate: if you want to work, go inside; if you won’t work, stay outside. As no-one went inside the police started to disperse the crowd with a lathi attack. After the intervention of the Parishad the police withdrew from the gate and the tailors went inside the factory. The company offered to increase the rate from 18 to 19 Rs, but the tailors did not agree. When work still did not resume on 14th of April the first rumours about dismissals emerged... some 10 or 12 workers who had talked too openly and loudly during the dispute were made to hand in their notice one by one – and the company had them beaten up by some young goons when they had left the factory. It is known that the company pays 20 Rs in the NOIDA factory – here work resumed for 19 Rs when the company told us to. While the tailors were on strike the workers in the finishing, washing and cutting-department had continued working. On 18th of April the company started to shift machines to NOIDA.

Unistyle Workers

The factory is situated on plot B-51 in Okhla Phase 1. In the factory 200 workers are employed, only 10 by the company itself. The women workers who cut threads get 80 Rs for an 8-hours shift. The rest of the workers work longer hours, starting at 9 am and finishing at midnight. For a certain order of garments the tailors were asking for 25 Rs per piece, but the company offered 15 Rs. The tailors answered by stopping work on 30th of January 2009. The manager told them to go back to work
and that he will talk to the company director. After two hours he said that he could not fix a new rate yet. The tailors stopped working again. On 31st of January 2009 we worked for four hours, but after not getting the desired rate we stopped the machines again. The same on the 1st and 2nd of February. On 3rd and 4th of February we did not work at all, we sat inside the factory and the machines did not run. On 5th of February at 12 am – after having seen us sit idle the whole day – the company offered a rate of 20 Rs and work resumed. In the end they gave 19.5 Rs per piece. In the company documents shown to the client they note down a rate which is 2 Rs higher – the 2 Rs are cashed by the production manager and the contractor. And the story continues. In May 2009 we had to work on an order for Elisa and Mara. On 30th of May 2009 the company announced a piece rate of 11.65 Rs and 28.85 Rs for the order. Hearing this the 40 tailors stopped working. The company then offered 13 Rs and 32 Rs respectively, but the tailors refused the offer and demanded 17.80 Rs and 40 Rs instead. The strike continued on 30th and on 31st of May. The conflict continued in June 2009. On 13th of June the tailors stopped work and reiterated their demand for 40 Rs per Elisa T-Shirt. On 15th of June management at first repeated their offer of 32 Rs, when the tailors refused they offered 35 Rs. The tailors were still not happy and refused work - the pressure from the contractor’s master made no serious impression on them. On 16th of June all machines were silent till 12:30 pm, the company’s ‘in-charge’ then offered 37 Rs. The tailors decided to start working after the lunch break. While the tailors were on strike the workers in the finishing department continued working, but only 8 instead of 11 hours. The 20 female workers who cut threads in the finishing department still get only 2,300 to 2,400 Rs per month.

In July 2009 the young worker told us that in the end they succeeded in increasing the piece rate by 50 per cent – but after the order was finished the management announced in mid-July that for the next two weeks there won’t be any work available...

Wearwell Workers

The factory is situated on Plot B-134 in Okhla Phase 1. One of the main buyers of Wearwell is Marks and Spencer.

Workers have to work from 9 am till 1 am. Management swears at us a
lot. Over-time is paid at single rate, you have to pay 20 Rs for a meal in the factory, but the food is pathetic. The 150 to 200 casual workers don’t get ESI or PF. The 25 women workers who cut threads get 1,800 to 2,000 Rs per month.

On the 9th of July 2009 at 10 pm about 400 workers had to squeeze through a side entrance in order to get out for their break. Officially work stops at 9 pm, all over-time is paid unofficially. A security guard started pushing people with his lathi, a dangerous situation given the masses of people in a very confined space. Some workers pushed him back, five more security guards arrived and started hitting with their lathis. Workers got rather angry about that, all the workers present got engaged in beating up the security guards. The management called the cops, the cops asked for names. Workers answered that they would all beat up the guards and that they would beat up the manager, as well. The cops left after mumbling some empty threats. Work continued as usual till 1 am. The next day management singled out six young workers – they told them that they would pay 20,000 Rs to the police in order to take them to the police station and beat them up. A common practice in Delhi’s industrial areas. What is unusual is the fact that management did not suspend these workers! First of all, because they were unsure about the reaction of the other hundreds of workers, both permanents and casuals, after having seen their joint fist-fight with the guards and their behaviour in front of the police. Secondly, because in the charge and suspension letter they would have to admit that the factory was running at 10 pm, while it should have been closed. The workers were not too impressed. The following day they were ordered to the police station. The police and a middle-man were present. They asked the workers for 1,500 Rs in order to settle things. On 8th of August five workers were stopped at the factory gate to take their final dues, but they refused. The Workers inside protested and 21 more workers have been stopped at the gate. A union middle-man started to negotiate about leaving pay, but by end of August things remained unsettled. One of many little conflicts under the surface. To be continued...

3) According to Plan –

General information on the development of the region or on certain company policies
Dozens died in the Lakhani factory fire – see GurgaonWorkersNews no.18 – dozens are injured every day either at work or at home – see Sahiba International worker’s report in this issue. In a city with thousands of crammed-explosive factories and hundreds of plastic-tarpaulin slums, fire safety is nothing but a deadly illusion.

Town planners ignore the crumbling foundations of their high-rise buildings and they gamble with future dead by neglecting their own pathetic-helpless urban fire safety measures. The following is a summary of a main-stream article on the matter.

Gurgaon falls short on fire safety front

(Times of India, 24th of June 2009)

The Millennium City may take pride in its over 185 high rises, numerous shopping malls, glitzy office complexes and mega industrial units, but when it comes to basic fire-fighting necessities, the city paints a pathetic picture. Monday’s blaze in a sport goods factory at Kherki Dhaula is a case in point. As the 15 fire tenders available with the Gurgaon fire department proved sadly inadequate, the administration had to turn to the Air Force, the fire department of Rewari and some major industrial units nearby for help. The picture only becomes grimmer. In a city with a population of over 20 lakh, there are three fire stations Sector 29, Bheemnagar and Sector 37. Manpower shortage is another area of concern. “The department had sought 603 personnel while there are only 106 staff working in all three stations. Until the time when there is sufficient manpower, the department cannot work efficiently,” added Sihag, fire station officer, Sector 29. Said a senior fire official: “According to the byelaws, a building exceeding 15 metres is termed a high rise. The buildings are expected to follow safety norms as per the national building laws code, part IV. It is mandatory for every high-rise to install hose reel, down-comer, yard hydrant, auto sprinkler system, manually operated electric fire alarm systems, automatic detection and alarm system and underground static water storage tank as inbuilt fire-fighting techniques. However, because of lack of sufficient number of staff we cannot regularly inspect buildings and decided whether they are adhering to laws or not.”

4) About the Project –
Updates on Gurgaon Workers News

You can find some interviews with workers from Faridabad/Gurgaon on http://visions-of-labour.org/topic.php?clipId=17&Viam=Feature

They will be part of a documentary coming out in late autumn this year. If you can give us a hand with translating subtitles from Hindi into English for a workers' experience focussed documentary on Gurgaon/Faridabad please contact us.

Wages and Prices
Workers hired through contractors

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi

Slum Hut

Lakh

see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month.
But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through
contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker's wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
Second-hand bicycle: 600 to 1,000 Rs
Two simple steel pots: 250 Rs

Transport and Communication:
Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
Daily Newspaper: 3 Rs
One hour internet in a cafe: 20 Rs
Cinema (new) ticket Saturday night: 160 Rs
Single entry for swimming pool: 100 Rs
One litre Diesel: 30 Rs
Driving license in Haryana: 2,000 to 2,500 Rs
Start package pre-paid mobile phone (without the phone) 300 Rs
Phone call to other mobile phones: 1 Rs
One month mobile phone flat rate: 1,500 Rs

Luxuries:
Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
Money given to poor labourers for their kidney: about 40,000 Rs
Compaq Laptop: 50,000 Rs
Flight Delhi to London: 28,000 Rs
Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
Ford Fiesta: 587,000 Rs
Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors
Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for
employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the November 2009 issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

Workers’ told these reports to Faridabad Majdoor Samachar (Faridabad Workers’ News) in July and August 2009. The reports were distributed in the monthly free newspaper in the Delhi industrial belt. Most of the reports are from textile export factories, two are from automobile workers.

Given the huge masses of workers and their palpable anger it seems only
logical that NGOs and other institutions are interested in what’s happening. We summarise a recent study by “Society for Labour and Development”.

Short reports of workers employed by the post, in public transport, in the education sector and by the HDFC Bank in Gurgaon. We can see the massive casualisation of public and white collar jobs – and the proletarian post-graduate discontent.

2) Collective Action –

Reports on proletarian struggles in the area

*** The Youth is Getting Restless / Hidden Struggles in Okhlas Textile Factories, Part 2 –

In the last newsletter we have reported about physical conflicts and skilled workers’ wildcat strikes at textile factories of Wearwell (Marks and Spencers) and Unistyle. The unrest continued during August and September 2009, but it started to run dry in the channels of labour law and union representation...

*** Automobile Unrest and Jam in Gurgaon, Five Points related to the Rico Strike in October 2009 –

Within and against the car industry run the main front-lines of class struggle in India: Post-colonial permanent workers at Hind Motors in old industrial centre Kolkata are down-sized and Hind Motors factory land is taken for real estate speculation; while Tata and CPI(M) fight against rural proletarians and farmers to grab green-field land for a ‘peoples’ car’ plant in nearby Singur; and while rural-migrant temp workers at the world’s largest car parts manufacturer Delphi in the new industrial hub Gurgaon are striking wild against the pact of companies’ and permanent workers’ union. In the classical left conception and form of organisation these different proletarian figures were either played off against each other or the left tried to disempower them as productive collectives and ‘united’ them as mere members in their mass organisations. We hope that within these movements, in the situation of global crisis and through the mobile character of both industry and work-force a new form of revolutionary organising will develop.

Since end of September 2009 a strike / lock-out at automobile supplier Rico created or rather expressed some general trouble in the industrial
cluster. Honda threatened to re-locate production to other parts of India, the struggle broadened and was taken up by the union/political sphere on the back of a killed worker. On the other side of the globe in Canada Ford had to close down production due to lacking Rico parts – and, maybe influenced by wage dispute in India, Ford workers in the north voted against a management-union deal to cut wages for ‘saving jobs’. A chronology of news articles and more questions than answers.

In what phase of the Indian automobile industry did the Gurgaon strike take place? Short glimpse at the development of the automobile industry in India since the slump in October 2008. Obviously the economic stimulus packages for European car buyers have had their impact in India – in the first half of 2009 the passenger car export went up by 36 per cent compared to the previous year. This shows the global character of the automobile industry. Another level of globalisation intertwines production directly – hoping that the ‘low wages’ of the south can be imported with the manufactured parts into the assembly plants of the north.

The crisis of the automobile industry – and therefore of capitalism as we know it – is not only the crisis of profits or the physical and mental crisis of those who have to produce them, but also the crisis of the car as a terribly destructive means of transport. We summarise two recent articles on traffic jams and road accidents in Gurgaon.

As part of a workers’ documentary about life and struggle in Delhi’s industrial belt friends interviewed various automobile workers in the area: workers in Faridabad slum-workshops producing door hinges for Maruti Suzuki, Tata Nano and others; a young skilled CNC operator in a car parts manufacturing company; three suspended temporary workers at Hero Honda plant; and a former Maruti Suzuki worker sacked during the lock-out in 2000.

3) According to Plan –

General information on the development of the region or on certain company policies

Summary of study “Gurgaon and Faridabad – An Exercise in Contrasts” by Bibek Debroy and Laveesh Bhandari. Gurgaon and Faridabad are two
neighbouring towns in Delhi’s industrial belt. Their industrialisation was interdependent. A proper analysis of ‘clusters’ would have to look at the main contradiction of capital – capital thrives on the productivity of workers’ mass concentration and at the same time it is threatened by workers’ collective anger becoming more forceful and creative through proletarian proximity. The studies’ summary might serve as another little piece in the jigsaw of understanding the process from cluster to class war.

Two recent news items reflecting the fear of the ruling class towards the ‘unruly poor’. In the first news article the ‘unruly poor’ appear in the unspecific figure of terrorism with a hint at undocumented labour migrants. The article refers to a report published by yet another NGO about lacking police force and fire tenders – Gurgaon is not prepared for counter-insurgency. In the second article we can see how the ruling class tries to channel the ‘terror’ of the labour market into inter-working-class tension by demanding job reservation for a specific group, in this case setting the local proletarians against the migrant ones.

4) About the Project –
Updates on Gurgaon Workers News
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Short Workers’ Reports from Gurgaon Factories –
Workers’ told these reports to Faridabad Majdoor Samachar (Faridabad Workers’ News) in July and August 2009. The reports were distributed via the monthly free newspaper in the Delhi industrial belt.

Alankar Creation Worker
(Plot 410, Udyog Vihar Phase 3)
The 60 workers who do thread cutting work (both male and female) get 2,500 Rs per month, neither ESI nor PF. The work pressure on the tailors is very high, they have to ask for permission to go to the toilet and their
request is often refused. The general manager swears at workers, sometimes he hits workers, too. Monthly 40 to 50 hours wage is cut from payment – they say that it is due to not meeting the production target. We work from 9 am till 9:30 pm, sometimes till 2 am. Over-time is paid at single rate, Sundays are paid with 50 per cent incentive.

http://www.alankarcreations.com/contactus.html

ATC Worker
(Plot 86, Udyog Vihar Phase 1)

Lifestyle Retailing employs 150 workers, mainly sampling tailors, through three contractors. The main contractor does not employ anyone for more than five years – they would sack you before that without giving you any compensation. The other contractor sacked a guy after more than five years, but they paid only 15 days wages compensation for each year of employment.

Chintoo Creation Worker
(Plot 295, Udyog Vihar Phase 2)

Us 500 workers start shift at 8 am and finish at 2 am. On Sundays we work from 8 am till 8 pm. A lot of workers fall ill due to being overworked. If you are two minutes late they cut two hours from your wage. If you leave the job or if you are fired they keep 20 to 25 days of your wage. If you bother them enough they will give you some money and keep the rest saying it is because you have “created damage to the company”. Yesterday, on 20th of July 2009, a woman worker came to the factory to ask for her outstanding wage. She was told that she would not be paid due to having “damaged a textile piece” and in the personnel department they threatened her physically. They pay 3,600 Rs to the helpers, but they show 4,200 Rs wage on the documents. If you complain they say that you can quit the job. ESI and PF money is cut as if we were paid 4,200 Rs.

Eastern Medikit Worker
(Udyog Vihar Phase 1)

Us casual workers work 12-hours shifts, over-time is paid less than single rate: we get 13 to 14 Rs per hour. Wages are paid with delay.

http://www.naukri.com/gpw/medikit/index.htm
Gaurav International Worker
(Plot 198, Udyog Vihar Phase 1)

Working times are from 9 am till 11 pm – the thread cutting and packing department start as soon as 8 am. The management locks the gates in order to enforce over-time. The female workers have a lot of stress because of that. In the factory 600 female and 1,000 male workers are employed – the male workers are forced to work till 2 am. The company won’t even give you a cup of tea during the 14 to 17 hours of work. They swear at the us, they swear at the female workers, too. An official inspection was announced to visit the factory on 28th of July, so the personnel manager told us to say that we do 10 to 12 hours over-time per month… – when we actually do more than 150 hours. The tailoring of velvet (Makhmal) produces a lot of dust, this is why until last year they gave us free sugar molasses, but this has stopped now. Only on the day of the inspection on 28th of July they distributed the sugar molasses again. There are only three machines to punch in and out – so it takes 15 minutes to enter or leave the factory. If you take two days off they will take the company pass away from you. In the Gaurav International factory on plot 208 (Udyog Vihar Phase 1) and on plot 506 (Udyog Vihar Phase 3) the bosses swear at people a lot, too.

http://www.nafabs.com/
http://www.richagroup.com/group.aspx

KRF Worker
(Plot 403, Udyog Vihar Phase 3)

In the factory workers are employed on two 12-hours shifts – producing and colouring labels and threads for tailoring. We work on Sundays, too. We work 125 to 150 hours of over-time, but they pay only for 60 to 70 hours – and only at single rate. If you complain they swear at you. The newly hired helpers get 2,200 Rs, the older helpers get 2,500 Rs per month, but they are forced to sign that they receive 3,840 Rs. An operator works two machines, they get 2,500 Rs to 3,000 Rs, but they have to sign for 4,100 Rs. If you take one day off they cut two days from your wages. Only 200 out of 500 workers get ESI and PF.

Kailash Ribbon Factory – Krf Ltd
Kurubanks Worker

There are company factories in Gurgaon and nearby Manesar. More than 1,000 workers produce leather bags and wallets. In the factory on Plot 37 in Manesar Sector 4 wages are delayed – the June wages have not been paid till now, 21st of July 2009. We start working at 9 am and normally finish at 11 pm, often we are told to work till 2 am. Overtime is paid at double rate, but 50 hours get embezzled each month.

Logwell Forge Worker

(Plot 116, Udyog Vihar Phase 1)

The factory runs two 12-hours shifts, on Sundays, too. Over-time is paid at single rate. Logwell produces metal parts for the car and railway industry.

Madhu Chawla Design Worker

(Plot 783, Udyog Vihar Phase 5)

There used to be 300 workers employed, now there are 50 of us left. The company does not pay the minimum wage: helpers get 2,800 to 3,000 Rs and tailors get 140 Rs for an 8-hours shift.

Modelama Worker

(Plot 200/2001, Udyog Vihar Phase 1)

When we work half night-shifts work starts at 8:30 am and ends at 2 am. In July the factory ran at all four Sundays. Sometimes we work full nights, meaning from 8:30 am till 6 am. The company only gives 20 Rs for food. The company produces stuff for GAP. The wages for over-time are paid delayed and 500 to 1,000 Rs is cut. The same happens at Modelama factories on plot 105 and 204 in Udyog Vihar Phase 1. Since August work starts at 9:30 am again … one guy worked ten days non-stop from 9:30 am till 6 am. Because he tied a waste piece of cloth around his head he was accused of theft, he was sacked and not paid for his work.
Niti Clothing Worker
(Plot 218, Udyog Vihar Phase 1)
Us 12 housekeeping workers work from 7:30 am till 6 pm. We are not only told to clean the premises, we are also asked to do production work. And there is a lot of verbal abuse going on.

Premium Moulding Worker
(Plot 185, Udyog Vihar Phase 1)
We work 12-hours shifts, on Sundays we work 8 hours. Over-time is paid only 6 Rs per hour. The company produces steering wheels for the car industry. The helpers get 3,000 to 3,500 Rs per month.

http://www.alibaba.com/member/pmpsteeringwheels/aboutus.html

Richa Global Worker
(Plot 232, Udyog Vihar Phase 1)
There are no fixed working-hours in the factory. On the documents and to officials they say that shift ends at 5:30 pm, but often we are forced to work from 9 am till 10-11-12 at night. They swear at us a lot.

http://www.richagroup.com/group.aspx

S&R Export Worker
(Plot 298, Udyog Vihar Phase 2)
They give us the minimum wage, but instead of 8 hours we have to work 11 hours daily for it. The official labour inspectors who visit the factory are given a bribe and they leave again.

Company Phone: 0124 – 2341608

Sikal Export Worker
(Plot 775, Udyog Vihar Phase 5)
The helpers receive between 2,700 Rs and 3,000 Rs. The tailors work on piece-rate, but the rate is not disclosed before people start working. The toilets are only opened from 11 to 11.15, then from 1 to 1:30 and from 4 to 4.15 – there is a lot of trouble because of that.

Spark Worker
The wages are paid delayed, the July wages we got on 20th of August. About 400 to 500 Rs of over-time payment gets embezzled each month. If you leave the job they won’t pay you half the money they owe you. If you complain they swear at you. They treat the female workers badly, too. The thread cutting workers get only 2,500 Rs, everyone else gets the minimum wage. Money for ESI and PF is cut from these wages, but when you leave the job they won’t fill in the PF fund form. Only the admin workers and supervisors are directly hired, 300 workers are hired through contractors. There is no canteen, there are problems regarding the drinking water and there is only one toilet for 300 workers.

Company Phone: 91-124-2343146

Unistyle Worker

(Plot 140, Udyog Vihar Phase 1)

There are 300 workers hired through contractors in the factory. They have not been paid their June wages yet, today is the 21st of July. The helpers get only 2,800 Rs per month.

Company Address:
Rajouri Garden, New Delhi,
Delhi 110027,
India
+91 11 65339572

Vishesh Overseas Worker

(Plot 430, Udyog Vihar Phase 4)

In the huge factory we work 100 hours of over-time per month – only 50 hours are paid at double rate. If you leave the job they give you loads of trouble to get your outstanding wages. Those who left in June or July haven’t received their payments yet, on 29th of August 2009.

Woman Worker

(Plot 211, Udyog Vihar Phase 1)

Us 20 women are employed through two different contractors – we cut
threads. We get 95 Rs for an 8-hours shift, no ESI, no PF. We normally work 10 hours per day, over-time is paid single rate. On 10th of July we were all sacked – they told us that there was no more work. Our June wages and the wages for the ten days in July were not paid, even after having asked for them many times. We went to the factory individually and they sent us back. On 20th of July we gathered and went to ask for our wages together. Today, on 21st of July they told us to come to the factory to get our wages.

The NGO “Society for Labour and Development” has composed a study on garment workers’ conditions for a Dutch NGO engaged in an international clean clothes campaign and published it in June 2009. We have summarised the study – if you are interested in the complete study drop us a note or contact SLD directly, see web-link below.

The study focuses on five garment export factories, employing around 1,000 workers on average, out of which only 10 to 15 per cent are women – reflecting the generally low share of female wage labour in Northern India. Most of the workers are migrants from various states, about half of the workers live in Delhi area without their families – the families are left in the village or town of origin. About 80 per cent have no formal work-contracts.

The following quote is interesting regarding the current trend to undermine skilled tailors like the struggling workers at Unistyle and Wearwell (see this newsletter) by introduction of the ‘chain system’, meaning a more minute division of labour:

“Only 46% workers work on the basis of salary. 54% of workers work on piece rate basis. There are two types of piece rate work, one is called ‘full piece rate’ and another one ‘part rate’. Under full piece rate system (…) the rate depends on the fabric and the style. For instance, for a simple cotton, half sleeve shirt, a worker will get Rs.15 and worker has to make 8-10 shirts a day. Under ‘part rate’, a worker has to make, collar, cuffs, pocket, plate etc. For that the normal rate is Rs. 4 – 5 a piece and the normal target would be 30-35 pieces a day.”

The average wage is not enough to survive on, most workers are in debts. Although 6,500 Rs monthly “income” is relatively high compared to the average workers’ wage in the region, it is actually not spent on any major consumer goods:
“Workers monthly earning on an average including overtime is Rs. 4585.5 and on an average of 6 persons live on this wage. As there is an average gap of Rs 1915 between the average monthly expenditure and average monthly income, these workers are always in debts. 41% of this goes to food, 15% goes to housing, 8% goes to healthcare and education, 2% goes to entertainment, 3% goes to clothes and other necessities, 18% is sent home, 10% is other expenses, 3% is spent on transportation. 10.44% of total monthly income is spent on other expenses which includes repayment of loans, phone charge, spending on festivals, friends’ and relatives’ marriage, child birth etc.”

*** White Collar Blues –

Short reports of workers employed by the post office, in public transport and by the HDFC Bank in Gurgaon – distributed in indi in Faridabad Majdoor Samachar.

Postal Department / ED Worker

The government of India has decided that 300,000 workers who work in the postal services are now employed in a so-called Extra Department (ED). All of us ED workers are excluded from the wage rise for the public sector workers declared by the 6th Pay Commission. We earn about 3,200 to 3,300 Rs per month. Before the general elections we were reassured that we will be accepted as part of the postal services and that our wages will be increased. The elections are over, the government has settled down, but our situation is still the same.

Haryana Roadways Worker

In June and July 2008 – through the selection board – 810 drivers and 1,200 conductors were hired for the State Transport. The newly hired were categorised as SPL, the drivers’ wages are 4,200 Rs and the conductors get 3,900 Rs. Officially the wages for public drivers and conductors after the 6th Pay Commission is around 15,000 Rs. On 13th of July 2009 the regular (public) drivers and conductors organisations put forward their demands, including the demand for accepting the SPL drivers and conductors as regular employees. The government refused this demand. In response, on 13th of August 2009 from 12 am till 2 pm all buses of the Haryana Roadways stood still. The strike was called by the permanent workers union, but us SPL workers took part in it.
School Worker

(Guru Dronacharya Public School, Manoharpur, Jind Jila)

The school bus drivers are made to sign that they get the minimum wage, but actually the conductors are paid 1,500 to 1,800 and the drivers 2,000 to 2,500 Rs. You have to be on duty on Sundays, as well. Officially they say that you get PF, but when you leave the job they do not give you the PF fund money.

HDFC Bank Worker

(Branch: Mukhya Market, Sector 14, Gurgaon)

In the branch 100 workers are employed in the customer service for saving and other accounts. All these workers have either graduated or passed their MBA. They get 6,000 Rs wage and 2,500 Rs for transport costs – most workers drive motorcycles and share it with colleagues. The official working times are from 9:30 am till 5:30 pm, but after 5:30 pm there is an assessment and evaluating meeting where you get told off till about 9 or 10 pm. The bank does not pay any money for the overtime. The company fixes targets saying how many new customers you are supposed to win per day, but they are incredibly high, you can never meet them. The market crisis only increases the target trouble. The customers are often unfriendly, but you have to tolerate it. The HDFC workers get sworn at from all sides – and they also threaten you with the sack. You work under a lot of pressure.

2) Collective Action –

Reports on proletarian struggles in the area

In GurgaonWorkersNews no.20 we have reported about physical conflicts and skilled workers’ strikes at textile factories of Wearwell and Unistyle. The unrest continued during August and September 2009, but it started to run dry in the channels of labour law and union representation...

Unistyle Worker

The factory is situated on plot B-51 in Okhla Phase 1. In the factory 200 workers are employed, only 10 by the company itself. In June 2009 the skilled workers laid down tools several times in order to force the company to pay higher piece rates – and they succeeded. On 23rd of July
one of the two contractors started to pay a lower rate again – the workers refused to take the money and demanded the same pay as paid by the second contractor. At that point the production in the factory was low. In response to the contractor’s refusal 21 workers joined a union and complained at the labour department. The contractor offered a monthly wage of 5,500 Rs instead of the piece rate payment. The workers then showed some documents proving that they have been employed at Unistyle for more than three years – meaning that they would be entitled to permanent contracts as monthly paid wage workers at Unistyle. The question remained unresolved. The 21 workers went back to the factory, but due to lacking orders they sat around without work. The July wages were promised by 7th of August, then 17th of August, but not paid. Then a new order from Samsung arrived and the contractors told the workers to start working – the workers said that they want to be paid their July wages first. On these grounds the 21 workers were kicked out of the factory on 22nd of August 2009. The legal process at the labour department – initiated by the representative of these 21 workers – is still running...

Unistyle Company Address:
Rajouri Garden, New Delhi,
Delhi 110027,

+91 11 65339572

Wearwell Workers

The factories are situated on Plot B-134, on Plot D-21 and Plot D-17 in Okhla Phase 1. One of the main buyers of Wearwell is Marks and Spencer.

Factory B-134

On the companies documents it says that 125 workers are employed in B-134 (all permanent), working from 9 am till 5:30 pm. Actually 400 workers are employed (most of them casual) from 9 am till 1 am. In order to control the current unrest in the factory management took four workers to the police station on 14th of July 2009 – accusing them of having beaten up company security guards. The police took a bribe from
the workers and the issue seemed settled, but then they were put under pressure and told to hand in their notice. They refused. On 8th of August 2009 five permanent workers were stopped at the gate by management staff and refused access to the factory – again the workers would not sign their notice papers. Inside the factory 125 permanent workers started to complain about the management’s behaviour. In response 20 more workers were kicked out of the factory. The 25 workers joined the union IFTU and complained at the labour department – the company itself sent a letter to the labour department on 18th of August announcing that the 25 workers had “forcibly” left the factory on 8th of August. A union official – after having “fought” for re-instatement – advised the workers to take the redundancy payment and to hand in their notice. The five permanent workers who had been kicked out first refused to leave the job. The union official told them that they should let the others take their redundancy payment and that a higher sum will be negotiated for them afterwards. When the other 20 workers heard this they got rather angry. The legal process at the labour department is still running...

Factories D-17 and D-21

On 20th of July the company started to lay off casual workers in D-21 and D-17 saying that there is not enough work. When they were through with the casuals they started to lay off permanent workers. About 50 permanent workers then joined a union. On 1st of August 2009 the police came to the factory and tried to prevent workers from entering the factory. Workers went inside anyway, but when more police arrived they were kicked out. The company increased the redundancy payment by 2,500 Rs. Wearwell sacked workers in Okhla, but just opened a new factory in Faridabad...

In the following we want to portray three proletarian struggles which took place at the same time in 2007: the final attack on permanent workers at Hind Motors in Kolkata; the rural movement against the Tata car plant in Singur; the wildcat strike by temp workers at Delphi in Gurgaon. They all emerged in and against the car industry – but the protagonists of these conflicts were very different proletarian figures, each emerging from or dissolving with a certain phase of capitalist development in India, each phase fuelled by and having to channel the
proletarian aspirations of its moment. We can say that around these three car plants the Indian working class fought with itself, the three disputes represent the main front-lines of class struggle in India. In the classical left conception and form of organisation these different proletarian figures were either played off against each other or the left tried to disempower them as productive collectives and ‘united’ them as mere members in their mass organisations. We hope that within these movements, in the situation of global crisis and through the mobile character of both industry and work-force a new form of revolutionary organising will develop.

Hind Motors factory – Flexibilisation and real estate bubble decomposing the post-colonial workers’ strong-hold

Hind Motors in Kolkata is one of India’s oldest car plants, a symbol of the early phases of 5-years-plan industrialisation of the post-colonial era, offering permanent workers identity to its employees. During the mid-1980s the passenger car division got under increasing pressure from upcoming car manufacturers like Maruti Suzuki, with the financial crash of 1991 and the subsequent increase in automobile investments Hind Motors passed the pressure on to the permanent workers. In 1998 there were still 10,000 workers employed, by 2007 this number came down to 4,100. In 2007 unions started a strike against wage freezes – the West-Bengal state government party CPI(M) tried to use its affiliated union CITU to control the strike. After the strike Hind Motors management issued a VRS (Voluntary Retirement Scheme), basically trying to force workers to resign. The CITU leader-ship in the plant took the VRS and suggested to the workers to follow their example. By 2009 the number of workers came down to 2,200. Parts of the factory – for example the outsourced forging department CI Forge – now run as flexible producers for various international companies. In summer 2009 Hindustan Motors started to import knocked-down kits of mini trucks from Chinese company Shandong Shifeng to assemble them with a small amount of workers for further export to Africa. The main business after the downsizing of the factory is real estate: under the command of the CPI(M) industrial land is sold to private developers in order to convert it into real estate assets – an officially illegal act.

Singur Tata factory – Rural proletarian struggle against a greenfield
factory in the search for an alternative to ‘development’

While factory land in Kolkata is turned into posh apartment blocks, some kilometres away rural proletarians and farmers struggle against the attempt of Tata and the West-Bengal government to turn agrarian land into greenfields for the Tata Nano car factory. Tata wanted to open a factory in ‘Communist-ruled’ West-Bengal, but not in the old industrial centres like Kolkata, spoiled by generations of workers’ struggle. The struggle movement against the car plant was not homogeneous: some farmers were interested in higher compensations for their land, some smaller peasants wanted to keep their land as a means of subsistence in addition to wage work, some rural landless felt that – while jobs in the villages and on the fields might be paid half the amount – the chances to get a job on construction of or in the car plant itself were low. Most of the left tried to gloss over these divisions either by using a ‘village community’-ideology or traditional Maoist concepts of ‘peasantry’. The movement questioned ‘industrial development’ from a proletarian perspective: how many jobs are created and how many livelihoods are destroyed? does the production of a passenger car, a product for a minoritariant middle-class, justify the destruction of a more or less natural environment? Through the movement ‘development’ was transformed from ‘natural law’ into a hot-spot of social debate. The movement against Tata was high jacked by various political parties, ranging from BJP to Congress to Maoists, united merely by the will for political influence. The CPI(M) government used this fact as a pretext to mobilise first Stalinist ideology of development – urban and industrial progress against the back-ward rural Kulaks – and then Stalinist terror. In early 2007 police force and para-military CPI(M) cadres massacred several villagers in Singur. The movement continued and might become the last nail in the coffin of CPI(M)’s long years of capitalist state power. Tata decided to produce the Nano in Sanand in Gujarat. The crisis slump in end of 2008 endangered the boom of the Indian ‘people’s car’ – current production level is 2,500 Nano’s per month. Up to now the promised well-paid jobs for the landless and the promised high compensation payments for the land-owning peasants broke up and divided the rural proletarian struggles. The current crisis shakes up some illusions and false promises.

(for more on Singur see: http://www.sanhati.com)
Delphi Gurgaon – A new generation of factory workers in the emerging Indian industrial clusters

While rural proletarians in Singur, West-Bengal fight about the question of ‘automobile development’ a young factory workers’ generation in one of the new industrial clusters engage in a wildcat-strike at world’s biggest car part manufacturer Delphi. Gurgaon, like Chennai or Pune developed into automobile hubs in the 1980s and 1990s. Like the striking workers at Delphi most of the new workers are migrants from rural parts, many of them from West-Bengal – may be even from Singur area. They arrive in the shining new urban areas of development with hopes – and they are confronted with a draconic factory regime and much lower living standards than they had hoped for. Unlike the earlier generation of workers like those at Hind Motors these workers have no illusions to get a permanent contract. At Delphi the number of permanent workers came down from 2,000 to 250. The 2,500 temp workers are not represented by the classical institutions of the workers’ movement, they often change jobs between sectors, they are mobile and restless. At Delphi the permanent workers’ union tried to get the temps back to work – afraid to lose their permanent jobs if the production would continue to be put on hold. The temp workers drop their job or lose it frequently, they go back and forth between the rural parts and the urban. They are in touch with the world, the IT temples and call centres in their industrial areas. They are part of the global automobile supply chain – see impact of current strike at Rico – but they hate the industrial world as much as they are eager to escape from the villages.

Three main disputes about recognition of unions (Auto Rico and Sunbeam) and a three-year wage agreement (Honda HMSI) expressed some of the unrest in Gurgaon, India’s main automobile cluster. The disputes lasted for more than a month between mid-September and end of October 2009. After a Rico worker was killed the CP affiliated AITUC union called for one-day-strike – allegedly 80,000 to 100,000 car workers did not work on 20th of October 2009. Last but not least, the dispute at Rico caused factory closures at GM and Ford in the US due to lack of parts.

The main political significance is the international character and set-up of the unrest in Gurgaon. Workers in India in a dispute for higher wages...
cause car plants in the US to come to a standstill. The workers at Ford and GM are currently under pressure to agree on wage cuts in return for dubious job guarantees. Their union UAW has already signed a deal, but the workers are unsure if to confirm it. In this moment a combative signal from the ‘low-wage-end’ of the global supply chain might help to reassure the US workers in their collectivity. That they cannot rely on their representatives in order to form a global proletarian alliance is demonstrated by the way in which the Rico dispute in India is presented by the UAW. “We are experiencing the effects of outsourced suppliers, and we hope they would be able to resume production as quickly as possible so we can in turn resume production”. Brian Fredline, president of the United Auto Union Local 602, representing 2,700 workers at General Motors plant in Delta Township, Michigan who were sent home due to lack of parts manufactured by Rico. We try to provide a short glimpse at the international context of the automobile industry in the part ‘What crisis?’ – see below.

We cannot say much about the internal dynamics of these disputes. There have been various conflicts at automobile companies in the last years – see summary below. In most cases a wider unrest amongst permanent and temp workers had simmered long before the official dispute started. The urge to establish a union or long-term wage agreements often resulted in: firstly, dividing the work force (mainly permanent workers, who represent only 20 per cent of the work-force, are attached to the union and long-term contract sphere); and secondly, to channel the conflict into open, legal and therefore controllable paths. There is also a long regional tradition of industrial disputes during which lock-outs / strikes are used to re-structure the work-force – given the current global ups and downs of the car industry this aspect of ‘engineered conflicts’ has to be taken into account when analysing the Rico dispute.

Two noteworthy details about the outcome of the current strikes: a public debate in the main stream media about the unstable situation due to such a large share of temp workers employed; and a rather empty threat of Honda HMSI management to shut-down the plant in Gurgaon and re-open it somewhere else if the political class should not be able to guarantee industrial peace in the region. The first point hints at a true core of unrest – at the same time the current disputes can be seen as a
proof that the division in permanent (unionised) and temporary workers still works well. The second point is an arbitrary one. In summer 2005 Honda management issued a similar threat and the political class reacted by organising a police massacre on several hundred workers. In itself it is an empty threat to re-locate the factory from a global low-wage region like Gurgaon given that Honda HMSI relies on a huge web of suppliers and a scattered but regionally concentrated workforce. Such concentration of proletarians will always re-create the conditions of unrest. In Gurgaon four major assembly plants, churning out two thirds of India's passenger cars and two-wheelers depend on more or less the same suppliers.

These contradictory tendencies – a work-force divided into permanents and temps on one side, but an intertwined supply net connecting work-shops with modern assembly plants on the other – is reflected in the statements of managers from various companies about the impact of the local general strike on 20th of October 2009. According to the media 80,000 to 100,000 were on strike: “Except for the two factories (RICO and Sunbeam which supplies to the Hero group) where there was a problem, I don’t think any other factory was closed. About 4,000 to 5,000 workers from various factories joined in the prayer meeting to show their sympathy for those who died,” says Surinder Kapur, chairman of the Sona group, which has many factories based in the belt. But factory managements admitted production was disrupted. “The assembly lines are not working,” a senior Honda Motorcycle and Scooter India (HMSI) official said to agencies. Others say that if the agitation is not resolved, the impact could be huge. “These are major component manufacturers, and we do not carry very much inventory,” says Chairman of Maruti Suzuki, which was not, however, impacted by the strike because of the high percentage of contract workers – some estimates put it at 80 per cent of the labour force – in the area. Many of them lost income during the dispute.”

For the current political background of the situation in Gurgaon it has to be said that in Haryana state elections took place in September / October period. Unions are closely linked to political parties and most of the company and contractor hierarchy is intertwined with the political class. Some of the dynamics of the dispute have to be understood as power plays between various political/representative factions.
We lack proper insight voices of workers who took part in or observed the unrest. In that regard the report published by CEC is probably the most accurate one:

In the following we first want lay-out a chronology of the current dispute, then summarise the dispute at Rico, Sunbeam and Honda HMSI in more detail and finally we give a short over-view on recent car workers’ conflicts in Gurgaon area.

* Chronology of Unrest

4th of August 2009

Rico workers’ representatives start negotiating with management, seeking an annual salary increase of 10,000 Rs plus freedom to form a union with AITUC. The management is not heeding their demand saying the workers have had pay hikes and the unit is continuously seeing low productivity. The union submitted their application to the labour department, Chandigarh, for its formal recognition.

9th of September 2009

Rico Employees Union calls for an open meeting of its members at Kamala Nehru Park, Gurgaon. 3,000 workers attend.

20th of September 2009

Another Rico union meeting in Kamala Nehru Park.

21st of September 2009

Rico Auto Industries Ltd. declares a lockout. Security Guards, police and goons stop workers from entering the factory by force. Previously 16 workers were suspended for indiscipline.

22nd of September 2009

Sunbeam Ltd. locks out workers after dispute over union elections. Company goons or truck drivers attack them at night, workers have to flee, some get injured. Ten workers are submitted to hospitals. Other sources say that workers were attacked by 300 police.

23rd of September 2009

Union solidarity rally in Gurgaon for attacked Sunbeam workers. Some other component makers, including Hema Engineering, AG International, Microtek and even Sona Koyo Steering Systems, Endurance are said to be
in current legal disputes between management and unions.

25th of September 2009,

Around 15,000 workers gather in Kamala Nehru Park in Gurgaon during union rally. A memorandum is admitted to the DC Anurag Aggarwal, demanding his immediate intervention on the issues at 14 automobile factories in Gurgaon.

1st of October 2009

Police detains Gurudas Dasgupta, the general secretary of All India Trade Union Congress (AITUC) and the AITUC national secretary DL Sachdeva when coming to Gurgaon to address Rico workers. Union mobilise workers for protest march in response to arrests. Workers sit down at Rajiv Chowk, blocking the traffic for nearly three hours. Haryana Labour Court declares Rico strike illegal.

2nd of October 2009

Maruti Suzuki announces that production in Gurgaon plant is “marginally hurt” by the strike at Rico and Sunbeam. Unrest also has affected TI Metals, Microtech, FCC Rico and Satyam Auto.

4th of October 2009

Police arrives in buses at Rico and Sunbeam workers rally ground, pick up the workers, drive away, and drop them around 12 kilometres away. Tents and utensils are taken away by the police. Twenty-six Rico workers are arrested.

9th of October 2009

Honda HMSI publicly threatens to re-locate production to other country or region not being able to open third assembly line due to dispute with Honda union over wage revision. 17 workers have been suspended at HMSI

18th of October 2009

Ajit Yadav, Rico worker gets killed in clash, several more workers injured. Union officials state that they were attacked by a group armed with iron rods. Police fires shots, workers throw stones. Rico factory gates are blocked by workers in response.

19th of Oter 2009
200 workers sit-down in front of Rico factory in protest. Communist Party of India MP and All-India Trade Union Congress (AITUC) general secretary Gurudas Dasgupta has urged Prime Minister Manmohan Singh to intervene in the trouble. He also asked the Haryana government to disband “private armies” engaged by the management bodies in the industrial hub to take on the workers.

20th of October 2009

60,000 to 100,000 workers of 60 to 80 factories in Gurgaon on one day strike called for by AITUC. Workers from Sona Koyo Steering Systems, Hero Honda Motors, Bajaj Motors and Lumax Industries joined Rico workers in a sit-down protest outside Rico and demonstrations in the streets. Workers’ representatives reject a company offer to pay Yadav’s family compensation of 500,000 rupees and provide a job for Yadav’s wife. “It is illegal in all respects. It has also been declared illegal by the labor department,” said Jagdish Nagar, a deputy commissioner of police.

21st of October 2009

Talks between union, management and Haryana labour department.

22nd of October 2009

Rico management agrees to take back two or three suspended workers and announces that management will accept the formation of a union. Honda HMSI has made a “final” wage increase offer as part of a Long Term Settlement.

23rd of October 2009

Rico management states that 900 workers have turned up for shifts and that 2,000 more workers are expected during the next days.

26th of October 2009

Due to lacking transmission parts supplied by Rico in India Ford has to shut-down production in Oakville plant in Canada for a week, losing several thousand vehicles, sending home about 3,000 workers employed in the plant. The shutdown comes during conflict regarding contract changes to lower Ford’s Canadian labour costs.

27th of October 2009

Honda HMSI and union find three year agreement including productivity
related bonus payments. Management hopes that third line will take up work. At Rico the lock-out continues.

28th of October 2009

AITUC calls for Gurgaon wide strike in solidarity with Rico workers. GM in the US announces that two plants (Delta Township and Warren, Michigan) are affected by lack of parts from Rico. Production at Delta Township plant is supposed to be resumed on 9th of November 2009 – 2,700 workers are sent home.

* Summary of Unrest

We focus on the three main companies involved: Rico, Sunbeam and Honda HMSI – all situated in Gurgaon. In order to understand the wider background of the situation at Honda HMSI we suggest to re-read the text in GurgaonWorkersNews no.7. For a general summary of the company situation at Rico and Sunbeam we rely on information of CEC.

Dispute at Rico

CEC: “Rico Auto Limited started its Gurgaon branch in 1994. It is one of the largest ferrous and aluminium foundries supplying die-cast components to the automobile sector. The company makes auto parts for brands like Hero Honda, Honda, Suzuki, Bajaj, Maruti Suzuki, Ford, General Motors, Nissan, Volvo, Jaguar, Tata and Land Rover. In the case of Ford US Rico ships the brackets to a Ford transmission plant in Detroit, Michigan, from where they are sent to assembly plants across the region. In the disputed plant in Gurgaon Rico has 3,600 permanent workers and around 1,500 casual workers. There are 500 workers as management staff. Around 76 workers are women. The salary structure of the employees is very low. Permanent employees with 2-6 years’ experience are paid Rs 4,500 a month, whereas the casual workers with same experience are paid Rs 3,800-Rs 4,000 per month. The permanent workers with 6 to 9 years’ experience get Rs 6,500 monthly, and those with 9-10 years get Rs 8,000-Rs 10,000.”

The conflict involved demands for higher wages etc., but by end of September 2009 the official point of tension was the demand for registration of a trade union affiliated to the All India Trade Union Congress (AITUC). According to CEC, the workers felt the need for unionization when the company, in the name of economic recession,
trew out large numbers of workers without prior information or economic benefits. The situation inside the plant became tense. “The demand for the formation of a union has been sent for verification to the Labour Commissioner and we have no objection against it,” said Mr Surinder S. Chaudhury, Vice-President, Human Resource, Rico. He added that production since September 2009 has dropped 40-50 per cent. Rico reacted by suspending sixteen workers. “We had to suspend them because they were going slow. They had slowed the production line by around 30 per cent for the last 45-60 days,” a company official said in late September 2009. In order to control the situation management was forced to look for a head-on collision. The suspension of sixteen ‘union reps’ was a save means to provoke a reaction and to get the ‘trouble-maker’ out of the plant:

“On 21 September, those workers who came to work faced the wrath of the management and were forced to sit outside the gate of the factory. ‘Around 5,000 employees had to sit outside the company gate, since the company said it was on lockout from 21 September 2009,’ says the Rico employees. The employees came to know about this undeclared lockout only on the same date, when the first batch of around 1,500 workers had gone to work at 6 am. The security guards at the gate did not allow the workers to go inside. When they refused to listen, the police force, along with the security guards and bouncers (the musclemen employed by the company), lathi-charged the workers. ‘Many of us got minor bruises, but major causalities did not happen,’ says Ranjan Pande, a Rico employee. The workers have been in front of the factory gate since September 21, 2009. ‘We are not on dharna (protest assembly); we are sitting here because the management does not allow us to go inside,’ emphasize the workers.” (CEC-report)

There are divergent information about the strike’s / lockout’s impact on the companies’ production. Some state that Rico’s management had been able to mostly maintain production and meet schedules as, out of a total of 3,000 employees, around 1,700 were reporting for work. Rico has been forced to operate two 12-hour shifts against the normal practice of running three shifts of 8 hours each.

Dispute at Sunbeam

CEC: “Sunbeam Auto Ltd is a unit of the Hero Group of Industries, and
was established in Gurgaon in 1987. The company has 650 permanent
workers, 800 staff members, 600 trainees, and around 2,500 casual
workers. The concept of trainees at Sunbeam is worth mentioning, as
people with numerous years of experience remain trainees here. One
such trainee is Hansraj, who is an operator of the gravity dye casting, and
is a trainee for the last ‘eight’ years. According to the workers, there are
trainees with even 13 years of experience. Same is the case with the
casual workers. Mangaram is a casual worker for the last 12 years, and
works for a basic salary of Rs 3,510. The company gives meagre wages to
its staff. Subhash Babu’s take-home salary is Rs 9,000 only, in spite of his
23 years of work experience as a quality inspector”.

“The case of Sunbeam Auto Ltd is not much different from that of Rico.
The only difference here is: the workers have asked for revival and
election of the existing union. Sunbeam has had a registered union –
Sunbeam Shramik Union – since 1996. A “management friendly” union. In
May 2009 the term period of the current office bearers got over, and the
workers demanded an election and a change in the leadership. (…) The
tactics of the management consisted of calling workers independently to
the concerned department head’s room and making him forcefully sign a
letter that was taken on a 10-rupees stamp paper, stating his willingness
to acknowledge the current union. The management could collect
signatures of around 200-250 workers, since the threat was to terminate
them. But when a majority refused to do so, the management prevented
the entire workforce from entering the factory premises on September
22, 2009, without any notice. Like Rico, the gates were not opened for
them for the 6 am shift. The management version of the incident is
different. According to SK Sharma, the DGM of Sunbeam, the company is
not on lockout and is functioning with 30 per cent of its workforce. He
emphasized that the workers are on an illegal strike.”

Dispute at Honda HMSI

HMSI currently has 1,872 regular workers and another 2,500 on contract.
Honda HMSI plant was affected by the disputes at Rico and Sunbeam due
to lack of parts – but there was a ‘home-grown’ conflict going on, as well.
The Honda workers union and Honda management were in process of
negotiating a three years wage agreement. The management accused the
union of using a go-slow tactic at the new third production assembly line,
involving 40 permanents and 100 casuals, in order to put pressure on the management.

On 10th of October HMSI management announced that production at the plant is down by more than 50 per cent and that the new line for vehicles – the third one since production began – has failed to take off. “This means a production loss of almost 600 two-wheelers per day. Overall, we are equipped to roll out 4,350 vehicles a day but we are doing only a little over 2,000 units because of the workers’ attitude,” an HSMI official said. While no concrete figures are available, it is estimated that the company has suffered a loss of around 250 crore Rs.

Mohan Deepak, VP for Industrial Relations at HMSI, said the average cost-to-company (CTC) for a shop-floor worker is currently around Rs 25,000. According to HSMI management the wage demands of the union will push their CTC higher than shop floor workers at Hero Honda, the current market leaders with stronger business and production figures.

On 27th of October 2009 union and management enter an agreement on 3-years wage contract including “performance reward scheme”.

* History of Unrest

It would be an important task to write a historical analysis of the struggles in Delhi’s industrial belt during the last decade in order to understand the current conflict in its context – for many reasons we can only give a superficial summary of some automobile workers’ disputes in Gurgaon of the last three – four years.

Hero Honda temp-workers occupy factory – April 2006

Unnoticed by most lefty groups or unions more than 3,000 temp workers occupied the Hero Honda Gurgaon plant for several days demanding higher wages and better conditions. The company cut water and electricity – the workers sent a delegation for negotiations, which was bought off. Some demands were met by the management. When the factory occupation ended workers at Hero Honda supplier Shivam Autotech occupied their plant raising similar demands.

(GurgaonWorkersNews no.4)

Workers at car parts manufacturer Amtek attacked – June 2006

After some workers close to the union were disciplined by shifting them
to a different plant of the company they and some more workers joined in a sit-down protest inside the plant. After some disputes with the management they were beaten up by paid goons – other sources said that they were beaten by temp workers of the plant.

(GurgaonWorkersNews no.3)

Honda HMSI temp workers go on wildcat strike – September 2006

After temp workers were allegedly not included in a union deal they occupy the canteen of the plant supported by the next arriving shift from the outside. The company reacted by cutting water supply. The company and union asked them to go back to work. Some sources claimed that the strike was instigated by anti-union forces paid by the management.

(GurgaonWorkersNews no.7)

Wildcat strike of temps at car parts manufacturer Delphi – January and August 2007

At Delphi 250 permanents (unionised) and 2,500 temp workers were employed. The temp workers went on wildcat strike blockading the main gate in January 2007. The company threatened to close the factory and asked the union to get the temps back to work. In August the temps struck again for few hours, demanding the payment of the increase minimum wage and succeeded.

(GurgaonWorkersNews no.6)

Series of wildcat strike at auto suppliers – September 2007

After the Haryana government increased the minimum wage in summer 2007 many companies kept on not paying the wage or making workers work many more hours for it. In several companies workers – most of them with temp contracts – rejected the wage payment and laid down tools spontaneously. In most cases the management promised to pay the minimum wage in future.

(GurgaonWorkersNews no.9 and no.10)

Automax casual workers attacked by police – April 2008

Casual workers at car parts manufacturer Automax demanded permanent contracts – the management reacted by suspending ‘leaders’ in order to provoke a reaction. In a strike / lockout situation and
subsequent agitations the police attacked the workers with lathis (clubs).
(GugaonWorkersNews no.11)

Wildcat strikes at car parts manufacturer Ilpea Paramounts – April 2008
About 80 casual workers of the company got engaged in a legal dispute in front of the labour department. They tried to put pressure on the company during visits of the labour inspector – the company reacted by threatening them with goons.
(GugaonWorkersNews no.12)

Wildcat occupation of plant by temp workers at Hero Honda Dharuhera – May 2008
After not having been accepted as members by the permanent workers’ union the temp and casual workers went on wildcat strike and occupied the plant for two days. Management and permanent workers union both promised betterments of the workers’ situation. The temp and casual workers then tried to register their own union – a process which ended in a mass lock-out in October 2008.
(GugaonWorkersNews no.14)

Wildcat sit-in strike of temp workers at Honda HMSI – September 2008
Another wildcat sit-in by precarious workers against manhandling by the management.
(GugaonWorkersNews no.13)

Lock-out and killing of manager at Graziano car parts supplier – September 2008
After a longer dispute about union recognition and various unions involved (AITUC, CITU, HMS) the company suspended workers and finally locked them out. The workers continued their protest demanding their jobs back. In an escalation a manager got killed.
(GugaonWorkersNews no.14)

Lock-out of temp workers at Hero Honda Dharuhera plant – October 2008
After their wildcat strike in May 2008 the temp and casual workers tried to register a union and put forward a general demand notice. The company reacted by locking out all temp and casual workers during big market slump. The company let in the permanent workers and half of the
casual and temp work-force. 1,200 workers stayed locked-out, 800 new workers were hired.

(GugaonWorkersNews no.14 and no.19)

Lock-out and police attack on workers at car parts manufacturer Musashi – April 2009

In a dispute about union recognition several leaders were suspended. About 250 workers showed their solidarity and were locked-out in response. During a protest-march the police attacked and arrested many workers.

(GugaonWorkersNews no.18)

Strike / Lock-out at Rico and Sunbeam car parts manufacturer – September 2009

In dispute for higher wages and union recognition about 4,000 workers of two car parts manufacturers went on strike / got locked-out. One worker got killed during a clash, AITUC called for a one-day-general strike.

(GurgaonWorkersNews no.21)

a) In what kind of situation of the Indian automobile industry did Gurgaon strike take place?

The strike in Gurgaon automobile industry happened at a time of proclaimed “recovery” of the Indian car industry. End of October 2009 the two main automobile companies in Gurgaon – and India – announced record figures.

Maruti Suzuki India reported a nearly two-fold jump in its net profit for the period July to September 2009 – compared to the previous year. The company's domestic sales grew by 21.9 per cent at 209,083 units. Management said exports during July to September 2009 jumped by 109 per cent at 37,105 units as against 17,745 units in the year-ago period. Maruti Suzuki announced significant investment in Gurgaon plant in order to increase capacities by 90,000 cars. In the two plants in Gurgaon and nearby Manesar production capacities are about 1 million cars per year.

Hero Honda which runs two plants in Gurgaon area and is world's biggest two-wheeler manufacturer is on a similar high. End of October 2009 the company announced that it would smash its annual sales target
as it reported a 95 per cent jump in the second quarter profits. Hero Honda management was confident of exceeding its sales target of four million units for the year.

Examples of an exceptional regional boom contrasting the global crisis or just a mild recovery after a record slump?

b) No decoupling: Indian car industry shared the global slump in October 2008 and benefited from the state sponsored scrappage incentive in the EU and deficit spending and low interest rates in India.

The Indian car industry experienced a similarly deep slump in the end of 2008. All major car companies sacked their temporary staff, temporarily closed assembly departments or cut working-times – for summary see GurgaonWorkersNews no.16.

During the fiscal year 2008 to 2009 (April 2008 to April 2009), the sales of domestic passenger cars increased by ‘only’ 1.31 per cent to reach 1,219,473 units. In the absence of stimulus packages, the sales of passenger vehicles would have declined 3 per cent or have shown no growth whereas the commercial vehicles sales would have declined 30-40 per cent.

The mild recovery since March 2009 was partly based on lower prices for steel – due to the severe over-production of Chinese and Indian steel manufacturers. The industry also benefited from lower taxes – part of the deficit spending of the Indian state, which tumbles further into debts. Car sales for June 2009 (107,000 units) have increased by 7.8 per cent in the Indian market. The main contributing factor is the reduced interest rates for the auto loans. In July 2009 115,000 units were sold, the mild upward trend continued till September 2009.

More than from internal demand the Indian car industry recovered due to the state sponsored “recovery” of the EU car market – through scrappage incentives and other stimulus programs. Car exports from India – mainly to the EU – jumped by 35.73 per cent from April till September 2009, in concrete numbers 210,088 units as against 154,783 units in the year-ago period. In October 2009 newspapers announced a drop in export growth due to end of government programs in the EU. Total exports grew ‘only’ by 21.6 per cent in September compared to over 30 per cent in the last few months.
The total sales figures of commercial cars like trucks and buses are still down. State infused liquidity might encourage private consumers to take on a credit, but the general industry seems still reluctant to beg on future profits by investing.

c) India's car industry shares global fate of over-capacities – the internal market is limited

India's car industry is running into over-capacities – the productive capacities of the two Maruti Suzuki plants alone are at 800,000 to 1 million cars per year. Currently are about a dozen more assembly plants in India – modern assembly plants run profitable at about 300,000 cars, meaning that the total productive capacity in India is somewhere beyond 3 million cars per year. Currently the internal market is about 1.3 million cars – propped up by cheap credits and dependent on US outsourced IT and banking jobs – export figures are at about 350,000 units. Industrial workers in India are nowhere near an income allowing them to buy cars and the waged middle class mainly depends on crisis ridden real estate or IT sectors. The Tata Nano – hailed as India’s Volkswagen and cheapest car in the world – turns out to be produced into a social vacuum. Since production start in July 2009 the monthly production is only 2,500 units. About 150,000 Rs is still way to expensive even for well paid industrial workers – and exactly these better off permanent industrial workers have been under attack since the mid-1980s – see for example GurgaonWorkersNews no.8 on struggle at Maruti Suzuki.

d) In the current phase state credits keep the business running, mergers and struggle over markets are increasing – but they only exacerbate the problems in the future

Unable to solve the actual problem of the industry – the profitability crisis and the crisis of a mode of production – increasing company merger invert the neo-liberal myth of ‘outsourcing’ and profit-centres. In the course of the crisis the big car manufacturers had to bail out the spun-off and formally independent suppliers (e.g. GM had to bail out subsidiary Delphi). Some Indian companies are taking part in those international fusions of capital. Delhi-based car parts manufacturer Amtek was seen as a potential buyer of machinery and plants of bankrupt EU branch of Ford’s main supplier Visteon – on Amtek’s violent repression in Gurgaon factories see GurgaonWorkersNews no.3.
Gurgaon based Motherson Sumi bought several bankrupt parts manufacturer in Europe in 2009 – on working conditions at Motherson see GurgaonWorkersNews no.6. In 2008 Tata took a loan of over 3 billion USD for taking over Jaguar and Land Rover. These mergers are only formal reflections of two general tendencies: ‘global cars’ (produced in few plants and exported to countries all over the planet) and a extension of the global supply chain and spread out division of labour (e.g. US factories actually depending on parts produced in the global south).

e) With increasing transport costs the ‘global car’ was put on hold – now it is seen as one way out of the crisis

Particularly the Renault Logan was presented as a truly global car. Manufactured in few factories, amongst others in Romania and India to be delivered to countries around the globe. The Logan production in India is stuck in a jam. India sales crashed by 71 per cent in September 2009 to just over 500 vehicles, while its April to September 2009 numbers are down to less than a third of last year. Renault managers say that “it is more expensive than we hoped it would be in India. The market here is extremely sensitive to the price. Another reason is, we don’t have enough localisation in India”, meaning that too many parts are imported from ‘expensive’ abroad. The concept of an ‘export car’ is still on, e.g. Nissan and GM want to start production of a ‘cheap global car’ in 2010. Indian labour costs are said to be about 10 per cent of that in the U.S. and Europe and raw material costs in the nation are lower by 11 per cent. “The Chennai plant will start exports in the second half of 2010. We will export 110,000 units in 2011 to more than 100 countries especially, Europe (30 countries) and will increase to 180,000 units in the future,” a Nissan manager said in October 2009. India exports more cars than world’s biggest car manufacturer China and exports are growing faster than domestic sales, e.g. Hyundai plans to export 300,000 cars from India in 2009, more than its sales in the Indian local market. But where to, given the general slump in car sales? Newspapers hail the 10 per cent share of Indian manufactured cars in emerging markets like South Africa – but that is 10 per cent of ‘only’ 500,000 annually sold cars. Another trend in order to enter markets is to source cheap car parts from China or other Asian countries. India’s automobile manufacturers increasingly intertwine their production with Chinese car makers, particularly for automobiles produced for exports to Africa and within Asia.
f) We can see an extensions of the global supply chain of car parts emerging out of the last years’ profit squeeze – connecting Indian workers more or less directly to workers in China, South Korea and the EU and the US.

During the last years export of car parts from India grew faster than the export of complete cars – parts are exported mainly to the US, EU and Japan. In September 2009 Fiat announced to source 1 billion USD of parts from India in 2010, out of which 300 million USD for export to the EU plants. In September 2009, as well, Hyundai India started exporting crank shafts and connecting rods to Hyundai factories in South Korea. Component exports from India, that touched 3.6 billion USD in 2007-08, are estimated to be near flat in 2008-09. The car parts manufacturer in India are directly linked to the international markets. Amtek Auto – mainly based in Gurgaon – gets as much as 50 per cent of its sales from abroad. In September 2009 an Amtek manager said: “Overseas sales for us was down as much as 30-40 per cent last fiscal year following the slowdown in Europe. While we had done around $650 million in 2007-08, the number came down to around $450 million last fiscal,”. The same is true for Rico Auto Industries that makes components for engines: “Our exports dipped by around 7 per cent last fiscal as US and Europe shrank,” he said. Rico supplies to companies like Ford, GM, Caterpillar, BMW and Cummins.

g) Global division of labour and ‘global cars’ make sense only if low wage regions are kept low waged and if these low wages are imported back into the centres. Workers have to turn this trend around by making use of their global cooperation. The Rico dispute in Gurgaon stopped a Ford plant in Canada, at the same time Ford workers voted against a wage cut deal.

The Rico dispute has shown the global dimension of car production today. It has shown Ford workers in the US and Canada not only that the production in their plants depend on ‘cheap labour’ from the south, but that this ‘cheap labour’ is not up for the race-to-the-bottom: an industrial dispute, amongst others concerning the demand for higher wages, interrupted the global supply chain. At this point of time Ford workers in the US were supposed to vote in favour of wage cuts in order to save their jobs. End of October 2009 Ford workers in Missouri have
overwhelmingly rejected a new contract with Ford. Ford and the United Auto Workers union agreed to the changes to help lower Ford’s labour costs, but UAW members must ratify the changes. Kansas City UAW local president Jeff Wright says workers were angry about a cap on entry-level wages, changes in work rules and a no-strike provision. This is not yet an ‘active communication’ between workers around the globe, but a mutual influence and a sabotage of the current re-structuring process of the global car industry. Only by making conscious use of this cooperation the global working class can find a way out of the automobile madness of destructive production.

The terrific jam –

The car is not only terrible to produce, it also causes further damages on its polluting way – see GurgaonWorkersNews no.13 on energy and traffic crunch in Gurgaon.

Expressway to die –

More than hundred people died in 1,696 accidents on the Delhi-Gurgaon Expressway since February 2008 – many of them workers who have to cross the highway on their way to work. In August 2009 the National Highway Authority India published a declaration saying that major shortcomings (lack of footbridges and ambulances etc.) had been solved. An inquiry published by Newsline a week later revealed that most of the amendments exist on paper alone. “No foot over-bridge beyond Rajiv Chowk till Kherki Daula toll plaza”. “At Ambience mall, the ambulance from Paras Hospital was locked and even after waiting for almost 20 minutes, no staff came.” “There were no fire tenders along the entire stretch of the Expressway.” “No segregation of lanes or dedicated lanes marked for emergency vehicles at any of the toll plazas.”

Cybercity Blocked Up –

A recently published study about traffic problems in Gurgaon revealed that the average speed of cars during peak hours on DLF Cybercity Road is 1 Kilometre in 45 minutes. About 100,000 cars use this road each day. The average time a car is stuck into traffic jam is 90 minutes – during this time 1.25 litres of petrol are turned into poisoned air.

As part of a workers’ documentary about life and struggle in Delhi’s industrial belt friends interviewed various automobile workers in the
area: workers in Faridabad slum-work-shops producing door hinges for Maruti Suzuki and others, a young CNC operator in a car parts manufacturing company, three suspended temporary workers at Hero Honda plant, a former Maruti Suzuki worker sacked during the lock-out in 2000.

3) According to Plan –

General information on the development of the region or on certain company policies

Faridabad was India's biggest industrial cluster in the 1970s and hotspot of workers’ struggles in the late 1970s till mid-1980s. 40 km to the west Gurgaon's urbanisation in the 1980s was based on Faridabad’s industrial supply-chain providing Gurgaon’s assembly plants with parts and productive knowledge – while the experience of struggle was hoped to be deluded by rapid re-location within emerging the industrial belt. A proper analysis of “clusters” would have to look at the main contradiction of capital: capital thrives on the productivity of workers’ mass concentration and “economy of scale” and at the same time it is threatened by workers’ collective anger becoming more forceful and creative through proletarian proximity. Nevertheless the studies’ summary might serve as another little piece in the jigsaw of understanding the process from cluster to class war.

Academic research normally focuses on a single aspect of clusters. The study “Gurgaon and Faridabad – An Exercise in Contrasts” by Bibek Debroy and Laveesh Bhandari tries to understand the different development models of Faridabad and Gurgaon by looking at the different “legal land regimes”, e.g. what was the legal frame-work for the transformation of farmers' land into industrial or urban land in these two satellites of Delhi? The study tries to find out why Gurgaon witnessed a more rapid growth than Faridabad since the 1990s and “it finds that a confluence of macro-economic, geo-spatial, political economic and institutional factors conspired to provide tremendous advantages to Gurgaon but not to Faridabad till the mid 2000s.” If you are interested in the complete study please drop us a note.

Summary: “Gurgaon and Faridabad – An Exercise in Contrasts” by Bibek
* Faridabad has more fertile land and smaller land-holdings than Gurgaon, therefore it was easier to acquire land in Gurgaon

“Geographically the Aravali hill range separated the two [new] districts. Faridabad lies between the Aravalis and the Yamuna, one of North India’s largest perennial rivers. The land is relatively richer alluvial with a high water table and consistent land sloping from the Aravalis in the West to East towards the Yamuna. In other words, agriculture is far more productive in Faridabad – with relatively richer soil, easy access to water through tube wells and irrigation channels, and good drainage. Consequently the new Faridabad district had more productive and valuable land. Being less productive and less in demand for agricultural purposes, Gurgaon’s land was more readily convertible to non-agricultural purposes and government policies allowed this conversion. This didn’t happen in Faridabad, where land was relatively more fertile. The land size distribution was also skewed towards larger plots-sizes in Gurgaon than in Faridabad. In other words, land for non-agricultural purposes was cheaper and larger plots were more available in Gurgaon. Converting agriculture to non-agricultural land was therefore far easier and cheaper for the private construction firms in Gurgaon, and the monetary returns to the entities involved in this were also consequently far higher in Gurgaon.”

Average Size of land-holding 1980-81:

Faridabad: 1.91 Hectar
Gurgaon: 2.45 Hectar

* Faridabad’s urban growth was based on industries manufacturing for the domestic market. These got attacked by liberalisation since 1991. The export industries were then mainly based in Gurgaon

“Indian economic reforms started in the mid-eighties and gathered momentum in the early nineties. The bulk of Faridabad’s manufacturing base developed before this period. In line with overall economic structure of India during that period, the large industrial base of Faridabad produced for a domestically-oriented market. The 1990s reforms led to de-licensing of most manufacturing, open entry both for domestic and international firms, rapid lowering of import tariffs,
depreciation of the rupee, reduced subsidies and benefits to the manufacturing sector in general. This led to a range of negative shocks to the manufacturing sector in India in general and Faridabad’s in particular. Meanwhile the rapid growth of the services sector, the entry of MNCs, and the rapid rise of the export oriented Information Technology (IT) and IT enabled services (such as business process outsourcing) required large floor spaces which the large private entities were willing to supply in Gurgaon.”

Bank Credit to Industry as per centage of total in Haryana in 1996 (2006)
Faridabad: 22 % (19 %)
Gurgaon: 12 % (22 %)

* The Haryana political elite got engaged in land deals in Gurgaon, which made it easier to obtain permissions to turn agricultural land into real estate and industrial plots

“Agricultural land was easier to acquire in Gurgaon than in Faridabad. The land was acquired not only by private sector construction companies, but also (it is claimed by many though not confirmed) by the political class, which had some inherited in Gurgaon as well. This land now needed to be converted into non-agricultural use. And since the political class was also (as claimed) a beneficiary from this conversion, with higher sale values resulting, the conversion was readily done in Gurgaon.

One further strand needs to be added to complete the story.

Haryana was the first state in India that allowed entry of private developers in real estate. In that sense, the Haryana Urban Development Authority (HUDA) policies were uniform across both Gurgaon and Faridabad. However, the so-called third-tier of government: urban local bodies (ULBs) were missing in Gurgaon. Gurgaon only had a municipal committee, not a municipal corporation, since it was below the relevant population threshold. Had there been a municipal corporation, as was the case in Faridabad, there would have been yet another tier of government, with possible countervailing checks on arbitrary conversion of village land to urban areas.

Land conversion requires many permissions and complex procedures. It requires the ascent of the state government (Government of Haryana),
the land development agencies (Haryana Urban Development Authority – HUDA), and also the local government. Within the state government the Chief Ministers (CM) office has the key veto power in allowing land conversion. Hence all of land conversion and development related issues were highly centralized for Gurgaon, controlled directly by the CM’s office.”

The study then explains in detail how the “Second Tier” of governance used various tricks to delay the ‘formal urbanisation’ of Gurgaon (using gaps in the National Census etc.) and in order to keep central command over the conversion of land into assets. We have covered in various GurgaonWorkersNews how the influx of speculative capital and the emergence of a class of ‘real estate farmers’ ripped apart the old patriarchal village communities and brutalised a whole region.

Two recent news items reflecting the fear of the ruling class towards the ‘unruly poor’. In the first news article the ‘unruly poor’ appear in the unspecific figure of terrorism with a hint at undocumented labour migrants. The article refers to a report published by yet another NGO about lacking police force and fire tenders – Gurgaon is not prepared for counter-insurgency. In the second article we can see how the ruling class tries to channel the ‘terror’ of the labour market into inter-working-class tension by demanding job reservation for a specific group, in this case putting the local proletarians vs the migrant proletarians.

“Gurgaon soft terror target: Study

Home to several corporate offices and a major IT hub, the Millennium City has been ranked as highly vulnerable in a terror-specific Disaster Management Assessment Survey (DMAS). The first-of-its-kind survey conducted by NGO Centre for Transforming India has found that the city is currently equipped with only 23 fire tenders, 2000 hospital beds and 3600 police personnel while these figures should ideally be 50, 6000 and 10000, respectively. According to the study, the city fares badly in terms of infrastructure and mobilization capability to counter and curtail any terror-inflicted disaster. The study notes that the government and private developers need to accord due importance to areas like manpower training and investment on devices such as CCTVs to achieve a robust security system. Commenting on the findings of the study, Pankaj Sharma, chief trustee, Centre for Transforming India, said: “With a
population of more than 2 million, Gurgaon is home to a large floating population which includes people working as maids and servants, migrant population, people coming for work and those coming to malls purely for entertainment. However, there are no mechanisms for coordination among the government, private companies having offices in Gurgaon, developers and mall owners in terms of sharing of resources or knowledge so that the city does away with its weak spots and becomes capable of countering untoward incidents.”

(16th of October 2009 – Times of India)

During the recent Rico strike Gurgaon police was able to get military aid. The Gurgaon Police Commissioner said he had called for ten companies from the Haryana Armed Forces and India Reserved Battalion “to tackle the situation”. If you have difficulties to rule, you still can try to divide, as the following article shows:

“Gurgaon’s success masks Haryana’s woes

Inadequate investment in human capital leads to resentment against areas that contribute most to state’s revenue. Gurgaon, the mother lode of Haryana’s exchequer, is turning into a symbol of resentment among the youth of one of India’s richest states: many of them do not have skills for white-collar jobs, triggering a clamour among politicians for job reservations for local people. “We have promised 80% job reservation for the youths of Haryana in our manifesto,” said Kuldeep Bishnoi, chief of Haryana Janhit Congress (HJC), who was Congress’ member of Parliament (MP) in the last Lok Sabha.

“We can no more allow industries in Faridabad and Gurgaon, using our power and water, to feed youths from other states, leaving our ones jobless.” The Indian National Lok Dal (INLD) has promised 50% reservation for local youth and even a national party, such as the Bharatiya Janata Party (BJP), has asked for half the jobs to be reserved for locals.

In Haryana industry is increasingly driving the economy of a state where ownership of land was traditionally valued over education or employment. Vivek Kumar, a professor of sociology at New Delhi’s Jawaharlal Nehru University, who has carried out fieldwork in Haryana, is not surprised. “It is a feudal society where land has dominated the
psyche,” he said. Successive Haryana governments have clung to an illusion their society would remain largely agrarian, he added, explaining the under-investment in education. Gradually Gurgaon, and to a lesser extent Faridabad, have begun to turn into lightning rods of the frustration of Haryana’s youth, which is articulated by politicians.

“Unemployment is a major issue and has worsened in the last five years of Congress rule. Our party has promised 50% job reservation for local youths. The state’s fate cannot be left to be decided in the hands of a few sitting in five-star hotels in Gurgaon and Delhi,” Manish Grover, the BJP candidate from Rohtak, told Mint. INLD’s MP Ajay Singh Chautala pointed out that the frustration eventually showed up in the form of a rising crime graph. “Joblessness has led to lawlessness in the state, with many taking to wrong ways of earning money,” he said.”

(12th of October 2009 – Livemint)

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
HSIIDC
ITI
Jhuggi
Lakh (see Crore)
Lay off
Minimum Wage
Panchayat
PF
Ration Card
SP
Staff
Trainees
VRS
Wages and Prices
Workers hired through contractors

AITUC
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

BPO
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.
Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee's Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called 'governmental fair price shops' are shops were 'officially poor' people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders' jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP

Superintendent of Police, Head of the District Police.
Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:

– Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
– Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
– Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

– Half a kilo red lentils on the local market: 25 Rs
– Kilo rice on local market: 14 Rs
– 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
– McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone): 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the January 2010 issue you can find:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Garment Export Workers’ Reports and Escapist Hopes of the Export Regime –

These reports were told by workers during the distribution of Faridabad Mazdoor Samachar in autumn 2009. Most of the workers are employed in textile factories – some of them working for major companies such as H&M, GAP or Calvin Klein. The textile export companies announced in December 2009 that the market is back on track and that exports to the US and Europe are growing again: an upswing in orders, but also an even
greater pressure on prices.

2) Collective Action –

Reports on proletarian struggles in the area

* Aftermath of the Rico strike –

We start with a report given by a permanent worker employed at Rico, published in Faridabad Majdoor Samachar. This is followed by a general summary of the disputes’ aftermath, e.g. the announcement of Rico company to ‘de-risk’ their position in the global supply chain by opening additional production capacities.

* Never Mind the Aftermath, here is the Prelude: Unofficial Action at Napino Auto and Electronics Ltd –

This wildcat action happened shortly after the Rico dispute was officially finished in mid-November 2009: workers of parts manufacturer for Hero Honda and Suzuki react to managements’ bullying by strike action and raising demands – the strike spreads from Manesar to Gurgaon and Haridwar plants.

* Anger on the backdrop of a boom: Short Reports of Workers employed by Automobile Suppliers –

The Indian car industry is hit by an over-stretched supply-chain and a shortage of parts endangering the current holy boom – or at least the temporary upswing. Suzuki announces it will add further capacities to the main assembly plants in Gurgaon. We publish four short reports by workers employed at different Suzuki suppliers – voices from the bottom of the boom, voices of the future risk.

*** Hell’s Bells: Call Centre and Workers in Global Movement –

It seems that with the crisis a final push of global re-location of call centre and IT related services is taking place. IBM announces thousands of job cuts in the global north while adding 5,000 jobs to its India centres. Although the interview with Convergys workers reveals that the call centre Mekka Gurgaon is not left untouched by the slump either.

* Struggle at Wipro in Romania –

After Alcatel in Timisoara (Romania) threatened to shift a third of the work-force to the Indian company Wipro, workers started to get agitated.
Wipro is one of the major call centre employers in Gurgaon.

* Interview with Convergys Call Centre Workers in Late Summer 2009 –
Short chai chat with workers employed by Convergys in Gurgaon, talking about impacts of work and crisis on life and physical health.

* From BPO to Riot – Proletarian Students in NOIDA clash with Police –
A faked BPO company took money for employment from some students in NOIDA, a neighbouring satellite-town of Gurgaon. When the students noticed the scam they did not allow the company owners to move out of the building until the outstanding money was paid – and the student-workers were attacked by the cops.

3) According to Plan –
General information on the development of the region or on certain company policies

*** The Real Estate of Urban Wasteland –
The financial crash in autumn 2008 and the more recent payment crisis in Dubai sent shockwaves affecting not only the housing market, but also the financial fundaments of many industrial and urban infrastructure projects. We give some snap-shots of the real estate of crisis in and around Gurgaon. Focus is on the planned ‘Delhi-Mumbai Industrial Corridor’ – a major development-axis for capital in India.

* Public-Private Tsunami from Dubai to Gurgaon –
The real estate sector is an indicator for the wider economy: house prices have crashed since 2008, but despite the low mortgage interest rates the sales are in no way sufficient to pull the sector back on track, stocks of empty concrete are piling up – what does that mean in a semi-private city like Gurgaon where infrastructure is part of the deal? We have a look at empty spaces and de-railed private metro projects.

* Accumulative Axis of Evil: Delhi-Mumbai Industrial Corridor –
The actual necessity for the Indian export plans to build a freight rail connection between the automobile/textile factories in Delhi and the Mumbai sea port turned into a project of wish/harmful megalomaniac thinking: the Delhi-Mumbai Industrial Corridor. We give a short presentation of 1,500 km of “high impact/market driven nodes” and
“transparent and investment-friendly facility regimes”.

* Mariginal Living, Marginal Deads – Slum demolition and National Highway –

Sad news about victims who lose homes or even life on the altar of speed, on the highways towards social impasse.

4) About the Project –

Updates on Gurgaon Workers News

*** After 30 years of hardcopy now soft-version online: Faridabad Majdoor Samachar –

You can find an English translation of the Hindi monthly workers’ newspaper from Faridabad:

Some of their older texts have now been published online:

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

These reports were told by workers during the distribution of Faridabad Mazdoor Samachar in autumn 2009. Most of the workers are employed in textile factories – some of them working for major companies like H&M, GAP or Calvin Klein. The textile export companies announced in December 2009 that the market is back on track and that exports to the US and Europe grow again.

Economic Times on 1st of December 2009:

Orient Craft – one of the biggest textile export company in India employing several ten thousand workers in Gurgaon alone – now opens another plant in Bhilwara in Rajasthan – a rather ‘deserted’ place. “Sitting at its Gurgaon headquarters, Orient Craft CMD Sudhir Dhingra says the new Bhilwara plant was necessitated by the surging demand from the US and Europe, and will produce 250,000 units a year. The company’s order-book has grown 15-20 percent in the past few months”.

A month later, we can find a different perspective on the ‘order-boom’
from the global north: more orders, but the pressure on prices increased even more.

Economic Times on 3rd of January 2010:

“Overseas buyers negotiating fresh contracts for the coming season are pressing for further discounts on already low prices, forcing textile firms to refuse some bookings. Gokaldas Exports Ltd explained that clients who would earlier buy a shirt at $8 want to pay only $6.5 now. “We can’t sell it at that price,” a manager said. “We need an upturn in the psyche of the US and European buyers in the coming year so that they go back to buying more premium brands because though volumes have risen, it is mostly in the lower-end of product lines which have lower margins.”

Sudhir Dhingra, managing director of Orient Craft Ltd, said an order for around 1.8 million pieces of garments from Gap India, through which US-based Gap Inc. routes its imports, fell through last week because the Indian exporters involved in that deal couldn’t sell at the low rates quoted. Some export firms are even looking to replacing existing clients with new ones to capitalize on the recovering demand”. As if it were about the right choice of partners on the market...

Crisis induced escapist hopes in the textile sector’s management – on escapist tendencies in the automobile sector see article on Rico strike in this issue. If there is an escape it will be the productive escape of living labour leaving this rat race – and we have all reason to:

Coca Cola Worker
(276 Udyog Vihar Phase 1)

Out of the 250 workers in the plant 150 do not get ESI or PF. Those of these 150 who have been hired recently get 2,500 Rs, those who work since ten years get 3,500 Rs. We work from 6-7-8am till 8-9-10pm. Overtime is paid at single rate.

Dhir International Worker
(299 Udyog Vihar Phase 2)

Out of the 1,000 workers only 10 to 15 workers get ESI and PF, those in the sampling department. The threat cutting workers get 2,800 to 3,000 Rs. The other helpers get 3,774 Rs. Each month 200 to 300 Rs get embezzled. They do not give you the annual bonus. You work 100 to 125
hours of over-time each month, but they pay at single rate. When the inspector came on 30th of October 2009 the factory was spick and span. The management said: “If they ask then say that there is no over-time, or only two hours a day paid at double rate. And say that a doctor comes for health checks”. They showed a box with medical equipment to the inspector and removed it again after he left. There is no canteen in the factory.

Eastern Medikit Worker
(Udyog Vihar Phase 1)

The casual workers in the factory work 12-hours shifts. The over-time payment of August was not paid by 30th of September 2009. Even after three years of employment as a casual they don’t pay you a bonus.

(292 Udyog Vihar Phase 2)

The 100 permanents work 8-hours shift, the 300 casuals on two 12-hours shifts. The over-time payment for the casuals is 15 Rs an hour. The casuals do not get the company bonus. The wage slip does not tell how much money is deducted for ESI or PF, the casuals get 3,110 Rs without further information.

http://www.zapconnect.com/companies/index.cfm/fuseaction/companies_detail/eregnum/3005344564.html

Evergreen Leather / GAP Worker

The factory is situated in Dundahera. The workers produce leather jackets for GAP. No worker gets ESI or PF. The main factory is in Udyog Vihar Phase 5.

lea@evergreengroups.com

Gaurav International Worker
(Udyog Vihar Phase 3)

The managers swear at us a lot. PF dues are cut from wages, but when workers leave the job they get no fund money, the company does not even fill in the PF form.

http://www.nafabs.com/
JAK Group Worker  
(566 Udyog Vihar Phase 4, 344 and 356 Udyog Vihar Phase 6)  
There are 700 workers employed in the three factories, working day in day out from 9am till 1am. You work 200 to 215 hours over-time, paid single rate, normally 20 hours get embezzled. Ninety per cent of the workers are male, ten per cent are female. May be 20 per cent of the male workers get ESI and PF. If the inspector comes the rest of the workers are kicked out of the factory beforehand – and this day they do not get paid. The wage of the female helpers is 2,600 to 2,800 Rs, the male get 2,800 to 3,150 Rs.  

Kailash Ribbon Worker  
(403 Udyog Vihar Phase 3)  
The newly hired helpers are paid 3,000 Rs. They get neither ESI nor PF. 

Ridhima Overseas Worker  
(662 Udyog Vihar Phase 5)  
There are 150 workers employed in the sampling, cutting, finishing, packing departments. The manufacturing / tailoring takes place in a different factory. Only three women workers out of the 150 get ESI and PF. The helpers get 2,800 to 3,600 Rs the sampling tailors get 5,000 to 5,500 Rs. The September wages have not been paid yet – on 31st of October 2009. When we asked for wages the general manager swore at us and kicked three workers out the job – on 28th of October 2009. There are 50 to 60 hours of monthly over-time paid at single rate. The over-time of July, August, September has not been paid yet. There are insects in the drinking water, some workers fell ill. The toilets are dirty. If you leave the job they do not pay you the outstanding wages – or they pay too little. They pay the police in order to make them threaten you. 
[http://www.trademart.in/RidhimaOverseasPrivateLimited.htm](http://www.trademart.in/RidhimaOverseasPrivateLimited.htm)  

Krishna Label Worker  
(162 Udyog Vihar Phase 1)  
They pay the minimum wage, but instead of 8 hours a day they make us
work 9.5 hours for it. They did not pay the DA for July onwards. There is lack of drinking water. The tanker arrives late. If they sack you they don’t pay the outstanding wages.

Crew Bos Products / CK Worker
(199 Udyog Vihar Phase 1)

We have not been paid our September wages yet – on 31st of October 2009. We work 70 to 90 hours over-time per month, they pay at double rate, but the over-time for August and September has not been paid. They produce leather goods for CK here.

http://www.hotfrog.in/Companies/Crew-Bos-Products

Modelama Export Worker
(105 Udyog Vihar Phase 1)

I was kicked out of the big factory on 4th of September 2-009 after having clocked in 5 minutes too late. I went to the factory again and again, but I still have not been given my August wages – on 30th of September 2009.

http://www.modelama.com/

Orchid Overseas Worker
(128 Udyog Vihar Phase 1)

Out of the 500 workers in the factory 150 are on regular wages, the others are on piece rate. We work 70 to 80 hours over-time per month, they pay less than single rate: 15 Rs per hour. Here we produce stuff for Spirit, PS and Next.

http://www.orchidoverseas.net/home.html

Poddar Export Worker
(637 Udyog Vihar Phase 5)

The helpers get 2,700 Rs, working 12-hours shifts is normal. ESI and PF is cut from the 500 workers’ wages, but when you leave the job the company does not fill in the PF form.

http://www.poddarexports.com/company.php

Polypack Worker
(194 Udyog Vihar Phase 1)
The 50 workers who are hired directly by the company get the annual bonus, the 450 workers hired through contractor do not get it. The helpers get 3,500 Rs.

Rakheja Enterprise Worker
(A-74 Udyog Vihar Phase 4)

The helper in the factory get 2,600 Rs, the skilled workers get 120 Rs for an 8-hours shift. Work starts at 9:30am and finishes at 8pm. Over-time is paid at single rate. Out of 350 workers 10 get ESI and PF. The drinking water is bad. The bosses swear.

http://rakhejaenterprises4131_ww.indiabizclub.com/

Radnik Worker
(215 Udyog Vihar Phase 1)

We work 100 hours over-time per month. They make you sign that you get double rate, actually they give less than single rate. They say: “If somebody asks then say that you get double rate. Otherwise the factory will close down. We have so many factories here, in NOIDA, in Okhla, therefore it does not matter to us when we close down one of them. But you workers will be in trouble”. There are 500 workers in the factory, but only 50 to 60 older workers get ESI and PF. When we ask for it they say: “We would have to cut 13.75 per cent from your wages. How much money would be left for you”? If they make us stay till 2am they give us 18 Rs for food in the canteen. The food is not right and it does not fill your belly. It is daily practice that the guard at the gate threatens you with calling goons.

http://www.radnikexports.com/

Richa / GAP Worker
(239 Udyog Vihar Phase 1)

The daily working-times are from 9am till 11pm. Only the first two hours of over-time are paid at double rate. The workers hired through three different contractors who cut threads, fit buttons or accesoirs are only paid single rate and don’t get ESI or PF. We produce stuff for GAP.
Sani International Worker
(330 Udyog Vihar Phase 3)
We work from 9:30am till 9pm, when they force us to stay till 10:30pm they give us 10 Rs for food, if we have to stay till 2am we get 20 Rs. Overtime is paid at single rate. We manufacture goods for Premima. The workers hired through contractor don't get ESI or PF. There is no canteen. The toilets are dirty.

Sargam / H&M Worker
(153 Udyog Vihar Phase 1)
There used to be 500 workers in this factory, now there are 300 left. The bosses swear at us a lot and they like to sack people or sent them home unpaid. Even if they make us stay till 5am they won't give any money for meals. You work 70 to 150 hours of overtime per months – but at some days they just send you back home, so the overtime gets lost. They pay the minimum wage, but each month 200 to 500 Rs get embezzled. They paid the Diwali bonus, but of that 200 to 400 Rs disappeared, as well. The toilets are bad, there is no water and no lock – people have to cue up.

Shan Export / Sign Impex Worker
(254 Udyog Vihar Phase 1)
There are 1,000 workers employed in the factory, as many as in the other two plants in 330 Phase 2 and 463 Phase 3. Only the middle-management is hired directly by the company. We work from 9:30am till 10:30 pm, often till 2am – about 125 hours of overtime per month. They did not pay the 74 Rs of July 2009. They cut money for ESI and PF, but they issue no cards and do not cash out fund money. They swear a lot at you – that is the rule in export factories. If you work till 2am they give you 20 Rs for food. You have little time to go to the toilet, there is always a queue. There is no canteen.

Shivank Export Worker
We work from 9am till 7:30pm. The helpers get 3,000 Rs, the skilled worker 140 Rs for 8 hours. Out of the 1,000 workers 10 get ESI and PF.

SS International Worker

The helpers get 2,500 Rs – now they say that we will pay 2,800 Rs. The tailors get 125 Rs for 8-hours shifts. Work starts at 9:30am, normally it finishes at mid-night. Often we have to work till 2am or even 8am. Amongst us 200 workers no one gets ESI or PF. They give us two half-hour breaks for eating, there is no break for drinking tea. The over-time payment is delayed. There is only one tap for 200 workers to get drinking water. manager swear at us a lot.

Viva Global Worker

The DA is paid with six months delay. Only after two months of employment you are registered for ESI and PF. The behaviour of the seniors is not good, they swear at people.

http://www.vivaglobal.com/

2) Collective Action –

Reports on proletarian struggles in the area

* Aftermath of the Rico strike –

The following report of a Rico worker is part of a longer article published and distributed in Hindi in FMS no.227. Apart from the Rico dispute the article documents a workers’ struggle in Gorakhpur and asks general questions about how to organise.

Based on conversations with a permanent worker, Rico Auto Industries,
38 kilometer Delhi-Jaipur National Highway, Gurgaon:

“It’s a big factory. After casting in iron and aluminum through machining, various parts of vehicles are made. The company has factories in Ludhiana, Dharuhereda, Manesar. Rico Auto, Continental Rico, Magna Rico, FCC Rico...In these factories, work of Hero Honda, Maruti-Suzuki, Honda, Ford, General Motors etc is done. Work has to be performed standing and after 8 1/2 hours duty, they force you to keep working. Even on weekly rest day, shift workers have compulsory duty. Payment of overtime is at single rate. They keep increasing the production target and for not completing the production target, they harass us. Wages are said to be 5,500 but really 4,200 are given. Basic wages are low and there are various allowances. Leave Travel Allowance (LAA) money is cut from the wages each month and given at the end of the year when LAA is supposed to be provided by the company. In the canteen, bad food for more money. No arrangement for transport. Despite many efforts, workers get tired of asking but many of the permanent workers also are not given ESI card. In this situation, permanent workers keep quitting jobs and new ones become permanent. ITI & MSC are taken as trainees. Permanent workers are 2,000 to 2,500. Through 2 contractors, as many as 2,500 workers have been hired. I don't know about their condition...To overcome their difficulty, permanent workers put in 1,000 rupees each, that is 20 lakh rupees collected and joined the union. The big leader of the union converses with the Chief Minister-Prime Minister. In August, things started heating up. On September 21, when the company suspended 16 permanent workers, then no permanent worker entered the factory. Workers hired through contractors also stayed out. Workers sat at the factory gates all day, even cooking their meals there. Leaders came to give speeches. Company hires new people. Production goes on. Goods enter and leave the factory. Sec. 144 forbids a gathering of 5 or more people at a place. Stay 50 meters away from the gate. Police took away the tents and mats. Arrests and bail. In support of unions in Sunbeam and Rico factories many unions together held a big meeting on September 25th. Normal production continues in other factories of the company. Due to prolonged time and the Diwali festival on the 17th, there were a smaller number of workers at the factory gate. The company organized an attack on October 18th in which a worker died
and many were injured. Unions called strikes in 50 factories on October 20, 80-90 thousand workers did not work. Work came to a standstill for three days in the factory. One boss was beaten. Leaders did not allow the National Highway to be blocked. The company gave 5 to 10 lakh rupees to the family of the dead worker. No arrest in the murder case. Though the Labour Department-Chief Minister got negotiations started between the Management and union on Oct. 22nd. The Company restarted production in the factory through new hires on October 23rd. Negotiations are continuing. Leaders are keeping all things to themselves. This time they are not telling anything to the workers because... In 1998, when an attempt was made to form a union, the leader had sold out, we don't know what is there in the demand notice, what the conditions are...Production is continuing in the factory. Pressure on the company is decreasing...Conversations-negotiations are on. Workers hired through contractors have dispersed. Where can we permanent workers go? Despair, full of rage, enraged. This week something is bound to...Union has started a relay-hunger strike from November 2nd”.

This is a worker’s voice when the dispute was still on. Shortly after union and management came to an agreement on 5th of November 2009. As per the agreement, out of the total 16 suspended workers, the management has agreed to revoke the suspension of eight, while one worker will be absorbed after one month. Seven workers will be investigated by State (Haryana) Labour Department. Management spokespeople said incentives and other issues like salary increase will be decided, after comparing with those of other leading companies located in and around the Gurgaon-Manesar area. At Sunbeam Auto – the other major disputed hot-spot during autumn – losses of about Rs 65 crore for this financial year were attributed to the strike.

Legal Aftermath

Only after the dispute it shows that the legal system worked as usual – against the workers. We can see how Rico management ‘prepared’ the lock-out.

The company announced a lockout on the morning of 21st of September 2009.

Workers who arrived for the morning shift found the gates locked and
around three dozen policemen and between 200 and 250 private security guards-some equipped with firearms, others with sticks-were inside the facility. According to a labour official, around 150 security guards were inside, mostly hired locally.

At 3pm, the company verbally communicated that 16 workers had been suspended for instigating workers to go slow, while the rest could rejoin work the next day. In the conciliation meetings that went on through the night, workers argued that they had met weekly production targets, so the suspensions could not be made on that ground. No show-cause notice was served on the suspended workers, which was illegal.

The company was prepared for the confrontation. Four days before declaring a lockout, it filed for an injunction in court not to allow workers to strike within 200m of the factory, which the court limited to 50m. This is the general practice of all managements in Haryana when they want to have a showdown with workers.

After the violence, the Rico management chose to file the first information report through one of their security guards; two workers were arrested for the murder while the private security guards disappeared. While all of Rico’s complaints to police have been registered as first information reports, those filed by the strikers have not been accepted by the police.

De-Risking

It is one thing to use the legal repressive apparatus against individual workers – a paper tiger in the end. The main problem is that capital cannot escape from a socially more and more spread out labour force. The Rico strike showed the supply chains are global. Automobile companies in the global north sourced 3.6 billion USD worth of parts from India between March 2007 and March 2008, compared with 330 million USD a decade ago. Now Rico and Honda management talk about ‘de-risking’ and ‘re-location’ – a myth of an escape from the living.

In the press in November 2009 Rico Auto management announced that it will set up two new plants outside Haryana. A Rico spokesperson said that the move was in line with a demand raised by key customers who were affected by the 45-day strike at its Gurgaon factory. “They want us to de-risk our operations to ensure uninterrupted supplies in case of any
labour or industrial dispute in future”. Rico’s major production comes from Haryana while also has some new facilities created in Uttarakhand and at Sanand where Tata Motors’ Nano car project is coming up – just for demonstrating the global character: 15 percent of the value created of a Nano car is from German car parts manufacturers. In contrast to this a manager of a German company said at the recent Delhi Auto Expo that nowadays nearly 90 per cent of parts manufactured by German companies in India are sent to other national markets and production units outside of India.

In December 2009 Honda Motorcycle and Scooters announced that it could set up new plant outside Haryana. “We do not rule out the possibility of moving to the south or west, but ideally, we should stick to north India where we have a fully developed supplier base and logistic set-up. Industrial unrest is widespread in India and we can face similar problems anywhere in the country,” HMSI president & CEO Shinji Aoyama said. When asked what exactly are the factors which will determine a new location (if it moves out of Gurgaon), Aoyama said, “The key determining factor would be cordial industrial relations in the area. This is one of the important factors we will keep in mind while deciding location for a new factory”. In an interview, managing director and chief executive of Hero Honda Motors Ltd, Pawan Munjal answered the question: Labour issues have tripped up the auto industry in the last few months. Why is this happening repeatedly?

“In my view, it is purely a (labour) union-driven activity from the outside and they’re doing a huge disservice to this belt of Gurgaon, Manesar and Dharuhera. I only hope it doesn’t go the Faridabad way. I wish and I pray to the government of Haryana to take strict action otherwise it could become a huge problem”. (livemint, 7th of January 2010)

* Never mind the Aftermath, here is the Prelude: Unofficial Action at Napino Auto and Electronics Ltd –

Only days after the ‘solution’ of the conflict at Rico a spontaneous strike action was reported from a different automobile supplier in Gurgaon/Manesar industrial area...

“Gurgaon, 19th of November 2009: It seemed like a trivial incident at the time—an overzealous shop-floor manager meting out punishment to a worker for a fault on the assembly line at Napino Auto and Electronics
The worker was asked to get on a table, hold his ears, squat, and then stand up again—a form of discipline across northern India and known as the “murga” (rooster) employed mostly on errant schoolchildren by teachers and by policemen on small-time criminals.

The incident, which came to be perceived as a public humiliation, ignited the discontent that had been simmering among the 900 or so workers at the company that makes electronic parts for auto makers such as Hero Honda Motors Ltd and Suzuki Motorcycle India Pvt. Ltd. The workers, surprised by their own show of solidarity since there was no union history at Napino, went on a snap strike demanding action on a list of demands, including the payment of long-pending dues.

They also pushed for full overtime pay, salaried leave and, most critically, equal wages for contract workers doing the same job as the regulars. They sought a wage hike and wanted those who had been on contract for a lengthy period to be made full-time employees and thus eligible for employee benefits. Of the workforce, 852 are contract workers, 48 are permanent. Napino has a partnership with Japanese company Shindengen Electric Mfg Co. Ltd.

The uprising at the Manesar plant, 16km from Gurgaon, stalled production for two days. As word spread to other Napino units in Gurgaon and Haridwar (in Uttarakhand), workers served similar notices on the management: The Gurgaon factory was shut for two days, while in Haridwar, output was hit for a week”.

Only a couple of weeks later, on 7th of December 2009, DNA business magazine reported “sporadic incidents of work disruption have again been reported from Munjal Group company, Omax Auto, over the last two days”. No wonder that the management think-tanks have to notice these developments. Some of them even recognising that the core problem is the ‘unruly nature’ of the unrepresented temp work force, which became the majority workforce of Shining India. They acknowledge the dual role of unions for the company management – on one hand an extra expense for representatives and certain distributive gains, but on the other hand a ‘negotiation partner’ valuable in times of
general unrest. The probably best article published about Gurgaon industrial turmoil actually comes from a Wall Street Journal. From a social management point of view the article criticises the ‘uncooperative’ attitude of the managing class towards the representatives of workers, calling for better dialog. The following paragraphs are taken from the article, reflecting some of the union developments in Gurgaon.

“Workers of at least 35 companies in Gurgaon are now members of the Communist Party of India-affiliated All India Trade Union Congress, while the Hind Mazdoor Sabha has members in at least 38 companies.

While unions compete with each other for membership, they also realize the value of presenting a united front. About 35 of them came together in June this year to form a federation under the banner 4S, or Sanyukt Shramik Sangharsh Sangh (Joint Labour Struggle Union).

It’s not clear what 4S’ exact long-term strategy is, but its immediate goal, says secretary Harish Sharma, a Hero Honda union leader, is to build a platform for joint decisions on issues relating to suspension, termination and union registration. At least two contractors have been removed from companies for “misbehaving” with workers as a result of efforts by 4S, he said. The federation’s representatives also sit in on conciliation meetings to settle disputes.

(…)

Three weeks after filing for trade union registration, Ram Niwas Yadav, a worker at Hema Engineering Industries Ltd (Gurgaon), was waylaid by half-a-dozen men on the morning of 29 September. Yadav said he was beaten up by the men, who threatened to kill him if he did not resign from the company. As Yadav lay in hospital recovering from his injuries, the workers went on a one-day strike in protest.

In August, Hanif Mohammed, employed at Bajaj Motor Co. Ltd, was slapped several times by senior supervisors inside the factory before being forced to resign, prompting a production halt for a few hours. The incident took place a week after workers filed for union registration.

In the same month, workers at QH Talbros Ltd, which makes car steering systems, registered to form a trade union. The company’s first reaction was to transfer Mahesh Singh, a union leader, to Pune. After the factory was shut for two days owing to industrial action, it promised to reinstate
him if he withdrew the papers for forming a trade union. The management eventually retracted the transfer order.

(...)

The Union government doesn’t seem to be fully abreast of the trouble brewing on this front, going by the figures. According to its records, four industrial strikes had taken place till September in Haryana, but an investigation by Mint found at least 15 labour upheavals in the Gurgaon-Manesar industrial belt alone, each stopping work for a few hours to 52 days (see graphic).

(...)

So what’s different about this wave of trade union activity? Timing. It comes as the world is emerging from a financial crisis that marks an inflection point in its industrial development. As the world’s fastest-growing economy after China—and one that sailed through the economic crisis relatively unscathed—India is poised to become one of the powerhouses that pulls everybody else out of the trough.

Take India’s automobile sector—it’s helping to define the future of the global car industry by churning out the low-priced models that are propelling growth as markets elsewhere lose steam. It’s also one of the key fronts on which workers are fighting companies, which explains why the stakes are so high”.

The Indian car industry currently experiences an upswing – due to orders from EU and to special credit schemes on the Indian market, which is likely run out in the near future. “Our sales grew 49 percent in September and 15 percent in October 2009. We would have done much better if it wasn’t for a serious parts supply constraint because of which we couldn’t ramp up quicker to meet the increase in demand,” said Karl Slym, president and managing director of General Motors India in December 2009.

The industry projects this boom into the future and adds new capacities. Despite all the talk of ‘de-risking’, the main assembly plants in Gurgaon are set up for further capacity extension. Not only passenger car maker Suzuki, but also its two-wheeler branch.
Suzuki Passenger Cars will also renovate the production facilities at its all three manufacturing units and add new capacity of at least 70,000 – 90,000 units by December 2009. A new production line is likely to be set up at the Manesar unit, which will have a capacity of 3 lakh units per year. The capacity addition is expected to be done in phases. The company has 600 acres of land in Manesar. “We can make two plants producing an additional 600,000 cars in Manesar itself,” Nakanishi said.

Suzuki Motorcycle India (SMIPL) plans to double production capacity of its two-wheeler plant in Gurgaon – news from December 2009. The company’s vice-president Atul Gupta said, “With robust demand in the past few months, we will increase our monthly production capacity to 25,000 two-wheelers by March 2010 from the current 12,000 units.”

Here some voices from the bottom of the boom, voices of the future risk – published and distributed in Faridabad Majdoor Samachar in autumn 2009.

Gautam Packaging Worker
(354 Udyog Vihar Phase 4)
The factory runs on two shifts, we produce seat belts and power window parts for Maruti Suzuki. They pay skilled workers the minimum wage for unskilled workers.

http://company.indiatradepage.com/29999/GAUTAM_PACKAGING/

Haryana Enterprises / Maruti Worker
(318 Udyog Vihar Phase 3)
The helpers get 3,000 Rs, neither ESI nor PF. The shifts are 12 hours each. Over-time rate is 10 Rs per hour. They produce parts for Maruti Suzuki here. People cut their hands on the power presses on a regular bases – they tell you to get private treatment and then sack you.

Logwell Forge / Maruti Worker
(116 Udyog Vihar Phase 1)
Us 48 workers work in this factory since fourteen years. In August 2009 all of a sudden the company changed our permanent contracts into temp work contracts – through a contractor. On top of that 26 of us were sacked. They did not even give the gratuity payment. Now us 22 workers
left have to do the work of 48 workers. We manufacture parts for Maruti Suzuki. In total there are 400 workers hired through contractor in this factory. The 74 Rs of Dearness Allowance were not paid since July 2009. We work on two 12 hours shifts. Over-time is paid at single rate instead of double rate.

Neolite / Maruti Worker
(396 Udyog Vihar Phase 3)

We work from 9am till 9pm, manufacturing light-systems for Maruti Suzuki, Eicher and Tata vehicles. We used to be paid 16 Rs per hour, since July 2009 this has been reduced to 15.40 Rs. Over-time is also paid at this rate. We have to work on Sundays, too. If you take a day off, they kick you out. When they hire you, you have to work a day without being paid. If you are five minutes late they cut one hour of your wages. On one line 40 workers are employed, but there is only one fan. The heat causes a lot of distress. There is a cooler, but it does not work. If you tell them they say that the cooler stirs up dust which would damage the parts.

http://www.kellysearch.co.in/in-company-350513274.html

It seems that with the crisis a last push of global re-location of call centre and IT related services take place. IBM announces to cut thousands of jobs in the global north while adding 5,000 jobs to its India centres. Though the interview with Convergys workers reveals that the call centre Mekka Gurgaon is not left untouched by the slump either.

Romania and India are not only assembly locations for the global car Renault Logan, they are also IT outsourcing destinations. Since the onset of the crisis the re-location of IT services seemed to have taken up speed again. In January 2010 IBM announced that it create 5,000 new jobs in India while cutting jobs in Europe and the US. The company currently operates in a number of Indian cities, including Mumbai, Kolkata, Pune, Hyderabad and Gurgaon.

In Timisoara, Romania, the French telecom giant Alcatel-Lucent announced in November 2009 that one third of the work-force will be outsourced to Wipro in early 2010. The workers then formed union to defend their rights. On 10th of November 2009 a joint-action of Alcatel workers in France, Germany, Italy and Romania took place against job
cuts. In September 2009 Wipro had closed an IT research and development-centre in Sophia Antipolis, France. About 60 engineers got the sack. Wipro, Convergys (see interview), IBM and Genpact are the main call centre and BPO employers in Gurgaon.

Article on Wipro job cuts in France

http://www.humanite.fr/2009-09-16_Politique_-_Social-Economie_Hold-up-a-Sophia-Antipolis

Short chai chat with workers employed by Convergys, talking about impacts of work and crisis on life and physique.

Workers:

Since this recession has started, companies are not offering more than Rs. 16.000 – 17.000. Before this, they were offering Rs 20.000 plus. And apart from this they are making people to work for some more time.

If 50 companies were hiring, now only 10 or 15 companies are hiring. American Express, for example, chucked out a large sum of employees and they hired new batch, but they are paying very less to them. Even we have seen, in our company also there are a process of lay offs. Recently 50 people have been asked to leave because of the recession. They were getting very good salary. They weren't the new people, but still they were asked to leave. The situation is not as bad as compared to US or England, it is not so bad in India. At least the people are able to manage – able to survive. And I think, as the recession is getting over very soon – another 5-6 months, things will definitely change.

Question:

Do you sometimes, in call centres here, you sell credit schemes or you have to do bank account work for US citizens? Do you realise that actually these people are in higher debts now or they have difficulties to pay their bills or they ... Do you see some connection with the American people? Not as clients but as people?

Workers:

In both contexts we can feel the heat, because before this, around 2-3 months, our client was offering very high incentives. But till now the situation has changed. Previously it was easy to sell. Now people are not ready to shell any money. They are saying, “No, I am very good. We don’t
want to shell any money.” So the sale has gone down. People are feeling the heat, companies are asking to make more sale, people are not ready to buy, so we are not able to earn, so everyone is suffering.

Question:

And what about your job, do you sometimes think: “Why did I bother to study? Everyone can do it”, “I am a machine”, “I’m an answering machine”.

Workers:

If we gave the same script to an uneducated person, and he learn that by heart – he could do the job. He’ll be able to do the same work that we are doing because we are so repetitive. So it is monotonous. That’s why 90% of the people are unsatisfied. Nobody wants to work in the night shift. People do feel burn out at times. Still but even if you are working with a call centre, certainly you have no better options. That’s for sure.

Question:

Does it have a physical effect on you? So what for example? If it is not too private for you.

Workers:

I lost my hair. Hair loss is one of the most common thing you can see. Symptoms you know of not getting proper sleep. Maybe losing on your weight as well sometimes. These are the basic things maybe. Hair loss is one of the major things you see and also these dark circles, these puffy eyes and all the things you can very easily correlate with call centers. Until I get another better job, I have to work. I have to do that regardless of whether I am losing my youth. I have to make money.

A faked BPO company took money for employment from some students in NOIDA. When the students noticed the scam they did not allow the company owners to move out the building till they paid them back.

Greater Noida on 10th of January 2010

Over eight students suffered minor injuries in a clash with the police personnel at Knowledge Park-I late last night. The students were protesting against a BPO company company.

“A company at Sector Alpha had hired some management students from a college. The students had joined on January 1. Later, they alleged that
the company was fake. It had allegedly demanded their salaries as security. Last evening, the company owners and students held discussion for settlement on the college premises. The students said they would not allow the company owners to move out till they cleared their payments. A woman company owner called the police in the meantime saying that she was held captive by the students. The police had to use mild force to disperse the agitating students and take the owners out,” said a police superintendent.

Medical superintendent of the Kailash Hospital Sannil Kapoor said, “Over eight students had come with minor injuries.” The students alleged that the police was helping the company and ignoring their complaints. They said instead of talking to the college administration, the policemen took the company owners to hostel and assaulted the students with sticks. “I was standing at the gate when some policemen assaulted me with sticks. I suffered injury on the leg.” said a first year student.

3) According to Plan –

General information on the development of the region or on certain company policies

The financial crash in autumn 2008 and the more recent payment crisis in Dubai sent shockwaves affecting not only the ‘housing market’, but the financial fundamentals of many industrial and urban infrastructure projects. In the following we give some snap-shots of the real estate of crisis in and around Gurgaon. Focus is on the planned ‘Delhi-Mumbai Industrial Corridor’ – a major development-axis for capital in India.

* Public-Private Tsunami from Dubai to Gurgaon

The real estate sector is an indicator for the wider economy: house prices have crashed since 2008, but despite the low mortgage interest rates the sales are in no way sufficient to pull the sector back on track, stocks of empty concrete are piling up – what does that mean in a semi-private city like Gurgaon where infrastructure is part of the deal? We have a look at empty spaces and de-railed private metro projects.

* Accumulative Axis of Evil: Delhi-Mumbai Industrial Corridor

The actual necessity for the Indian export plans to build a freight rail connection between the assembly plants of Maruti Suzuki or Hero Honda and the Mumbai sea port turned into a project of wish/harmful
megalomaniac thinking: the Delhi-Mumbai Industrial Corridor. We give a short presentation of 1,500 km of “high impact/market driven nodes” and “transparent and investment-friendly facility regimes”.

* Mariginal Living, Marginal Deads – Slum demolition and National Highway

Sad news about victims who lose homes or even life on the altar of speed, on the highways towards social impasse.

Gurgaon is a financial outskirt of Abu Dhabi, its public-private urbanisation was fuelled by international financial flows. The real estate sector plays this double role of being a market for long-term goods and a money channel for large-scale investments or a haven for money to breed itself; and the sector is an indicator for the wider economy: house prices have crashed since 2008, but despite the low interest rates the sales are in no way sufficient to pull the sector back on track – what does that mean in a semi-private city like Gurgaon?

While slums are growing and dozens of homeless freeze to death in Northern Indian winter the main problem of the real estate sector is a growing stock of unsold apartments and office space. In Gurgaon, where on average 330 new ‘middle-class’ houses or apartments were sold each month between August 2009 and October 2009, it would currently take nearly two years to clear the stock – that is if no new flats were built from now on. Prices have come down quite a bit and interest rates for mortgages are low compared to 2008 – but given the current high inflation the days of cheap money are counted.

Not only the local markets are threatening the real estate developers in Gurgaon. The payment crisis in Dubai had a direct impact due to the many alliances between Dubai firms and Indian ones. Emaar Properties has a joint venture with MGF, Limitless UAE and DLF plan to invest thousands of crore outside Gurgaon and Mumbai – turning soil into concrete. In December 2009 offices of Emaar MGF were raided over alleged violation of foreign direct investment (FDI) norms: Emaar is accused of having diverted investments meant for the real estate sector to purchase agricultural land in and around Gurgaon – which is officially forbidden for ‘foreign companies’. But what is the law? In 2007, the income tax department had raided several premises of the company for alleged income tax evasion. But a mysterious fire broke out at the tax
department’s Connaught Place office in October 2007, destroying all documents pertaining to Emaar-MGF’s case. Delhi Police had registered a case of sabotage, but have not been able to make a breakthrough.

The real estate crisis goes beyond the housing market, it impacts on infrastructure and the shape of the city, as well. In December 2009 India’s first private metro rail project was announced to be down. The metro would link the DLF township in Gurgaon to Noida, covering a stretch of 5km involving six stations. The land over which the metro rail lines are to be built is owned by DLF, hence even the stations that come up will be managed by IL&FS-DLF. The metro stretch was to be developed by the Haryana government, but it went to the private sector because the state government lacked the funds. Backing such projects are the ministries of roads and aviation. Kamal Nath, Union minister for roads and highways wants to award large stretches of roads and highways to parties who can fund it themselves by earning money from real estate and development on either side of the roads. If there is money to make...

Like with any Master Plan of capitalist development we have to be careful not to believe the hype. The inner contradictions and crisis tendencies prohibit the existing regime to ‘plan’ development in a long-term sense. Since mid-2008 the major development’ projects, e.g. the huge Reliance SEZ in Gurgaon disappeared from the mainstream horizon. Similarly India’s biggest development project – the Delhi-Mumbai Industrial Corridor (DMIC) and the Ludhiana-Kolkata Freight Line. The latter would connect the eastern ports with the mining and steel-manufacturing areas in Jharkhand and Orissa and the industrial areas around Delhi. Focus of public interest is the DMIC because it is seen as India’s launch pad into the global economy. The main centre of the car and two-wheeler industry in India is situated around Delhi, meaning that this industrial centre of India is about 1,500 km away from the nearest industrial port. With increasing needs to export the DMIC is first of all a necessary rail connection to the world market, passing through the states of Uttar Pradesh, the National Capital Region (NCR) of Delhi, Haryana, Rajasthan, Gujarat and Maharashtra, Jawaharlal Nehru Port near Mumbai. For the construction of this rail-way line the Indian government asked the Japanese state for financial and logistical support – an agreement was signed end of 2006. Since then fantasies of developers and reality of the global system went on separate tracks.
On the drawing boards of the developers the railway line turned into a 1,500 km long Garden Eden of blooming clusters and environmentally friendly industrial zones, a wish-list of development. The rail line is supposed to become the vein of a 150 kilometre wide industrial corridor: manufacturing clusters, IT-hubs, Agro-Food-Processing areas, power-plants, logistic-highways and warehouse zones, integrated town-ships, skill development centres and so on. Currently 17 percent of India’s population live inside the corridor area. Or as the developing agencies put it themselves: “High impact/market driven nodes-integrated Investment Regions (IRs) and Industrial Areas (IAs) have been identified within the corridor to provide transparent and investment-friendly facility regimes”. The whole thing becomes rather pornographic, please feel free to have a look yourself:

And of course the landed rural class will be pleased and pampered. On 12th of January 2010 the Haryana planning authority announced a new planning commission for the Kundli-Manesar-Palwal (KMP) global corridor – a ‘market driven node’ of the DMIC. Deputy Commissioner Rajender Kataria, who is also the chairman of the district planning committee: “2 km on both sides of the KMP global corridor is treated as amenity zone in which some theme cities are proposed to be developed by the government. Besides, these cities, any person can set up recreational projects provided he owns 50 acres or more.” The theme cities include World Trade City in 260 hectares, Fashion City (220 hectares), entertainment (140 hectares), Leather City (280 hectares) and Leisure City in 750 hectares. While ‘Leather City’ will probably be a labour intensive export sweat-shop city in the Muslim area of Nuh in Mewat, ‘Leisure City’ will please the decadence: racing track, race course, golf course, Disney land and so on.

According to plan the corridor area would turn into India’s Shenzhen – DMIC becomes a test-case whether India can turn into a true global industrial power. The estimated investment costs are 90 billion USD. Before we have a look at the question whether the starting and finishing point of capitalist development – !money! – is able to fund this great leap forward, let’s focus on the material core of this project. We know about the role of road and track building for the ‘progressive drive’ of industrialisation. In Gurgaon the National Highway 8 connects the Suzuki assembly plants with suppliers in Manesar and the extension of the
highway transported industrial units to Rewari and Rajasthan border areas. The planned rail-track would actually connect existing/emerging industrial clusters of various kinds, some of them increasingly focussed on export and therefore increasingly transport dependent:

Uttar Pradesh- Noida/
Greater Noida, Ghaziabad
(General Manufacturing)
Haryana- Gurgaon,
Faridabad, Sonepat
(Automobile, Electronics, Handloom)
Haryana to Gujarat heartland
(Agro-Business, Horticulture etc.)

Rajasthan: Jaipur, Alwar,
Kota, Bhilwara, Jodhpur
(Marble, Leather, Textile)
Gujarat: Ahmedabad,
Vadodara, Anand, Bharuch,
Surat(Engineering, Gems & Jewelry, Chemicals)
Maharashtra: Mumbai, Pune,
Nashik (Automobile, Textile, Pharma)

This is a very pragmatic logistical aspect of the DMIC. Furthermore the corridor expresses a capitalist hope: to overcome the dilemma of either ‘industrial core centres’, prone to develop a local working class powerbase, or ‘greenfield solutions’, often lacking infrastructure. The industrial layout of the corridor aims at decentralising industrial cores (using pictures like integrated town-ships, hubs etc.) while connecting them logistically. The ‘de-risking’ by shifting factories away from main clusters of proletarian unrest which companies like Rico and Honda talk
about – see article in this newsletter – will see the coming up of smaller industrial areas being attached to the central assembly lines by rail- and highways. In that regard the logistical cooperation between Japanese industrial developers and Indian state is a continuation: Maruti Suzuki’s first industrial set-up in Gurgaon in the 1980s and the planning of Industrial Model Town (IMT) in Manesar down the road in 2000 were based on Japanese industrial planning aid. The ‘Japanese aid’ will be tied to railway technology and engines being sourced from Japan and further planned FDI in the corridor area. Newspapers report, for example, that in the planned Neemrana III industrial unit – situated at 122 km from Delhi on the Delhi-Jaipur highway NH8 – 19 major Japanese companies have committed to start manufacturing operations. These include Mitsubishi Chemicals, Daikin Air Conditioners and Nissin Brakes.

Question will be how helpful the Japanese state can be in terms of financial aid – given the rather precarious situation of the Japanese national economy. Work on the corridor was supposed to start in early 2008, but then investment things went a little pear-shaped. Construction was postponed – things went silent about the corridor for about two years: How to finance 90 billion USD in times of burning Babylon? The initial financial composition of the Delhi – Mumbai Industrial Corridor Development Corporation (DMICDC) was aiming at 49 per cent equity by the Indian and Japanese state in the form of Japan Bank for International Cooperation and the remaining 51 per cent equity by financial institutions and companies, the major share of 41 per cent is by IL&FS Infrastructure Development Corporation Limited.

While we might be able to assess the economic situation of the Indian and Japanese state, what about the IL&FS Ltd. being the major ‘private’ sector investor? The IL&FS Ltd. is composed by following shareholders:

* 26 per cent by the UTI Indian Life Insurance which underwent major financial difficulties after 2001 and of which the US based equity trust Rowe Price owns 26 per cent since November 2009.

* 23 per cent by ORIX Cooperation Japan, Japan’s biggest non-bank lender. In April 2009 ORIX had to be bailed out by the government as loans to real estate companies turned bad. The company’s share price fell 77 percent in the financial year 2008 and forecast its lowest profit since 1997. Orix’s booked a 2.1 billion yen loss in the first nine months of
the fiscal year 2009 as it increased bad-debt provisions (http://www.orix.co.jp/grp/index_e.htm).

* 12 per cent by Abu Dhabi Investment Authority. The company is said to have lost as much as $125 billion during the global economic crunch in October 2008. The 7 billion investment in Citigroup has lost about 90 per cent of its value as of November 2009, two years after ADIA acquired a major stake in the bank. (http://www.adia.ae/)

So no wonder that things went a little quiet around the DMIC. Early 2010 the Japan Bank of International Cooperation signed a loan agreement of modest 75 million USD to prepare a plan for the DMIC region; and Haryana State Industrial and Infrastructure Development Corporation (HSIIDC) asked for bids to start work on a “Mass Rapid Transportation System between Gurgaon-Manesar-Bawal, exhibition-cum-convention centre, integrated multi-modal logistics hub and new passenger rail link”. “The full-scale development of the DMIC can happen only by 2017 when the dedicated freight corridor is ready, since the industries are dependent on it for raw materials and moving finished goods. But we don’t want to wait till then, so we have identified certain early bird projects which are not full-scale city projects, but more like smaller industrial complexes,” a Delhi – Mumbai Industrial Corridor Development Corporation (DMICDC) spokesperson said in January 2010.

So the material/symbolic front-lines of class war in India for the coming years are re-drawn: the development of the industrial corridor between Delhi and Mumbai, the Operation Green Hunt in the Adivasi belt and the civil war against the rural poor, the development of the queue for NREGA employment scheme as a way to control proletarian rural-urban mobility and the Iran-India pipe-line project as a symbol for national border-conflicts and dependence on cheap energy – and probably the dikes in the Sunderbans and other areas victimised by climate/social-change. Time for abolishing corridors, borders and front-lines from below...

Those who live on the hard-shoulder are pushed around. On 7th of January 2010 the demolition squad of the Haryana Urban Development Authority (HUDA) demolished more than 50 slum-houses near Sector 17 in Faridabad. The place where people lived is marked for the widening of the Faridabad bypass road which connects Badarpur border from Delhi side to Ballabgarh area. Bulldozers were protected by riot police.
Those who have to cross the speed-ways to get to the assembly-lines on the other side might lose their lives. Between January 2008 and July 2009, 107 people died on the 27.7km stretch of the Delhi-Gurgaon Expressway (NH8) in 1,696 accidents. When asked about this the Union transport secretary Brahm Dutt said in a media interview in December 2009 that as it was one of the first such projects undertaken by National Highways Authority of India, the agency “deserves that much of margin”. A daily commuter from Gurgaon, “Had there been enough footbridge-crossings from day one, people would not have risked their lives to cross the expressway. We had made the demand immediately after the IFFCO and Udyog Vihar flyovers were opened, but these came almost two years later”.

4) About the Project –

Updates on Gurgaon Workers News

The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Workers hired by the company for a limited period of time.

Workers hired through contractors
Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore
Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.
SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services:

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon Workers News – Newsletter 23 (March 2010)

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

In the March 2010 issue you can find:

1) Proletarian Experiences – Daily life stories and reports from a workers’ perspective

*** Hundreds Hotspots of Potential “Internal Threat” / Workers’ Reports from Gurgaon Factories –

While the Indian government declares a small armed Maoist guerilla as the ‘biggest internal threat’ their economic miracle produces a mass base of diffuse discontent in the industrial areas across the country. Please read these reports in conjunction with the article on food price inflation in this newsletter! The following short reports were gathered by
Faridabad Majdoor Samachar during the distribution of their newspaper in Winter 2009/2010.

*** Food Price Inflation, Farmers Supply-Chain Management and Urban Re-armament –

The food and transport prices are soaring, the nominal minimum wage hikes are minimal and the internal security fear is on the rise. Short overview on the matter followed by reports given by proletarians of the security sector: the potential angry brigade of/against neoliberal law and order.

*** Two Random Encounters –

Short conversations with a locked-out worker employed in the defense industry and a boxing farmer’s son in a Faridabad train, pondering about the unreliable security of farmer’s life.

2) Collective Action –

Reports on proletarian struggles in the area

*** After Rico Strike now Trouble at Denso Car Parts Factory / Report after a Visit in Manesar –

Denso supplies Suzuki and Toyota with fuel pumps. After intending to register a union 500 permanent workers were locked-out on 17th of February 2010 – Denso management hired 300 temp workers and kept them inside the factory day and night.

3) According to Plan –

General information on the development of the region or on certain company policies

*** NREGS: Encircle the countryside? –

The National Rural Employment Guarantee Scheme (NREGS) is presented as the main anti-insurrectionist welfare-measure against Maoist exploitation of rural despair – while Maoists claim that without their pressure the NREGS would not be implemented in their areas. Fragments on the social control character and conflicts around the world’s largest work-fare program.

4) About the Project –

Updates on Gurgaon Workers News
*** Glossary –
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

*** Hundreds Hotspots of Potential “Internal Threat” / Workers’ Reports from Gurgaon Factories –

While the Indian government declares a small armed Maoist guerilla as the ‘biggest internal threat’ their economic miracle produces as mass base of diffuse discontent in the industrial areas across the country. The following short reports were gathered by Faridabad Majdoor Samachar during the distribution of their newspaper in Winter 2009/2010.

Bhurji Supertech / Bajaj Worker
(272 Udyog Vihar Phase 2)
The wages of the 150 to 200 helpers are between 3,000 and 3,200 Rs. They don’t get ESI or PF. There are two 12-hours shift plus 12 hours overtime on Sundays. You don’t get a single day off per month. Wages are delayed, we received the November wages on 24th of December. They only paid half the bonus for Diwali. There is no water in the toilets. They manufacture Bajaj coolers here and Bhorji Injection Moulding machines.

http://delhiyellowpages.co.in/delhi/BHURJI_SUPER_TECH_INDUSTRIES.html

Crew Bos Products / CK Worker
(172 and 199 Udyog Vihar Phase 1, plus 137 Sector-4 Manesar)
The workers in the three factories of the company have not received their October wages by 30th of November 2009. The workers produce leather goods for CK.

http://www.hotfrog.in/Companies/Crew-Bos-Products

DMM Tools / Maruti Suzuki Worker
(43 Udyog Vihar Phase 3)
The helpers are paid 3,000 and the machine operators 3,500 Rs. We work on two shifts 10.5 hours each. Over-time is paid single rate. We manufacture parts for Maruti Suzuki. Out of 90 workers five will have ESI and PF. If you leave the job or they kick you out the last ten days of work are not paid. Managers swear a lot and the toilets are dirty.

Avery Dennison Worker
(94 Udyog Vihar, Phase 1)

In the shining new factory there are 40 of us workers who are directly hired by the company, but they say, that we are actually employed through a contractor. They demand at least 12 years of school education when hiring people, they make us operate machines and we have to sort 12-digit barcodes, nevertheless they call us unskilled and pay us only the unskilled workers minimum wage of 3,914 Rs. Officially there are three shifts of eight hours each, but they make us stay for 16 to 24 hours on stretch. We work 100 to 150 hours overtime per month, they pay double rate but 20 to 30 hours get embezzled. The manager swears at us a lot. They used to pay for food when they made us work 16 hours, but since three months they stopped paying. Because they refused doing overtime the company sacked ten workers two months ago and another two workers this week. Those sacked workers did not get the outstanding wages for the last three or four working days and they were not paid the statutory bonus – they said that the contractor will pay and gave his phone number. On the phone the contractor said that the company will pay... The work is more than hard. For the hard work of turning the dying moulds the company ordered 50 to 60 workers from outside. For a 12-hours shift they pay them 150 Rs, they do not get a proper food break, no tea break, no ESI or PF.

http://www.alibaba.com/member/in105555656/contactinfo.html

Gaurav International / GAP Worker
(198 Udyog Vihar Phase 1)

More than 2,000 workers work from 9 am till 10 pm, midnight, 2 am... Only the first two hours are paid at double rate. They give you no food money when making you work till 2 am. They don’t give you a day off – even with fever you have to work. They swear at you. The factory manufactures stuff for GAP. In the Plot 236 factory the punch-card of the
workers shows that working-time finishes at 6 pm, actually on 5 to 6 days per month the manager makes them work till 11 pm. These additional hours are not paid. On 23rd of December there was turmoil about this in the factory and since then they let us go at 6 pm.

http://manufacturer.indiatradepage.com/all/udyog_vihar/27/

Gulati Export House / GAP / Polo Worker
(203 Udyog Vihar Phase 1)

The 400 workers are hired through the company directly and everyone has ESI and PF. After leaving the job I asked the company to fill in the PF form – the pension office sent it back saying that no money was saved in the fund account. Next time I sent it the same happened. The third time I came to the factory the manager said that a the old accountant has left the job and that when the new one arrives, he will fill out the form for me...

...In the Gulati factory on Plot 2, Sarol Mor in Sector 18 the majority of the 4,000 workers are hired through contractors – non of them get ESI or PF. The wages of the helpers are 3,000 to 3,200 Rs. Daily working times are 16 hours, overtime is paid at single rate. The factory produces garments for GAP, Polo, Veritas, Style and Co. When buyers arrived to check the factory the company handed out pay slips showing double rate payment of overtime to the permanent workers. The next month they cut this extra-money from the wages.

http://www.importgenius.com/shipments/gulati-export-house.html

Jyoti Export Worker
(124 Udyog Vihar Phase 4)

The helpers wage is 3,515 Rs and the skilled workers get 4,200 to 4,300 Rs. The managers swear a lot and the manager in charge takes 500 Rs each month commission from the helpers.

Kailash Ribbon Worker
The helpers are paid 2,200 to 2,700 Rs, the skilled workers 3,500 to 6,000 Rs. The factory runs on two 12-hours shifts. On bank holidays and Sundays the company forces us to keep our cycles inside the factory, they lock the door and make us stay and work inside. They pay only single rate for overtime. They cut 6-8-10 hours from your wage for ‘having dozed off’. Out of 350 workers 100 might have ESI and PF.

http://business.zibb.com/profile/kailash+ribbon+factory+ltd/in/gurgaon/124001/26136166

Liyar Industrial Worker

I, Vinod, started working in this factory on the 20th of November 2002 and left the job on 30th of November 2006. On the 13th of October 2007 the company sent my PF form back to me, the company had filled in the form with faulty details. In one part of the form they stated my birth date as 15th of July 1969, in a different part as 15th of July 1987. After a lot of back-and-forth the company again returned the form, saying it was refused by the pension office due to faulty details. This time they put down my name as Vinod Varma in one place, as Vinod Kumar in a different place of the form. The company does this intentionally, they try to fleece the PF fund and cause trouble over trouble for the workers. So finally, by entering November 2005 instead of November 2002 as the commencement date of my PF payment the company gobbled up three years of my pension fund.

Manis Centra Worker

The skilled tailors get 140 to 150 Rs a 9-hours shift, the helpers get 2,800 Rs per month. Normally we work till 7:30 pm, but often we are made to work till midnight. Overtime is paid at single rate. None of the 300 workers get ESI or PF. The company slogan is: Don’t kick them out, they will leave by themselves.

Neolite / Maruti Suzuki Worker

The factory runs 30 days per month on two 12-hours shifts
manufacturing head-lights for Hero Honda, Maruti Suzuki and Tata 407. The overtime payment is at single rate.

http://www.kellysearch.co.in/in-company-350513274.html

Niti Clothing Worker
(218 Udyog Vihar Phase 1)

The thread cutting workers in the factory get 2,400 to 2,500 Rs per month, no ESI, no PF. After a year of employment a contractor took one month wages of 25 workers and disappeared... These workers were never paid. The skilled workers get 4,185 Rs per month, but when work runs out or is completed they are sent away at noon and 4 hours of already given work are not paid.

http://www.neetee.com/

Radnik Export Worker
(215 Udyog Vihar Phase 1)

The working-times start at 9:30 am and shift finishes at 10 pm, often they make us work till 2:30 am. Overtime payment is less than single rate. If you have to work till 2:30 am they give you food, but it is rather bad and won’t fill your stomach. Out of 1,200 to 1,300 may be 50 to 60 workers get ESI and PF. On the company web-site the management declares that they are part of some fair-trade circle and that ‘a world without exploitation’ is their goal.

http://www.radnikexports.com/

Richa and Company Worker
(239 Udyog Vihar Phase 1)

The supervisor and manager take 500 Rs bribe from each helper each month. They swear a lot. In the factory on plot 193 the working-times are from 9 am till 11 pm, 1 am, sometimes the whole night. There is only one break at around 6 pm. Only the first two hours overtime are paid at double rate, after that single. Even if they make you work the whole night they don’t give money for buying food. The manager in charge and the production manager swear a lot. For a minor flaw they kick you out.

http://www.richagroup.com/group.aspx

Ridhima Overseas Worker
After the company had not paid wages for two months 90 skilled workers on piece rate got in touch with a union in July 2008. After three months of back-and-forth between union and labour department an official came to the factory. The workers did not get the outstanding wages of 300,000 Rs. The 12 people of the middle-management (staff) had outstanding wages of 250,000 Rs. In order to keep people away from the factory premises – this is, people who might come and ask for their wages – the company placed two musclemen at the gate. In all three factories the company owes workers a lot of money.

http://www.trademart.in/RidhimaOverseasPrivateLimited.htm

Sargam Export Worker
(152 Udyog Vihar Phase 1)

We work 150 hours of overtime per month – They pay at double rate. The supervisors take 300 Rs per month from workers’ wages, if you refuse, they swear at you and give you so much trouble that your are forced to leave the job. From the overtime money 200 to 300 Rs are embezzled, as well. The factory on Plot 152 is used as the finishing department, while the production work – tailoring – is done in the factories on Plot 153 and 210 in Phase 1 and Plot 224 and 540 in Phase 5. The company pays the minimum wage and there is ESI and PF officially cut from wages, but there is a lot of conflict and bribery around that issue. They don’t give you an ESI card. They don’t give you time off. There was little work in October 2009, but still there were about 400 workers per factory floor in the Plot 152 factory – today there are 700 to 800 on all three floors together. On the pretext of having messed up a piece of garment on 29th of October three workers were sacked. My two acquaintances were taken back on the 7th of November, while I was made to sign my notice letter. I went back to the factory several times to get my outstanding wages. On 10th of December 2009 they said, that they don’t have information about my name and employment records. I made my way into inside the personnel department, but the manager said that he will call the guards to kick me out. I insisted and the official said that I will be paid on 12th of January 2010. In this way I have not received my October wage yet, it’s end of December 2009 now.
Shining Impex Worker
(254 Udyog Vihar Phase 2)

We work from 9:30 am till 10:30 pm – they often make us stay till 2 am. We work on Sundays, as well. Overtime is paid at single rate. The helpers get 3,914 Rs and the skilled workers get 160 to 170 Rs for an 8-hours shift... There are about 250 workers and the manager in charge takes 500 Rs bribe from each worker each month. If you refuse to pay they kick you out.

Since late summer 2009 the prices for food and transport have increased significantly. The newspapers say that the overall annual inflation for potatoes and pulses in 2009 was 40 per cent, for vegetables 20 per cent. Daily experience confirm these figures. Lentils are at about 80 Rs for a Kilo, which is nearly double as expensive as a year ago. A kilo apples will cost between half and a full daily wage of an average factory worker. Onions are 15 to 20 Rs the kilo, which was about 8 Rs two years ago at the same time of year. At many tea stalls you now pay 5 Rs for a tea, while it was 3 Rs a half a year ago. This is partly because of the enormous increase in sugar prices. Not only food, but also transport got more costly. The three-wheeler union of Gurgaon announced that by 29th of December 2009 the price for the trip from old Gurgaon bus stand to Chakkarpur is 10 Rs. That is a 100 per cent price hike. Delhi buses increased their ticket prices by about 30 to 40 per cent on most journeys.

Working-class wages did not keep up with this level of inflation. The minimum wage for industrial helpers – the most common category – was increased from 3,500 to 3,900 between summer 2009 and winter 2009/2010. Many companies have not passed on the hike. The opposite is true: bigger companies in the textile export sector – like Gaurav International and Richa – have cut down the obligatory extra-payment for overtime work. The government had promised bigger DA (Dearness Allowance) payments, but this did not materialize. It is clear that the working-class is supposed to pay for some of the state's 'economic incentive schemes' since October 2008, e.g. the lower interest rates for car and consumer good credits and mortgages for the masses of empty upper-class flats. The times of cheap credits is counted, given overall inflation. The food price / wage – ratio will remain explosive. Currently the Indian state tries to appease conflicts at various fronts of the price
developments: in November and December 2009 ten thousands of sugar cane farmers protested in Delhi against import plans of the government, followed by mass demonstrations of small shop-keepers against the price-hikes of big traders and union led-demonstrations against inflation. All these protests remained within their respective class limitations and institutional boundaries – but for the political class the juggling job will get increasingly difficult.

Capitalist answer to food-price inflation is farmer supply-chain management, NGO-mediated new trading technologies and productivity increase. The following snap-shots of farmer’s development around Gurgaon resemble the way that the British colonial powers tried to sell their railway and telegraph system in the late 19th century. They said that the bad famines like 1876 will not happen again, because the telegraph system will communicate the areas of food-shortage and the railways will bring the necessary food quicker. The famine of 1894/6 was even worse given the speed-up of food-price inflation through telegraph communication and the quicker transport of grain to the export ports via rail-track. Today it is electronic communication and supply-chain management which will push the smaller farmers and shop-owners to the edge of the market:

“Mobile outlets with GPS to deliver veggies in Gurgaon

TNN 21 December 2009

GURGAON: Come January 14 and residents in posh colonies of Gurgaon will find an easy and smart way to buy vegetables, fruits and dairy products

as ‘fresh green on wheels’ will soon be available at their doorsteps. Municipal Corporation of Gurgaon (MCG) has given green signal to a private company to launch 150 mobile retail outlets in the city.

The outlets will be equipped with Global Positioning System (GPS) devices and will be run by a central control room in Jaipur.

Interestingly, the owners of these retail mobile kiosks will be women from the economically challenged urban communities. “We have joined hands with 16 NGOs which will help us pick women self-help groups. These women will be given training to operate real time software and hardware platforms attached to the mobile kiosks. They will also be
provided micro home loans, insurance and education for their children,” said Aditya Bhardwaj, managing director of the company”.

“Retailers farm out training to beef up rural supply chain

New Delhi, Dec. 15

Sanjay Chauhan, 29, a farmer from Shikarpur village near Gurgaon is showing off his certificate from a farm training programme that he has just attended. Besides acquiring new skills, he hopes to have a profitable relationship as a supplier with the French retailer Carrefour, which organised the training. Retailers such as Bharti-Wal-Mart, Carrefour and Reliance are still trying to get their supply chain formula right by roping in farmers as stake-holders. Despite being the biggest names in the trade, these retailers are ploughing rural areas not just to teach innovative farming methods but also trying to find the best suppliers among the lot.

With fresh fruits and vegetables being one of the most sought-after items in a retail store, mega retail chains are going all-out to build a high-quality supply chain. Carrefour, which is sourcing field-fresh vegetables worth $170 million from India, said it has been working closely with farmers in northern India and training them in global farming practices. In the last six months alone, the number of farmers trained by the company has gone up from 800 to 1,500. Reliance Retail, similarly, has trained farmers in the northern and western parts of India. A Reliance spokesperson said, “We are currently working with nearly one lakh farmer families across 4,000 villages in India.”

This social process of productive misery has to be secured – either through work-fare measures like NREGS (see article in this newsletter) or through threat of brute force. India did not see any major unrest during the last rounds of global food-riots in spring 2008 – but the situation has aggravated significantly since then. The state wants to re-arm the urban forces, in mid-January 2010 the Gurgaon local authorities announced to hire at least 300 more cops. This is pathetic in comparison to the army of private security guards. The corporate and upper class lobby demands the legal amendment to allow private security guards to carry automatic guns – automatization ueber alles: CNC-embroidery machines increase the numbers of unemployed tailors, GPS for veggie-sellers increases bankruptcy amongst small traders, machine guns will not contain the
social tension on neither end of the barrel. The government estimates that there are about 15,000 to 20,000 armed Maoist Guerillas in the jungle areas of the tribal belt. There are over 100,000 proletarian security guards in Gurgaon alone – a mass force of social repression or a potential/neoliberal angry brigade against the ruling affairs? Here are some of their voices.

Choukas Security Worker

Next to NIMS Hospital in Sanjay Colony Sector 23 the company office is situated. The company supplies drivers and security guards. Most of the guards have to work 12-hours shifts day and night. No weekly day off. They pay 4,500 to 5,700 Rs per month, based on a 80 hours week. Wages are paid with delay. Even if you have to work 36 hours non-stop they won't give you extra-money to buy food.

RR Group Security

(Company Office: Delhi)

We work at 15-16 Westend Plaza in Kapashera, Gurgaon. We work on 12-hours shifts day and night. No single day off, 4,500 Rs monthly wage. They cut 500 Rs for ESI and PF, but they don’t issue an ESI card and when you leave the job you won’t get the PF money.

SDM Cisco Security Worker

(Anmol Tower, Security Company Office in Sukhrali, Gurgaon)

We are paid 3,600 Rs monthly wage. There is no single day off during a month, we work two 12-hours shifts. The overtime payment is at single rate. I have no idea what kind of wheeling and dealing the company undertakes, but for ESI and PF only 156 Rs per month is cut from the wages.

SLV Security Worker

(Company Office: Ghora Road, Gurgaon)

They make us work 12-hours shifts. They pay between 4,500 Rs and 6,000 Rs per month. If you leave the job, the outstanding wages for the last 15 working days are not paid.

Faridabad, Autopin Jhuggi, a slum alley. A worker arrives at the workers’ library by bike. He brought the last issue of Faridabad Majdoor Samachar
and comments on some of the reports and articles. He is in his late 30s – a mechanic employed by a company manufacturing, amongst others, electronic timers for the war industry and national army. He is very outspoken – his main question is how to overcome the system without having to become martyrs in the process of struggle. And how to give other workers hope without creating illusions. Should we display the full amount of misery of our conditions and all the short-comings of our struggles? Where would hope come from? He himself is currently in a difficult situation of struggle. Since 1995 the number of workers in the VXL factory on nearby Mathura Road has come down from 400 to 93 and the company has started a final attack on the remaining work-force. By 4th of February 2010 they managed to get 46 more workers out by using various strategies of ‘relocation’ etc.. Till October 2009 the CNC-machines ran on two 12-hours shifts non-stop and the operators were burdened with working two or three machines at the same time. In November 2009 the sacked 150 to 200 casual workers and reduced working-times to two 8-hours shifts. Then the CNC operators were given the choice either to relocate to Kolkata or to resign. There is no factory in Kolkata and the answer of the management to the question “What will happen to us then in Kolkata” was to kick out the asking workers on 18th of December 2009. In this situation the union decided to engage in a tool-down strike which resulted in a lock-out. Currently – in February 2010 – workers sit outside the factory. The last step in the episode of getting rid off these workers? The worker who told this story was the general machine operator in this company. He did his apprenticeship there, worked there for over a decade...

...local train back from Faridabad, the train has to stop every hundred metres and give way to express and freight trains. Young students get bored and play jump off and on games. A young man watches them with a rather spiteful look. His name is Gaurav, he is son of a farmer and lives near Balabgarh in the south of Faridabad. He is on his way to an entry test for the police force – he likes boxing and won the regional competition in the weight class 67 to 72 Kg. He says that these students are childish and that they have never worked and won’t have to for the next years. He went to college, as well, but he also works on the fields of his family. The family got wealthy when selling some parts of their land to the Industrial Development Authority – but they kept about 30 acres
which they work on as a joint-family. During harvest times they employ up to 30 people on their land. His father is a police officer in Gurgaon. There is a lot of crime in Gurgaon, partly because of the new rich farmer's sons who have money, but no future perspective. Gaurav says that this is why he wants to keep being a farmer. The soil keeps you grounded and gives security because it won't vanish like money. So why does he want the police job? He says that job and farming are two different things. The field alone is unaccountable – last years there was no rain till October and the harvest was not that great. You never know what you will get out and how prices develop. He says that his father is still a simple man, despite the money from the land sales and the job in Gurgaon – he tries to keep simple traditions, and that is good...

2) Collective Action –

Reports on proletarian struggles in the area

*** After Rico strike now trouble at Denso car parts manufacturer / Report after a Visit in Manesar –

Hopefully not a mere repetition of the Rico struggle – see GurgaonWorkersNews no.21 and no.22 – which basically ended in one worker dead and many suspended. While Denso workers are locked-out in Manesar, Sendan Vikas workers are on strike / lock-out in Faridabad, in 60 km distance from Manesar. Both Sendan Vikas and Denso supply Maruti Suzuki with parts. Real connections between workers and not between officials have to be made.

A visit at Denso plant in Manesar, 26th of February 2010

The factory is located close to the Honda HMSI plant in Industrial Model Town Manesar. About 80 workers – men and women – sit in 100 metres distance of the factory gate. Denso produces fuel pumps and MPFI-systems for Suzuki and Toyota, employing about 550 workers including staff. About 400 workers are employed in the production department, about 150 of them women workers. Before the lock-out about 150 workers hired through contractors were employed, mainly in maintenance and canteen.

The company hires-and-fires. People have to work one year as trainees, earning around 4,500 Rs. After the training there is another year of probation. Only 50 per cent are then taken on as permanent workers.
Workers hired through contractors earn around 4,000 Rs, even after several years of seniority. The permanent workers' wage ranges between 8,000 Rs to 18,000 Rs after ten years seniority. Because of the hire-and-fire policy the permanent workers decided to register a union with the help of AITUC. The company tried in various ways to undermine this attempt.

On 17th of February 2010 the A-shift arrived in the company bus at the factory. The company announced the suspension of 36 union members and asked all workers to sign a ‘paper of good conduct’, basically asking individual workers to promise discipline, not to raise demands or to engage in union activity. Permanent workers refused to sign this and the company refused to let them inside the factory. The workers hired through contractors went inside and the company hired 300 more workers with the help of agencies.

These workers hired through contractors are kept inside the factory 24 hours, no one can leave the factory. Permanent workers were told that a contractor kept 200 original documents of workers and refuses to hand them back to the workers when they intend to leave. The company also offers significant wage increases to people who show inclination to leave. The permanent workers say that there is TV inside and drinks. The factory used to run on two 8-hours shifts, now it runs on two 12-hours shifts. Nevertheless, the production is down by around 40 per cent. The workers don’t know whether production in the nearby Maruti Suzuki plant is affected by the reduction in output.

Most of the work inside the factory is skilled and / or hazardous work, e.g. in the press-shop. The company seems to hire any workers, skilled or not. There is also a boiler running in the factory which needs regular maintenance and checks – but the responsible workers are locked-out. The workers do not expect much help from the official labour department. The police puts pressure on the workers and backs local thugs who intimidate the people outside the gate.

These workers at companies like Rico, Mushashi, Sunbeam and other bigger car parts manufacturers are young workers and fairly skilled workers. They find themselves in a position better than many other industrial workers in the area, in terms of working-hours and wages. But they are far away from the wages of, e.g. older Maruti Suzuki workers and
they face more job insecurity. They know that they are in a central position of India’s boom – they are advised by major political agencies like AITUC to choose the path of union recognition and then have to face lock-out situations. It is tragic that two bigger suppliers of Maruti Suzuki are in conflict with their workers at the same time, but that for various reasons a joint-proletarian-venture is difficult to achieve. The story of the Sendan Vikar workers in the next issue of GurgaonWorkersNews.

A friend send following valuable comment concerning the ‘good conduct undertakings’ that workers are supposed to sign:

“I am a little unclear about them. Friends from Faridabad Majdoor Samachar say to sign them and go inside, because one signs on all sorts of rules and conditions when one is hired anyway. Then why do managements use them? Just to scare workers? At MA, the union contested it, saying it was illegal (as part of an ‘illegal lockout’). But are they illegal? If so, then should further vitiate their value to mgmts. Can a worker be legally terminated for not following through on the ‘good conduct’ undertaking? I doubt it. But it’s worth a discussion in GWN if not an FMS lead piece, since they seem to be a very common feature in factory turbulences”.

The following note was published in local newspaper:

“Industrial workers hold protest against atrocities”

Tribune News Service

Gurgaon, February 24

Hundreds of factory workers owing allegiance to different trade unions and employee organisations took out a protest march and staged a demonstration in front of the Kamla Nehru Park. They were protesting against the highhandedness of the managements of Manesar-based Denso and AG Industries, which they alleged, had been stopping them from forming worker unions. Sensing the volatility of the situation, the district administration imposed Section 144 and the workers were allowed to hold their protest at the Leisure Valley Park, Sector 29 or the HUDA Park, Sector 5. However, defying the orders, the workers assembled near the Kamla Nehru Park and started raising slogans against the managements of certain factories and the state government. A large number of police personnel deployed there prevented them from
entering the park, following which they staged protest demonstration there. The protesters alleged that the managements of these factories had got the protesting workers attacked by hired goons, who were supported by the police. “On top of it, instead of taking action against the attackers backed by the managements, the police lodged FIR against the innocent labourers”, they rued. The workers later took out a protest march to the office of the divisional commissioner and submitted a memorandum of their demands.”

DENSO HARYANA PVT. LTD. Plot No.3, Sector-3, IMT-Manesar, Gurgaon-122050(Haryana), India. Tel: +91-124-2290611, Fax: +91-124-2290602 ...

3) According to Plan –

General information on the development of the region or on certain company policies

Although the NREGS has no direct impact in urban Gurgaon it will redefine the employment situation, the labour market, the state regulation of proletarian reproduction in the countryside and thereby reverberate in the urban: will more people enter the urban job market, will sacked workers be able to go back to the village and find an income?. One of the main tasks of communists today is to understand the possible explosiveness of rural-urban-rural migration in times of mass redundancies and hiring and the impact of urban experience and desires on struggles around rural labour and work-schemes – the mutual influence of rural and urban proletarian discontent.

We have given various shorter introductions to the NREGS (https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no-912/#fn5 and https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no-918/). In the following we have a brief look at the social control dimension of the NREGS and the potential for struggles of the rural proletariat to go beyond village boundaries. First of all some official figures about the current stage of NRGES. Basically the central government says that it will guarantee 100 days of paid work for one family member of an officially poor rural household, for the first phase of
2009 the central government claimed to provide 25,000 crore RS. As it looks like the 100 days work and therefore wages were generally NOT given. Official figures say that in 2008-09, only 14.5 per cent households could complete 100 days employment under NREGA while the percentage remained at 4.5 in 2009-10 till September 2009. In December 2009 the Chief Minister of Punjab, Singh Badal, announced that NREGS “failed” in Punjab. Shiv Charan Singh Brar, a noted social worker engaged in the implementation of the scheme, said, “There is a lot of discrimination in the distribution of job cards. These cards are being given to rural masses who have voted for the SAD-BJP combine. Job cards to rural people aligned with the Congress are being denied”.

Looking at some of the struggles which emerged from NREGS – see below – we can see that there is a degree of ‘systemic corruption’. Thanks to this ‘corruption’ anger and despair of NREGA rural workers is channelled into institutionalized paths of local or regional administrative levels often limited to the “demand for proper implementation”.

A similar picture arises when it comes to the wage levels. In September 2009 the central government put a cap on the general wage paid, which is 100 RS a day. The NREGS is supposed to be on the level of the minimum wage for rural labourers in the respective states. If the minimum wage of the state is higher, the state government, not the central government is supposed to pay for the difference. Official figures claimed that the average wage till September 2009 was not 100 Rs, but around 84 Rs a day.

The difference between central government and state government wages creates some kind of tension between these two levels of the political class. On 18th of February 2010 the Haryana government announced to the central government in an official letter that it needs financial aid to cover the difference in NREGS wages: 100 Rs would be paid by the centre; to pay the difference to the local minimum wage – which in Haryana is around 150 RS per worker and day – would cost Haryana state “large sums of money”.

The other line of intra-ruling-class tension ‘created’ by the NREGS runs between different sectors, e.g. Punjabi farmers and local industry say that NREGS hinders necessary low-wage migration. A closer look reveals that it is less the NREGS but the shorter harvest times due to
mechanisation in Punjab – and therefore less pay for the migrant workers – which makes more labourers from Bihar and other distant states reluctant to make the long journey. In Haryana the media claims in February 2010 that 1,000 companies involved in wood-based manufacturing have come under scanner for the alleged trafficking of Bangladeshi labourers. The workers are brought from bangladesh in order “to compensate the shortage of labourers triggered by the partial success of the National Rural Employment Guarantee Act (NREGA) in Bihar and UP”.

Another NREGS front-line runs between state and state-want-to-be. NREGS is seen as the bollwerk and magic cure to Maoists extremism, the soft-skill of counter-insurgency. In November 2009 the home secretary announced: “Aiming to countering extremism at grass-root level, the Centre has asked states to ensure that 100 days of employment is provided to all eligible rural households under NREGA in districts affected by the left-wing extremism. Helpline should be made operational to capture demand for job cards and employment, it added”. This is very much paper-tiger propaganda and Maoist groups like People’s War Group are probably right when they claim that local burocrats only give full pay for full amount of work once under certain pressure from below, above or from wherever. Here two video-examples of NREGA-state-propaganda.

http://video.aol.co.uk/video-detail/nrega-uplifts-lives-of-many-in-naxal-hit-binika-village/2836393109

* NREGS and the making of rural citizenship

After the implosion of the rigid village hierarchy under market and class movement pressure, one of the main tasks of the central state was to regulate proletarianisation and the mobility of rural labour. With the acceleration of the crisis of peasantry a merely formal integration of the rural poor as citizens and voters became far less than sufficient. The local state, the panchayat and other institutions had to become social managers of welfare and warfare. The NREGS is one main lever of social control. For NREGS you need a job card, for a job card you need a proof of identity – which becomes ever more sophisticated. The government of
Assam announced in December 2009: “To make the process of money transaction more easy and hassle-free for the job card holders, the government will soon launch biometric smart cards”. Another entry-point into controlled citizenship is the requirement for a bank account: The switch from cash to bank payments of wages under the National Rural Employment Guarantee Act (NREGA) has been acclaimed by the government of India as the “world’s largest ever financial inclusion scheme”. This switch again is sold as a way to erode corruption and to teach the rural poor how to save money that they don’t have. A survey published in Economic Political Weekly found out that workers’ bank accounts are very much in reach of local middlemen and elites and that particularly for women the bank account often means further disempowerment and individualisation.

* NREGS and the possible generalisation of struggles

It is difficult to find a general analysis of struggles which irrupted around NREGS so far. The question will be whether the fact that there is a ‘common employer’ of a vast mass of rural poor in form of the state will lead to a generalisation of struggles in a positive sense – or lead to a political integration and mediation of otherwise, though isolated and sporadic, nevertheless explosive struggles against individual land-owners or other employers and local ruling class. Firstly, the following examples are rather random. Secondly they seem to confirm the concern that the ‘confictive interplay’ of NGO/civil society and local elite becomes the main stage of struggle. A friend told us about the change of character of social audits in Jharkand. Initially there was no official structure of these ‘social audits’, sometimes 2,000 people would take part. Since introduction of NREGA these social audits became much more formalised and exclusive. A proper analysis has to be undertaken. The following examples mention more the success of the ‘supporting institutions’ than the activities of the workers themselves:

Karnataka, October 2009

Activists of the Karnataka Prantha Raitha Sangha (KPRS) appear to have made significant progress in the implementation of the National Rural Employment Guarantee Act in the Munoor Gram Panchayat, Karnataka. They have managed to induct 250 persons into the scheme in Munoor that had only 25 job card holders before the KPRS entered the scene.
Around 15 days ago, the first NREGA project – the building of a 1.5 kilometre irrigation canal – started in the village employing nearly 50 workers. But what these grassroots activists have gained so far may come to naught because of their lack of information about the basic provisions of the NREGA. Speaking to The Hindu the workers on site threatened to stop coming to work in the future if the wages are not raised. The workers, mostly women, have come to believe that they are going to be paid only Rs. 82 per day. They demand at least Rs. 125 per day, the wage that they would have earned as agricultural labourers, in addition to lunch and two cups of tea. The KPRS activists supported the demand for raising the “minimum wages of Rs. 82.”

Zilla Panchayat Chief Executive Officer P. Shivashankar tries to confuse the workers: “The programme rests on three basic principles, namely, ‘work on demand’, “pay in proportion to the work’ and consequently, ‘no work, no pay’, says . In other words, Rs. 82 is not the daily minimum wages guaranteed under the NREGA as understood by the workers and activists. It is in fact the payment for one unit of work. “When a worker displaces (digs or transports) 1.2 cubic metres of soft soil, it is considered to be one unit of work for which the payment is Rs. 82,” Mr. Shivashankar explained. In the case of hard soil, the workers are paid Rs. 99 for every unit of work. “If they work more they will be paid more, if they work less they will be paid less. It is that simple,” Mr. Shivashankar said. District general secretary of the KPRS Yadav Shetty blamed government officials for misinforming the people in Munoor. But he said that his organisation would conduct more awareness workshops for its grassroots cadres.

Rajasthan, June 2009

Mazdoor Kisan Shakti Sanghatan activists Aruna Roy and Nikhil Dey said they chose Bhilwara for the audit exercise because they wanted to see if the Minister [of Rajasthan] could face up to an NREGA audit in his constituency; Mr. Dey argued that the MKSS social audit had visibly and strongly demonstrated the positive effects of civil society-government collaboration. The unity of purpose shown in Bhilwara by social auditors, government, media and the office of the Comptroller and Auditor-General was replicable in other States. Besides, as many villagers pointed out, the minimum wage of Rs. 100 a day under the NREGA had
increased wage levels across the private sector, benefiting both families that could not avail NREGA work and families that had completed the NREGA quota of 100 work days per family. As MKSS activist Shanker Singh remarked: “NREGA has greatly increased the bargaining power of poor people. They are no longer willing to work cheap.”

Gujarat, January 2009

Agriculture workers rally for unpaid wages from NREGA work. In the last few months the NREGA Workers Union received hundreds of complaints related to non-payment of wages, corruption and work not started despite demands under the NREGA in Fatehpura Taluka of Dahod District, Gujarat. After the public rally the job card holders marched from main market to Taluka Panchayat office walking 1.5 k.m while shouting slogans like “Long live agriculture union! We want work! We want bread! We want 100 rupees minimum!”

Jharkhand, June 2009

In what is seen as a victory for workers under the National Rural Employment Guarantee Act who had faced hardships because of delayed payment of compensation, as many as 174 of them from 10 villages of Khunti and Murhu blocks have received Rs. 2,000 each under the Payment of Wages Act, the total adding up to Rs. 3.48 lakh. This came at the end of a month-long struggle. A team of student volunteers from Delhi University and elsewhere have been running a “sahayata kendra” (help centre) for NREGA workers here since May 1. The first problem that came to their attention was that of delayed payments in the district. In most of the villages of Khunti and Murhu blocks that were surveyed, wages had not been paid for weeks, even months. In some cases, the delay added up to years. In the absence of timely payments, rural workers had developed an aversion to the NREGA.

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC

BPO
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.
BPO

Business Process Outsourcing: for example of call centre work, market research, sales.

CITU

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers

Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee’s State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.
Ration Card

Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff

In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees

In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices:
Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

http://www.gurgaonworkersnews.wordpress.com

gurgaon_workers_news@yahoo.co.uk

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

-*** In the Spiral of Inflation / Reports from Gurgaon Metal and Textile Factories –

In March 2010 the transport prices on most routes within Gurgaon
doubled, milk got more expensive, in April 2010 the government announced that cooking gas and petrol price will increase further. Within the spiral of inflation the pressure to work overtime increases. The 30 per cent minimum wage increase for workers in Delhi is a real wage loss – nevertheless it increases workers’ discontent, as a friend from Okhla has told us. Metal and textile workers from Gurgaon told their reports to friends of Faridabad Majdoor Samachar during distribution of the newspaper in February 2010.

*** What Are You/We Doing / Proletarian Autobiography –

A 55 years old worker tells about his life-long attempts to escape from field-work drudgery and to avoid ‘real subsumption’, the direct control of capital. He goes back and forth between village and town, survives on short jobs in factories, business activities like peanut and cigarette selling and self-employed white-washing of other people’s brick-walls.

2) Collective Action –

Reports on proletarian struggles in the area

*** First Lock-Out, then Scientological Brain-Wash: Up-Date on Denso Car-Parts Factory and on Strike at Groz Tool Factory, Gurgaon –

On 22nd of March 2010 Denso in Manesar announced that it will take 23 out of 36 suspended workers back. The company ‘promises’ to take the rest back after one month, given a peaceful atmosphere in the factory. All Denso workers will be sent to one week of training in a Brahma Kumaris “World Spiritual University” Ashram near Manesar, to find a “peaceful mind”. During the lock-out in Manesar, Denso workers in Poland confronted the company with wage demands. In closer spacial proximity workers at nearby tool manufacturing company Groz also sit outside the factory after suspension of 16 workers. (Missed) chances of a proletarian just-in-time solidarity...

3) According to Plan –

General information on the development of the region or on certain company policies

*** Warfare against the Huts, Gated Peace for the Palaces / Note on Slum Raids and Fires in Gurgaon –

In times when land converts into ‘land-banks’ and the price paid to
farmers for an acre of agricultural land in Gurgaon/Manesar can be around 4 to 6 crore Rs the question of who can live on it and how becomes a question of life in a mortal atmosphere. Short news on raids of unauthorised colonies in Gurgaon and slum fires in Faridabad.

4) About the Project –
Updates on Gurgaon Workers News

*** Organising Workers Collectivities / Proposal by Faridabad Majdoor Samachar –

Friends of Faridabad Majdoor Samachar (FMS) are opening various places in Faridabad, Okhla and Gurgaon, inviting workers to meet, talk and coordinate practical steps together. They have published a proposal in the current issue of FMS which has been distributed within the industrial areas. Read their proposal in English translation on their website.

Faridabad Majdoor Samachar

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

In April 2010 the government announces that inflation will cross the 10 per cent mark. For proletarian goods inflation has gone way beyond this mark already, particularly when looking at prices of vegetables, sugar, rice, pulses. In March the transport costs on most routes within Gurgaon doubled. Cooking gas price will increase by about 40 Rs per cylinder; diesel and petrol prices will be increased on 1st of April.

The state governments have to react when it comes to workers’ wages. In March 2010 workers in Haryana got a Dearness Allowance of 300 Rs per month, increasing the minimum wage for helpers to 4,214 Rs. The minimum wage for workers in Delhi was increased by 30 per cent in March 2010, helpers are now entitled to 5,272 Rs, the Uttar Pradesh government (industrial area of neighbouring NOIDA) followed by
announcing a 40 per cent hike.

The first question will be whether companies will pass on the increase in full amount. Friends working in garments industry in Okhla (Delhi) told us about serious conflicts and work stoppages caused by companies’ initial refusal to increase wages. The second question will be at what point the considerable minimum wage difference created between Delhi and neighbouring Haryana (Faridabad, Gurgaon) will cause major disgruntlement both within capitalist and working class.

On a global scale in the garments export industry these wage developments will have an impact on the international position of the local industry, given the enormous global pressure on commodity prices, increasing competition and labour costs of around 40 per cent of production costs. Friends in Okhla reported recent lay-offs – in case of Unistyle company 10 per cent of the work-force were sent home.

The pressure on workers increases – during recent years we have seen wildcat actions taken by workers after an official minimum wage increase to actually enforce a wage hike on the shop floor. Things waiting to happen. For now we can only document metal and textile workers reports to friends of Faridabad Majdoor Samachar, shared during distribution of the newspaper in February 2010.

Bhurji Supertech Worker
(272 Udyog Vihar Phase 2)

The 100 permanent workers received the December wages on 20th of January, the 200 workers hired through contractors haven received the wage yet, by 30th of January. The helpers hired through contractor get 3,000 Rs, from this 554 Rs is cut for ESI and PF, but you get neither card nor PF form. They swear a lot.

Classic Dials Worker
(367 Udyog Vihar Phase 2)

Out of the 150 workers employed in the factory 125 are helpers most of them female workers. The helpers’ wage is 2,500 Rs. You work till 10:30pm at night, overtime is paid at single rate. We produce dials for watches, brands like Maxima, Titan, Sonata, HMT. Less than 25 workers get ESI and PF. If you leave the job, the last 8 to 10 days are not paid.
Dhir International Worker
(299 Udyog Vihar Phase 2)

The daily working-times are from 9 am in the morning till 1 am in the night. The women workers are sent home at 9:30 pm. Normally we work Sundays from 9 am till 9 pm, sometimes till Monday morning 9 am. each month 180 to 200 hours overtime. Overtime is paid at 15 Rs per hour, and of the total overtime 400 to 500 Rs gets embezzled. The wages are paid with delay. On 13th and 14th of January the workers refused to work, they were paid their December wages on 20th of January. The wages of the thread cutting women workers is 3,800 Rs, of the tailors 4,000 to 4,100 Rs. Out of 600 workers less than 100 get ESI and PF. The toilets are dirty and the management swears a lot.

Enexco Technology Worker
(157 Nauragpur, Gurgaon)

In the plant 260 workers work on to 10 1/2 hours shifts, manufacturing machinery for the cement industry. Between 6 and up to 15 days per month people would start working at 8 am and work till the next day 6:30 pm. If you stay inside the factory for 34 1/2 hours they pay 15 hours overtime. The 30 permanent workers are paid overtime at 1.5 rate, the 180 casuals and 50 workers hired through contractors are paid single rate. If you work for 34 1/2 hours they give you 56 Rs for two meals and breakfast. If you work 10 1/2 hours they give you three tea breaks. Money for ESI and PF is cut from the casual workers wages, but they are not given an ESI card or PF number. If you ask for the PF number, they kick you out. If you leave the job, they don’t fill in the PF form. Some workers caused a lot of trouble – they were given back the money which had been cut from their wages.

Instyle Worker
(140 Udyog Vihar Phase 1)
The helpers get 3,500 Rs and the tailors get 4,000 to 4,100 Rs. There are 100 hours of overtime per month, paid at single rate. They cut ESI and PF money from wages, but when you leave they don’t give you the fund money. I had filled in the PF form after 18 month of employment. The PF office sent it back saying that no money has been transferred to the account throughout this period of employment.

Jay Switch Worker
(407 Udyog Vihar Phase 3)

We are forced to work overtime and during that time the company does not even provide for tea. Overtime is paid at single rate and the December Wages have not been paid by 30th of January.

Tel.: +(91)-(124)-4001465 / 4001466

Kalamkari Export Worker
(280 Udyog Vihar Phase 2)

Tailors work in the factory for years without break, but the company issues new company cards every 5 to 6 months. The ESI and PF numbers change. We work 120 hours overtime per month, paid at 1.5 rate. In the finishing department 55 workers are employed through contractor: the thread cutter get 2,500 to 2,700 Rs, the press operators 3,000 Rs and workers who remove threads get 3,200. No one gets ESI or PF. Working times are from 8:30 am till 9:30 pm, no day off per month. We work 150 to 200 hours overtime per month, paid at single rate. From the overtime 500 Rs per month gets embezzled. If an inspector comes to the factory, these 55 workers are kicked out beforehand. They don’t give tea, they tell you off instead.

Krishna Label Worker
(162 Udyog Vihar Phase 1)

The 450 workers are hired through three different contractors. From wages dues for ESI and PF are cut. I left the job after nine months and the manager said that PF forms are filled in by the contractor – but the contractor had abandoned the contract with Krishna company. Instead 8
they make you work 9 hours a day for the minimum wage. They don't pay
the last 20 days of outstanding wagesIf you complain they say that you
should bring the pay-slip, but the company never issued pay-slips.

Logwell Forge Worker

(116 Udyog Vihar Phase 1)

In the shearing department 65 workers had been employed by the
company directly for years – before Diwali they have been transformed
into workers hired through contractor. If you take a day off, they send
you home the next day – without pay. Now there are 30 out of 65 left of
us and we work as much as in old times when we were more than
double as many workers. They used to give you money for the uniform
and shoes, in 2009 they did not. We work on two 12-hours shifts, they
pay single rate.

http://www.kellysearch.co.in/in-company-350507277.html

MDH Masale Worker

(216 Udyog Vihar Phase 1)

The company employs 10 to 12 workers directly and 150 through
contractors. Overtime is paid at single rate.

Neetee Clothing Worker

(218 Udyog Vihar Phase 1)

The wages of the 30 to 40 women workers who cut threads is 2,700 Rs
per month, they don’t get ESI or PF. The 100 tailors get neither ESI nor PF.
We work from 9 am till 10 pm – the women workers are also forced to
work that long. Overtime is paid at single rate. When you leave the job
the last 10 to 15 days are not paid. The management swears a lot.

http://www.neetee.com/

Poddar Export Worker

(637 Udyog Vihar Phase 5)

They tell you that they pay 4,000 Rs in the cutting department, actually
they pay 3,500 Rs. No ESI, no PF. The thread cutters get 3,000 to 3,200 Rs.
Normal shifts are from 9:30 to 6:30 pm, but they often make you stay till 2 am. We work 150 hours overtime per month, paid at single rate. If you leave, they pay 800 to 900 Rs less than they would have to.

http://www.kellysearch.co.in/in-company-350517348.html

Richa Global Worker
(232 Udyog Vihar Phase 1)
In the finishing department 80 workers are hired through A.K. Fashiontech contractor. They are made to sign that they receive 4,044 Rs monthly wage, in fact they get 3,600 Rs. For ESI and PF another 570 Rs is cut from the 3,600 Rs. ESI cards are issued for 8 to 10 workers, but no one receives PF when leaving the job. The factory runs two 12-hours shifts. There is no weekly day off. You work 100 to 150 hours overtime per month, which is paid at single rate. We produce garments for Polo and others. The supervisors swear at us a lot.

http://www.richagroup.com/group.aspx

SS International Worker
(821 Udyog Vihar Phase 5)
The helpers get 2,800 Rs, no ESI, no PF. The tailors get 135 to 150 Rs per day. Daily working times from 9:30 am till 1 am. If you leave the job they won’t pay the last 10 to 15 days of outstanding wages. The toilets are dirty.

Taurus Home Furnishing Worker
(418 Udyog Vihar Phase 3)
If you work 9 hours a day, 30 days per month than you are paid 3,000 Rs as a helper and 3,800 to 4,000 as a tailor. We work 150 to 200 hours overtime, payment is less than single rate. If you work till 2 am at night they give you 30 Rs for food, which is hardly enough to fill your stomach. The production of cushions and blankets runs 360 days a year. None of the 250 workers get ESI or PF. The toilets are very dirty.

A 55 years old worker tells about his life-long attempts to escape from field-work drudgery and to avoid ‘real subsumption’, the direct control of
capital. He goes back and forth between village and town, survives on short jobs in factories, business activities like peanut and cigarette selling and self-employed white-washing of other people’s brick-walls.

“The time that I get up in the morning keeps changing. Now that I have started working as a painter and whitewasher again, I get up at 7 o’clock in the morning...

We were eight brothers and sisters. There was little family land, so my father started working as a mason. After having worked for Kanpur for some time, my eldest brother in addition to the work in the fields, also started work as a mason. I did not like school too much, because you had to endure the teachers’ punishment. I can still remember the beating of the teacher’s stick on my back in the 5th grade. So, I stopped going to school then and grazed cows instead.

My father and eldest brother worked in masonry. My two older brothers started working in Faridabad while my younger brother went to school. My sisters were already married at that time. I worked on the field. I ploughed the field with the bullock. I irrigated it with the Persian wooden wheel and bamboo baskets. I made sugar melasse. My uncle would do some of our work and we would do some of his. I would do wage work, but back then you were not paid in cash, but in grain: two to three kilos barley, peas, rice. I had a passion for singing and drama, but my father did not like this...

I was seven years old when I was married. The wedding procession went on foot. My uncle put me on his shoulders and took me along. Eleven years later, my wife was brought to our house. We had a son. I never had money on me. I would have to ask my mother for money. My wife would say one thing or the other...

Constant bickering at home. My wife and my sister-in-law went on and on finding fault with one another. My sister in law ridiculed me – you don't work, you just wander about. In anger, one thing is said and then another- it gets messy. I remained mired down in anger. I refused to work....

I went to Kanpur to my uncle. They hired me at Victoria Mill to remove the ash from the boilers. After two days, I left the job. After wandering around in Kanpur, I returned to the village. I borrowed 50 Rs and after
informing my relatives, I left for Ludhiana. I started working in a work-shop manufacturing parts for bicycles. The wage was 130 Rs a month. At that time one kilo of flour was 60 to 70 Paisa and a quarter litre milk was 50 Paisa. I shared a room with another guy, the rent was 20 Rs. We cooked on a sawdust fire. Our expenses for food and so on was 30 to 40 Rs. I then worked in a workshop for engine parts and finally in a factory producing nuts and bolts. There the wage was 180 Rs...I was able to save 100 Rs a month. The telegram with the news about my mother’s death reached me after an one week delay.

Because of too much quarreling, I left the factory job and I rejoined at the work-shop when news arrived that my brother had died in an accident in Faridabad. I did not understand English and the management at the workshop did not tell me what had happened, they just stuffed me into a car...

I refused to live in the family home. My older brother called me to Faridabad. There I started working as a helper at the furnaces of Orient Steel factory and at the same time ran the paan (betel nut) shop of my brother’s friend. The factory ran on three shifts and after the factory work, I worked four to six hours in the shop. On Sundays I worked sixteen hours in the shop. There was always money in my pockets. One brotherís factory was closed down and in the other brotherís factory, problems were occurring. Because of the shop, I did not stay back to work overtime, making the excuse that my health was bad. The supervisor who had hired me left the job. Two months later, I was forced out of the job.

At the entry gate of Mujesar, I got a paan shop there. I began to sit there every day for 16 hours a day. Claiming that the area was his, a fellow from the village had my shop removed.

I went back to the village for a while, then returned to Faridabad, and got a paan hut in front of Nikkitasha factory in Sector 6. When things became troublesome inside the Escorts plant, the management had decided to open Nikkitasha factory. There was a large population of workers and three buses brought staff from Delhi. Because of this, I used to sell a lot of paan and cigarettes. Then suddenly after about two and a half years, the workers and staff went back to the Escorts plant. My sales dropped to less than a quarter...I moved the hut to Sector 2 in front of Orient Bank, then to Bata Chowk. Tired of it all, I sold the nicely done up hut. I brought
my wife and children to live with me in Faridabad.

For two months, I walked around and sold bracelets and stuff which I got on commission from my brother. The profit was 50 per cent per item and you could have a good laugh with the ladies. But small items would also tend to get lost.

I came to the decision to sell vegetables and borrowed 500 Rs from my brother. I bought vegetables and fruits on the market and pushed the trolley through the alleys of the area. You encounter all kinds of people along the way. Together with the vegetable sales I started working on piece-rate in a work-shop doing hand moulding. Around Diwali I also started whitewashing jobs through a contractor. I bought a shack in the slum, sold it, bought another one. The hand moulding requires strength and is rather hot. I was sick of selling vegetables.

I started selling scrap. I walked through the alleys shouting. In order to collect iron, bottles, plastic, copper, alloy I would have to start working at 4 o’clock in the morning. In the morning, the guards sell cheap stuff secretly on the side. I would have to run around till 2 p.m. When the Haryana government banned alcohol drinking, there were less bottles around, then my income went down a lot...

For three months, I worked as a guard at a factory gate in Sector 59. Twelve hours a day, thirty days a month. Because of troubles of sleeping at night, I left the job.

Ten years ago I started whitewashing and painting buildings. I work myself and I also sometimes take two to four workers to work with me. Ten years ago everyone used lime. Today 90 to 100 per cent want their walls painted. To work with lime is not so harmful. Plastic paint is harmful for lungs and eyes. When you scrape the old paint of the wall, chemical dust enters your lungs. The skin on my hands got bad due to the chemicals, The wall paint comes in powder-form and irritates your skin. In the bright sunlight. some of the paints reflect so much that the painter can go blind...

I got myself a ladder on rent and started whitewashing in 2002. The ladder broke – I fell from 18 ft hight. My ankle bones broke in a bad way, I was not able to walk for a year. I lived on savings and the income of one of my boys who started work as an electrician. Then I took another
It is because of all the compulsions upon a person that makes a person leave one thing, pick up something else, then make that person wander or return to that same thing.

I am tired of whitewashing. Climbing up, plastering, painting. It is hard, dirty-dusty work and I don’t have the capacity to do it any more...

In 2008, I had started selling cigarettes and peanuts on commission. In March 2009, I started selling juice. But in September 2009, I had to return to whitewashing work. The peanuts did not take off and there is heavy work attached to them – standing around from 8 a.m. till 11 p.m. waiting for customers.

I get angry when my wife asks what I have been doing all day. It’s been 30 years that I have left the village. I left with the desire to earn and build a proper house. What I have now is a slum hut. I have lost my courage... I hope my son will take care of us, that he won’t just push us around.

(Faridabad Majdoor Samachar – New Series No. 259, January 2010)

2) Collective Action –

Reports on proletarian struggles in the area

*** Up-Date on Lock-Out at Denso Car-Parts Factory and on Strike at Groz Tool Factory –

Denso management is equipped with finest armour of modern class warfare: they made use of their plants in Thailand to prepare for the lock-out; they could rely on the local labour department to not interfere in the illegal lock-out and to keep the workers’ representatives entangled in legal scuffles; they were able to hire goons and fresh labour through links with the rural elite; they could rely on the main union burocracy to engage in merely symbolic shows of struggle and solidarity, which kept the young workers bored playing cards in front of a running factory; finally they made use of their financial power and managerial connections with the spiritual management consultant Brahma Kumaris in order to win back heart and minds and shakra of the young workers after a weeks post-lock-out-training in a luxurious local ashram.

Denso,

Sector 3, Plot 3,
Industrial Model Town
Manesar
The workers have been locked out since 17th of February 2010 – see last issue of GurgaonWorkersNews.

On 18th of March they were still sitting in front of the factory while workers hired through contractors still worked and slept inside. The initial idea to write a common letter with locked-out Sanden Vikar workers – a different supplier for Maruti Suzuki based in Faridabad – was at least discussed after exchange of phone numbers. A common letter from workers of suppliers to the Maruti management could showed at least some symbolic unity and could have made a little impression on the Maruti management. Unfortunately the Sanden Vikas workers decided to believe the Labour Officials that the suspended workers will be taken back and they went back inside the factory on 6th of March 2010. More about this conflict in the next issue. AITUC union planned a demonstration for mid-March, union members from 12 different Gurgaon-based companies took part. A worker assumed that the ordered parts from denso plant in Thailand must have run out and that quality problems will occur more frequently. The Denso workers tried to establish some contact to Maruti quality staff, hoping that they will raise quality concerns in their name.

On 22nd of March a Denso worker told us that the company agreed to take 23 out of 36 suspended workers back. The remaining workers are supposed to be taken back after one month, once a ‘peaceful atmosphere’ is established inside the factory. The chances for these workers to get their jobs back is slim. Denso needs the young and skilled work-force, Denso cannot just break them. The management told workers that before entering the factory they will be given one week of training in an scientological ashram near Manesar, to find a peaceful mind...

http://www.brahmakumaris.com/
http://www.panoramio.com/photo/16755105
http://en.wikipedia.org/wiki/Brahma_Kumaris_World_Spiritual_University

Denso runs many factories around the globe, apart from Asia they have invested heavily in Czech Republic and Poland. While Denso was unable
to supply Maruti Suzuki with the full amount of required fuel pumps the Ford subsidiary Visteon – which seems to run a factory not only in Jaipur area, but also in Manesar – started to vamp up production in order to compensate for Denso parts. Interestingly enough both Denso in Poland and Visteon in France are currently facing workers’ unrest. This situation would have allowed direct coordination between struggling work-forces.

Denso Poland

On 25th of March Workers of Denso Thermal Systems Polska protested in front of the FIAT assembly plant in Tychy, Poland. They demanded to get the same wage increase as the other workers employed by the FIAT group. At the Denso plant about 500 workers manufacture washers and cooling aggregates. The management had offered to increase wages by 300 Zloty per month, but the workers were not satisfied with the offer.

Visteon France

On 22nd of March 2010 the 500 workers employed at Visteon factory in Gondecourt started an unlimited strike for 5 per cent wage increase and against the threat of 250 redundancies by 2013, which the management had announced. On 25th of March the strike ended with a 2.9 per cent increase plus bonus payment. If you want to get in touch with the workers at Gondecourt:

ce.visteon@voila.fr.

While the struggle at Denso is finished off with repression and abdomenable breathing techniques, workers at nearby Groz company sit outside their factory after suspension of 16 union reps...

Groz Engineering Tools Pvt. Ltd.

Village Kherki Daula, 41st Milestone

Delhi – Jaipur Highway

Gurgaon

Groz manufactures metal machine tools for export to countries all over the world. The only local company getting parts is JCB. The Groz factory was opened in 2003. Groz runs another factory in Chennai, under the name of Acurate Products Ltd. It currently employs 225 permanent workers earning around 7,000 to 8,000 Rs per month and 500 workers
hired through contractor earning the minimum wage. The factory runs machines and assembly lines.

On 10th of March 2010 a worker hired through contractor had an argument with a HR manager S.S.Sindhu and was sacked. All workers reacted in response. The General Secretary of the HMS union got involved and subsequently suspended together with 16 other workers. Workers were attacked by company goons. HMS is not yet registered at Groz, the application process runs since six month. In reaction to the suspension all permanent and all workers hired through contractors decided to go on strike and sit outside the factory. before the incident the production was running well, workers were not working overtime, mainly because Groz only pays at single rate. The company has not issued any lock-out paper, but hired around 200 new people. They produce together with company staff, but production rate is low. Some negotiations with the Labour Office started, but management refuses to take the suspended workers back. Groz workers have little contact with nearby locked-out Denso workers. Some demonstration might take place after consultation with HMS leaders. Please feel free to send an email to HR department:

eyogesh.sharma@groz-tools.com

http://www.groz-tools.com

After the news about the lock-out at Denso we received following article about a planned lock-out at car parts manufacturer Bosch. A new strategy which is able to undermine the lock-out policy has to be discussed.

Bosch

Bosch threatens second lockout as workers remain adamant

11th of March 2010

Automotive components major Bosch Ltd Thursday threatened to declare lockout at its main plant in the city as its agitated workers remained adamant over wage revision and healthcare benefits.

Mico Karmika Sangha (Mico Trade Union) general secretary K.N. Umesh: “In mid-March 2010 the company declared lockout unilaterally at Naganathapura facility where about 1,000 people are employed without
serving the mandatory notice to us. Now it is threatening to close the Audugodi plant where about 2,400 people are working”.

After final round of talks failed last month, the workforce at both the plants have been on a go-slow agitation since 12th of February 2010, demanding an average Rs.15,000 hike in their wages per month in view of the rising inflation and high cost of living in an expensive city like Bangalore. The management initially offered a measly Rs.500 hike after the three-year wage accord of 2005 expired by 2008 and raised it up to Rs.2,800 subsequently.

“We were patient and restrained from going on strike or tool down for over 12 months as did not want to disrupt production at a time when the industry was reeling under global recession and slowdown in the Indian economy. When orders picked up during the third and fourth quarter of 2009, our workers exceeded production targets up to 130-140 percent,” Umesh said.

Noting that production declined by 40 percent this week and sales valued at Rs.120 crore (Rs.1.2 billion) were hit, the company said it was unfortunate the workforce had resorted to go-slow and tool down when the order book was looking up following a revival in the automobile sector during the last three months.

Bosch India manufactures spark plugs, alternators and generator starters for the Indian automotive industry and exports to its parent group firms worldwide.

Of the four major plants in the country, the two Bangalore plants account for 55 percent of the company’s production and sales turnover, which was Rs.4,750 crore (Rs.47.5 billion) in calendar year 2009. The other two plants are at Nashik in Maharasthra and Jaipur in Rajasthan. There is another plant in Manesar, just 5 minutes away from the Denso plant.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Warfare against the Huts, Gated Peace for the Palaces / Note on Slum Raids and Fires in Gurgaon –

In times when land converts into ‘land-banks’ and the price paid to
farmers for an acre of agricultural land in Gurgaon/Manesar can be around 4 to 6 crore Rs the question of who can live on it and how becomes a question of life in a mortal atmosphere. The ground price does not have the direct interest to suck out blood and energy of those without land and resources – here we talk about bodies which have to be removed.

15th of March 2010

Local farmers/landowners in Gurgaon and Faridabad area complained about the tandem of state and private developers and the way in which land acquisition is taking place:

Haryana continues to help colonisers acquire land. The petitions filed before the Punjab and Haryana High Court suggest the state has been acquiring land before releasing it to the colonisers, following their failure to buy it directly from the landowners. This is not all. In Faridabad district, the state functionaries initiated land acquisition proceedings by issuing a notification under Section 4 of the Land Acquisition Act. But soon after, they allegedly issued licenses to the colonisers to develop the land – a move objected to by the landowners. They have alleged the state is the facilitating the colonisers by “acquiring the land after the efforts of the developers to purchase the land from the landowners failed to yield any result”

24th of March 2010

A team of Municipal Corporation of Gurgaon (MCG) and the district administration raided over half a dozen sites where illegal colonies were allegedly being developed, officials said. Nine persons allegedly involved in the unauthorized colony racket were also arrested, they said. MCG Commissioner Rajesh Khullar and Deputy Commissioner Rajender Kataria have ordered to lodge an FIR against those arrested. When Khullar along with other officers raided an illegal colony site at old Delhi road, the persons there tried to escape but they were nabbed by police, an official spokesman said here.

27th of March 2010

At least five dozen jhuggis in Sector 59 in Ballabgarh area were gutted in a fire here today. Although no injuries took place, the jhuggis were gutted engulfing the little belongings of the inmates. The inmates of the jhuggis
are migratory labourers and petty workers. According to some of the slum dwellers, the fire broke out in one of the jhuggis and soon spread to others. The wind velocity was high at the time of the incident and this helped the fire to spread faster. The majority of the adult inmates were at work when the incident took place. The slum area has more than 200 jhuggis. These jhuggis are built, partly on the land of Haryana Urban Development Authority (HUDA) and partly on private land. This is the third time in as many years that fire has broken out in the slums in Sector 59.

30th of March 2010

Two children – son and daughter of a paint-worker – were killed while two other kids suffered serious burns when a major fire gutted over 100 dwellings in a slum settlement in Shalimar Bagh in Northwest Delhi on Tuesday. A case of fire has been registered at the Shalimar Bagh police station against unknown persons.

4) About the Project –

Updates on Gurgaon Workers News

Friends of Faridabad Majdoor Samachar (FMS) are opening various places in Faridabad, Okhla and Gurgaon, inviting workers to meet, talk and coordinate practical steps together. They have published a proposal in the current issue of FMS which has been distributed within the industrial areas. Read their proposal in English translation on their website.

http://www.faridabadmajdoorsamachar.blogspot.com

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist).
Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state
government checks the general price development and accordingly pays
an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-
term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories
employing 10 or more people. Employers have to contribute 4.75 percent
of the wage paid to the worker, the employee 1.75 percent of their wage.
Officially casual workers or workers hired through contractors who work
in the factory (even if it is for construction, maintenance or cleaning work
on the premises) are entitled to ESI, as well. Self-employment is often
used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical
school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut
Lakh
see Crore
Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a
power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker's wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices:

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon,
single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0.7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their
daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Developing Unrest: New Struggles in Miserable Boom-Town Gurgaon

Following article tries to summarise the main tendencies of class relations in Gurgaon and based on that to come to practical conclusions and suggestions for local ‘communist activities’.

Gurgaon, a satellite town in the south of Delhi became the symbol of ‘Shining India’. Many people are dazzled by the glass-fronts of shopping-malls and corporate towers and fail to see the development of a massive industrial working-class behind the facade of ‘post-fordist’ display of consumerism. Together with industrial centres like the Pearl River Delta in China or the Maquiladoras in Northern Mexico the Delhi industrial belt has become a focal point of global working class formation.

A Global Working Class in Local Formation

In the industrial areas of Gurgaon a very particular class composition (1) emerged. Hundred of thousands migrant garment workers work next to the assembly lines of India’s biggest automobile hub and next to hundred thousand young workers sweating under the head-sets of Gurgaon’s call centres. We are forced to re-think our traditional understandings of what ‘workers’ are, how they struggle and how this struggle can become a process of self-empowerment towards self-emancipation.

The specific structure of industry and the composition of the work-force first of all pushes us beyond the regional and national frame-work.

On the most obvious level this happens through the global market. In spring 2008 the Rupee reached its peak to the US-Dollar, causing bad export conditions. The garment industry in Gurgaon dismissed thousands of workers and shifted orders to ‘low currency’ countries like Vietnam and Bangladesh. In autumn 2008 the Rupee plummeted, but together with it the US and European market crashed and sent shock-waves into the industrial areas of Gurgaon: credit crunch for the real
estate, garment orders came down, US-banking services slumped. At one point in time, workers in one space – who might otherwise have thought that they have little in common but chai stalls – faced a common situation: cut in bonuses or piece-rates, abolishment of free company meals or transport, threat of job cuts. The potential for a socially explosive tea-party of english-speaking call centre night-shift youth, migrant garment and construction workers and young skilled workers in the car part plants entered the Industrial Model Towns – a mass base of actual ‘internal threat’.\(^{(2)}\)

There is a second level on which the ‘collective work-force’ has to be grasped beyond the boundaries of factory walls or company units. This level is shaped by local, regional and global division of labour. Maruti Suzuki connects their assembly lines and welding-robots via transport chains with production units of hundreds of outsourced suppliers, reaching into the work-shop slum-villages of Faridabad or the green-field industrial areas along the National Highway. Assembly plants around the globe depend on parts manufactured in Gurgaon by companies like Rico or Delphi. IT and BPO offices cooperate closely with branches oversea, while production in the huge garment factories is supplied via supervisor middlemen with piece-work from working (wo)men stitching ‘at home’.

On a third level the character of the work-force itself can not be grasped on a local level: the majority of workers are migrant workers, going back and forth between urban industrial life and village. Wages are too low to reproduce a nuclear family in Gurgaon, most workers leave their family in the villages. Similarly it is near too impossible to survive a longer period of unemployment – or for that matter, a longer period of strike – in Gurgaon. Though disintegrating, the village still functions as the main unemployment insurrance. The changes in the villages, such as introduction of the National Rural Employment Guarantee Scheme or the general development of the agricultural market, reverberates in the working conditions in Gurgaon and echoes back into the rural. Workers arrive in Gurgaon with hopes, which are in most cases disillusioned. They survive 16-hours shifts by keeping both village misery and glorification in mind. Their urge ‘not having to be a worker anymore’ expresses itself individually in plans to open a shop back home. Reality forces us to find a collective and social expression of this urge to abolish our existence ‘as workers’.
Main element of this reality ‘as worker’ has been the casualisation of work-force. In winter 2000/2001 Maruti Suzuki used a labour dispute of minor importance to lock-out the permanent work-force and to replace them through compulsory ‘Voluntary Retirement Schemes’ with temporary workers. This has been repeated in other companies to a point where 70 to 80 per cent of the average factory work-force is nowadays hired through contractors – due to their mobility they have less interest in struggles for long running wage agreements and company pension schemes. They have more immediate desires and anger. The remaining casual and permanent workers are often young workers hired in various ITI-campuses all over India, employed with much less job security and lower wages than the old type of permanent work-force. In the garment factories the skilled tailors on piece-rate producing ‘full-piece’ garments are increasingly put under pressure by chain-systems employing 20 less ‘skilled’ workers to produce the same garment in division of labour and by introduction of CNC-cutting and embroidery machines. In Kapashera – a workers’ dormitory ‘village’ where about 200,000 textile workers and families live close to the main industrial area – dozens of ‘CNC-courses’ and six week basic tailoring courses are offered by small-scale informal schools.

Given this complex picture the majority of workers do not face a single ‘company boss’ in a formal way, they face many bosses. Due to the real estate boom which catapulted local farmers out of their fields into landlordism and business a specific coalition of local political class, landlords, labour contractors, police and company-hired local goons became a repressive front ready to quell expressions of workers’ unrest. This local front of ruling class is complemented by a faceless front of multi-national investment and central government policies.

Old Type of Struggles: Locked-Out in Dead-Ends

Under these general conditions struggles which remain within the boundaries of classical type of company or trade union struggle normally end in defeats and/or institutionalisation. There have been many ‘union’ struggles in Gurgaon in the last years and they seem to follow certain patterns (3):

There is discontent amongst both permanent workers and workers hired through contractors. In most cases some ‘under-the-surface’-struggles
pre-date the ‘official conflict, e.g. at Honda HMSI ‘spontaneous’ canteen occupations happened before the ‘official’ struggle for union recognition. In this phase certain sections of workers get in touch with union officials hoping that registration of a union will strengthen their position. Representatives emerge, member-lists are required for the application. The company tries to put pressure on the emerging ‘leadership’, in many cases provokes a situation where suspension of ‘outstanding’ workers can be declared. In many cases companies ask the remaining work-force to sign individual letters of ‘good conduct’, trying to single out supporters. Due to the unions self-interest they tell workers not to sign: a struggle in classical terms is easier to organise once workers are victimised, although their actual power might be greater once back inside the factory. An unofficial lock-out situation emerges, often workers hired through contractors – who expect less gains from a company union – either enter the factory or additional workers are hired to keep up production. Often these new workers are hired from the local population of surrounding villages – another division between them and the mainly migrant original work-force. Companies are normally prepared for the lock-out and subsequent problems in production, either by piling-up extra-stock or by getting parts from other suppliers. ‘Unofficial unrest’ turns into classical forms of struggle, often managed by the main union advisors: protests in front of the factory gate, demonstrations, meetings with political leaders – the martyrdom of workers becomes a stage for leaders. In most cases the conflict becomes a single company issue without attempts to connect it to the wider discontent. State and company are well capable to deal with these ritualistic forms of struggle, either through repression or through entangling it in a long legal dispute. The result of these disputes normally exclude the workers hired through contractors who had been part in the initial struggle and often the legal cases for re-instatement of victimised workers run for years. After recognition of a company union there tends to be silence afterwards (4). Even once in the trap of a lock-out workers can do more than just wait for the next symbolic show of solidarity. In the case of the current lock-out at Maruti fuel-pump supplier Denso in Manesar 36 union members have been suspended on 17th of February 2010 and about 500 workers refused to sign papers of ‘good conduct’. Since mid-February they have been sitting outside the factory while newly hired workers are kept inside
for 24 hours. Already before the lock-out Denso had ordered additional parts from its Thailand plant – an act of preparation. In nearby Faridabad workers of another Maruti supplier, AC manufacturer Sanden Vikas, were ‘locked-out’ at the same time. The union did not facilitate direct links between these two work-forces. The suggestion came up to write a common letter to Maruti Suzuki management – a rather symbolic sign of workers’ coordination which could have had a small impact nevertheless. Another idea came up to go in small number of workers to stand with placards in front of Maruti or other local factories. Denso runs factories around the globe, some effort to let workers and management in these factories know about the situation in Manesar could have been made (5). Small steps which could help to spread the word and may be create direct links between workers of the supply-chain. This did not happen, instead we saw one or two union demonstrations of the classical type and bored young workers sitting and playing cards. According to information of a Denso worker, on 22nd of March 2010 the company took back 23 out of 36 suspended union reps and sent all Denso workers on one week training in a local ‘World Spiritual University’ ashram, to find a ‘peaceful mind’. When they returned to the factory most of the workers were shifted to new jobs in different departments, at new machines, with new neighbouring work-mates.

A New Generation of Workers’ Struggles

We have to discuss about the short-comings of traditional forms of struggle together with workers – and we can discuss new forms on the background of actual experiences of wildcat strikes and factory occupations which happened in Gurgaon during the last years. These struggles have remained largely unknown to a ‘wider public’. Unfortunately the left activists normally only get to know or interested in workers’ struggles once they have reached the ‘official’ status, which generally means: when they are repressed. The lathi-charge at Honda in 2005 mobilised the left, so did the murder of a worker at Rico – the main left position concerning these incidents was a ‘civil rights’ position, not an attempt to analyse the basis for workers’ power and self-activity. The struggles of a new generation already give some answers and ask many questions for the future, e.g. how struggles can be extended from the factory base avoiding ‘unnecessary’ direct confrontation with the state forces and pitfalls of formal representation.
In April 2006 more than 4,500 temp workers occupied the Hero Honda Gurgaon plant for several days demanding higher wages and better conditions. The company cut water and electricity, but told the police not to enter the factory. No support from outside the plant. The workers sent a small delegation for negotiations, which was bought off: the delegates returned promising fulfillment of all major demands after restart of production, they then disappeared. Only some demands were actually met by the management. When the factory occupation ended workers at Hero Honda supplier Shivam Autotech occupied their nearby plant raising similar demands. Workers at KDR press-shop in Faridabad, who supply Shivam Autotech with metal parts, worked reduced hours during these days.

In September 2006, after temp workers at Honda HMSI Manesar were not included in a union deal they occupied the canteen of the plant supported from the outside by the next arriving shift. The company reacted by cutting water supply. The company and union asked them to go back to work.

In January 2007 the 2,500 temp workers at car parts manufacturer Delphi in Gurgaon went on wildcat strike blockading the main gate. The company threatened to shut-down and relocate the factory and asked the union of the 250 permanent workers to get the temps back to work – after two days the blockade was lifted. In August 2007 the temps at Delphi struck again for few hours without prior notice, demanding the payment of the increased minimum wage and succeeded. Many of the workers lived together in back-yards of nearby villages, sharing food, mobile phones and information about jobs.

In August 2007, after the Haryana government had increased the minimum wage, over a dozen companies in Faridabad and Gurgaon faced spontaneous short strikes by mainly casual workers, demanding the payment of the new wage. In most cases these actions were successful (6).

In May 2008 after not having been accepted as members by the permanent workers’ union the temp and casual workers at Hero Honda in Dharuhera went on wildcat strike and occupied the plant for two days. Management and permanent workers’ union both promised betterments of the workers’ situation. The temp and casual workers then tried to
register their own union – a process which ended in suspension of leaders and a mass lock-out in October 2008 (7).

It would be schematic to label these struggles ‘spontaneous’. We need spaces to meet in the industrial areas for analysing the social production process and the already existing day-to-day experiences of organisation and subversion within: in factories, along supply chains, in the back-yard living quarters, in the common remote villages (8). If there will be a communist party it will be the celebrations of the collective worker, discovering themselves by turning their social cooperation against its proclaimed precondition: capital. Part of this proletarian self-reflection must be the development of a structure of mutual aid, practical support and coordination. Comrades of Faridabad Majdoor Talmel are about to open some physical spaces for workers’ meetings in Faridabad, Okhla, Gurgaon and Manesar. Please get in touch!

(1) For debates about the concept of class composition see:
http://libcom.org/history/porto-marghera-%E2%80%93-last-firebrands

(2) We wrote an article about the wider class situation in India after the crisis blow of autumn 2008:

(4) After recognition of the union at Honda HMSI the number of workers hired through contractors and general productivity even increased.

(5) It is difficult to rely on the classical union structure for these kind of international links. When the dispute at Rico stopped GM and Ford assembly lines in the US and Canada due to missing parts the comment of a United Automobile Workers official in Michigan was: “We are experiencing the effects of outsourced suppliers, and we hope they would be able to resume production as quickly as possible so we can in turn resume production” Interestingly enough this comment was made after the UAW had signed an agreement to lower wages to ‘save jobs’, which was disputed by many workers on the shop-floor. While Denso workers in Manesar were locked-out, Denso workers in Tychy, Poland, organised protests for wage hikes matching the wages increases for FIAT
workers.

(6) Today the situation seems even more explosive, given that the April 2010 ‘minimum wage hike’ of 30 per cent for Delhi workers does not compensate for the enormous inflation of food and transport prices.

(7) For video-interview with these Hero Honda workers see:

(8) For concept of ‘workers’ self-inquiry’ see:
http://libcom.org/library/renascence-operaismo-wildcat
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Three Communists in Gurgaon –
The industrial development and proletarian unrest in Gurgaon did not remain unnoticed. We talked to three communists who decided to focus their political activity on the vast landscape of working class formation. The comrades are part of the revolutionary Marxist-Leninist left, belonging to three different political organisations.

*** Service?! What the hell! / Reports from Service Proletarians, Street
Labour Markets and Factory Workers in Gurgaon –

Some voices of security guards and drivers, metal and textile workers. Some voices from workers looking for a job at corner labour markets, harassed by the police and other thugs.

2) Collective Action –

Reports on proletarian struggles in the area

*** Inflationary Proletarian Struggles –

While opposition parties arrange token protests against the price hikes, workers on the ground battle for higher wages. In March 2010 Delhi government announced 33 per cent increase of minimum wages, but this hike hardly ever reaches shop-floor reality. In the aftermaths of the minimum wage increase we observe various spontaneous proletarian actions in Gurgaon and Okhla industrial areas. The combination of an interlinked (automobile) industry and organisational efforts like Faridabad Majdoor Talmel can become future lines of coordination and generalisation of the unrest.

*** Update on Struggles of Permanent Automobile Workers at Sanden Vikas and Exide –

The first-tier supplying industry of the automobile industry is heating up under the double pressure of increasing demand of the assembly plants on one side and the more confident claims of the workforce on the other. The recent struggles at Denso, Sanden Vikas and Exide express the difficult position of a young permanent work-force: they appeal to the classical union form of struggle hoping to secure an increasingly precarious position. These classical forms detach them from the wider casual and temporary workforce and therefore from the true ‘material’ power-base.

*** Waterwars, Energy Crunch and Revolting Villages –

Groundwater levels in Gurgaon drop dramatically, gobbled up by industry and upper-middle class life-style. Water and energy flows are diverted away from workers’ and peasants’ spheres. We document some struggles of ‘villagers’ against the lack of resources and oil-pipe-line projects crossing their fields.

3) According to Plan –
General information on the development of the region or on certain company policies

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –

This is an attempt to introduce a regular update on general tendencies of crisis development in Indian – motivated by Greek shock-waves, naked shorts and potential spillovers. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future.

4) About the Project –

Updates on Gurgaon Workers News

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Three Communists in Gurgaon / Interviews for an Open Debate –

The industrial development and proletarian unrest in Gurgaon did not remain unnoticed. We talked to three communists who decided to focus their political activity on the vast landscape of working class formation. The comrades are part of the revolutionary Marxist-Leninist current left of the CPIs, belonging to three different political organisations. We decided to not mention the party names in the individual interviews, based on the experience that way too often the left focuses more on internal ideological quarrels than on the exchange and reflection of practical experience.

All three comrades visited the strike at Rico in autumn 2009 and wrote articles and pamphlets about the conflict. They see themselves outside and critical towards the established unions. We hope that the interviews about their impressions from Gurgaon can be a starting-point for an open debate about how to organise a ‘communist position’ within proletarian reality. There are many open questions which should be discussed ‘politically’ in future, we just mention some:
* How much importance do we attribute to analysis of social production process as a potential for generalisation of struggle (supply chains etc.)
* What kind of role can communist play in day-to-day reality and during specific struggles, such as at Rico?
* What are the potentials of factory groups or ‘hidden forms of day-to-day struggle’ and how can they coordinate with the wider working class area?
* Which roles do the established unions play and is there any use in registering ‘our own’ unions?
* Are there specific segments of workers or proletarian situations which bear specific potentials for proletarian movements to come?
* Where do our own resources come from, how do we organise our own reproduction in order to have time or in order to be rooted in the class terrain?

We want to refer to the practical proposal by comrades from Faridabad to open workers’ meeting places in Gurgaon, which we see as part of this debate: Faridabad Majdoor Talmel

We also want to refer to the importance of experiences of the past by quoting from a letter written after the death of Romano Alquati in April 2010. Alquati was part of Quaderni Rossi in the early 1960s, a group of dissident communists which tried to ‘co-analyse’ the conditions of a emerging new generation of industrial workers in Italy’s north:

“Alquati went to Torino not to cry over cardboard suitcases, but in search of an antagonistic power. The conflict in front of him was no longer between below and above, but between workers and capital. Power against power. To the scandal of the leftist intellectuals and party leaders, the mass worker did not sacrifice for universal justice, did not have conscience and ideals, but wanted more money and less work. The working class liberated itself only by extinguishing itself, refusing work and the identity of oppressed. For this reason it was an extraordinary cycle of struggles. Humanism died forever in the wildcats of Mirafiori and among the rivers of Porto Marghera.

There was no sociology of work – it did not even exist in Italy – studying the factory. In fact when Romano and the other young militants of the
Quaderni Rossi (Red Notebooks) and then Classe Operaia (Working Class) began to do conricerca (co-research) they were contemptuously labelled anarcho-socialist, both by the Marxists who had no need of bourgeois science and by the academics who were the rentiers of bourgeois science. The co-researchers, instead, studied the global literature of the social sciences in order to understand and anticipate the struggles, for only from a partial viewpoint you can see the whole. And there they found the formation of class composition (On Fiat and Other Writings remains a fundamental text to comprehend it). More than that: they organized themselves within it. For conricerca has never been for Romano a “research from below”: either it was the organization of workers’ autonomy, or it did not exist. He had no populist ideal of horizontalism: the prefix “con” meant to question the borders between the production of knowledge and political subjectivity, science and conflict. It was not simply a matter of knowledge but the organization of a threat. Conricerca was working class science.

In fact Conricerca is above all a political methodology. Here the traditional categories of spontaneity and organization loose their consistency. “Spontaneity was organized.” But nothing was achieved once for all. The operaists had broken with the Marxist and Leninist tradition to reread Marx and Lenin within the new composition of living labor. And in this way they grasped the breach represented by the mass worker, which was also a clash within the class producing something that previously did not exist”.

Communists come from Some-where

P. is a student in his 20s, A. a party full-timer in his 30s and M. a welder in his early 40s.

P.

In the mid-2000s I was studying at Delhi University and got in touch with a communist organisation. Inspired by a lecturer I started to work amongst cart-pusher on Chandni Chowk, we tried to establish a union there in 2006. This attempt failed mainly due to lack of financial resources. My family also depended on my income, my father has passed away, so I had to take a regular job. I started working in a retail shop, which was part of the Big Apple chain. I worked as a cashier in Delhi, our official working hours were from 2:30 pm till 11 pm, but
actually we had to work till 4 am in the morning. The shop was 18 km from my home, so I spent a lot of time travelling, as well. There were about 40 people employed in the shop and at some point in January 2007 we decided to do something against the bad conditions. One day, before the counting of the cash money, we all stopped working at 11 pm and left the shop. The management reacted by ripping the work-force apart and sending people to work in various dispersed shops and branches of the chain. There were a lot of problems afterwards, so I needed a different job.

M.

My father was in the CP, working in the mining industry. He wanted me to become a lawyer, but I saw how lawyers operated in the villages, when it came to land deals, and I thought it was a rather useless job. I finished my 10th class in 1984. I went to college afterwards, were I got in touch with a political party. I did not complete college, I went back and forth, then decided to do an ITI course as a welder. That was an individual, but a political choice, in order to work amongst workers. After the ITI course I thought of doing a BA, at that time I read a lot, but I left the BA and became a party full-timer instead. I lived in various cities and areas, travelled a lot, from Rourkela (steel industrial area) to Jamshedpur. I met workers, went to strikes, wrote pamphlets and articles for the newspaper, organised theory classes. In 1996 we had a party meeting in Nagpur were we decided to focus on building party units in factories. I worked in a garage for a short time, then at Nico, a company manufacturing molded engine parts for the car industry. Workers there found it strange that I refused overtime – after some arguments with the contractor I stopped working there after about three months. In 1997 I became member of the central committee of the party and worked full-time for the organisation again. I moved to Ilahabad for that. I wrote a proposal to the party, mainly saying that the party's attempt to form factory units was unsuccessful and that more effort is needed to concentrate on the day-to-day problems of workers and to develop a communist position in that. Not as a trade union, but as a communist organisation explaining that the worker's discontent is not individual, but that there are wider social reasons behind the problems. I thought that the party got involved in these efforts only half-heartedly. We were discussing theoretically, but answers can only be found in practical efforts.
A.

My family supported the RSS, I come from a business household and I saw how the business got pauperised in the early 1980s. My generation had no prospect to take over the business, therefore ‘education’ became compulsory and obtained a new meaning: the new generation had to diversify. I first went to a government school, then to a public school. I wanted to become a burocrat, an IAS officer. I went to Stephen’s College at Delhi University, but I did not fit in. The other students had a generational tradition of elite education, I felt rather displaced. I started reading and I came across Marxist writing – there was not much political activity going on at the college. I tried to understand the social character of the individual situation I found myself in. I got in touch with a political organisation of the far left, but before joining I read party documents of various tendencies. I was looking for an organisation with a strategy based on the analysis of India as a capitalist society. I joined a smaller splinter group, became active at the campus. Finally I felt that the politics of the group was rather NGO-ised and the campus activities seemed limited. I joined the MA, but left it after one year. The decision to leave at that point was an expression of hatred against the system, not only against education system, also against the way the system plays out in family. I saw how two of my brothers, who lived in the same house but ran two different businesses got divided through the emerging differences in ‘economic success’, still living under one roof. For some reasons I rejoined and completed the MA, in four instead of two years. I joint the research department, but soon I left it. I left academia altogether and became a party full-timer. I continued some of my research on class and caste in 1920s – 1945 on an independent level.

Party full-timer means that ultimately the party decides where to send you. The party also takes care of your reproduction. I first was sent to three different working class localities in Delhi, our aim was to first build a youth organisation and then based on the support of the youth to build up trade union organisations. All three locations were close to industrial areas. We had some contacts in the area, we then started setting up a library, cultural activities, study circles, which were basically lectures. The youth helped us to distribute pamphlets in the area. The attempt to set up registered unions failed, the area was dominated by small scale industries. We managed to set up a struggle committee amongst
construction workers. The construction site was close to the university. Our activists heard about non-payment of wages and started to discuss with building workers. We decided to strike, the strike was supported by students and teachers – during the strike we set up a public kitchen with help of the teachers. But construction workers are migrant workers, once they find an opportunity or the site is finished, they normally move on. Some phoned us after having left the site near the campus, but we had to tell them that they had to fight for themselves now. The committee was an attempt to hold people together, but it depends largely on activists’ input.

The party then sent me to Haryana, to the rural area. We wanted to form a youth organisation in the villages and similarly go from there to the organisation of agricultural labourers. One of the differences between village and town is that people seem to have more time in the village. The youth debated till 2 or 3 at night, we talked about all kind of things, problems of adolescence. The urban youth has the colleges for this kind of talks. The village youth did not want to work in the villages, to close to home, to close to everyone knowing who is who. It is also a question of honour. So the village youth migrated on a daily level to work on Haryana’s biggest rural market, where several thousand workers are employed, storing food, loading trucks. There we met youth from various surrounding villages. We set up a workers’ committee for these market workers, we raised issues, such as wage increases. In the end the CPI turned out to be more successful then we were, they had much better connections with the Labour Department in Chandigarh. The village youth does not want to work in the villages and those workers who do are usually from Bihar, they often feel to vulnerable to form an organisation.

I went back focussing the work on Delhi. We set up a front-organisation for workers – basically everyone can join it independently from other union membership. We encourage to form these groups in order to discuss and to have some space independently from the established unions. For example we went to Graziano, after the struggle, which culminated in the killing of a manager. The workers first had joined CITU, then AITUC, they finally approached HMS. The HMS main union guy is also a labour contractor. We can see that workers go to leaders, they expect them to use their links with the political class in the workers’
favour. If CITU cannot deliver this, workers approach different leaders, they calculate. Currently we can see a development which undermines this influence of ‘personal leaders’. The big companies focuses heavily on work discipline and rely less on local middleman. This also means that the union leaders are often by-passed. In the case of Grazianio various ML-organisations set up a Solidarity Network, but workers got closer to HMS after the company started accepting negotiations with HMS. We lost touch with the workers.

Arriving in Gurgaon

P.

After I left the retail shop I attended a meeting of an organisation at Delhi University, an organisation which turned out to be a NGO, which I did not realise at that point. They were looking for full-timers to organise garment workers in Gurgaon. The organisation paid 4,000 Rs per month. I took the job and started to roam Gurgaon in June 2007, at that time I was completely on my own in this. I found it difficult to meet workers directly at the factory gate, so I mainly visited them back at their rooms. We talked about the main problems, such as non-payment of wages, no ESI, no PF – and what we could do about this. I found that the factory is only one area of conflict, many workers face harassment from locals and landlords. The workers said that according to their experience the unions in Gurgaon are not of much help, that they rip you off in the end. They also asked about my own motives and why they should believe me. I said that I am part of your social reality and that is why I want to engage in it. I did this kind of basic activities for about eight months. At one company I had a success: the company had not paid wages for six months, workers complained. I went to the Labour Officer and told him about the issue, asking him to send an inspector. The inspector confirmed the workers’ accusations and told the management to pay the outstanding wages within one week’s time. The management did pay. Through this success I established good relations with active workers in the company.

At that point the organisation decided to launch a convention, which was supposed the founding conference for building a union. The organisation set targets of how many workers should turn up. At that point I started to inquire more about the aims and financial resources of the organisation and basically found out that they were a NGO funded by NGOs in US-
America. I got into arguments with the NGO hierarchy, I asked them what their aim was, whether it was just economical or was also aiming at general social change. They answered that they want to set up a union for economic gains. I nevertheless mobilised workers to come to the convention and about 600 to 700 turned up. A union was founded. For the union registration I went to Chandigarh several time. There the Assistant Labour Officer told be frankly that he will oppose the union registration because the NGO wants to target international clients like GAP etc., and that this would result in job losses. I told the NGO about this, but they said that this decision was not of my business, that I was not involved in the decision making. In January 2009 I left the NGO job. I debated with my comrades of the political organisation and we decided to continue the work in Gurgaon for political reasons. The political organisation would support me financially. Some of the active workers – who were ‘on my side’ after the success of getting the outstanding wages – were more or less bought of by the NGO, they were given jobs and financial incentives to stay with the NGO union.

We formed our own union, workers pay 10 Rs per month, which covers the main costs. There are about 200 to 250 members, but they come from different companies. In one single company there are about 60 members, but we kept silent about our efforts. We think that we would at least 50 per cent of the work-force on our side before we can come into the open and apply for union recognition. The danger is that after handing in official applications the Labour Department goes to the company with the membership-list in order to proof whether these workers are actually employed there. This would leave us vulnerable, therefore a certain strength is required. The NGO knew that we want to organise a union in this specific company, so they organised demonstrations in front of it and parallel assemblies – basically putting our comrades in the factory at risk, sabotaging our efforts.

We have a meeting place, but normally we meet in workers’ rooms. We don’t publicise the meeting place, only workers know about it. We have a core committee of 10 workers, they normally come to the weekly meeting and then coordinate with members in various factories. We have an internal newsletter. We think about publishing a newspaper, but we lack funds. We can take practical little steps, e.g. there was a problem in a company where workers of our group are employed. People there were
forced to sign their resignation and then to re-join – in order to sabotage their seniority. We knew that we will not get any help from the Labour Department. First they asked workers to come individually to the office, workers managed to postpone this by saying that they will come the next day. The management got angry, we discussed in the meeting about this. The workers then said that they will sign once the management gives a reason in written for why they ask the workers for the signature. This went back and forth and finally the management sacked three workers. Workers told the management that they would have to push them out of the factory and that they would sit in front of the factory in protest against the dismissal. We also called the Labour Department, they told the management to take the workers back. The workers got their jobs back. This was a success.

M.

We continued debates about how to set up factory units and decided to move to certain industrial centres. I decided to move to Gurgaon – I got aware of the situation there after the lathi-charge and repression against the Honda workers in 2005. Our main problem remains that we have little time for political activities, and that workers in general have little time. The second problem is that it is difficult to speak openly inside the factory. I arrived in Gurgaon in March 2009, I found a job within four days, as a welder in a machine manufacturing factory. There are not so many differences if you compare the proletarian situation in Ilahabad and the one in Gurgaon – it is a newer generation of workers. I don’t think that the migrant status of the workers makes much of a difference. I started to meet people, in order to form a group of workers. In my factory 300 workers are employed, one or two of them I meet on an irregular level after work. We have some kind of circle in the factory, but we are not in a position to raise demands or things alike.

Rico Strike Experience

P.

I went to the Rico strike twice. At that time AITUC people hold speeches. Workers had lathis. Some people shouted: we will smash the factory, we will attack the Labour Commissioner. The AITUC people told workers to stay peaceful. The demonstration took place on the service line of the Highway, not the Highway itself. If you wanted to talk to workers, they
told you to talk to the leaders. I wrote a leaflet about the strike, workers told me to show it to the leaders first. We distributed the leaflet in Udyog Vihar, about 1,000 leaflets. There people knew about Rico through the media, but they had no direct information. One worker said: see, what can we 200 people do, if even these 100,000 workers of the Rico dispute cannot do anything.

M.

I went to the Rico dispute several times. When I was there no demonstration was going on. The management had some link with the panchayat, who asked the workers to remove the dharna, the protest in front of factory. The panchayat also told workers that they get the minimum wage and higher compensations for the family after the murder – the panchayat tried to mediate. At that point I saw no AITUC leaders. The workers just sat in front of the factory. Some said: the strike goes on for so long, it is 48 days now, what should we do?! I could give no proposal, the strike has already gone week after such long time, the unity failed. I would not have told them to block the highway, I would not have stopped them either.

A.

We had some contacts to garment workers in Gurgaon, but our main activities happened during the Rico struggle. I have never seen a struggle like Rico before, it was a qualitatively different struggle – a transit moment. I saw a group of workers leading the work-force, but the rest of the workers were active themselves. The workers were getting trained through struggle. At the beginning they were sitting and gossiping, later on they started shouting whenever police turned up. Workers normally stop showing up once a strike carries on for long, but at Rico workers continued to come to the protest. AITUC was not used to this kind of long dispute, they normally organise one day strikes. These long disputes are a new trend. It is a new work-force, a young work-force in a new industry without established union structure. In this scenario you can see the failure of old unions. Amongst the young workers a group of workers become leaders. I could notice them as leaders, because all workers told us to talk to them. But the majority of workers think that they are leading the struggle. They said: if the union betrays, we will continue. In the strike local groups played a role, e.g. a bigger group of workers all came from a
The AITUC officials were not around 99 per cent of the time. Most of the non-permanent workers were present at the struggle, at least the casual workers. Most of the workers had ITI or diplomas, some MSC or BSC. People see that despite high level of formal education they are not been made permanent. Women played an important part, confronted police with lathis.

Workers were sitting in groups of six or seven and discussed. I listen to discussions about the ‘nature of the state’, the problems of the law. We asked questions: ‘if you focus on registration of unions, this does not mean that once your union is registered, the management will actually negotiate with you. You have to be organised and not solely rely on union leaders’. Workers asked: ‘how can all workers meet together and decide?’ We had some ideas: ‘a kind of referendum with proposals for the next steps of struggle that workers can kind of vote on’. We asked: ‘you formed a committee and got in touch with AITUC, but did you get in touch with other workers? You don’t even have a pamphlet to hand out’. People responded: ‘AITUC is coordinating that’. We then wrote a pamphlet and handed it out. It was the first pamphlet, only after that AITUC published their own pamphlet with the names of the leaders in big print. The workers relationship with the AITUC was arbitrary. People said: ‘The state is afraid of our struggle’. ‘They do not let Gurudas (CPI leader) come to meet us, because his words would be engraved in stone for us, they would have major importance’. On the other hand AITUC leaders had to say several times to workers during protests: ‘do what we say, otherwise you will not win’. This created some conflict with the local workers’ leaders. AITUC always asked workers to stay peaceful, while the local leaders had a more violent rhetoric. While AITUC was against hiding stones and lathis under the blankets, they did not oppose.

What has to be done?!

P.

Currently there is only one person, every now and then there are two people of our organisation active in Gurgaon – so the debate with the political organisation is the main support.

One of the biggest problems in Gurgaon is that workers think that someone should come and help them. But we cannot talk openly, it is difficult to meet in parks. Often the locals against such meetings, they
have an economic interest in migrant workers as tenants. We see the building of trade unions as one means, currently we focus on one company to register a union, but we have to be organised on the level of industrial area. Registering a union is a strategy, we see some advantages, such as the right to strike. But we look beyond the trade union boundary. We also don’t have the usual ‘leader-types’. When the issue about the sacking of the three workers came up, our members in this company thought about strike. We discussed it, but it was clear that if we are 40 organised workers amongst a work-force of 1,000 we are not in the position to strike. We would not have the strength to deal with the reaction of the management. On a daily level we have to raise consciousness. Use any possibility, whenever or wherever, to speak to workers. Talk about the importance of organisation. How can we be organised and what happens after being organised.

M.

When the worker enters the factory, the struggle begins. The worker has a feeling of exploitation, but no language to express it. We have to explain, that it is not an individual problem, but a social one. We have to do that also through means of newspapers and leaflets. We have to link up with other workers. This has to be based on daily work and relationships, this does not happen spontaneously. We should not rely on the law, there is no need to register trade unions. Normally they become second class management. For the next year: I want to meet 10 – 20 other workers from various sectors and start debating how to overcome the current situation. I don’t see a specific segment of working class in Gurgaon which could play a special role in future movements. Normally workers in the basic industries, such as power plant workers, play a decisive role.

A.

We suggest to form ‘organisations’ independently from the main unions. After the end of the Rico struggle the local leaders got more and more co-opted by AITUC. We had proposed to publish a newspaper together, about workers’ experiences and struggles around the world. But we lost touch with most of these workers. During a crisis mode a new consciousness emerges, but this consciousness has to be transformed in organisational forms. Organisation can not be enforced from the outside,
but it does not emerge from inside alone. At this juncture in Gurgaon, we can spread ourselves horizontally, our organisation itself is not established in Gurgaon. We suggest to form workers’ committees. We are not in position to register unions and we don’t know whether it will be desirable in the future.

*** Service?! What the hell / Reports from Service Proletarians, Street Labour Markets and Factory Workers in Gurgaon –

Some voices of security guards and drivers, call centre, metal and textile workers. Some voices from workers looking for a job at corner labour markets, harassed by the police and other thugs. The reports were collected and published by Faridabad Majdoor Samachar in February and March 2010.

Security Guards

GSS worker

We work near Shankar Chowk in Cyber City Phase 2 in building number 10. The security companies name is Globe Security Service. We work 12-hours shifts day and night. There is no weekly day off, there is no day off in general. For 30 days off 12-hours shifts we are paid 5,300 Rs. They cut money for ESI and PF from that wage, but we receive neither card nor fund form. About 250 Globe Security workers are employed at DLF Building Service (DLF is India’s main real estate developer). The wages are paid with delay.

BK Worker

The BK Security companies office is near Hanuman Mandir in Dundahera. We work on two 12-hours shifts. No days off. We are paid 4,500 Rs per month. The wages are paid in 500 Rs or 1,000 Rs instalments. If you ask for the outstanding wages management tells you that they will have you beaten up by the police. ESI and PF money is cut, but neither card nor fund number is given.

Driver

Swift Corporation Worker

(91 Udyog Vihar Phase 1)

About 100 workers are employed setting up fair stalls here and there. If no actual fair is going us drivers work from 9 am till 7 pm – if when are
set up we work 24 hours on stretch. The wages are fixed at 5,500 Rs, overtime is not paid. The drivers are forced to drive fast, in result one driver had an accident in Jaipur on 24th of January 2008. He was badly injured and the company took him to Gurgaon to have treatment in an ESI hospital. He had to stay 11 month in bed and then needed crutches for another 7 months. When the accident happened the company made tons of promises. During the first months the company have 4,000 Rs per month for expenditures, after eight months they stooped paying. About 18 months after the accident the driver came back to the company, he had a certificate of a doctor saying that he was fit for work. The company refused to let him drive and made him stand at the company gate for the time of the 10-hours shift. The worker had difficulties standing upright for such a long time. The company did not allow him to use the drivers’ rest room. His wage was 4,9– Rs, then the company started to cut 500 Rs per month. The management said that this money is a pay-back of the money which the company had spent on his treatment after the accident. When the company started to cut 1,000 Rs in January 2010 the driver refused to take the wage – the company has not paid his full January wages till today, 27th of February 2010.

Call Centre Worker

We are 100 workers engaged with home-keeping in a nearby call centre, located at Plot 265 in Udyog Vihar Phase 1. For working 9-hours shifts 30 days per month they pay us 3,640 Rs.

Labour Market Worker

The unofficial labour market is situated within the industrial area of Udyog Vihar Phase 1. Every day more than 500 workers gather on the street labour market. Sometimes you find work, sometimes you don’t. In order to force you to do very hard and heavy work sometimes thugs turn us and force you to come with them. They initially fix 200 Rs wage for the day, finally they pay 150 Rs. The police harasses us, tell us to move on and don’t ‘loiter’. But there is no other place to stand and wait. Where we stand we don’t have the possibility to get hold of drinking water.

Metal Worker

Hi-Techs Worker

(69 Udyog Vihar Phase 4)
We work everyday from 8:30 am till 9 pm. Sometimes they make us work till 3 am. We work 180 hours overtime per month, payment is at single rate. The wages of the helper in this boiler tank manufacturing factory is 3,500 Rs.

Premium Moulding Worker
(194 Udyog Vihar Phase 1)

Us 300 workers are working on two 12-hours shifts manufacturing steering-wheels for Maruti Suzuki, Mahindra, Hyundai, Tata and Ford. There are 50 casuals and 100 workers hired through contractors who run machines, but they are categorised as helpers and are given 3,000 to 3,500 Rs per month. We work 100 to 150 hours overtime per month, we get only 6 Rs per hour overtime payment.

Bhorji Supertech Worker
(272 Udyog Vihar Phase 2)

The factory manufactures coolers. The December wages have been paid to the permanent workers on 25th of January, to the workers hired through contractors on 28th and 30th of January. The 150 workers hired through contractors get 3,000 Rs, neither ESI nor PF.

Flow Link Worker
(141 Udyog Vihar Phase 1)

The workers manufacture chisels for the chemical industry. Out of 50 workers only 10 get ESI and PF. The helpers’ wages is 3,000 Rs.

EEL India Worker
(509 Udyog Vihar Phase 3)

The workers manufacture rotor packer for the cement industry. The helpers are employed as casual workers, they are told that they will be paid 3,914 Rs, which is the minimum wage. Actually they have to work on Sundays, as well, but are not paid for these days. The rest of the overtime is paid at single rate.

Pharmaceutical Workers

Eastern Medikit Worker

Wages in the factories in Udyog Vihar are paid with delay.
Print Workers
Royal Flex Worker
(256 Udyog Vihar Phase 1)
We print and manufacture posters, placards and signs and work from 8:30 am till 10:30 pm. We work Sundays, as well. The helpers are paid 2,400 Rs, Overtime is paid at single rate.

Textile Workers
Bharat Export Worker
(376 Udyog Vihar Phase 2)
The helpers’ wage is 3,000 Rs and the tailors get 110 to 140 Rs for an 8-hours shift. We work from 9 am till 1 am on a daily level. They say we have to come on Sundays and work overtime. The drivers of the company also have long working-times: from 7 am till 10 or 11 pm. They pay single rate for overtime. The company runs two more factories: 493 Udyog Vihar Phase 3 and 316 Udyog Vihar Phase 4.

Kanchan International Worker
(872 Udyog Vihar Phase 5)
The January wages have not been paid by 27th of February 2010. The wages for September and October 2009 have not been paid fully, 500 to 1,000 Rs was given ‘for expenditures’.

Kalamkari Worker
(280 Udyog Vihar Phase 2)
Out of 400 workers 10 to 20 are old permanent workers. The casual workers work for the company since years, but every six months their company card is changed – so they don’t have to be made permanent and their PF money gets lost. The company shows Sundays as days off, but actually people work Sundays, as well. The workers manufacture garments for RD and Motherhood.

Sargam Worker
(152 Udyog Vihar Phase 1)
The people from the personnel department give all workers a hard time. On pay day they take 500 to 1,000 Rs from the newly hired helpers’ wages
– they swear at you for any kind of reason.

Kuruboks Worker
(199 Udyog Vihar Phase 1)

January 2010 wages have not been paid yet, on 27th of February 2010.

2) Collective Action –

Reports on proletarian struggles in the area

*** Inflationary Proletarian Struggles –

While opposition parties arrange token protests against the price hikes, workers on the ground battle for higher wages. As of 1st of February 2010 Delhi government increased the minimum wage by about 33 per cent, industrial helpers are now entitled to 5,272 Rs. These are battles by a modern industrial work-force in an atmosphere of existential questions: On 6th of May 2010 an independent ‘research group’ published a report according to which Delhi has a malnutrition rate of 47 per cent among the urban poor and an overall rate of 35 per cent in the city, which is much worse than even Sub-Sahara at 33 per cent.

The textile companies – were labour costs are ranging at about 40 per cent of production costs – will have difficulties to ‘sustain themselves’ in the global rat-race of competition. A 30 per cent wage increase is indeed significant. For the time being (End of April 2010) the Haryana government did not announce similar wage hikes – merely an increase in Dearness Allowance, leading to monthly wage differences of 1,000 Rs between industrial areas of Delhi (Okhla) and Haryana (Faridabad, Gurgaon) – it is only a question of time before either management or workers’ pressure will lead to a re-levelling of regional wages.

On the day after announcement of the wage hike we distributed Faridabad Majdoor Samachar in the industrial area of Okhla, like every month. More workers asked for the paper, we distributed 400 issues more than usual. We were curious whether the official wage increase and the subsequent ‘non-payment’ of the new wage by company management will lead to similar unrests and wildcat strikes like in 2007 – for article click HERE. Indeed we heard a lot of workers complaining about ‘non-payment’ of the new wages, about skilled-workers being ‘re-scheduled’ to unskilled wages, about company bus-services being
cancelled and so on. The days after pay day become tense – in March and April the ‘spontaneous’ struggle heated-up.

Viva Global Worker/Striker

On 8th of March 600 workers at Viva Global in Gurgaon started a wildcat strike demanding for the payment of the post-DA new minimum wage. On 9th of March the strike continued. Viva Global management called the police – but the police said that it was an issue between company and employees. Management made rather general promises, so far without result. Work continued on 10th of March. Viva Global is a main garment supplier for Marks and Spencers.

http://www.vivaglobal.com/contact.html

Dimple Export and Creations Ltd. Worker/Striker
(B-35 Okhla Phase 1)

The skilled workers are paid 150 to 170 Rs for an 8-hours shift. On 17th and 18th of March 2010 more than 300 skilled workers stopped working and demanded to be paid 248 Rs for an 8-hours shift. The contractor said that the male workers will be paid 220 Rs, the female workers 190 Rs and that from that money ESI and PF will be cut – but without proof in form of a pay-slip. The skilled workers refused the offer and after striking for two hours on 20th of March they decided to wait for the wage payment on 10th of April and that in the meantime they will not let anyone be sacked. After the strike the contractor started shouting a lot. The masters want their commissions and try to increase production at all costs. They won’t let you go to the toilet. From all the sitting the feet of the tailors start to swell up. Since the 25th of March the company let people go at 5:30pm – before that you either had to take a day off or stay till 9:30pm (if you had a headache they said: “Come on, take this medicine”.). The workers in the finishing department are in a difficult situation, they did not manage to lay down tools together – the thread cutting women workers get 100 Rs for an 8 hours shift.

Kiran Udyog Ltd. Worker/Striker

Kiran Udyog Ltd. manufactures metal parts for first-tier suppliers like
Denso, Sona Koya and for the assembly plants of Honda HMSI and Maruti Suzuki. A share of production goes abroad, for example to Daimler Crysler or ZF Sachs in Germany or Regal Beloit in the US. Kiran runs six factories in Delhi area, out of which two are situated in Gurgaon. In Unit-3 (Delhi) about 300 workers are employed, more than half of them hired through contractors. In April 2010 their wages were 3,800 Rs, even after several years of employment. We met a small group of workers who told us that people start to take ‘collective days off’, demanding to be paid the new minimum wage.

http://www.kiranudyogindia.com/profile.html

While automobile manufacturers in Gurgaon vamp-up their production capacities – see report ‘The Social Tsunami Impact’ in this issue – workers rattle the supply chain. During March and April 2010 – as part of the Faridabad Majdoor Talmel – we met workers in Okhla, Faridabad, Gurgaon and Manesar who work for different employers. A casual worker Honda HMSI, a young permanent worker at Denso, the temp workers at Kiran Udyog, workers at Sanden Vikas. They are linked by productive cooperation on a daily level, bridging the 80 kilometres geographical distance and contractual differences between them. Reflecting on the struggles at Rico, Denso etc. we can find out about how to turn our (supply) chains into weapons of proletarian communication and combat.

Sanden Vikas Worker

(Plot 65, Sector 27a, Faridabad)

Inside the factory 65 permanent workers and 400 workers hired through three different contractors are employed. Apart from that there are 450 ‘staff’, the workers in the moulding department are nowadays also termed ‘staff’. It is permanent work, but workers hired through contractors who work since eight-ten years continuously in the plant are ‘temporary workers’. Their wages are low, they are forced to work Sundays. They work 150 to 225 hours overtime per month, 400 to 600 Rs are embezzled from their wages. The permanent workers were getting afraid about the security of their jobs, they became willing to ‘get organised’...(more in next newsletter).

Strike at Exide, Gurgaon-Bawal
According to the company web-site: “Exide Industries India is of the largest manufacturers of Lead Acid Storage Batteries in World. Almost 80 per cent of car manufactured in India are fitted with a battery manufactured by us.” Exide runs seven plants in India, one of them in Bawal, near Gurgaon, 3.5 lakh batteries per month are rolled out from this unit. The Bawal plant supplies Hero Honda, the globe’s largest motorcycle manufacturer. Hero Honda produces on an average about 15,000 units of bikes a day from its three facilities at Dharuhera, Gurgaon and Haridwar.

On 22nd of April 2010 the press published that, “Hero Honda has already loaded 5,000 bikes in which batteries are yet to be fitted Battery maker Exide has been facing labour trouble at the Bawal facility in Haryana since last month, curtailing its production by up to 75 per cent, a situation if continues could impact seriously auto manufacturers. When contacted Exide Industries director (automotive), Mr Pawan Kumar Kataky said the workers have been on a go-slow agitation since the end of March demanding higher wages and modification of the current three-year contract. Exide had negotiated a three-year wage agreement with its 150-odd workers in October 2009. However, in less than six months, a section of the workers wanted the agreement revised to secure higher wages. Senior Exide officials have already met Haryana chief minister Bhupinder Singh Hooda to break the stalemate.”.

As a side-note: Hero Honda has a second source of nuisance in form of a labour contractor who had been put out of the deal. On 2nd of May the press informed: “The court of Gurgaon Additional District and Sessions Judge YS Rathore has restrained Hero Honda Motors from dealing with the employees provided to it by Brain Logistics Pvt Ltd (which had been providing warehousing management service to Hero Honda) through any other contractor. The court passed the said orders after considering a petition filed by Brain Logistics yesterday. The petitioners maintained that they had been providing warehousing management service to Hero Honda Motors’ SPD plant in Gurgaon since October 2001, and had nearly 500 employees on their payroll. “However, in April, 2010, all employees provided by Brain Logistics to the said Hero Honda plant were usurped by the company management through a new purported contractor,” the petition asserted. “The sole purpose behind the move is to break the continuity of service and then absorb these trained workmen at a low
cost,” it said, adding that the Hero Honda management was depriving these workers of their legal rights of seeking permanency in job and other perks “illegally and forcibly”.

http://www.exideindustries.com

JL Autoparts Worker

(14b, Industrial Area, Faridabad)

The helpers get 2,200-2,300 Rs. The machine operators who are employed by the company directly get 2,800 Rs, those from contractors get 3,000 Rs. The factory runs on two shifts, overtime is paid single rate, about 200 Rs are embezzled each month. Sometimes they make you stay longer after a 12-hours shift, but they will give you only 20 Rs for buying food. Only 20 to 25 workers of the total 500 have ESI or PF. The toilets are dirty.

Eco Auto Worker

(Plot 20, Sector 6, Faridabad)

After 50 permanent workers went on strike in May 2009, some of them were sacked in June 2009, the others in December. Now there are 75 casual workers and 75 workers hired through contractors who manufacture oil pumps for Hero Honda and carburetors for Hero Honda, Yamaha, Enfield and Bajaj. Since August 2008 workers get holidays only at three festival / bank holidays, during the other festivals they have to work. They work two shifts, about 50 to 100 hours of overtime. The casuals and workers hired through contractor are not paid the statutory annual bonus. Since December 2009 the casual workers are not given any pay-slip anymore. They give you the money in an envelope – no explanation how much money for attendance, how much cut for PF, ESI.

http://ecoautocomponents.com/about_us

*** Water Wars, Energy Crunch and Revolting Villages –

Gurgaon water-level drops, the industrial competition about who is able to drill deeper borewells is intensifying. Power-cuts are most unpleasant in areas were people depend on the borewells on a wider scale, e.g. for irrigation. Some news on the matter.

Suncity Township runs dry and blames construction workers
2nd of April 2010

Gurgaon

Residents of Suncity Township – a middle-class gate community spread over 140 acres along Golf Course road – have been going without water for the last 10 days because the only source supplying water to the colony – a borewell – has gone completely dry. The society RWA has been using tankers to supply water to the families living here. “The last 10 days have been hellish for about 5,000 people living in the township. First the borewell went dry a few weeks back, so we deepened drilling levels by about 10 feet. But that did not work for long and after a few days, the borewell went completely dry again leaving us with no water at all,” said Abhay Punia, president, Suncity RWA. “During the last week we had to depend completely on the water bought in by the tankers which we then ferried to each house in buckets”. Residents said that to stop misuse of water, all construction activities in the township have been completely stopped. “We have asked all labourers to leave the premises because they misuse water”.

Several protests against water shortage

3rd of May 2010

Rewari

Irate residents held demonstrations at several places in the district today in protest against erratic water supply. Irked by persistent disruption in the drinking water supply due to non-functional boosters, residents of various affected wards in Bawal town blocked traffic on the Bawal-Pranpura road. Women broke empty pitchers there in protest against the alleged apathy of the Public Health authorities.

The blockade, which lasted about three hours, was lifted following the intervention of Tehsildar Jitender Kumar, who assured that the boosters would be repaired and water supply restored within 24 hours. Similarly, residents held a dharna at the waterworks at Mandhiya Khurd village, 20 km from Kosli, today against the supply of brackish water. They alleged that because of this their children were suffering from diarrhoea.

Power-Cuts Villagers block highway

6th of May 2010
Residents of three villages blocked the road for five hours in protest against the short supply of power in the villages. The blockade was lifted around noon after the officials of the district administration and the power department assured an action. The department agreed to supply at least six hours of power daily. Hundreds of residents hailing from Nagura, Dhankhari and Baghana villages assembled at the 32 kV substation at Nagura and demanded an explanation from the staff and the officials for the acute shortage of power supply.

7th of May 2010

In protest against the inadequate power supply, residents of Chhatar village today locked a 32 kV power substation. About 300 residents assembled at the power sub-station around noon. It is reported that the villagers virtually pulled out the staff on duty from the sub-station and locked up its main gate. After holding a meeting, they announced to lock up the power station which they said had become defunct following its inability to supply power for the past several days.

18th of May 2010

Residents of Gangholi village today locked up the gate of the power substation of the Uttar Haryana Bijli Vitran Nigam (UHBVN) to protest against the inflated bills and erratic power supply. People said while the total duration of supply in a day was not more than five hours, the department had been trying to overcharge them in an illegal manner.

Farmers oppose laying of pipeline

31st of March 2010

There was tension between farmers and officials near Ranauli Latifpur village in Dadri as farmers were trying to stall the laying of Indian Oil pipeline in the village. Villagers alleged that the police had been deployed in the area to quell their protests. Farmers are demanding land compensation on the pattern of Greater Noida area. The administration has announced compensation at the rate of Rs 640 per sq mt which farmers term as low. Farmers had called a panchayat at Shiv Mandir of the village, which unanimously decided to stop the work.

The condition of six farmers sitting on dharna in protest against low compensation, has deteriorated. The farmers are sitting on dharna under the aegis of Bhartiya Kisan Union since several days near Adda Gujarat
village.

3) According to Plan –

General information on the development of the region or on certain company policies

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –

Following are rather random day-to-day shots in the general direction of a ‘bigger picture of global crisis in India’, motivated by Greek shock-waves, naked shorts and potential spill-overs. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future. Please add your pieces, throw your stones...

* State of Crisis and Fiscal Counter-Insurgency

Currently there are two major burning beds of crisis in India. The military counter-insurgency of the state against the armed rural uprising and the massive price inflation, particularly of proletarian goods, such as food and transport costs. If the first is an attempt to control the massive proletarianisation in the countryside, the latter is an outcome of the state’s ‘cheap-money-policy’ in order to keep urban-industrial India running through a global ocean of melt-down. The state tries to confine these two centres of crisis to their spacial and sectorial locations, the dividing walls are built out of state debts: the bail-outs of defaulting farmers, the massive grain procurement and rural employment schemes on one side; and the export incentives and low-interest credits for a deficit induced inflationary boom based on a labour-intensive low-wage regime on the other.

In order to keep rural and urban proletarians divided in their ‘separate crisis’ the state needs financial inputs.

“We had to inject Rs 80,000 crores as stimulus package to overcome the crisis, which helped arrest further deterioration of the Indian economy,” finance minister Mukherjee said in April 2010. He promises to bring the fiscal deficit down to 5.5 per cent from 6.7 per cent of the GDP, while announcing at the same time that plan expenditures of the Indian state for 2010 – 2011 budget will increase by 15 per cent. Fiscal deficit means that the state spends more than it earns; the difference is closed by borrowing causing future state debts. During 2009-10 the state’s
borrowings already constituted around 40 per cent of the budgeted state expenditure. If state income (tax etc.) does not increase, the borrowing turns sour, it turns into debts. India’s public debt was at 78 per cent of GDP in 2008/09 (82 per cent in 2010). This is quite a lot, compared to other ‘emerging markets’ with an average debt of 45 per cent of GDP – public debts in riotous Greece are said to be around 125 per cent of GDP.

Where would the economical growth backing up the state expenditures come from?

The Finance Minister anticipates a GDP growth of 8.5 per cent against 7.5 cent in 2009-10. While 10 per cent manufacturing growth during the first half of 2010 seems to be ‘on track’, the wider indicators look less promising: Foreign Direct Investment inflows into India dipped 5.16 per cent to USD 25.89 billion in 2009-10. India’s exports declined 4.7 per cent to $176.5 billion in 2009-10. Export forms a fair chunk of the GDP (1988: 6 per cent / 2008: 22 per cent). Bilateral trade with China stood at 51.47 billion USD in 2008, but it declined to 43.3 billion USD in 2009. During 2008-09 the trade deficit was over 10 per cent of the GDP and the absolute value of the trade deficit was 63 per cent of the aggregate exports. A major part of the trade deficit was financed by software exports and remittances of Indians abroad – rather shaky and very US-dependent sources.

Sure, certain industries benefited from the induction of 80,000 crore RS, e.g. large scale construction, real estate, textile export and automobile industry, but the measure heated up the economy as a whole. During March – April 2010, after the inflation crossed the 10 per cent mark, the Reserve Bank of India (RBI) hiked interest rates by and cash reserve ratio. Having been forced to slow down the flow of cheap credit money through central banks, the state tries to raise ‘separate credit’ for itself out of the short-termed low-confidence blue: in may 2010 India's financial markets saw the first issuance of ‘ultra short-term treasury bills’. RBI sold 35-day Cash Management Bills (CMB) to raise Rs 6,000 crore for the government. Previously, the lowest tenure Treasury Bills sold in the country had a tenure of 91-days. We don’t know how these bonds sold, in the end the state has to rely on more blunt measures of fund raising, such as the general fuel price increase in April 2010 – the state fixed petrol price is kind of a central tax in India. The last resort of the state is
to go to the global pawn shop: while introducing the new budget plan for 2010 – 2011 the finance minister announced further ‘disinvestments’ (privatisations): “While talking about revenue mobilisation through disinvestment, Pranab Mukherjee said that they expect to generate Rs 40,000 crores in the coming year from disinvestment as against Rs 25,000 in 2009-10”.

* Agrarian Demise

Leaving the issue of military counter-insurgency aside, in April to May 2010 the state debate about how to tackle the rural crisis focused on two main issues: the state’s spending on food subsidies and the question of how to deal with indebted farmers.

The state acts as the main buyer of those agricultural produce which either enter proletarian consumption on a mass scale (wheat, rice, sugarcane) or which secure the livelihoods of middle market farmers (cotton). The state has to ‘guarantee’ prices on both sides – trying to prevent a mass decline of middle-scale farming and/or a further food price crisis for the proletarian households. This is a stumbling attempt to influence a fundamental social transformation on a price level.

The government’s annual spend on food subsidy has risen from 0.63 per cent of GDP in 2007-08 to 0.90 per cent in 2009-10 and is supposed to reach 1.1 per cent next year. Despite the government providing Rs 55,578 crore to finance purchase of food grains, in May 2010 the food ministry said that the sum is short of another Rs 26,979 crore. One way to lower the subsidy bill is to re-define poverty in a formal way. In May 2010 government officials announced to tighten the ‘Food Security For All’ program and exclude household ‘above poverty line’, which used to be entitled to subsidised food.

Re-defining poverty of the hungry and reclaiming debts from the walking dead: The total outstanding debt of farmers to banks in the country stood at 5,90,728 crore RS on 31st of March 2009 – this compares to the 80,000 crore RS ‘economic stimulus package’ and a total state budget of 11,08,749 crore RS! Despite ever-more-rapidly increasing suicide rates amongst farmers in the green-revolution areas the state announced a crackdown on loan defaulters on 15th of April 2010. The crackdown on farmers defaulting on agriculture development bank loans in the cotton belt in Punjab has begun with the first set of six farmers being arrested.
The bank is witnessing a default of around 60 per cent in the cotton belt. The recovery rate among Punjab farmers was 90 per cent 10 years back. Successive failure of the cotton crop, use of loans for purposes other than agriculture and hope of further loan waivers has resulted in a steady increase of defaulters, who are up by around 40 per cent now. We have to see this ‘crackdown’ as a formal act, not as a viable option or systemic answer. The problem has turned from a question of credit defaults into default of a social mode of production. Rather than to crackdown and to precipitate the demise, the state in power has to bail out a large section of ‘defaulted farmers’, whose proletarianisation is politically much less affordable than paying their bill: “As per provisional figures, 4,21,278 farmers in Punjab and 8,85,102 in Haryana are estimated to have been benefited under the agricultural debt waiver and debt relief scheme, 2008,” the minister said.

* Automobile Future of Toxicity

If the peasants misery is the acute pain of the past, the automobile development is the crisis of an absent future, they are the push and pull of an over-stretched system. While it seems easy to understand the development of the car industry in the US, the tendencies within the automobile sector in India are less obvious. The Indian car industry followed the global slump from October 2008 to March 2009. Companies sacked temp workers and reduced capacities accordingly. The industry was then caught by the surprise of a ‘double incentive scheme’, one being the ‘scrappage schemes’ of the North which increased car exports from India, with higher growth rates than those of the ‘internal sales’; the second being the Indian state’s low-interest pampering of the upper-middle-class consumers, which managed to sustain demand. Most automobile manufacturers found their capacities and supply-chains over-stretched. By beginning of 2010 most manufacturers talked themselves into desperate positive thinking and announced major investments of existing and opening of new assembly plants – based on general figures which already suggest a general trend towards over-capacities (see below). We have an even more complex picture when it comes to ‘car parts manufacturing’: since 2008 the export of parts growth faster than the export of assembled cars, at the same time since 2009 we can see that the share of car part imports for local assembly – mainly from Thailand and South Korea – increases quicker than the general local
parts manufacturing. This translates as follows: Assembly plants in India use more parts from abroad, while the part manufacturers in India send increasingly more parts abroad than to the local assembly plants. Since 2008 we can see an actual extension and re-linking of the supply-chain between North and South and within Asia. We can see a frantic search for solutions driven by Greek fears. Following some details, which concretise some of the assumptions above.

Car Sales

Last year, customers around the world bought 50.91 million cars, 2.4 per cent down from 2008’s 52.17 million. In contrast, the Indian market did well with 1.2 million cars sold in 2009, 12.5 per cent more than the 1.05 million they did in 2008. On the background of this ‘modest boom’ companies such as General Motors, Volkswagen, Mahindra and Mahindra (M&M) and Renault-Nissan, among others have announced that they are looking to set up new plants; other companies such as Maruti Suzuki, Hyundai and Bajaj Auto are planning expansion in their existing factories. Where should it all be parked? Even if we take a slightly higher sales number for the internal market of 1.5 million, the question remains how to run ten to fifteen assembly plants on a profitable capacity level, particularly when Maruti Suzuki alone has an annual production capacity of more than 1 million cars, while exporting only 140,000?

Similar numbers at Hyundai and Nissan. Hyundai is the largest exporter of passenger cars from India with around 68 per cent market share. “Last year, we exported slightly over 270,000 units, out of which around 50 per cent were shipped to EU countries. Demand was good last year, as it was spurred by the scrappage incentive which most of the governments in the EU countries had introduced” Hyundai General Manager said in May 2010. Nissan began test trials of exporting cars in April 2010. The first shipment was expected to reach Barcelona in 22 days. Nissan Motor India Managing Director said the company was “gearing up for exports to Europe from second half of 2010.” Nissan exports are expected to reach 1.10 lakh units in 2011.

Productive Capacities

India has two of the world’s 10 largest car factories: Maruti Suzuki India Ltd’s factory in Gurgaon, which is at No. 3, and Hyundai Motor India Ltd's
in Chennai at No. 7, an indication not so much of the country’s growing market for cars or its emergence as an export hub, but, according to bourgeois economists, to the more labour-intensive regime in assembly plants in India. Here things become confusing:

In contrast to the common sense that an automatised plant would have to churn out more goods in order to meet ‘economy of scale’, the ‘analysts’ claim that: “In India, scale can be hit at between 400,000 and 500,000 units,” said Vikas Sehgal, a partner at consulting firm Booz and Co. Managing these plants is very complex as they begin to resemble “mini cities”, he added. Sehgal estimates that in Europe and the US, car makers would have to roll out 250,000 cars a year to achieve economies of scale. Let’s leave aside the fact that apart from Suzuki and Hyundai factories most other assembly plants have a lower annual output than comparable European plants – mainly due to their stage of ‘production start’. The fact that the biggest assembly plant in India still runs on two shifts hints a more ‘labour-intensive’ character of car assembly in India. In the North assembly plants have to run on three shifts in order to ‘valorise’ the huge amount of machinery before its bell tolls.

Car Parts Re-Shuffle

Today, 95 per cent of the parts of small cars such as the Maruti 800 are made in India. This increase in ‘localisation’ was achieved by keeping up high import duties and other measures to encourage ‘local production’ and investment. These import duties on components have fallen from 60 per cent in the 1980s to 10 per cent today. As a consequence import of components has grown faster than domestic production since the 2005-06 fiscal, according to a study released recently by industry lobby group Federation of Indian Chambers of Commerce and Industry (Ficci).

In 2006-06 India imported components worth 2.77 billion USD, or 22 per cent of the size of the industry. In 2008-09, this grew to 6.12 billion USD, or 30.8 per cent of the industry size. The degree of ‘localisation’ seems to sink. “There are indications of that,” said Vishnu Mathur, executive director of industry lobby Auto Component Manufacturers Association of India. “A number of investments that could have come to India have gone to Thailand.” At the same time the export of car parts from India growth faster than the export of assembled cars.

Examples from Gurgaon: Maruti Suzuki, Hero Honda, Honda HMSI
Maruti Suzuki

Maruti Suzuki, produced 9,66,069 cars from January to December 2009, up 27 per cent from the year ago. In a statement, the company said, “In the October-December 2009 quarter, favourable conditions in the domestic market supported by the government’s stimulus package and ease of automobile finance helped achieve good sales.” The company exported 1.4 lakh units to other international markets and is expecting to maintain the same figure this year. During the quarter under review (Q3), Maruti’s domestic sales volume rose 37.8 per cent to 2.18-lakh units, whereas its exports climbed by more than 167 per cent to 39,116 units led by compact car A-Star. Maruti Suzuki India has earmarked an investment of close to Rs 6,000 crore over the next 24 months, capacity at the Manesar plant will be increased by another 2.5 lakh units by 2012. Maruti managing director said there were no plans begin a third shift; with the present arrangement it was possible to manufacture 1.2 million vehicles annually on an installed capacity of a million units. “The option of third shift exists but we are cautious because of issues of quality etc”. Rural sales doubled to account for 18 per cent of total car sales, whereas share of sales to government employees stood at 13 per cent.

Hero Honda

The world’s largest two-wheeler maker Hero Honda announced in April 2010 that it will produce over 45 lakh units in 2009-10 from its three facilities in India and will decide on setting up a fourth manufacturing unit within the next six months. “Despite difficult conditions, we will surely produce 4.5 million units for 2009-10 against 3.7 million units of last fiscal... The market wants more,” Hero Honda Managing Director Pawan Munjal. Hero Honda is said to be looking for a suitable location in Gujarat or Himanchal Pradesh to set up a new manufacturing unit. Sources say that they are interested in setting their plant in Sanand region (Gujarat) where Tata has established their Tata Nano manufacturing unit.

Honda HMSI

Honda’s Indian motorcycle and scooter arm is to build a new motorcycle production plant to meet increasing demand for motorcycles in India. The new plant will complement Honda’s existing production plant in the Gurgaon District in Haryana, where production will be ramped up from
1.25m cycles per year to 1.55m by the end of this month (April 2010), with a further expansion to 1.6m cycles planned for next year. To build the second plant, Honda Motorcycle and Scooter India (HMSI) will acquire approximately 240,000sqm of land within the Tapukara Industrial Area in Rajasthan, which is 40km from the existing plant and around 90km from Delhi. HMSI's sales have grown steadily with 2009 sales of approximately 1.09m units (up 11 per cent compared to 2008) achieving a record high for nine consecutive years.

4) About the Project –

Updates on Gurgaon Workers News

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
Exchange Rate
HSIIDC
ITI
Jhuggi
Lakh (see Crore)
Lay off
Minimum Wage
Panchayat
PF
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Workers hired by the company for a limited period of time.

Workers hired for a specific performance, paid for the performance.

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays...
an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.
Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have
a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices:

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs
Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs
Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs
Workers hired through contractors
Similar to temporary workers, meaning that they work (often for long
periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the work force, their wage is 1/4 to 1/6 of the permanents’ wage.
Proletarian Photo Story on Kapas Hera: A Working Class Dormitory
Shanty-Town in Gurgaon

*** अब कोई आशा है तो वह सर्वहारा वर्ग से ही है ***

On the Dark Side of ‘Fun and Food’-Village

Kapas Hera is one of the biggest new ‘working class dwelling clusters’ in the Delhi industrial belt. Within the last ten years rent-based mass-accomodations for around 200,000 to 300,000 workers and families emerged out of dusty scrub-land around a minor peasant village. Kapas Hera is where over 100,000 garment export workers eat and sleep or conspire after 12 to 16-hours shifts in neighbouring Udyog Vihar Phase I to IV – one of Delhi’s biggest ‘planned’ industrial areas (see Gurgaon factory reports in back-issues of GurgaonWorkersNews). If nearby Udyog Vihar and Maruti Suzuki factory are the locations of productive power, Kapas Hera is the reproductive mass incubator of proletarian tension, desire and collective survival. It can turn into a working class think/act-tank for unrest and social transformation. In this spirit we put together some stories and photos. We urge you to have a look at the previous proletarian walk through Chakkarpur, another ‘working class village’ in Gurgaon. For Chakkarpur walk please click HERE.

The internal differences between Kapas Hera and Chakkarpur are significant and characteristic for the change of proletarian living arrangements in Gurgaon area. A short side-note about the photographs: Given the allergic-spiritual repugnance towards taking pictures of the living, the photographs from Kapas Hera do not capture the objective conditions and the actual proletarian wealth of the area: bustling crowds of people till late night, ever-changing groups of five, six young guys standing at street corners talking, hundreds of neighbourhood women-groups sitting in the shade conversing, mass-beds on each breezy concrete flat roof of nocturnal chats. In the following text the numbers in brackets refer to the numbers of these anaemic photos on the website. Click HERE to get to the website and then click the small photo in the
Political Geographies

Kapas Hera is situated between Old Town Gurgaon and the Delhi International Airport. The area is also known as Kapas Hera Border (1 and 2), because the Delhi-Haryana state border runs through the former village. Kapas Hera lies across the main road from Gurgaon's biggest industrial area: Udyog Vihar Phase I to IV (3). The majority of the 200,000 to 300,000 workers who live in Kapas Hera work in the industrial area which they can reach after a 10 to 20 min food-walk en masse, crossing the border into Haryana (4). If you want to have a moving imagine of the borderlines, check THIS middle-class misanthropist youtube-video.

Kapas Hera itself is divided into a ‘local part’, where mostly local ex-peasant families live in bigger ‘Yadav Nivas’ family-houses (5), and a ‘proletarian part’, where industrial workers dwell (6). The ‘proletarian part’ is divided by the main-road – Old Delhi-Gurgaon Road. Since the price hike for travelling to Gurgaon from 5 Rs to 10 Rs in April 2010 you hear many workers say “Gurgaon is far away”, while it is actually in 5 km distance. In the north-west Kapas Hera is bordering actual fields with active agricultural production (7, 8 and 9) and the upper-class party venue ‘Oberoi Farm’ – can you see the lawn and palm trees behind the slum? (10). The bigger north-western part is further divided by a canal, which functions as the main waste dump (11, 12 and 13). According to information of a local the Delhi-side of the canal was official designated as ‘residential area’ meaning that there was some kind of permission to build houses, while the Haryana side is officially agricultural land, meaning that all houses built on it are ‘unauthorised’.

Historical Material

The history of original Kapas Hera was erased during the slum demolition drive of the State of Emergency in the mid-1970s. Interestingly enough Kapas Hera appeared in the memories of a rather dubious figure, in the ‘Notes from death cell’ of Z.A. Bhutto! We quote:

“Ram Kirshan and Pyare Lal, for example, were simple villagers whose misfortunes befell them solely through a geographical accident: there villages, Sambhalka and Kapashera, happened to be close by Sanjay’s...
[Gandhi] car factory at Gorgon [sic!]. They were demolished, as witnesses have told the Shah Commission, without the villagers being given any notice of the bulldozers’ approach. The bulldozers left Ram Kirshan and Pyare Lal destitute. “Only the sky above me and the earth below me is what I am left with.”

A decade later this very ‘earth below’ would turn into gold.

The history of the proletarian part of Kapas Hera is young, around ten to twelve years. Some of the ‘proletarian area’ of Kapas Hera might have been ‘common land’ before, given the claim of one older resident who said that the ‘locals’ divided the land up amongst themselves in order to build rent-houses on it. There will have been considerable wheelings-and-dealings with the local political class during this time of land conversion. A 25 years old ‘local’ says during a tea stall conversation that his uncle owns half the land of ‘Fund and Food Village’, an upper middle-class amusement-park across the road from Kapas Hera (14). With the money the uncle bought his nephew a four star hotel in DLF Phase-II, which accommodates mainly foreign management of Ericsson and other multis. He himself recently bought eight hectare land in Pataudi area. “For farming, for keeping the tradition”, he says. Soil squeezed and convoluted and re-located through the ground-rent strainer. In 2001 Kapas Hera was captured by the general census, meaning all people who were registered there. Officially around 20,000 people used to live in the village back then – officially their number will not be much higher today, while actually a medium-sized town has emerged in the bordering invisibility.

A worker describes the arrival in Kapas Hera in the late 1990s: “I arrived from Bihar, I first stayed in Tekhand near Okhla. A bad slum, latrine across the road, no air. I fell sick. I got a job at Gopal Clothing in Gurgaon and moved to Kapas Hera. It was one of the first small lines of rooms, the rest of Kapas Hera was scrub-land. There was space, some trees. We even got some herbs from the peasants still working in the nearby fields. On the other hand there was more misbehaviour from the locals, they gave us bad names and sometimes people got beaten up. Then things got crowded as more and more people arrived from far away, now the situation is not much different from the one in Tekhand”.

Architecture of Class Composition
The main characteristic which sets Kapas Hera aside from the various other villages in Gurgaon is the spacial division between locals (landlords) and industrial workers (tenants). In most cases – like the one of Chakkarpur – the old villages and their roundish lay-outs are filled with migrant workers by settling them in the back-yards of ex-peasant homes or integrating tenant-rooms into the old hamlet-type structure. Kapas Hera is also different from many older Delhi or Faridabad working class slums, in the sense that the houses are not ‘self-built’ by workers, they are not owned by workers, they have been set-up as rent-yielding mass accommodations in the first place. Compared to Chakkarpur the average rent income per landlord is much higher. While it might be around twenty to thirty in Chakkarpur, it is 50 to 80 in Kapas Hera. The actual layout of Kapas Hera is pre-planned in the sense of a straight and rectangular network of alleys, each with a number for an address (14.1). This compares to the crooked-winding alleys of most other peasant/workers villages, like for example Khandsa (14.2). With the spacial division comes less ‘social control’ of the direct landlords over their tenants. In Chakkarpur the patriarchal control of the land-lord over the water consumption of the (female-proletarian) tenants was a daily nuisance and point of conflict. While migrant workers from West-Bengal complained about the arrogant behaviour of the ‘locals’, the ‘locals’ are more or less absent from daily reality in Kapas Hera. The ‘non-locals’ are predominantly textile workers from UP, Bihar and Nepal. A significant share – somewhere around 30 per cent – are muslims, but there is no ‘separate living’. The average age in Kapas Hera is around 25 to 30 years and 70 per cent of people living here are male. We will return to the question of composition later.

In terms of proletarian housing we find three main types of accommodation: the slum (15 and 16), the workers’ line (17) and the multi-storey workers’ block (18). While only a small fraction live in slums, an equal number of workers live in lines and blocks. There is a social-economical hierarchy to these different forms of housing.

The slum consisting of non-brick huts is confined to a fringe part of Kapas Hera (19). There used to be a commercial flower-field, but as it seems there is more money to be made from slum-rent then from rose-smell. Mainly street and sewage cleaners, refuse workers and re-cycling workers live in the slums – in India these professions are still largely
attached to the Dalits, the ‘untouchables’. The slum has a landlord, people pay 500 Rs per month for a hut or 33,000 Rs for a larger plot which also contains the re-cycling storage space. According to recycling workers the rent went up by ten percent in 2009. Water is provided by tanker, meaning that women have to queue up and get water for the day in buckets (20). Only some huts have electricity.

The workers’ lines are small brick-built lines of 6 sqm rooms (21 and 22). All kind of workers live in these lines, some lines are mainly used by rickshaw-drivers (23). The rent is about 750 Rs per month and room. These rooms heat up enormously and given the lack of windows there is hardly any circulation. Water is normally taken from a hand-pump, meaning that normally there is access to water 24 hours a day – with groundwater levels falling rapidly (24).

The workers’ blocks are four to five floor buildings with about 15 to 20 rooms per floor (25 and 26). Their brittle-boned brick-skeleton smells of possible deathtrap in an earthquake prone area like Delhi. The rooms are slightly bigger than those in the lines. Room-rent is around 1,000 to 1,200 Rs per month plus electricity, which is counted by individual meter. Typically there are no windows, therefore the floors are connected by metal-bars in the actual floor (27). This means that the noise level is significant. If there are power-cuts, the rooms are in darkness and there is little outside space to go to. One floor of 80 people share two or three latrines and one tap and washing area with a drain. There is water four hours in the morning and four hours in the evening. There are hardly any other buildings or built structures in Kapas Hera – we will return to the social dimension of this question later. In terms of the general lay-out we have to mention the quite significant amount of standing-brackish water (28 and 29) and open sewage (30), a preferred breeding space for Dengue-mosquitos and other dubious species.

Internal Economy

The main share of the internal economy of Kapas Hera is oriented towards proletarian reproduction/consumption. Most significant in terms of numbers of people involved is the small shop-economy (31 and 32). These shops sell items for the daily needs (milk, cigarrettes, buiscuits, phone-calls). Rents for these single-room counter-shops vary between 2,000 and 5,000 Rs, in many cases the ‘shop-owner’ sleeps inside the
shop. There are half a dozen bigger shops which sell rice, pulses etc. in larger scales, these shops are typically run by locals. In addition to these shops there is one main vegetable and garment market – Veer Bazar, which is focused to the proletarian needs, which also means that it is open till late at night (33 and 34). There are several chicken farms in Kapas Hera, which breed for the local demand. There is no health centre or hospital in Kapas Hera, but many pharmacies for proletarian self-medication and smaller ‘clinics’ which provide at least some second-hand advice. There are a few more personal services, such as hair-cutting or tea stalls, but compared to the wider Delhi standard they are of rather minoritarian dimensions. If we think of possible targets for self-appropriation we have to think hard. You don’t want to loot small shops and there are only one or two richer ‘farmers houses’ where you might find a flat-screen. There are one or two storage spaces for the bigger shops where you might find a ton of red lentils. The only display of actual wealth is a Maruti Suzuki factory car park where around 60 brand-new cars wait for transportation.

The main chunk of privately organised ‘public service’ is street-cleansing (35 and 36), refuse collection, recycling (37 and 38) and house internal sweeping. It is difficult to assess the total work-force of this sector, but we can assume one to two hundred workers. The cleaning and refuse sector is centrally organised by contractors, very likely of the upper-hierarchy of the respective caste. These contractors make deals, e.g. with the land-lords of the workers’ blocks. Every day a cleaning worker unblocks the internal sewer-system and sweeps the floors. Because there is only one central drain per floor, all food left-overs etc. get accumulated in the drain. The contractors charge the landlords for this service. In April 2010 the workers’ blocks room rents in the whole of Kapas Hera were increased by 20 Rs per month after the cleaning contractor increased the charges. While it is easier to understand this ‘individual deal’ with single landlords, the question of how sewage and street cleaning is organised and paid for is more difficult – given the absence of a local administration. Canalisation works in one street is adorned with a sign saying: ‘This project is funded by Yadav Transportation Trust’, which hints at a semi-private initiative of local businessmen.

There are several hundreds building workers living in Kapas Hera, which
are fetched by special buses in the morning and transported to Delhi Metro or Common Wealth Games building site (39 and 40). Apart from maintenance work-shops for bicycles, coolers, rickshaws and scrapmetal-dealers (41) there are some productive extensions of the wider industrial areas reaching into the streets of Kapas Hera. Small textile work-shops, half a dozen cellar-factories employing around 50 tailors (42 and 43) and a network of home-based female piece-work, mainly embroidery work. Besides there are a number of small ‘training centres’ where older tailors teach young newcomers the basics of sewing (44). These courses run about two weeks and cost around 300 Rs. The lower-skilled workers can be employed by ‘chain-system’, a rigid division of labour which undermines the position of skilled ‘full-piece’-tailors. After all Kapas Hera is a dormitory attached to the neighbouring industrial centre. People get up together, pushing into the small alleys (45 and 46), gather at the crossroads (47), form a river of over a hundred thousand bodies streaming to work. The evening rush back runs in tides, a first wave of workers rolls back at around 6 pm, the major bulk floods in at 9 pm, many return later. This rhythm is the collective beat dominating the days and nights of this medium-sized township.

Social Control vs. Working Class Culture

Kapas Hera is an expression of ruling arrogance, in the sense that urban-industrial developers fabricate intricate master-plans of industrial zones without any further mention of workers accommodation. This issue is left either to workers’ ability of ‘self-valorisation’, meaning the ability to build a slum; or the neo-rich business drive of ex-peasants to convert their former villages – in order to rent it out. While in China companies provide dormitories on the factory premises, workers in (Northern) India are left alone. This is as much misery as chance for counter-collectivities outside the direct control of the factory-management regime.

For an urban unit of 300,000 inhabitants there is a blatant lack of ‘public institutions’. Schools and hospitals are outside, there is not one single park, the police station is 1 km towards the airport, there is no ration shop (state run shop for certified poor), the panchayat (village council) runs businesses in the ‘local’ part, but has hardly any influence on daily life in the pauperized-populous part. There is a small temple, which not many people seem to visit. There is no mosque, which might partly be
due to the dominating Hindu ‘locals’. There are some money collections by Islamic organisations, but they seem insignificant. As we already mentioned, hardly any worker in Kapas Hera will have de-registered from their village in Bihar or UP – a ghost-town of unofficials, a double-image of hundreds of deserted Bihari villages. The main ‘social book-keepers’ are the small shop-owners selling mobile phone SIM cards, they might ask for an ID. It speaks for itself that the only proper entry-point for semi-state civil society are the poor slum children. A NGO organises meetings to tell mothers how to bring up healthy children in a slum surrounding. The state is present in its absence. Of course there will be informers in Kapas Hera, of course the state indirectly controls the living area by intervening during the industrial-factory side of the day, e.g. through labour officials or inspectors. Nevertheless, compared to many other social locations Kapas Hera in its essence is: a palpable non-existence of ‘the public’ – in the most dense non-private life of a mass concentration of proles. What do workers do in such an open-alien area, where many of them are free strangers amongst free strangers (48)? Do they fill the vacuum the state control/organisation has consciously left? Is there a proletarian culture of the newly arrived? Hard to tell. How much Saturday Night Fever can you catch if Sunday is yet another working-day? How much time left for street life and sub-culture after a 16-hours shift? Counter-culture is more likely to develop on the shop-floor or may be the floor of your dwelling (49 and 50). There is a culture of a ‘group of five’, a group of five men or women meeting either randomly on the street, at a chai stall or around the home. There is corner-hanging-out of young men, particularly in front of the STD phone centres. Ten guys phoning presumably the village back home while ten other guys wait and chat – an ad-hoc village in the diaspora. There is a street-filling mass whistle and screams of joy after the end of a summer’s day power-cut. There is Sunday hidden beer-drinking, some shops sell booze under the counter. There are kids taking over a patch of waste land for cricket (51). There is an atmosphere oscillating between feelings of anonymity (52 and 53) and feelings against segregation or false community building – which is reflected by the neighbourly life in the workers' homes.

On a Workers' Block Floor
The house has four floors, the landlord lives near Manesar and turns up once a month. There is a shop in the basement, the shop-keeper is the land-lord’s proxy. He takes the rent. People can buy stuff on commission in the shop. Landlord or proxy hardly ever turn up on the floors themselves. There are 20 rooms a floor, around four to five people to a room. On our floor about half of the rooms are inhabited by families, the other half by groups of single men. The majority are garment factory workers – people on the floor work in around ten different factories, each factory has around 500 to 1,500 workers. A third of the floor inhabitants are Muslims, the rest Hindu – which does not express itself in practical-daily sense. People come from Bihar or UP, many come from Benares. Most of the people have stayed in Gurgaon for six to eight years or even longer, which is a considerable period. They belonged to the early arrivals, they made it from industrial helpers to full-piece tailors, some with supervising roles. Some of them were able to increase their absolute wages by six to seven times over a decade, which is an increase of more than 100 per cent in relative wage terms. On the other hand: if they had arrived in Faridabad in the 1970s they would probably have had a better paid permanent job by now, pension funds and ESI card, probably an ‘owned house’ in the jhuggis. Possessions are modest. The people of about four rooms have a proper cooler, rather than a ceiling fan. There are three second-hand televisions on the floor. Two workers have a bicycle.

‘Living together’ means that groups of five to ten have a morning chat in the washing area. People share some basic items, such as brooms, and some basic topics, such as how bad the job is. Some older workers help younger guys finding jobs or give advice. People help each other assembling or repairing ceiling fans. People are aware of the crowdedness and give each other some space, which has a tendency towards indifference. There are occasional arguments, in most cases about water distribution. During the heat people sleep outside their rooms.

Non of the eight or nine women on the floor work outside the house. Women sit together in a group of five, partly taking care of the 15 smaller children playing on the floor between the rooms, partly doing embroidery piece-work for a nearby factory. The stuff is delivered and fetched by an acquaintance. When back from their factory job two
‘husbands’ organise the accounting work, the list of the women of how much they have produced, the collection of stuff, the distribution of wages. One ‘supervising husband’ complains about the company pressure, the delays and irregularities in payments. The women earn 3 Rs per piece, about 60 Rs a day.

There is a common understanding of the situation: The urban is miserable, but bears more chances than the village. The village has fresh air and an empty-idle stomach. You have to work hard, but you might be able to get two months off in the village. There is hope that after some years the savings might be sufficient to start a ‘non-worker’ existence back home. Or at least to educate the children. There is individual experience of having worked in about half a dozen different factories. These experiences overlap and circulate. Everyone knows some facts about or some people working in any Gurgaon factory randomly mentioned. It is clear that the system is evil and exploitative and that ‘solidarity’ and ‘collective action’ is the only weapon. Everyone moans about everyone’s indifference (59). We are everyone, meet some of us.

Vinod is in his end-30s, he is from Bihar. He is from a ‘poor peasant family’. His brother got engaged in the CPI peasant and rural labourers union. This is how Vinod got in touch with a left-wing organisation based in Delhi. Every now and again younger communist militants meet in Vinod’s room. Vinod stays with his family, his wife and three children in the 8 sqm room. He came to Delhi about twelve years ago, he worked as a helper in the textile industry. Now he is a quality checker in a garments export factory, he earns about 7,000 Rs per month. He works seven days a week, 12 hours a day. Every second week he takes a day off. He sometimes tells the story how he and a muscle-man hired by him and other workers had a fight with a small contractor after not being paid their wages. In the end they went to the room of the contractor and took away his sturdy wood-frame bed for compensation.

Ibrahim is in his early 40s, from Bihar. He worked in Kolkata for a while, manufacturing leather gloves. He knows the names of Bremerhaven and Hamburg, because the gloves were exported to Germany. He then started to work as a welder, he worked in the mining areas and on power plant construction sites in various Indian states. Twelve years ago he came to Gurgaon. He works in a small work-shop in Kapas Hera since six years.
The work-shop owner is from West-Bengal, he used to employ ten workers, but four left because he pays less than the minimum wage. They manufacture container trolleys and other equipment, mainly for the Delhi airport. Ibrahim earns 4,000 Rs, as a skilled metal worker. When the night-guard went home for two months, Eramul stayed in the work-shop over night and got some extra money for that. In his free time he goes to Delhi, partly to visit the mosque, and he copies Urdu spiritual texts into a notebook. He wants to open a shop for ‘home appliance maintenance’ in his village, repairing fans or televisions. He wants to go back in two, three years time.

Rajeev is 25 years old, from Benares. He left his home in UP after some trouble at school. He came to Delhi around five years ago. He first worked as helper doing white-washing, then got a job as a helper in a textile factory, cutting threads. At that time he earned hardly 1,000 Rs a month. He learned more skills on the job, now he is a skilled tailor, working on piece-rate. He claims to be able to earn up to 500 Rs a day, depending on the piece. Work takes his toll. He works in Manesar, which is more than 30 km from Kapas Hera. He has to leave Kapas Hera before 8 am and often returns after mid-night. Transport costs for travelling to Manesar have nearly doubled over the last year, to about 40 to 50 Rs per day. He has been ill for a while, low fever, stomach problems. He spends 300 Rs per month on medication. In March he went back to his ‘village home’ for a month.

Naresh is in his mid-20s, he has recently paid 35,000 Rs for a two months course in basic programming. He now earns 7,000 Rs as a ‘software assistant’. He now has to deal more with ‘staff’, with middle-management. He says there are two types of staff, those who have been workers before, and those who have not. He could afford better accommodation than sharing a room in a rented block, but he likes the company of his room-mates – who are ‘still workers’

Rakesh is unemployed since 15 days. He started working at Gopal Clothing in 1998, one of the first factories which opened in Udyog Vihar Phase I. He started working as a helper, he now is a skilled worker in the cutting department, he sometimes works in supervising position. After working eight years at Richa Global he managed to get 90,000 Rs PF money. He has ‘very little land’ in Bihar, he does not plan on going back
Ajay is 20, he goes to a polytechnic college in Manesar. He stays with an uncle, who also pays the 1,000 Rs monthly school fees. The uncle is a skilled tailor in supervising position. Ajay wants to join the police-force after finishing the polytechnic.

Inamul is in his early 20s, he comes from a village in Bihar, close to Nepal border. His father worked as a lumber-jack in the forests, Inamul helped him when he was a kid. He then moved to Katmandu in order to start working in textile factories. He shows two union membership cards from Katmandu. He says that unlike in Gurgaon there is a unity in Nepal. If workers are mistreated the union will sort the management out. Katmandu textile industry went down the drain during the civil unrest, so he came to Kapashera. He works for Richa Global as a skilled tailor. Each Saturday they have to work full-nights, from 9am on Saturday till 7am on Sunday. He often has family duties on Sunday, so he skips a night of sleep. During the hot summer period he will go home to the village for two months.

Thousands of us form a daily mass demonstration of sleepy bodies, of multiplied insomnia, of dreams against the day, marching towards the machines (60). Having left the rural, being reluctant to arrive. At some point in time Kapas Hera – its thousands of backyards and rooms and roofs – might become a social borderline in struggle; a borderline between the certainties of a forlorn present and the collective desire to go beyond rural return or urban arrival, beyond push and pull (61).
*** Misery is Relative / Comparison of Minimum Wages in Delhi and London –

The following text is devalued with increasing speed: the global crisis and subsequent struggles shake the global wage scale. In June 2010 the Indian government ‘free-floated’ the petrol and diesel prices, fueling the already double-digit inflation. In the UK the government increased the VAT by 20 per cent and cut wage-subsidising benefits. The collapsing Euro inflates the Rupee. The struggles in China and Bangladesh put pressure on wages in the global low-income zones. We will see whether class struggle and crisis will re-shape the global wage-division, old concepts like ‘workers’ aristocracy’ and most of the concepts of ‘integrated’ working-classes ‘in the imperialist nations’ will help little to understand. We need global proletarian debates.

The following ‘relative’ comparison of Delhi and London minimum wages and their respective purchasing power would be a rather tedious endeavor if seen as a purely statistical enterprise or poverty competition. It would result in the usual ‘statistical findings’, e.g. that if you are inclined to become a well-groomed truck-driver with a passion for cheap daily newspapers and road-side cups of tea you should move to Delhi; whereas for any other reasons you should make it to or stay in London – if you can – because you will earn roughly four and a half times as much in terms of purchasing power. If you were a textile company manager looking for low wage zones your perspective might be a little more blunt. You would compare the absolute wage difference between a potential minimum wage worker in London’s East End (around 1,200 GBP per month) and those of a worker in Delhi’s Okhla industrial zone (around 76 GBP per month). The fact that in absolute terms the London wages are about sixteen times higher will make investment decisions a fair bit easier.

We compare the workers’ wages to consumer goods and services. This in itself will tell us little about the actual social position we find ourselves in.
once we depend on this wage and have to sell our labour power for it. How does our wage compare to the income of people in the city around us? Will we feel ‘excluded’ from wider social life and life-styles? How does the wage compare to the general ‘productive social wealth’, the material power to set in motion bodies and minds for profitable purposes or mass destruction? We compare wages which are set by two different states, wages which are defined as ‘minimum’ in terms of the local, moral, historic minimum level of reproduction for a worker. One local context is the capital of an ‘ex-colony’, the capital of a developing country, the regional centre of an emerging global industrial cluster. The other local context is the capital of an ‘ex-empire’, the centre of historical Industrial Revolution, with 250 years of industrial working class history. The centre of world finance, real estate bubbles and a declining manufacturing base. This also means that Delhi area is dominated by a work-force which – in general sense – knows how many acres of wheat you can reap in a certain amount of time or how many shirts or metal parts a worker can produce per day. Productive workers from mainly rural backgrounds have a rough notion how their productivity relates to wages they receive and prices they have to pay. London is characterised by mainly ‘unproductive labour’: a cleaner might know how much money their company charge the client, they know about exploitation on an immediate level, but less on a social scale.

Workers’ wages and their consumption level tell us something about the ‘stage of capitalist development’, if we agree that one of the characteristic outcomes of industrial working class struggle is that after the class wars of mining, railway building and machine and weapon manufacturing workers a following generation of workers is able to buy ‘industrial goods’ in form of long-lived consumption goods like radios, fridges or washing machines. We also have to mention the ‘sources’ of our consumer products. In Delhi we refer to the most common trade-form for basic food items, vegetables or durable consumer goods: small traders. The prices in London are based on prices of large super-market chains for daily goods and internet price comparisons for durables – because this is how proletarians shop in general. We leave it to a different research to find out whether the demise of small traders and the consequent drop of general wage level due to increased competition will be compensated by ‘cheaper’ large-scale and ‘more direct’ trading.
When we compare London-Delhi wages relative to food items, the London wages are about five to six times higher, if we compare them in relation to the mentioned ‘durable consumer articles’, London wages are fifteen times higher. The astonishing fact is the relative ‘expensiveness’ of agricultural goods in India, compared to ‘basic manufactured items’: While I can buy five times as much rice of my London minimum wage, I can ‘only’ buy three times as many shirts or shoes. This is only partly due to higher relative petrol prices in India, which form a decent chunk of food prices. Apart from room rents – which are a peculiar issue – it is personal services such as cooked food or hair cuts where a minimum wage in Delhi can command as much personal service labour as the wage in London. This tells something about the low levels of service proletarian wages in the Indian metropolis! Out of good attitude we put ‘global goods’ into the equation, e.g. Nescafe, Mc Chicken, Nokia mobile phones or IPods. We can see that the ‘wage division’ widens when it comes to these ‘global goods’ – which doesn’t mean that the Delhi young proletarian would not have access to the ‘use value’ of these goods. Let’s not argue about the use value of a McChicken, but of Chinese Fake-Brand MP3-Players or Handy-Cams. Apart from the ‘old school’ consumer durables like fans, gas-cookers and bicycles, the modern proletarian in Delhi owns a mobile phone with gadgets. We suggest the thorough article on Sanahati: “Do 600 Million Cellphones Make India a Rich Country”

http://sanhati.com/excerpted/2388/

But let’s stick to the basics: the level of minimum wage as means of reproduction for a worker. Behind this phrase a political field of question opens up. In London the nominal/direct wage does not cover reproduction, in the sense that in case of illness, unemployment, old age the state has to guarantee an additional part of income. The London minimum wage is hardly a ‘family wage’: the state has to top up in terms of child benefits etc. In Delhi these ‘welfare provisions’ only exist on paper, in 90 per cent of cases workers won’t get unemployment or pension money, neither health care. For most workers in Delhi the minimum wage has to cover parts of these future or ‘accidental’ costs. In a purely economical sense we would have to add these monetary benefits or service costs to the London minimum wage. On the other hand a London worker is very likely to be ‘fully proletarianised’ in the
sense that s/he hasn’t got a ‘second home’ in a village and no access to – however small – a piece of land and wider family network which could act as a basic security net. We can argue whether it is not the other way around – that the urban wage has to finance the maintenance of the small piece of land and the rural family members. Fact is that many workers in Delhi industrial areas try to save money – first of all on rent – in order to be able to ‘save money for the home’. Ideally a ‘single worker’ – who is either unmarried or whose family lives in the village’ will try to save half of his or her monthly wage. The most common life perspective – or illusion – is that the urban industrial wage work is a temporary stage and that there is a future as semi-peasant / shop-keeper etc. in the village.

When it comes to rent and living arrangements the ‘village’ plays a role. In London only ‘migrants’ would stay five people to a room, no separate kitchen – which is the norm in Delhi, not only for families, but also for unrelated young workers. In this way they can drop the rent share of their total wage to under 10 per cent. In London you might rent a room in a shared flat, giving you access to a kitchen and a toilet, which will cost you around 50 per cent of your wage. In the relative wage comparison we took all three different scenarios into account: comparing the most common set-up; comparing ‘a single worker’ to ‘a single room’ according to the respective local ‘workers’ housing standards; comparing ‘a single worker’ to ‘a single room’ according to London housing standards. The main obvious result is that compared to other ‘goods’ rent in London is relatively high and the main reason for why the relative wage levels are ‘only’ four to five times higher. Who would have thought?! At this point the quantitative state of mind leaves us clueless: Is it expression of a higher living standard to live in a London Stratford bed-sit, while your two-weeks dead neighbour starts to send his whiffs through the mortar?

What about the ability of workers in Delhi and London not only to be a categorical part of global working class formation, but to take part in it in a physical and communicative way. We can compare costs for flights Delhi-London and costs for an hour spent on the internet and we can see that a flight belongs to the ‘fridge/washing machine’-category out of reach for most Delhi workers, while the internet is closer to home. Here again, we reach other forms of exclusion. Even if a worker in Delhi would be able to save money for the flight, that does not mean that s/he will get
a visa. Even if a worker in Delhi can surf on the net, the fact that the Hindi sites are still rather insular compared to the ‘global electronic village’ of the English speaking Indian upper-class is not an ‘economical’ problem. Which does not mean that the worker in Delhi would not have the means for ‘political mass-expressions’, see prices for printing a small newspaper or for sending it by post. On a similar relative price level range the products of ‘knowledge circulation cum mental domestication’ such as daily newspapers or cinema. In terms of access to career paths to leave the minimum wage misery it looks rather bleak for proletarians on both sides of the globe. A truck driving license might be within reach, but won’t solve the initial problem. The worker in Delhi would have to save around 833 years in order to afford the two years fees for a MBA (management degree), while the worker in London might make it in 20 years. Great.

How do these wages relate to themselves in the historical dimension, does the gap close or widen over time? Difficult question. We can assume that since it’s introduction in 1997 the relative minimum wage in the UK fell – which was 3.60 GBP at the time. But did it increase in Delhi? Minimum wage in Delhi 1990 was around 900 Rs. The early 1990s were turbulent times in terms of inflation, up to 18 per cent annual consumer price increase in 1994 to 1996. If we assume an average annual inflation of around 8 per cent for 1990 to 2010 period, the wage of 900 Rs would have had to increase to 4,177 Rs by 2010 to compensate. Here the fundamentals of statistics become drift-sand. Since 1990 the share of temporary and casual jobs, the amount of jobs through contractors increased rapidly, while more and more permanent workers lost their jobs. May be the minimum wage has increased in real terms, the general conditions of industrial workers in Delhi have hardly improved. In what kind of ‘working class position’ would a London minimum wage be situated in Delhi? If we take a common commodity basket (rent, food, clothes, transport, consumer goods – according to average share of total wage), we come to a medium wage ratio of 4.5 times higher wages in London. This would mean that the ‘equivalent’ to the London wage in terms of purchasing power would be around 23,400 Rs per month in Delhi. What kind of wage workers in Delhi would earn this kind of wage – which would place them into widely hailed ‘emerging Indian middle-class’? Some call centre workers earn that kind of money. Permanent
workers in the automobile industry earn this much, partly more. We can see that major wage differences run within the industrial areas of Delhi as much as within the global working class. We can also see that the ‘wage question’ is everything but an ‘economical question’, but – in the end – a question of social-historical power, of class power. Let's stop calculating!

But whoever wants to know how we calculated things: We could see a rather shaky exchange rate between Rupee and British Pound during 2009 – 2010. At the end of November 2009 the rate was 1 GBP / 78 Rs. Since then the British Pound steadily declined in value – or rather, the Rupee got appreciated. On 3rd of May 2010 the rate was 1 GBP / 68 Rs. For the total wage calculation we take the minimum wage for industrial helpers in Delhi May 2010 of 5,200 Rs per month based on an 8-hours day and a 6-days working week. We have to emphasise that only a fraction of workers actually get this wage, most workers earn less or have to work considerably longer hours for it. We base the London hourly minimum wage of 5,80 Pounds on the same monthly working times.

Monthly Minimum Wage Delhi: 5,200 Rs / 76.5 GBP
Monthly Minimum Wage London: 81,600 Rs / 1,200 GBP
Exchange Rate 3rd of May 2010: 68 Rs / 1 GBP

Item [Kilo Rice]: Price Rs in Delhi [22 Rs] / Price GBP in London [1.10] – Amount of Items I can buy with monthly wage in Delhi [236] / London [1091] (London Wage this times higher/lower than Delhi Wage [4.6])

Food
Kilo Rice: 22 Rs / 1.10 GBP – 236 / 1091 (4.6)
Kilo Wheat Flour: 14 Rs / 0.3 GBP – 371 / 4,000 (10.7)
Kilo Potatoes: 10 Rs / 0.5 GBP – 520 / 2400 (4.6)
Kilo Pasta: 35 Rs / 0.8 GBP – 149 / 1,500 (10)
Kilo Red Lentils: 48 Rs / 1.2 GBP – 108 / 1,000 (9.2)
Kilo Chickpeas: 80 Rs / 1.3 GBP – 65 / 923 (14.2)
Kilo Sugar: 35 Rs / 1 GBP – 148 / 1,200 (8.1)
Kilo Carrots: 20 Rs / 0.85 GBP – 260 / 1412 (5.4)

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

*** Short Workers’ Reports from Gurgaon Factories –
The following short reports have been collected and re-distributed by Faridabad Mazdoor Samachar in late spring 2010. Most of the workers are employed in garments export factories.

*** Fifteen Years of Proletarian Existence in Delhi and Gurgaon / 5 Minutes Chat with Worker on a Street in Udyog Vihar –
Starting his life in Delhi with work at an electronics factory, he shifted to...
Gurgaon to work in the export garments industry, now he is unemployed looking for day-jobs.

*** Short Report of a Pavement Shop-Keeper in the Industrial Area –

Struggle of small pavement-traders with the Haryana State Industrial & Infrastructure Development Corporation (HSIIDC), about the right to stay in the area.

2) Collective Action –

Reports on proletarian struggles in the area

*** Local struggles over Water, Struggles over Power –

Gurgaon is an open drain of human energy, converting it into tiredness and commodities. It is a drain of water and power. Residents fight back against the city, fight over the energy flow. As it seems on the surface, urban and rural are in clinch over power-distribution. In Faridabad industrialists complain about the power-shortages, making it impossible for them to keep up with global competition, while farmers in the hinterland say that they cannot irrigate their land due to lack of electricity. We document some struggles over water and (social) power: road blocks, blockades of power stations, strike of power staff against privatisation, boss-napping, riots and destruction of polluting factories.

*** Street Fighting Days / Delhi Street-Sweepers have a Riot –

Delhi rulers spends billions on the prestigious Common Wealth Games, paying little to those who build and maintain the city. Construction workers already had a riot on Common Wealth sites after one too many fatal accidents. Now street sweepers had had it, they expressed their riotous souls and anger, demanding proper contracts and higher wages. Several cars got burnt, the police had to resolve to warning shots.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Gurgaon: A Paranoid Post-Neo-Liberal City –

Neo-liberal endorphins are re-ceeding, land-prices dropping, bonuses in the middle-management departments coming down. The city wakes up, looks around itself and startles in fear: who are all these people left out
by the rush?! We start with a comment posted on GurgaonWorkersNews expressing the general angst towards the unknown proletarian aliens. The city soothes itself in booze and online-checks on its servants: are they Maoists? In the end we have to create our own ideal world of neo-rich India without the poor: “The Kingdom of Dreams”, “a 5.66 acre entertainment and leisure hotspot”, a soapy-bubbly image of our gated fantasies.

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –
This is an attempt to introduce a regular update on general tendencies of crisis development in India – motivated by Greek shock-waves, naked shorts and potential spill-overs. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future. In June-July petrol-prices went up after the government free-floated the prices, we saw token general strikes and the state extending its anti-Naxalite counter-insurgency to the rural workers’ unions of Punjab and Gujarat. Read more...

4) About the Project –
Updates on Gurgaon Workers News

*** More translations by FMS: Shanty-Town Economics –
You can find two more English translations of texts by Faridabad Majdoor Samachar on their web-blog. The texts concern the question of proletarian housing and state control over reproduction: http://faridabadmajdoorsamachar.blogspot.com/

*** Glossary –
Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

___________

1) Proletarian Experiences –
Daily life stories and reports from a workers’ perspective

The following short reports have been collected and re-distributed by Faridabad Mazdoor Samachar in April 2010. Minimum Wage at the time in Haryana (April 2010): 4,214 Rs for unskilled workers, based on 8-hours
shifts, over-time has to be paid double. We document to studies by local/global NGOs about the Asian garments industry. Their idea of a Asian wide-basic wage demand for textile workers seems naïve – given the actual happening riotous workers movements in China and Bangladesh, the rapid ups and downs of currencies in global crisis, the fierce battle over slumping garments markets: the nation state – the institution they address – is neither interested nor in control to facilitate such a well-meaning scheme. Nevertheless, there is some useful information and workers’ stories in some bits of the documents.

Instyle Worker
(378 / Udyog Vihar Phase 2)
The wages are always delayed. They paid the February wages on 25th of March. The 150 hours of overtime are paid at single rate. The drinking water in the factory is bad. The toilets are very dirty. The bosses swear.

Klesh Ribbon Worker
(403 / Udyog Vihar Phase 3)
The Factory runs on two 12-hours shifts, no weekly day off. The hepers’ wages are 2,700 Rs to 3,000 Rs. No ESI, no PF.

Richa and Company Worker
(239 / Udyog Vihar Phase 1)
The 30 women and 40 men doing the thread-cutting work are paid 3,500 Rs, no ESI, no PF, overtime is paid at single rate. Those skilled women workers who stitch pearls or glitter-stars on to the garments are paid the minimum wage for unskilled work, neither ESI card, nor PF. Amongst others we fabricate garments for GAP. There is one shift in the production department, which starts at 9 am and finishes at midnight. Women workers are called to work at 7:30 am, they are sent home at 9pm or 10pm, if they refuse to stay that long, they are immediately sacked. On 27th of March some male workers said that they will refuse to work till midnight. The incharge and some guys gave those workers a beating and made them stay till midnight. The company pays only the first two hours overtime at double rate. If you are five minutes late for work, they close the door in your face, if you want to take a day of, they swear at you. If you take two or three days of, they keep your company
card and say: “Pay us 500 Rs and then you will get your card back”.

Omega Export Worker
(863, Udyog Vihar Phase V)
We work from 9:30 am till 1 am at night, on a regular level. They give only 20 Rs for food, despite the fact that we don’t have time to cook our own food, working these long working-days. The overtime is paid at single rate, though they would have to pay double according to the law. Even the women workers have to work till 8 or 9 pm at night. The company-hired helpers get 3,500 Rs, which is way below the minimum wage, the helpers hired through contractors get 3,000 Rs. Around 150 workers work on piece-rate – they are supposed to work first, the company says that it will tell them about the rate per piece afterwards. Of the 700 workers employed in the factory around 100 long-term workers get ESI and PF.

Smarti Apparels Worker
(156, Udyog Vihar Phase I)
We produce leather jackets, every day from 9:30 am till 10 pm to midnight. Overtime is paid at single rate. At the moment there are only 150 workers, but after April the numbers will increase to 1,000. When you return from the village they won’t pay you the last ten to fifteen days you had worked before leaving. When wages were increased to 5,090 Rs, they gave only 5,000 Rs. You give them a 10 Rs, but they won’t give you the 100 Rs note. They always say “later”.

Choice Export Worker
(358, Udyog Vihar Phase II)
The female workers doing embroidery are paid 3,000 Rs, they get neither ESI nor PF. The January and February 2010 wages were not paid by 20th of March 2010. As a result 10 women workers left the job, but they have trouble getting the outstanding wages.

Kalamkari Worker
(383, Udyog Vihar Phase III)
From our wages each month about 300 to 400 Rs get embezzled. Working-times are from 9 am till 8:45 pm, overtime is paid at one and a half. The skilled tailors get 163 Rs for an 8-hours day, but the company
documents say 173 Rs. In the production department managers swear a lot. Money is cut for ESI and PF, but they don’t tell us the PF number, and they don’t fill in the PF form. There are major problems with the drinking water. The toilets are very dirty. We manufacture goods for the company Motherhood.

Security Guard

The company office is in GL Complex in Dundahera, the company is called Yuva Security Group. We earn 5,000 Rs for a 30 days working-month, based on a 12-hours working-day. I left the job after 15 days, because my health was down. When I asked for the money for the 15 days they said that they won’t pay me.

Kachan International Worker

(872, Udyog Vihar Phase V)

We have not been paid our wages for the period of September 2009 tol February 2010. On 12th of March 2010 we filed a complain at the Labour Department, they said that they would send an inspector by 29th of March 2010. The inspector did not turn up.

Gaurav International Worker

(225 Udyog Vihar Phase 1)

They make us work from 9 am till 11 pm or even midnight. On Saturdays we have to work the whole night, meaning that we work continously from saturday 9 am till Sunday 6 am. They don’t give money for food, even if they make you work 20 hours on stretch.Only the first two hours of overtime are paid at double rate.

Marvel Worker

(370, Udyog Vihar Phase II)

The helpers get 3,500 rs the skilled tailors get 4,100 to 4,200 Rs. We work from 9:30 am till 11 pm. May be 200 out of 400 workers get ESI and PF. The general manager swears a lot. We produce stuff for Chicos.

Lifestyle Worker

(175, Udyog Vihar Phase I)

About 80 workers work on two 12-hours shifts doing computer-controlled embroidery work. The helpers get 4,000 Rs for 30 working-days, the
skilled workers get 5,000 Rs to 6,000 Rs. The wages are paid delayed every month. Only three or four workers get ESI and PF.

Gopal Clothing Worker
(274 Udyog Vihar Phase II)
The women workers are forced to work till 10:30 pm, the male workers till 2 am. In the computer-embroidery department workers are hired through contractors. They don't get ESI and PF, their overtime is not paid – they work four hours over-time each day.

Orion Convenience Worker
(90, Udyog Vihar Phase I)
Workers manufacture leather belts and bags. The contractor has disappeared and the company does not fill in The PF form.

Eastern Medikit Worker
The casual workers in the factories in Udyog Vihar are paid 3,914 Rs, although the minimum wage is 4,214 Rs.

*** Fifteen Years of Proletarian Existence in Delhi and Gurgaon / 5 Minutes Chat with Worker on a Street in Udyog Vihar –

In 1995 I worked at Mohan Industries assembling Stereo Decks, they paid 700 Rs that time. When I left the job in 2003 the wages had gone up to 2,100 Rs. I then went to Rajpura in Punjab, I worked in a sweets factory, earning 5,000 Rs. After a year I was sent to the company offices in the World Trade Centre near Connaught Place in Delhi. They trade with coconut products, milk, and jam. Wages were the same, but finally the company closed down in 2005. I then went to Gurgaon, to Udyog Vihar. Here I worked in 15 factories within a three year period: Isa Collection, Modelama, Nitin Clothing, Orient Clothing and so on... I ended up doing checker-work in the quality department. Officially they call it an 8-hours shift, but 12-hours are the norm and 15 hours are not unusual. There is a lot of misbehaviour in all places. I opened a fruit-and-veg-shop in Bijwasan in December 2009. Because they build a fly-over there the road was closed on 23rd of February 2010 – the shop was finished and done with. Now I am on the street myself. I am looking for work again in Udyog Vihar.

In Udyog Vihar Phase I to IV there are about 1,000 pavement shop-
keepers, selling tea, cigarettes, small items. There used to be one official canteen per Phase, the canteen officials would take around 500 Rs from each pavement shop-keeper in their area. This went on till January 2009. The licenses for these canteens ran out, no there is no canteen left in Udyog Vihar. After having worked on the pavements for years now guys of the Haryana State Industrial & Infrastructure Development Corporation (HSIIDC) have started to chase each individual shop-keeper away. We shopkeepers gathered and went to meet some local political leaders three times. Together with these leaders we organised a demonstration in front of the HSIIDC office in Udyog Vihar Phase 5, this was in December 2009. The leaders gave the HSIIDC officials a notification. The leaders then said: “Open your shops, you will get a permission”. But HSIIDC guys turned up again and threw away all our sales goods. After the demonstration the leaders did not show up again.

2) Collective Action –

Reports on proletarian struggles in the area

Gurgaon is an open drain of human energy, converting it into tiredness and commodities. It is a drain of water and power. Residents fight back against the city, fight over the energy flow. As it seems on the surface, urban and rural are in clinch over power-distribution. In Faridabad industrialists complain about the power-shortages, making it impossible for them to keep up with global competition, while farmers in the hinterland say that they cannot irrigate their land due to lack of electricity. We document some struggles over water and (social) power.

* Water

Gurgaon is built in a private rush, not caring much for infrastructure. Water gets who invests in private tubewells, who can effort the technological drill. Once the crisis comes to the fore the state calls for ‘collective efforts’ and ‘self-management’ and ‘building mass movements’. From the rulers point of view these ‘mass movements’ are supposed to look different from the riots and violence in in Delhi, Shahbad and Rohtak in July 2010.

Gurgaon is facing a shortage of 20 million gallons of water every day “The present population of Gurgaon is 20 lakh. As per norms the city
requires 360 million litres daily (MLD) or 80 million gallon (MG) of water supply. At present, the water works at village Basai has a capacity of delivering 60 MG of water. So there is a net shortage of 20 MG,” said the spokesperson of the residents organisation, Mission Gurgaon Development. There are many areas in the city where the distribution system has not yet been laid and these areas have to depend entirely on tubewells for water supply, the study said. “The entire cyber park of 144 acres has been drawing ground water for many years. Similarly, HUDA has not laid the distribution system beyond 55 sectors,” he added. Therefore a fare amount of population of Gurgaon city is still dependent upon the underground water. This heavy withdrawal of groundwater is resulting into lowering of water table by 5.0 metres per year.

Water racket unearthed; 6 illegal borewells sealed

The district administration today sealed six borewells being illegally operated for selling water in Delhi and Gurgaon. The team found another illegal borewell operating at Ekta Service Station in Sector 5 of Gurgaon, which was also sealed. The water being illegally extracted from this borewell was reportedly being sold in nearby areas through water tankers.

Don’t look to govt for water: Deepender

MP calls for collective efforts to check groundwater depletion. Congress MP from Rohtak Deepender Singh Hooda has exhorted the local residents to put in collective efforts to check the problem of water table depletion in Gurgaon. Without waiting for either the district administration or the government or any other organisation to take up the issue, every citizen should contribute for water conservation, then only our future generations will be able to get water, the MP stated while addressing a GIREMOTE Gurgaon summit on infrastructure, business and energy connect organised at Epicentre in Sector 44 here late last evening. The top priority, as of now, should be to address the problem of water table depletion, he said, adding that in Gurgaon and nearby areas, the exploitation of underground water was 300 per cent more than the seepage rate. This means that against one litre of water that goes
into the earth, we are extracting three litres from it. Gurgaon does not have any perennial source of water and presently depends on the Yamuna, in which water has been decreasing at the rate of 5 per cent per year for the past nearly 20 years, the MP pointed out. Hooda appealed to the gathering comprising builders, realtors and industrialists, to help build a mass movement on the issue so that the people realised the gravity of the problem and played a proactive role.

Protest for water turns violent – 10 injured in arson, stonepelting in Kondli

New Delhi

More than 10 people, including policemen, were injured in the arson and stone-pelting that followed when police tried to disperse about 300 residents who had blocked roads in protest against negligible water supply in their colonies for the last seven days in the Kondli area of east Delhi this morning. Two buses and three private cars, passing the roads at the time when police tried to open the road blockade, were damaged by the protestors. According to police sources, several motorcycles of the police department were also damaged by the unruly protestors who hurled stones at the police. The situation could be controlled only after two hours of police action. The locals alleged that there had been no supply of water in the area for the past seven days and despite repeated complaints to the Delhi Jal Board (DJB), no action has been taken. “What other option did we have if not to get on the road? It is seven days and there is no water supply in our houses. Nobody wants to hear us because we stay in unauthorized colonies,” alleged Singh.

Now, anger pours out on highway – Shahbad flood-hit block GT Road

Shahbad

Hundreds of vehicles were stranded on GT Road near the flood-affected town of Shahbad as angry residents blocked traffic in protest against the failure of the administration to restore electricity and water supply even after the floods had receded. With cell phone services disrupted in parts of Ambala, Shahbad and Kurukshetra, the stranded commuters faced much harassment. The traffic remained disrupted for about 40 minutes
till the administration was able to make the mob see reason. A resident alleged that there had been no electricity and drinking water since the past two days.

Villagers thrash staff, want polluting unit shifted

Rohtak

Residents of Mokhara village in Meham subdivision in the district are up in arms against the functioning of an industrial unit in the residential limits of the village alleging that it has been causing acute pollution, affecting the life of the villagers and their cattle. The protest of the locals against the unit turned violent last evening when some villagers allegedly forced their entry into the factory and thrashed employees. The complaint of violence was lodged by the Director of Bharat Chemical Factory, Ajay Gupta, who claimed that a mob of over 300 persons barged into the factory and indulged in violence and beat up the staff. The villagers have been demanding that the unit be shifted elsewhere as the chemical pollutants emitted by it were causing air and groundwater pollution, which had led to various kinds of diseases among both human beings and the cattle.

The police registered a case against over 300 villagers.

* Power

Farmers block highway over power shortage

Ambala

Traffic on the National Highway 72-73, near Naraingarh, in Ambala district was blocked for nearly three hours yesterday by hundreds of farmers. They were angry over acute power shortage and feared that they will suffer huge losses if the authorities do not streamline the power supply. “Thousands of hectares of land in our district have dried up due to the drastic fall of power supply in the district. Power-run tube wells can lift only a little water,” said Darshan Singh, a resident of Naraingarh. “We fear huge losses in the current season, as we cannot afford to irrigate lands with diesel-run shallow pumps. Despite the government’s earlier declarations that farmers will get electricity for minimum eight
hours, we get power for just three to four hours daily,” they alleged.
(The Tribune, 24th of June 2010)

Villagers lock up substation
Jind

The 132-kV substation at Nagura village in the district was locked up by the residents in protest against the poor supply of power from the past few days. This has been fourth such incident in the district during the ongoing summer season when the villagers have locked up a substation or held a demonstration against the poor power supply in the rural parts. Hundreds of villagers assembled at the substation today and asked the staff to vacate the place. It is reported that the protesters, who raised anti-government slogans, threatened to lock up power department offices against the failure of the department to supply adequate power to the village. The seizure came to an end after senior officials, including a DSP, reached the spot and pacified the agitators.
(The Tribune, 29th of June 2010)

Power staff stir
Rohtak

The Joint Action Committee (JAC) of the Haryana State Power Corporation Employees Union has announced to launch a statewide agitation from June 29 in protest against the state government’s failure to meet its long-standing demands and for carrying on with the policies of privatisation of the Power Department and its services.
(The Tribune, 24th of June 2010)

Power staff held captive for 14 hrs
Jind

At least five officials of the Uttar Haryana Bijli Vitran Nigam (UHBVN), including an executive engineer and an SDO, were held captive by residents of Kurad village of Narwana subdivision here for 14 hours in protest against the poor supply of electricity. The officials were set free this morning after intervention of the police and senior officials. The villagers did not allow them to come out till the work was over. It is reported there had been an altercation over the work on transformer’s
replacement to be done on the same night. While the employees and workers’ union of the power department staged a dharna in protest against the incident and threatened to stall work of power distribution and repairs till the safe release of all officials, the latter were set free this morning at 10.30 am following talks between the villagers and the district administration.

(The Tribune, 1st of July 2010)

Villagers hold up traffic over power
Jind

Hundreds of residents from four villages in the district blocked traffic near Alewa village on the Jind- Assandh road today in protest against the shortage of power in these villages. The road blockade, which continued for over one hour, was lifted following an assurance given by officials of the department concerned that they would address the issue. The protesters, who belonged to Alewa, Katwal, Gohiya and Khanda villages, came out on the main road, connecting the district with Assandh and Karnal. Irked by the erratic supply of power, villagers from Hinjrawan Kalan and Hinjrawan Khurd today laid a siege to their power substation and raised slogans against the functioning of the power utilities. Later, officials reached the spot and convinced the villagers to end their protest, assuring them of a better power supply in the future.

(The Tribune, 4th of July 2010)

Power demand at new high
New Delhi

It seems as if the power demand in national capital is hell bent on breaking its own records. It is the third time that a new record has been set by the power demand in the city in the past two months. The demand in the Delhi today surged past the earlier high of 4668 MW while touching 4720 MW in the evening. In June last year, the highest demand was recorded at 4,337 MW, since then there has been more than 8 per cent increase in demand.

(The Tribune, 1st of July 2010)

Industry reels under power shortage
Faridabad
The local industry is reeling under an acute shortage of power. An office-bearer of the FIA claimed that the industrial production had fallen by about 20 per cent due to the power shortage. Jain said the industry should get at least 15 hours of power supply to compete in the global market. Factories use “captive power source” like capital-intensive generator sets to keep their production going for an additional five hours. However, this was highly expensive as the per unit cost of power generated by gen sets worked about to about Rs 11. The cost of power per unit supplied by the department was about Rs 5.

(The Tribune, 24th of May 2010)

Delhi rulers spend billions on the prestigious Common Wealth Games, paying little to those who build and maintain the city. Construction workers already had a riot on Common Wealth sites after one too many fatal accidents. Now street sweepers had had it, they expressed their riotous souls and anger, demanding proper contracts and higher wages. Several cars got burnt, the police had to resolve to warning shots.

“Over 900 temporary safai karmacharis [street cleansing workers] indulged in widespread rioting early on Wednesday morning at Najafgarh in southwest Delhi. They were demanding permanent status and a hike in salaries for all Grade IV employees. Before the stunned and highly outnumbered local policemen could react, the protestors had barged into the MCD’s zonal office, beaten up its staff and smashed furniture. The arrival of reinforcements in the form of PAC personnel and an RAF unit at the spot only added fuel to the fire with the protestors blocking the main Najafgarh Road, attacking vehicles and setting them on fire. MCD officials said the protests had been going on for the past three days. The violence, that lasted for over an hour, began around 9.35 am. According to cops, 17 cars were damaged along with five low-floor DTC buses and four DJB tankers. “A Gypsy belonging to the SHO of Najafgarh, Anand Sagar, was set on fire and got completely wrecked. The SHO himself was injured when the mob began pelting the cops with stones. The Chawla SHO, Sandeep Gupta, too had to be admitted to hospital. In all, over 14 policemen had to be admitted at the hospital. The police said they had to fire eight rounds of tear gas shells even as additional force from at least four neighbouring police stations, besides the RAF and PAC, were despatched to the spot. However, when these
shells too could not disperse the mob, cops had to fire in the air. “We fired five rounds in the air to disperse the crowd. We have arrested 14 protestors, four of whom are women,” said a senior officer from the southwest district. Delhi mayor P R Sawhney said: “The protest by safai karamcharis at Najafgarh is unwarranted and we will take strict action against them on Thursday if they do not report for duty. Such incidents take place when senior officials like the deputy commissioner of a zone is not strict with his/her staff. We are starting a cleanliness drive from Thursday and will not let such a protest come in the way of it being successful. If need be, we will take stern action against the safai karamcharis”. MCD has a total of 45,000 safai karamcharis out of which 5,000 are daily wagers. The civic body has been promising these people, hired on a daily wage basis from 1994 onwards, that they would be regularised”.

(The Tribune, 1st of July 2010)

3) According to Plan –

General information on the development of the region or on certain company policies

Neo-liberal endorphins are re-ceeding, land-prices dropping, bonuses in the middle-management departments coming down. The city wakes up, looks around itself and startles in fear: who are all these people left out by the rush?! We start with a comment posted on GurgaonWorkersNews expressing the general angst towards the unknown proletarian aliens. The city soothes itself in booze and online-checks on its servants: are they Maoists? In the end we have to create our own ideal world of neo-rich India without the poor: “The Kingdom of Dreams”, a soapy-bubbly image of our gated fantasy.

* Booze

The millennium city is guzzling alcohol like never before

GURGAON, March 21

Records provided by the excise department revealed that the city sold liquor worth Rs 295.23 crore during 2009-2010. S B Sharma, district excise and taxation commissioner (excise), said: “In 2008-09, we sold liquor worth Rs 165.22 crore. The figure rose by Rs 130 crore this year, which is an all-time high for the city.” Interestingly, consumption of liquor tripled in February this year compared to the corresponding period last year.

(The Tribune)

* Internet Check

Verification of domestic help goes online

Gurgaon, May 16

Gurgaon Police Commissioner Surjeet Singh Deswal yesterday launched a programme for residents’ security, under which any resident can place a request for the police verification of domestic help, tenants and drivers online.

“The programme, based on the public-private partnership model, has been started on an experimental basis. A company had approached the Gurgaon police for preparing a database of the floating population,
especially the domestic help, tenants and drivers, and the work has been entrusted to it as an experiment. If some more companies approach us, we will allot them other areas,” Deswal maintained. Ashwani Narula, CEO of Hamari Suraksha Software Solutions, said the residents could apply for police verification on the website. Following this, a representative of the company would visit their house and upload the photo, scan identity proof like driving licence or PAN card and fingerprints with a biometric device. The data so collected would be handed over to the police, which would get it verified from the police authorities at the person’s native place.

* Maoists

Red alert: Naxals draw up plan to shake urban India

Gurgaon, March 12, 2010

The Maoists are carrying their fight against the Indian state into urban India. A 129-page Maoist document titled ‘Strategy and Tactics of the Indian War’, seized recently by security forces, states: “Our presence today in key industries is extremely low. It is a pressing need that we enter key industries such as transport, communications, railways, ports, power, oil and gas and defence equipment. This is crucial for the success of our revolution.” The targets: Gurgaon, the Mumbai-Pune and Ahmedabad-Surat industrial belts and the Kolkata-Bhilai-Ranchi-Dhanbad region. “Maoists are trying to infiltrate trade unions of political parties,” a top intelligence officer, who gave Hindustan Times access to the document, said. The Federation of Indian Chambers of Commerce and Industry (FICCI) has urged the government to address security concerns of the private sector. In a report on “National Security and Terrorism,” a task force of FICCI has favoured the creation of a national counter-terrorism agency; a national intelligence grid; Ministry of internal security with a full-fledged Cabinet Minister; and a new intelligence agency to deal with non-state actors. Recognising the role of IT in the war against terror, it called for improving the quality and mechanisms for exchanging relevant information between government and business.

* Kingdom of Dreams
Gurgaon to become key tourist destination with Kingdom of Dreams

Gurgaon, January 21, 2010

Kingdom of Dreams, a 5.66 acre entertainment and leisure hotspot that will showcase Bollywood musicals and boast of an elaborate arts and food boulevard, is set to make the capital’s suburb an important destination for international tourists, says project director Viraf Sarkari. ‘In India, we don’t have any top quality tourist destination which gives a real taste of the country except for a few like the Taj Mahal. When people have foreign guests and they have to entertain some, they either take them to a five-star hotel for a meal or if one is lucky, there might be a kathak dancer performing live somewhere. With Kingdom of Dreams, we are trying to create that one-stop where a tourist or anyone can have the feel of everything Indian,’ Sarkari told IANS. Culture Gully is a kaleidoscope of India’s cultural, artistic and culinary diversity. Artificial clouds line the ceiling of the place and a pan-Indian cultural ambience will be created in the street-like area. ‘We are also happy as this project will generate a lot of employment for our people,’ he added.

This is an attempt to introduce a regular update on general tendencies of crisis development in India – motivated by Greek shock-waves, naked shorts and potential spillovers. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future.

* The Macro Crisis

To put the core of the social crisis in symbolic-statistical terms: Export constitutes around 15 per cent of the Indian GDP – it’s share increasing over the last years. IT related-services constitute 20 per cent of the export. IT stands for less than 0.1 per cent of total employment. This is the character of the boom. More than half of the children in India are malnourished, rural hunger in India is higher than in Sub-Saharan Africa. That’s the core of social reality. The current attempt of the Indian state is two-pronged in order to control the blib inbetween: push money in more substantial manufacturing/export at all cost, spend the rest of the credit money on keeping rural crisis at bay, be it through farmers’ subsidies or through counter-insurgency. This two-front war costs more money than the 8 per cent GDP growth creates. The state is compelled to attack proletarian living standards more harshly: the increase of fuel prices in
June 2010 was a necessary play with fire. Things can get hotter than the token general strike of July 5!

At this point we also want to hint towards the velvet glove of counter-insurgency: the instrumentalisation of well-meaning NGO work by those in power. Currently the states discover the importance of ‘small-scale’ farming and artisan-work as a way to individualise or ‘cooperativise’ the misery created by the mass loss of jobs and bankruptcies. Here one example about the flag-ship of feminist NGO’s SEWA being hailed by the US officials during the bi-state summit in July 2010:

“The miracle of SEWA is a treasure of India. It is also a treasure that the world is getting to share and benefit from it more and more. They have a huge fan in the Secretary of State (Hillary Clinton),” Verveer said. As SEWA expands its operations outside India in countries like Afghanistan and Sri Lanka, she said the US would like to collaborate with this Indian NGO. Referring to the recent strategic dialogue between India and the US, she said the two countries have agreed to take SEWA’s self help lesson and grow it more broadly in terms of capacity building regionally and also to grow the work that SEWA has been doing in Afghanistan.”

The Euro-Crisis

How can we summarise two month of global crisis in India? May and June have see publicly displayed insecurities of the elite concerning ripple-effects of the Euro crisis.

“To some extent, it will have some influence, but... the adverse impact will be limited... I think the European crisis is not going to have as adverse an effect as happened in the 2008-09 crisis.”

(Finance Minister Pranab Mukherjee, 21 May 2010)

His official added, that in any case, India had very little direct exposure to European countries at the centre of the crisis, with the country’s banking system having no direct links with them and exports to Greece, Spain, Portugal and Italy only 4 per cent of total exports.

A day after this statement the media announced the worst ever week for the Rupee since 1995, the rate of the Rupee to the USD dropped significantly (about 5.5 per cent since end of April) after short-term investors withdrew about 20 billion USD from Indian finance markets during May 2010 – the sharpest reversal in foreign capital inflows since
the Lehman Brothers collapse. The Reserve Bank of India had to jump in and induce 3.5 billion USD its 280 billion USD foreign currency reserves into the draining market. RBI governor Duvvuri Subbarao seemed much more worried than the Finance Minister some days previous, when he announced during the G20 summit: “India’s reserves comprise essentially borrowed resources and we are, therefore, more vulnerable to sudden stops and reversals compared with countries with current account surpluses”. And the impact is palpable not only in fiscal terms: “After a positive trend in April India’s apparel export, impacted by events in Europe, dropped by an annual 6.8 per cent to USD 820 million in May 2010” (ET, 6th of July 2010). “Exports of passenger cars from India declined by over three per cent in June to 36,874 units, mainly due to slowdown in demand from Europe (ET, 9th of July 2010). In July 2010 Reuters announced a ‘widening trade deficit’ due to the EU crisis: “India’s trade deficit was $117.3 billion in 2009/10, down from $118.7 billion in 2008/09. This gap is likely to widen to $132.70 billion in 2010/11 and $154.50 billion in 2011/12”.

Just to give some broad figures relating to the 20 billion USD flight from Indian market:

Total GDP 2009: 1,367 Billion USD
Total Export 2009: 165 Billion USD
External Debts 2009: around 200 Billion USD
Public debts of GDP 2009: 60 per cent

The Limits of Deficit Spending

Together with the US the Indian state is the global defender of ‘stimulus-policies', warning of the dangers of deflation see discussions on last G20 meeting in Toronto. The Indian state tries to stimulate the manufacturing/export sector, thereby increasing fiscal deficit and inflation. At the beginning of June the press reported that the fiscal deficit increased by 25 per cent in 2009 to 2010. Indian inflation hit double digits in May 2010, the highest in any G20 nation, sparking concerns that prices were running out of control and putting pressure on the Reserve Bank of India (RBI) to raise rates even before a quarterly review. Inflation is the result of a ‘soft-approach’ to the looming recession. Seeing deficits and inflation grow the state has to tackle things the hard way. Major part of
the Indian state deficit is attributed to the ‘subsidy’-bill, or in better terms ‘the areas of low taxation’. Money has to be shifted, the ‘unproductive or unprofitable subsidies’ are supposed to be cut down.

Fuel accounts for a quarter of the state’s estimated subsidy bill of 1.2 trillion rupees. But does that mean that the government of India is ‘net subsidising’ the oil sector? Comrades from Sanhati come to a different conclusion:

“In fact, direct subsidy is a tiny fraction (less than 1 percent) of the total tax revenues from the oil sector. Second, the total contribution of the oil sector to the exchequer has been higher than the sum of under recoveries of the OMCs and direct subsidies on petroleum products for all the years since fiscal 2004. Third, even the sum of duties (customs and excise) and (sales) taxes on petroleum products, which is only a fraction of the total contribution of the oil sector to the exchequer, has exceeded the sum of under recoveries of the OMCs and direct subsidies in all the years since 2004-05. (...) The oft-repeated assertion that petroleum products are subsidized in India is simply not true.” (Click for Sanhati report)

Regardless of the question of ‘actual net subsidies’ or ‘less taxation’, inflation has been high – the state officials announce beginning of June that the double digit inflation will be reduced to around six to seven per cent anytime soon; then they pour more oil into the inflation-fire: end of June the government decided to ‘reform’ the state-controlled fuel market and to free-float the prices of petrol and diesel, triggering an immediate petrol price-rise of five to ten per cent using the ‘high subsidy bill’ as an excuse. Who pays is the proletarian population. Asfia Malik, who is a schoolteacher, said to The Hindu: “Daily wage workers and even salaried people will not be able to afford the cooking kerosene cylinder now. Its price has increased from Rs 310 to Rs 345”. The reform sat well with the markets, days after the decision the oil stock prices rose, and with the G20 summit, which urged the phasing out of fossil fuel subsidies. Finance Minister Mukherjee said the recent fuel prices will have a direct impact on inflation by 0.9 per cent in the short-term. Still, there would be some cascading impact on food inflation and primary articles inflation. The food inflation will also potentially be aggravated by the recent decision by Agriculture Minister Sharad Pawar to “consider a proposal to
The inflation does not only hit the consumption side. Following example shows the impact of costlier fuel and power for certain industries: “The recent hike in electricity duty from 10 to 13 per cent has made power in Punjab the second-most expensive in India. Registering protest against the hike, members of the Apex Chamber of Commerce and Industry (ACCI) today threatened to shut down their factories and move to other states”. Obviously these are only snap-shots, but they show how the state tries to juggle its ‘subsidy’ debts, how ‘stimulus’ and ‘stifling-inflation’ interact. One of the general explanations for the source of the inflation are the stimulus package and low interest rates by the government plus the inflow of short-term investment from crisis ridden North towards the emerging markets during 2009 – 2010. On 16th of June one of the leading bankers in India delivered another reason for the inflation: a decline in productive investment within India. “The industry is behind its cycle of investment. The demand is outstripping supply and the industry has been slow to invest in capacity,” Banking major HSBC India country head Naina Lal Kidwai said. This sheds a quite different light on the ‘manufacturing back on full-capacity’-success stories of the government.

Selling Assets

If you cannot save enough money – because you might be afraid of the popular reaction – or you cannot tax a struggling economy more, you have to sell your assets. In May 2010 the Indian state sold third generation (3G) bandwidth for mobile phone services, the state earned 15 billion USD, twice the sum expected – the auction caused a short-term liquidity crunch on the market trying to raise money. In May 2010 the commerce and industry ministry was expected to propose 100 per cent foreign direct investment (FDI) in multi-brand retail, opening the doors to the likes of Wal-Mart, Carrefour and Tesco. The opening of the market is a major ‘hot-issue’ given the tens of millions of small traders in India, one of the main ‘social parking-spaces’ for the under-employed and failed peasants. An official of the ministry tried to counteract the widespread fear of mass bankruptcy: “The idea is that big multi-brand retail outlets should enable growth of small retailers and not threaten their existence”. A week later the media reported from the US: “The world's largest retailer Wal-Mart has solicited support from the US government for entering the
multi-billion dollar Indian retail market, where foreign investment norms are posing hurdles to its entry. The company is lobbying with the US Congress members as also the departments of commerce, trade and treasury, among others, to put forward its case on issues like “discussions on India and Foreign Direct Investment”, and “enhanced market access for investment in China and India.” Three weeks later we could read from India: “The Department of Training and Technical Education (TTE) will sign an MoU with Bharti Wal Mart (BWM) Private Limited to provide free skill development training to students enrolled in certain courses to help them obtain employment. The agreement will be signed by principal secretary, Department of TTE, Anand Prakash and vice-president, Corporate Affairs of the Bharti Wal Mart, Arti Singh. The expenditure will be borne by BWM”. Just a minor example how the world’s biggest companies are more intensively pushing into remaining markets, how capital concentrates and is about to be crushed by it’s weight.

The Response of the Labour Movement

Concerning the response of the labour movement there are certain global parallels. In response to inflation and petrol price hikes the opposition parties and unions called for a general strike on 5th of July 2010 – matching the general trend for ‘popular’, but largely symbolic mobilisations like in the PIIGS-states. There have been sporadic local protests against the fuel-price-hike immediately after announcement of the ‘reform’. On 5th of July the CPI announced a ‘major success’ of the general strike, while about 4,380 people, mostly workers of BJP and Left parties, were detained during the protests in Delhi alone – we will try to present some more accurate ‘local picture’ of the stage-show: “The all India hartal to protest against the steep increase in the prices of petroleum products has been an unprecedented success. Despite detention and arrests of thousands of protesters, there was a bandh like situation in all parts of the country with shops, business establishments, transport and educational institutions being closed. This has been the most widespread protest action in the country in recent years”. A friend from Manesar said on the phone: “Well, the shops are shut, the busses run infrequent... but the factories are running.” A similar impression – but from the other side of the barricade – had a reporter of the ET (Click).
Air India and British Airways workers’ unions had to go to court over ‘legal right to strike’ at about the same time. The crisis hits the airlines hard, the question of resistance to large-scale re-structuring is on the political and legal agenda. “Air India staff have called off a two-day strike that left tens of thousands of passengers stranded after an Indian court declared the stoppage illegal. Aviation analyst Kapil Kaul said it was the first time in 20 years he had seen union leaders being dismissed. The Delhi high court granted the injunction on Wednesday and directed the striking employees to return to work. The government had called the strike “irresponsible.” The government had given a $168m bailout to the ailing state-run airline and promised $252m more. Analysts say the airline's 30,000-strong workforce needs to be cut by half to make it competitive.” (ET, 27th of May 2010).

While Honda workers struck in China Hyundai workers struck in India, the police arrested 200 workers in Chennai – at a time when Asia is hailed as the last resort of the global car industry. While Foxconn workers in China expressed anger and desperation about their electronic misery, workers at Nokia in India laid down tools in mid-July 2010: The industrial action at the Sriperumbudur factory, which employees about 8,000 people, is the third dispute to hit the Finnish company in the last 12 months. Another proletarian crisis-related outburst worth mentioning were the protests of Vietnamese, Indian and other Asian construction workers in Dubai – following non-payment of wages in May 2010. These parallels are obviously still ‘non-communicating parallels’, but they follow a pattern. Finally we want to document a good strike report on the dispute of railway-workers in Mumbai (Click).

The Counter-Insurgency

In terms of counter-insurgency the Indian government declared the possibility of using army air-force against the Maoists, after Dantewada land-mine attacks end of May. The state withdraw the official threat at first. On 5th of July the state announced using Border Security Force (BSF) in specific special operations against Maoists. The BSF is deployed in Kashmir and northeastern states, using army helicopters. Apart from militarisation the focus of repression shifted towards the radical wings of workers’ unions in states like Punjab and Gujarat – states which have so far been seen as being outside the so-called ‘Red Corridore’. The state
force arrested several unionists in end of June in Punjab and Gujarat. On 22nd of June 2010 we could read in Chandigarh Tribune: “The Punjab Police has sought a special Central assistance of Rs 100 crore to build capacity to counter the ‘growing’ Maoist threat to the state. Security agencies claim Maoists have entrenched themselves among several extreme-Left organisations which are taking on the state through a series of mass movements. The organisations named by Punjab Police sources for ‘harbouring’ Maoists include the BKU – Ugrahan, Dakonda, Ekta and Krantikari groups, Punjab Kisan Union, two Kisan Sangharsh Committee groups, Kirti Kisan Sabha, Punjab Kisan Union, Jamhoori Kisan Sabha, Dehati Mazdoor Sabha, Punjab Khet Mazdoor Union and two groups of Pendu Mazdoor Sabha, Punjab Khet Mazdoor Union and two groups of Pendu Mazdoor Union, Mazdoor Mukti Morcha and Krantikari Pendu Mazdoor Union. A total of nine alleged Maoist sympathisers have been arrested including one “permanent” member Harnek Singh, who was arrested with a revolver from Ferozepur”. A longer summary of the arrests can be found at Sanhati (Click):

* The Rural Crisis

As we have said earlier on, capitalism in India will have to push and pull at two main developmental front-lines in order to steer through social crisis: the rural and the urban-industrial. We have a monthly glance at the main tendencies within the agrarian and automobile sector representing these two front-lines.

GDP and Food Grain Production

While general GDP growth was put at 7.4 per cent in financial year 2010, growth of agriculture was at 0.2 per cent. Given the bad rainfall and the bad food grain harvest – accounting for 70 per cent of the total output – most commentators thought that the announcement of a positive growth was surprising. Total food grain production fell by nearly 7 per cent in FY10. Major commercial crops like oil seeds and sugarcane had also recorded a decline in their output in the range of 4 to 8 per cent. In June the state announced a 0.5 per cent increase in the Minimum Support Price for paddy paid to farmers. Wheat and rice are the main ‘procurement crops’, the state often procures directly from farmers, while pulses – the other main food grain – is mainly bought by private traders. The government procured 33 million tonne rice last year. India’s total rice production is around 98 million tonne. The picture looks different when
it comes to pulses. India is a net importer of pulses and the sharp rise in prices is on account of higher commodity prices globally. The country produced 14.77 million tonnes in 2009-10 against a requirement of 18-19 million tonnes. While pulses – and to a certain extend wheat – have to be imported, commercial crops like cotton are exported. China, India and Argentina urged the US during the last WTO summit to drop import tariffs – protecting cotton industry in the US. Cotton prices have dropped severely during 2009, China turned from major import destination to export hub, due to internal overproduction.

The Subsidies

In the public discussion about the state’s deficit the subsidies for the rural world is seen as the mill-stone around the neck of national prosperity. On 8th of June 2010 the Financial Express summarised some of the ‘main culprits’, with a demand for ‘reform’:

FOOD SUBSIDY

India provides cheap foodgrains and pulses to nearly 180 million poor or low-income families through a public distribution system that will cost nearly $12.6 billion in the year to end-March 2011. It accounts for about 5 percent of the budget.

FERTILISERS SUBSIDY

To help farmers and boost farm output, the government fixes the prices of some fertilisers and pays a subsidy to producers to compensate for selling below cost. The bill is pegged at $11.2 billion in the current fiscal year, an increase of 5.7 percent on the previous year. It accounts for 4.5 percent of the budget.

RURAL EMPLOYMENT

The government guarantees each rural household 100 days of work in a year, a scheme that costs it just under 1 percent of GDP, or 3.6 percent of the budget.

INTEREST WAIVERS

The government subsidises the interest costs on some farm and housing loans and for some pension plans, at a cost of about $1 billion in 2010/11 budget.

Selling Land-Titles
If the land does not provide profitable returns as soil, it can be sold. The mass-bankruptcies of small farmers demand a more regulated legal framework for selling-and-buying of land. One of the other ‘reforms’ requested by state and advisors like the IMF is the de-regulation of the land-market. In large parts of India it is still about the introduction of proper land-titles, a legal proof for ownership over land, in order to trade it. On 29th of May a small column in the ET mentioned these quite substantial changes in overall commodity relations: (Column: Why giving land titles is hard) “The rural development ministry’s Department of Land Resources now has a draft Land Titling Bill 2010. The overall idea is the Torrens system, implemented in several common law countries, after its origins in Australia. Obviously, there are several prerequisites before the proposed land titling authority can guarantee titles. There has to be a title registry and there have to be survey settlements. The land information system and use of this for valuing property will follow. The proposed Land Titling Tribunal, to supplant recourse to courts, is also a subsequent matter. Enough technology is available to match satellite-based images with survey records and digitise cadastral maps”. Put a name to it, then a price tag. Shortly after draft for the ‘Land Titling Bill 2010’ the Punjabi government announced the introduction of a new land purchase policy in July 2010.

The policy “allows the state to buy land for various projects from owners through a process of tender-based bidding. As part of the new policy, various urban development agencies of the state can buy land from the owners at the rate quoted by them if the rates suit the government. The policy, he added, has the nod of the Cabinet”. By introduction of this policy the state wants to further individualise the issue of ‘compensation for land grab’, by facilitating individual exchange relationships. The state formalises, what has happened behind the doors informally anyway. The state also hopes to speed-up the dealing, hoping to get hold of land within 2 to 3 months.

The Rural proletariat

Those who have nothing to sell and nothing to lose depend on the rural labour market. One of the main state-measures to control the reproduction of the rural proletariat is the National Rural Employment Guarantee Scheme (NREGS). While official minimum wages have been
hiked in various states (up to 40 per cent in Delhi and UP), the following example from Rajasthan shows the current trend of actual wages. It is too early to say, but it seems that with the crisis the wage gap between urban and rural proletarians seems to widen.

JAIPUR: About 2,000 MGNREGA workers from across the state would demonstrate on Thursday near the Statue Circle over the poor payments in the scheme and against the state government's alleged step-motherly attitude towards them. According to the state’s MGNREGA website, the average payment of workers of this scheme which was Rs 89 per day last year has now fallen to Rs 70 per day. While the prices of goods have sky-rocketed over the year the average payment for MGNREGA workers, according to the government's own estimate, has gone down.

(Times of India, 24th of June)

* The Automobile Crisis

In May 2010 all major car manufacturers in India reported an increase in passenger car sales between 20 and 40 per cent for April 2010 compared to last year’s sales. Domestic car sales were 143,976 in April, up from 103,227 in the same month last year, led by Maruti Suzuki, which sold 80,034 units. The over-all annual growth of the passenger car market has slowed down: in 2010-11 the market grew 12 to 13 per cent, compared to 25 per cent in 2009-10. Not only did certain cheap credit schemes run out, car prices went up, as well: SIAM president Pawan Goenka said over the past six months prices of natural rubber had increased 40 per cent, while that of pig iron and steel had risen by 25 per cent and 10 per cent respectively. As we wrote in the last ‘Social Tsunami Impact’ export sales grow substantially faster than domestic sales – we can currently observe the emergence of actual ‘global car production’ in Asia. The ‘boom’ in India is accompanied by strikes of car workers at Honda and Toyota in China, by 200 arrests of striking workers at Hyundai in India.

With the entry of Indian car factories into the global market, global production standards are adopted. Despite the generally lower wage levels, the final assembly in India is using a composition of labour/capital similar to the North: At Maruti Suzuki 340 programmed robots are involved in spot welding (joining sheets), handling and sealing robots come from behind to complete the welding process, which was largely manual until a few years ago. Things will not be much different at
other major exporters. In May 2010 Nissan said it has started commercial production of small car ‘Micra’ from its plant in Chennai, which it plans to make a global export hub. The India-made Micra will be exported to “strategic markets” such as Europe, the Middle East and Africa as part of its plans to sell the car in over 100 countries. The new Micra will be produced in five countries — Thailand, India, China and Mexico. The fifth location is yet to be decided. Two-wheeler manufacturer Honda Motorcycle & Scooter India (HMSI) is planning to raise its exports to 110,000 units of motorcycles and scooters this fiscal over 80,000 units last year. “In a span of eight years the export destinations have crossed 50. We not only export to developing countries, we also export to the developed nations of Europe,” said Shinji Aoyama, HMSI president and chief executive officer.

Apart from ‘ready-made’-automobile the global supply-chain for car parts extends, as well. India’s Apollo Tyres announced in June to supply tyres to German car maker Volkswagen in Europe. Chinese parts manufacturers are looking towards India as a cheaper and – compared to their home-turf – more peaceful production hub. In June the Economic Times reported: “Chinese automobile and component manufacturers are queuing up to drive into the Indian market, second only to their own in pace of growth, with the intention of using it as a low-cost export base”. We expect that some of the recent industrial unrest in China is bound to be exported, too.

4) About the Project –

Updates on Gurgaon Workers News

You can find two more English translations of texts by Faridabad Majdoor Samachar on their web-blog. The texts concern the question of proletarian housing and state control over reproduction (Click).

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.
Business Process Outsourcing: for example of call centre work, market research, sales.

CITU
Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Casual Workers
Workers hired by the company for a limited period of time.

Contract Workers
Workers hired for a specific performance, paid for the performance.

Crore
1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):
An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi

Slum Hut

Lakh

see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so-called ‘governmental fair price shops’ are shops where ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to prove your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices:

Housing:
– Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
– Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
– Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:
– Half a kilo red lentils on the local market: 25 Rs
– Kilo rice on local market: 14 Rs
– 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
– McChicken: 40 Rs
– Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
– Cigarettes (10), cheapest local brand: 25 Rs
– Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
– Faulty shirt on Faridabad local market: 40 Rs
– Single gas cooker plus new 2 litre gas cylinder: 720 Rs
– Re-fill gas (2 litres – once every month and a half): 100Rs
– Second-hand bicycle: 600 to 1,000 Rs
– Two simple steel pots: 250 Rs

Transport and Communication:
– Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
– Daily Newspaper: 3 Rs
– One hour internet in a cafe: 20 Rs
– Cinema (new) ticket Saturday night: 160 Rs
– Single entry for swimming pool: 100 Rs
– One litre Diesel: 30 Rs
– Driving license in Haryana: 2,000 to 2,500 Rs
– Start package pre-paid mobile phone (without the phone) 300 Rs
Phone call to other mobile phones: 1 Rs
One month mobile phone flat rate: 1,500 Rs

Luxuries:
Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
Money given to poor labourers for their kidney: about 40,000 Rs
Compaq Laptop: 50,000 Rs
Flight Delhi to London: 28,000 Rs
Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
Ford Fiesta: 587,000 Rs
Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors
Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** The isolated social work in the household –

Report by a working-class woman about her work in and around the house in the industrial area: caring for husband and children, earning money by doing outsourced embroidery work. The story has been published several years ago in the Hindi workers’ newspaper Faridabad Majdoor Samachar. We document it in the wider context of workers’ reports, looking at the hidden side of the factory world.
*** The Fractured Assembly of Automobile Workers –

The distribution of Faridabad Majdoor Samachar has recently been extended to the new industrial area of Manesar, near Gurgaon, an area dominated by the automobile industry. We document short reports from automobile workers, mainly within the fractured cooperation of parts manufacturing. Recent struggles like at Rico, Denso, AG Industries or VXL, workers have not been able to extend their disputes along the arteries of this vast territorial assembly line.

*** The physical attacks of (garment) production –

Some workers’ reports from mainly garment factories in Gurgaon and Manesar. The reports were collected during times of summer heat, rising inflation and extreme overtime, which saw a lot of workers collapsing under the pressure. The reports are accompanied by a recent and thorough article on increasing mechanisation and Taylorisation of this labour-intensive industry. We also document a short statement from multi-national companies GAP, Next and Marks and Spencer from 8th of August 2010 about ‘their concerns’ about the workers’ conditions in Gurgaon. We add an appeal for solidarity by Viva Global workers who manufacture for Marks and Spencer and who have been locked out and attacked by paid thugs on 21st and 23rd of August 2010.

*** The crisis and the global hunt for calls –

Gurgaon is one of the biggest call centre hubs of the globe, having been relocation destination for a lot of US call centre work. Now that the crisis hits the US wage level, calls might be re-routed back up to the global north. A short summary of a recent study and a short workers’ report about house-keeping work in an American Express call centre in Gurgaon.

*** Circle of Animal Lovers: a NGO worker reports –

A worker employed by a Delhi based NGO reports about how the ‘Circle of Animal Lovers’ in collaboration with the Municipal Corporation of Delhi (MCD) treats working humans and other species. The NGO is entrusted with sterilizing street dogs – a profitable enterprise particularly in times of the prestigious Common Wealth Games.

2) Collective Action –
Reports on proletarian struggles in the area

*** A Series of wildcat strikes of garment workers to enforce higher wages in Gurgaon and Delhi –

We document six short reports by garment workers about seemingly spontaneous strikes to enforce higher wages. The conflicts took place in April 2010. The strikes have two parallels, one in space, the other in time. The strikes correspond with the more violent and widespread mobilisations of garment workers in Bangladesh and they continue the series of previous strikes during the last official increase of the minimum wage. The combination of companies not passing on the wage hike and the current inflation forces workers to react. The workers manufacture, among others, for Marks and Spencer.

*** The Student-Worker? Short glimpse at current disputes at Delhi universities –

There are various attacks affecting students and workers on the campuses: fee hikes, introduction of a semester system, entry of international academic FDI in the sector, anti-Maoist witch-hunt. The exam pressure increases with the general pressure on the labour-market. In recent years suicides among students became epidemic. Some short reports about current disputes.

*** A Strike against the Games / Life and struggles of workers building the Common Wealth Games in Delhi –

Friends from the journal ‘Radicalnotes’ documented the living and working conditions of Common Wealth Games construction workers in Delhi. You can find their accounts and photographs on the site – click HERE

In mid-August some workers went on strike against unpaid wages, supported by Delhi radical student groups.

3) According to Plan –

General information on the development of the region or on certain company policies

*** An Ideal Village and the social death of the peasantry / Report after visiting friends in Mandkaula, a village in Haryana –

Mandkaula, an one hour train ride south from of Faridabad, has been in
the heart of Green Revolution in the 1960s and close enough for the rural proletariat to be drawn into the industrial development of Delhi’s industrial areas in the 1970s. Mandkaula is an ‘Ideal Village’, its last generation of peasants and artisans die a social death. A post-visit report and some general news about other unruly villages in Haryana.

*** Short note on real estate business and the private-public land-mafia in Gurgaon –

Gurgaon is still an Eldorado for the international real estate business. In August 2010 the Hooda Haryana government was put into a no less dubious public spot-light for getting engaged in shady land-deals in Gurgaon. Farm land was turned into cheap property to build an amusement park. We summarised some news items on the matter.

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –

This is an attempt to introduce a regular update on general tendencies of crisis development in India – motivated by Greek shock-waves, naked shorts and potential spill-overs. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future. This month: growing tension between financial and fiscal managers of capital about rising inflation and trade deficit; planned mass foreclosures against bankrupt farmers in Maharashtra; and increasing debts causing hick-ups in the automobile supply-chain.

Updates on Gurgaon Workers News

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

The following story has been published several years ago in the Hindi workers’ newspaper Faridabad Majdoor Samachar. We document it in the wider context of workers’ reports, demonstrating the hidden side of the
factory world. Recently a new documentary on ‘house-workers’ in Delhi has been published, click HERE for the announcement.

(FMS 2003)

I am not yet 35 years old. My husband and elder son both work. I look after the house and also earn some money from stitching and embroidery. Every day I get up at a.m. I have to go out for latrine in the open. It is dark. I fear pigs and dirty men. (Men sit and hide). It's forced on us. I have to prepare for it. After coming back, I fill up water from the public tap. If it is not crowded, it takes twenty minutes, otherwise it takes an hour.

After bringing water, washing the dishes, cleaning the place then I cut the vegetables and grind the spices. I don't use readymade spices. My husband works in Okhla now and he has to catch the 7:40 a.m. train. On one stove, I cook vegetables and on the other I make rotis (bread) after kneading the flour. Sometimes, on the kerosene stove, I have to heat up the water because my two kids have to get ready for school. After the vegetables are ready, I make tea. My husband has to leave home at 7:15 a.m. to catch the train. The children leave at 7:45. In the morning, they have breakfast of roti and vegetables and then drink tea. My husband also takes his rotis. The children come back at 1 p.m. and eat. After I've completed my work then if some tea is left, I drink that or I make another cup. I drink tea but I don't feel like having breakfast. I heat up water and have a bath. Then I wash the dishes, broom the place, fold up the beds. I work very fast but still it is ten to 11 before it's over and if some guests come in it takes more time. Then I take rest for an hour or two.

I again fill up water in the morning from the public tap. I have to collect water three times in a day. Then work for money. I stitch a pajama for ten rupees. An underwear for five. A petticoat for ten rupees. Contractors bring clothes from factories on which I do embroidery at piece rate. It is 4 to 5 p.m. By the time I bring milk and vegetables from the market, it is time to start preparing for dinner. Taking it all into consideration, it means that I cannot take care of my body. There is no time for myself.

My eldest son has night duty for 15 days in the month. Today he has night duty. He has to go at 8 p.m. from the house. I had prepared food by 7 because if he leaves immediately after a meal, then he'll have a stomach. He eats one hour before and takes some rest. At this time, he is
also ill. His duty is of 12 hours. From 8 p.m. till 8 a.m. tomorrow, the boy of 17 years old has to stand at a plastic-moulding machine for 12 hours every day. I feel a lot of pain. I wish he didn’t have to work but he is forced to. How can I have him sitting idle at home?

By 9:30 p.m., everyone is free and lies down for bed and watches T.V. Sometimes, I am not able to sleep the whole night because of worries. When I’ve fall ill, I worry about who will do my work as my son and husband go to work and my children go to school. If you take help from someone then one fears the false allegations by neighbors of having a ‘loose’ character. My daughter is getting older (she is 13) and I keep thinking about her. I have to carry so many burdens, yet have to still keep going. How can I go on? I have not even lived half of my life. My blood-pressure goes down very low and I have very bad thoughts. If I die, what will happen to my children? Now I don't feel like meeting people whereas earlier I used to get-together a lot with people. Now my daughter has become a great support for me.

When I was 12 or 13 years old, I was married. And my husband and I stayed like two friends. Our children respect us. Again and again I try to convince myself that my children will support me. Like others’ children, my sons will not leave for their marriage. The fear of being left alone in old age…I cut down on meals to save some money so that at least their greed for money will make our children look after us in old age. When I get too tired then I become irritated and think why is this life being given to me? Death is better than this life.

The distribution of Faridabad Majdoor Samachar has recently been extended to the new industrial area of Manesar, near Gurgaon, an area dominated by the automobile industry. We document short reports from automobile workers, mainly within the fractured cooperation of parts manufacturing. Recent struggles like at Rico, Denso, AG Industries or VXL, workers have not been able to extend their disputes along the arteries of this vast territorial assembly line.

Honda Motorcycle and Scooter Worker
(Plot 1 and 2, Sector 3, IMT Manesar)

There used to be joint buses for the 1,800 permanent and 5,500 workers hired through contractors – now they introduced separate bus transport.
Both categories of workers used to use the same gate for entering and leaving the factory, now they introduced separate gates. Every worker used to have the right to 2 paid hours monthly for getting the gate pass, now this right has been reduced to the permanent workers – they say that there is too little admin staff, so they try to deprive the workers hired through of the gate pass. The management has recently increased the production target from 1,125 to 1,200 scooters. When workers met the new target the management distributed sweets – only to the permanents, not to the workers hired through contractors.

Munjal Showa Worker

(Sector III, IMT Manesar)

The factory runs on three shifts, manufacturing shocks and suspensions for Hero Honda, Honda, Yamaha. and for spare-part shops. There are only very few permanent workers. There are 500 casual ITI workers and 800 workers hired through four different contractors. They entice the casual workers by promising a permanent contract after five years – actually the workers are kept in a loop of ‘casual worker becoming trainee’ and ‘re-trainee becoming casual worker again’, no one gets a permanent contract. The workers hired through contractors are given enforced ‘breaks’ after six months of employment. The wages for the ITI worker is 4,500 Rs and for the workers hired through contractor 4,214 Rs. The wages are low... If you have to work in a standing position the whole time, then doing overtime means hell. We work 100 to 150 hours overtime, it is paid less than double rate, about 35 Rs per hour.

VG Industrial Worker

(Plot 26 F, Industrial Area, Faridabad)

We produce parts for export to Australia. In the plant only foremen, supervisor and managers are hired directly by the company, all workers are hired through contractors. The workers’ wages are 3,000 Rs, neither PF nor ESI. We work 12-hours shifts. On the obligatory weekly holiday we work 8 hours. Overtime is paid at single rate, wages are paid late. VG Industrial runs another factory on Plot 31 B in Industrial Area, a paint shop. The wages of the 25 workers hired through contractors is 3,000 Rs, neither ESI nor PF. In the GPS press-shop and the Model B press-shop they run two 12-hours shifts, day in, day out. The fixed production target
is high, they pressure you a lot, the supervisor swears at you, there are accidents at the power-presses: in one year I have seen 10 workers cutting their hands. In the weld-shop and the packing department they make you work 4 hours extra, after a 12 hours shift. Every month 400 to 500 Rs get embezzled from your wages. The 300 Rs for DA in January 2010 was not paid yet (April 2010).

Haryana Industries Worker
(Plot 318, Udyog Vihar Phase II, Gurgaon)

In the factory about 2,500 to 3,000 workers produce parts for Maruti Suzuki. There is no day off. For 30 working days of 8 hours we get 3,500 Rs. Normal working-times are from 9 am till 8 pm, the second shift from 8:30 pm till 9 am. Overtime is paid single rate. On 22nd of April 2010 a worker cut off four of his fingers at a power-press. Workers don't get ESI, if you cut your fingers, they make you pay for private treatment. The drinking water is bad, the toilets are normally locked – they open them only in the evening.

AG Industries
(Plot 8, Sector III, IMT)

The 100 permanent workers work on three 8-hours shifts, the 500 workers hired through four different contractors work on two 12-hours shifts. The factory runs 30 days a month. The factory manufactures fibre-side-covers for Hero Honda. The permanent workers get 7,000 to 10,000 Rs, the workers hired through contractors who run the moulding machines get 4,214 Rs. The permanent workers started to set-up a trade union, so the company sacked 5 and later on 13 permanent workers in January and February 2010. After back-and-forth workers laid down tools on 20th of March and gathered inside the factory premises. Permanent workers and workers hired through contractor stood side by side. The company called the police. They arrived in two buses, they first pushed workers out of the factory, then told them to keep a 200 meters distance to the company gate, and they attacked the workers with lathis in order to make themselves understood. One worker ended up with his hand broken, several others had bleeding heads. The police followed workers right into Sector V, beating them with lathis. Later on the police returned and smashed the window-pane of the companies’ security room and of
their police car. On the very same 20th of March some workers turned up for the evening shift and started working – the management worked, too. On the next day, the 21st of March, two Hero Honda company buses from Gurgaon turned up, full with workers. They got paint-shop workers from Dharuhera and Gaziabad. New people were hired at the gate everyday… On the 26th of March, the union had a demonstration in Gurgaon. Over 10,000 people came, there was an assembly in Huda Park. They handed out food. But afterwards nothing. We kept on sitting 100 feet away from the company gate. Leaving their victimised 18 workmates outside, the permanent workers decided to go back to work on 2nd and 3rd of April. The 500 workers hired through contractors pay for ESI and PF, but see neither card nor PF fund number.

VXL Worker
(20/3 Mathura Road, Faridabad)

The management had laid out a trap for yet another wave of redundancies. The number of permanent workers had already come down from 400 to 93, the management wanted to lay off another 46 employees. By instigating they created an atmosphere for a lock-out, which happened on the 6th of February 2010. Not surprisingly the management proclaimed that the workers were engaging in an illegal strike action. In order to move the demonstrating workers away from the factory gate the company cut the water supply on 2nd of April. During February, March and April both union and management had 15 to 20 separate meetings with the higher levels of labour commissioners, no joint meeting at all. The main outcome seemed to be that 7 workers would be sacked, 4 suspended and 41 transferred to other places, but the government official said that the company would not agree. After the 3rd of April even these type of meetings ceased… Therefore the union called for demonstrations on 20th of May to walk from the factory gate to Bata Chowk, on 21st of May to walk from the factory gate to Goodyear Chowk, on 24th of May to walk to the office of the labour commissioner. On 25th of May the labour official and labour inspector came to the workers and told them to stop the demonstrations, to stop causing public commotion and to talk again. On invitation from the management there were talks between company representatives and union leaders on 28th and 30th of May. Us workers still – today on 1st of June – don’t know what the
outcome of these talks was. The company produces bomb-timers for the army and other electronic items. The management has replaced permanent workers with casuals and outsourced work to 50 suppliers.

Kiran Udyog Worker
(B-182, Okhla Phase I)

The 110 workers hired through three different contractors are paid 3,300 to 3,800 Rs. They get neither PF nor ESI. The 40 workers who are directly employed by the company get ESI and PF, but the helpers wage is below the minimum, they get 3,800 Rs, the operators get 4,300 to 4,800 Rs. You start working at 8:30 am and finish at 11 to 12 at night. There is a 12-hour night-shift, too. Overtime is paid at 12 to 16 Rs an hour, 100 to 200 Rs are embezzled each month. The factory produces parts for Honda and Denso in Noida. The drinking water is bad, there is only one toilet, people have to queue up. The bosses swear and sometimes hit workers. If you are 5 minutes late they cut one hour from your wages, but shift finishes 10 to 20 minutes late, which is not paid. Tea breaks are 5 instead of 15 minutes. There is a lot of pressure, lots of accidents – but workers have to pay for medical treatment themselves.

Micro Precision Worker
(Plot 96, Sector V, IMT)

They pay you the minimum wage, but instead of 8 hours they make you work 10.5 hours. We manufacture dies for Hero Honda, JBM, Neel Metal and other companies. There is also a lot of sheet-metal work, lots of workers get injured. The managing director swears a lot, sometimes he hits people. The shift runs from 8 am till 8 pm, sometimes you have to work till 1 am. Overtime is paid at single-rate.

Yamaha Motors Worker
(The factory is situated at Mathura Road, Faridabad)

The company hires young workers who have completed ITI as casual labourers. After seven and a half months of employment the companies sends workers on an enforced ‘break’. After that the company hands out ‘Vancancy’-leaflets and sends the former casual workers to a labour contractor. The former casual workers are now hired through contractor and work in the same department as before. The wages are the same,
but the ESI and PF numbers have changed. After seven and a half months these workers are officially sacked by the contractor and re-hired as casual workers by Yamaha. Workers work since ten to twelve years in this ‘casual way’ at Yamaha. The work is permanent, the workers are non-permanent. The permanent workers get 25,000 Rs, doing the same work their casual/temp work-mates get 4,734 Rs. The helpers get 4,214 Rs and they have to pay a bribe for getting hired. Yamaha company only issues one T-Shirt for the casual workers, some of the contractors don’t even do that. There are three shifts, in the A-shift mainly permanents work, so in the C-shift mainly casuals are employed. The B-shift finishes at 2 am, that’s when the C-shift starts. There is a lot of trouble in these shifts – and once you are on C-shift you stay, shifts don’t change.

Oswal Electrics
(48-49 Industrial Area, Faridabad)
Around 1,200 workers are employed on 2×12 and 3×8-hours shifts, manufacturing parts for TVS Motorcycles and Orient Pankha. If they make you work double-shift, meaning 16-hours, they only give you 9 Rs extra-money for food – only few get 12 Rs. Overtime is paid at single rate. The machine operators are only paid the minimum wage for helpers.

Northern Tools and Gadgets Worker
(Plot 330, Sector-24, Faridabad)
Workers manufacture parts for Maruti Suzuki on 2×12-hour shifts. They force you to work overtime on Sundays – there is no day off, you work 30 days a month. The 90 casual workers are employed throughout the year, but they neither get ESI nor PF. Their March wage was 3,000 Rs. They said that wages would be increased to 3,500 Rs by April, but they paid only 3,000 Rs in April, too.

Super Age Worker
(Plot 109, Sector-6, Faridabad)
Workers work 150 to 200 hours overtime. Workers manufacture parts for two-wheelers of Yamaha, Bajaj, Hero Honda and parts for export to Dubai and Kuwait. Wages are paid with delay.

Pranav Vikas Worker
(45 – 46 Industrial Area, Faridabad)
The company employs 10 to 12 workers directly and 250 workers through 5 to 6 different contractors. They manufacture heating and cooling coils for Maruti Suzuki, Scorpio and Ambassador. Around 125 to 240 hours overtime, the permanents get double pay, the rest single. If you are forced to work 16 hours non-stop, they don’t even give you extra-money for food. The workers hired through contractors used to get two working uniforms per year, since three years there have been no uniforms at all. Money is cut for ESI and PF, but you will hardly get an ESI card and you have to pay 1,000 Rs bribe to the contractor in order to get the PF fund.

The international market pressure between low-wage regions like Vietnam, Cambodia, Bangladesh or India translates directly into excessive work-load on the shop-floor. Below you can find some reports, published in May 2010 issue of Faridabad Mazdoor Samachar under the title “Make it through the day... or Living life”. The monthly minimum wage (April 2010) at the times for unskilled workers in Haryana: 4,214 Rs (6-days week, 8-hours day), Delhi 5272 Rs. On 20th of August 2010 the Haryana minimum wage was increased slightly to 4348.21 RS per month for unskilled workers.

In terms of general wage development we quote from the article on mechanisation:

‘His job in the sampling department (which creates the first few samples of every new design) of a large garment manufacturer and exporter fetches him Rs5,700 per month.”That's a Rs1,700 increase in 10 years,” he says despondently, “while the price of atta has gone from Rs8 to Rs18.”

The following article on increasing mechanisation is a good summary of current conditions, but in its predictions it is ideologically tinted. Obviously the spokes-people of capital want to make themselves believe that potentially they are able to replace workers with machines. Nevertheless, the article hints at some important changes within the organisation of garment production, e.g. the expansion of ‘chain-systems’, a more minute division of labour, and the introduction of computer-controlled machines for certain work tasks like thread cutting or embroidery. Often these work-steps have been undertaken by ‘helpers’ and/or female workers.

These Garment Factories Don't Need Tailors
As garment units in Gurgaon scale up into mass manufacturing centres, machines are doing the trickiest work, cutting out the craftsman. When Santosh Kumar Kaushal came to Delhi from Allahabad 20 years ago, he found a job easily. He was a competent tailor, having worked in a small tailoring workshop back home for nearly a decade. After a few years in similar units in the neighbourhood, he settled down in a “fabricator” workshop, a 30-person unit where tailors lived and worked, being paid according to the number of pieces they produced. Till 10 years ago, says Kaushal, he’d make Rs150 a day tailoring coats. “We worked to our own schedules,” he says wistfully, “the atmosphere was friendly and newcomers learnt on the job.” But time and the garment factories of Udyog Vihar in Gurgaon, where he now works, have been cruel to him. His job in the sampling department (which creates the first few samples of every new design) of a large garment manufacturer and exporter fetches him Rs5,700 per month. “That's a Rs1,700 increase in 10 years,” he says despondently, “while the price of atta has gone from Rs8 to Rs18.”

Ironically, business is better than ever before in Udyog Vihar, one of the largest garment manufacturing hubs in the country. Exports of readymade garments, the mainstay of the manufacturing here, are again on the rise. In 2009-10, India exported garments worth $10.64 billion (Rs50,008 crore today). This year the Apparel Export Promotion Council (AEPC), a trade body, expects growth of 10-15%. The garment industries of the National Capital Region, spread across Gurgaon, Faridabad and Noida, contribute more than 28% of India's total exports; and of this the largest contribution is from the 2,500 manufacturing units of Udyog Vihar. These units, says Darlie Koshy, director general of AEPC, make higher-end “fashion” garments for companies such as Gap Inc., JCPenny Co. Inc., Ivy Co., etc. Among them they employ around 200,000 workers, and are always on the lookout for more.

A skilled tailor such as Kaushal should not find it difficult to get another job. But a series of changes in the manufacturing process over the last decade have made his skills as a tailor redundant. It started with the flood of readymade garments from China and South-East Asia. Fabricator workshops found themselves outpriced and started shutting down.

Manufacturing shifted to factories, where the tailor went from being a
craftsman to an employee. Where once a tailor would work on a single
garment at a time, now the work was split up among three or four tailors.
Productivity went up, and though payment continued to be at “piece rate”
or per piece, the charges dropped.

Then about six years ago came the assembly line or the “chain system”. Processes were standardized, and new machinery was brought in to do everything from cutting cloth to sewing on labels and buttons. An army of 30-40 workers would now work on a single garment. One would do just the hem, the other the zip and the third the collar, etc.

Manufacturing costs came down even further, and a flood of international orders started pouring in. Suddenly there was a huge demand for workers, but they didn’t need to be craftsmen. Skilled tailors were relegated to small sampling departments and a new kind of labour started taking over in the factories.

These were unskilled workers brought in by contractors from Uttar Pradesh, Bihar and West Bengal. While it would take a tailor a year to acquire the skill to stitch a “full piece” or entire garment, these workers were pushed onto the assembly line after two weeks of training. They settled in vast sprawling tenements in areas such as Kapashera, near Udyog Vihar.

The nali wali gali (street by the drain), which meanders off from the main Kapashera-Gurgaon road, is one such tailors colony in an area infamous for its filth. Local landowners here have created large compounds with hundreds of windowless, matchbox-sized brick rooms that they let out to the garment workers. In the heat of the Delhi summer, the rooms are baking and oppressive. The only access to the compounds is over a concrete beam that spans an open drain clogged with sewage and plastic bags. Four-five workers cram into each windowless room, for which they pay Rs1,000 a month.

In the warren of mud lanes, the conversation is about the wages being offered at different factories. The workers stay with a factory for five-six months, before returning home to their families. When they come back, they find work in another factory. Their wages are around Rs3,600, just above the minimum wage in Haryana. But the work hours are long, stretching at times to 15 hours. They're paid overtime, they say, but only at their average hourly pay, not double that, as is customary.
Dozens of small “tailoring centres” have come up in these colonies to train workers for the assembly line. Zakir Siddiqui’s centre is a dusty room, open on two sides, with six electric sewing machines. His paan shop sits by the entrance. Siddiqui does not have time for ceremony. The rates for the tailoring courses are scribbled on the wall. A two-hours-a-day tailoring course that teaches workers just a little more than how to sew a straight line, but enough to get them into the factories, costs Rs300. The training for a “checker”, short for a garment inspector, costs Rs800. The centre currently has 80 students.

The tuition is brutal. Siddiqui paces between the machines shouting at the students, rapping them occasionally on the knuckles. “I need to train them with a stick,” he says, loud enough for all the students to hear. “If I train a student in 15 days, I make a profit of Rs100, if they take a month to learn, I make a loss.”

Malti, a middle-aged woman from Bihar, dressed in a bright polyester sari, is staring intently at her machine. She’s worked in Udyog Vihar before, but as a thread cutter. Now she wants to get on the tailoring assembly line. That she hopes will get her a better wage. Students at the centre are guaranteed a job with the caveat that they will only work for a single company that Siddiqui has an arrangement with. The agent from the company, he claims, gets Rs250 for every worker he brings. How much Siddiqui gets, he doesn’t want to disclose.

Virender Kumar, a worker from Uttar Pradesh, is the product of one such “tailoring centre”. He now works on the skirt manufacturing line of a company. Each individual assembly line has 42 workers, six helpers and one master craftsman. Kumar is responsible for the zips. In the years that he’s been working in Udyog Vihar, the number of machines on the assembly lines has gone up dramatically, as has the production. “Five years ago, a single assembly line would have put out 150 pieces a day,” he says. “Today we make 400.”

Kumar’s salary in the meantime has increased from Rs2,800 to Rs3,604. Unfortunately for him, while the minimum wage in Delhi was increased by 33% in February, wages in Gurgaon remain the same.

The increasing mechanization in the garment factories is being driven by clothing companies. In an effort to improve and standardize manufacture across units that are spread around the world, the companies have
started stipulating the machinery a unit should use. “That way at least 70-80% of the quality is assured,” AEPC’s Koshy says.

Kaushal, meanwhile, has reconciled himself to becoming completely redundant. It’s only a matter of time before even the handful of skilled jobs in the sampling departments are taken away by sophisticated computer-controlled cutting, or CNC (computer numerical control) machines that have just started appearing in the factories.

“Soon there will be no difference between us and the assembly lines,” he says stoically. Would he join a tailoring shop? “There’s no work to be had there.” An assembly line? “Never.” “Gurgaon,” Kaushal says with a wide sweep of his hand as he prepares to leave, “is no place for tailors.”

Following a main-stream newspaper article on Marks and Spencer’s and other multi-national’s take on the condition in Gurgaon.

Britain’s top labels thrive on Indian sweatshop labour

London, August 08, 2010

Britain’s best-known high street stores — Gap, Next and Marks and Spencer — have reportedly launched inquiries into abuse of working regulations at their Indian suppliers, which have resulted in children as young as six being left alone while their parents work in outlets in Delhi and in the satellite township of Gurgaon on its outskirts. According to the London Observer investigation, factories were using workers hired through middlemen, and paying them as little as 25 pence an hour, in the case of Gap and Next, and 26 pence an hour for Marks and Spencers. All three companies told The Observer that they are totally committed to ethical trading and will not tolerate abuses in their supply chain. All said their own auditing processes detected the problems and that they have taken swift action to tackle them. Gap, which uses the same factory as Next, confirmed it had found wage violations and gave its supplier a deadline of midnight last night to repay workers who lost out. Marks and Spencers said it has yet to see evidence to support the wage claims. Workers claimed that those who refused to work the extra hours have been told to find new jobs, a practice defined under international law as forced labour and outlawed around the world. The factory has pledged to apologise and reinstate anyone who lost their job. Next said it had found
the situation to be “deplorable” and added the chairman of the Indian company it uses has apologised and promised to make amends, blaming demand for workers at the forthcoming Commonwealth Games in Delhi for leaving factories short of staff. Gap admitted wage and overtime violations and ordered its supplier to reduce working hours to within the legal limits and to refund workers who have been illegally underpaid. Marks and Spencer admitted its supplier had been operating excessive overtime, but said it had acted quickly to tackle the problem.

(London Observer)

___________

While Marks and Spencer announced on 8th of August that they keep an eye on their suppliers in Gurgaon, on 21st and 23rd of August the very same suppliers sent armed thugs to attack workers at Viva Global. Following a press statement:

VIVA – GLOBAL (GURGAON) WORKERS BEATEN UP- HUNGER STRIKE BEGINS TODAY

MAZDOOR EKTA MANCH
Plot No. 48, First Floor, Opp. Maruti Gate No.2,
Old Delhi-Gurgaon Road, Gurgaon, Haryana
Phone No. 0124-4385478,9910159352,9958613761, 927828635.
Venue of the Hunger Strike: Viva Global Factory, 413, Udyog Vihar,
Phase – III, Gurgaon – 122 016, Haryana, INDIA
Workers including of the Viva Global Factory, including women were brutally beaten up with hockey sticks and lathis by goons called in by the Management of Viva Global, the Gurgaon based sweatshop apparel house. The incident happened this morning between 9:30 and 10:00 AM when workers were to enter the premises of the Factory, as part of a tripartite agreement between the Management of Viva Global, the Labour Department and the Garment and Allied Workers Union (GAWU). The agreement was the outcome of a meeting between the three parties, held on the 23rd of August 2010. The prevention of workers entering the
factory, is a serious violation of the above agreement. Besides being beaten, a few workers were abducted in a vehicle by the goondas and taken to an undisclosed destination. At least one worker is still missing.

To protest against the high handedness of the Management of Viva Global and its utter contempt for any laws, rules and rights of workers, the workers of Viva Global have resolved that the President of the GAWU, Ms. Anannya Bhattacharjee will be on an indefinite hunger strike outside the gates of the Viva Global Factory. The hunger strike began today after a notice to this effect was given to the Labour Department. Our demands are :- 1) The abducted workers be immediately brought back. 2) All workers be reinstated and 3) The Management of the Viva Global apologise to the workers. Representatives of the Mazdoor Ekta Manch have also lodged a police complaint against the management for the unprovoked violence on workers and the abduction of workers.

Viva Global is a major supplier of apparel to ‘reputed’ multinational superbrands such as Marks and Spencer. There have been serious violations of labour laws and human rights at the Viva Global Factory. The Management has been using strong arm tactics against union leaders, representatives of workers etc., each time that the workers have demanded that basic amenities and legal wages be given to them. On the 21st of Aug 2010, at 6.00 PM, contract workers were locked out of the Factory in an attempt to illegally terminate them. Other workers (non-contract workers) had then demanded that contract workers be given their rights in terms of notice pay and the PF amount that
has already been deducted from their wages. Even on 23rd of August, when workers reported at the gate for duty, they were allowed to enter the factory. About 15 local goons with pistols had threatened the Union leaders and workers. A group of workers and union activists had then complained about the incident to the Labour Department which led to the tripartite agreement which had resolved: 1) That there would be no goondagiri by the Viva Global Management whatsoever, 2) All workers who were locked out would be taken back. Another tripartite meeting is also scheduled for Thursday the 26th of August for further discussions. However, the Management of the Viva Global has already violated the agreement of the 23rd of August.

We would request you to spread the news of the workers struggle at Viva Global. We would look forward to your solidarity and support!

With thanks // Rajeev Singh.

For the Mazdoor Ekta Manch, Gurgaon.

Below the long list of workers’ reports from other factories in Gurgaon, showing that Viva Global is not a single ‘black sheep’.

Workers’ Reports – Faridabad Majdoor Samachar

24th of May 2010

Shahi Export, Plot 15a, Sector 28, Faridabad

...after days of overtime many workers collapse. on 24th of May 53 workers are brought to the nearby hospital. they have to be treated with oxygene. 41 workers remain in the hospital. most of the collapsed workers are women...

24th of May 2010

NTL Electronics, Plot F-28, Sector 6, Noida

...after days of overtime six female workers collapse and fall
unconscious...

13th of May 2010

Palam Export, Plot A-205, Okhla Industrial Area Phase I

...after having worked 19.5 hours a day for several month a 22 years old worker suffers a heart attack and 50 female workers collapse at work...

13th of May 2010

Sargam Export, Plot 153, Udyog Vihar Phase I, Gurgaon

...during night-shift two workers collapse and fall unconscious...

Enexco Technology

(157 Nourangpur, Gurgaon)

There is money for ESI and PF cut from the 175 casual workers’ wages, but only 15 got an ESI card, and the card is temporary. If people leave the job PF is not paid – the PF form not given. After several years of employment a casual worker said: “Actually we are hired through a labour supplier, through a contractor”. In the factory there are another 125 workers hired through contractor and 40 permanent workers.

Orient Craft Worker

(Plot 15, Sector 5, IMT Manesar)

The 26 thread-cutting workers get 3,000 Rs per month, no ESI no PF. Official shift-times are from 9 am till 6 pm, but they make you work till 2 am. Only if clients/buyers come to the plant workers are let go at 6 pm. We work 60 to 70 hours overtime per month, but the pay-slip only shows 12 to 15 hours. Overtime is paid double rate, but on Sundays they are paid less than single rate. Some supervisors swear a lot at workers.

JNS Instruments Worker

(Plot 3, Sector 3, IMT Manesar)

There are 15 buses who bring and return people to and from work. They work from 8:30 am till 5:30 pm, those 200 who work till 8 pm are returned in smaller cars. The male workers work on two 12-hours shifts. The workers hired through contractors get less than single rate for overtime: 14 Rs per hours.

Kailash Ribbon Worker
The helpers among the 400 casual workers get 2,700 to 3,300 Rs, the skilled tailors get 3,500 to 3,900 Rs – neither ESI nor PF.

Eltex India Worker
(887 Udyog Vihar Phase V)
The workers employed in the plant work 200 to 250 hours overtime per month. Sometimes they make you work from 9 am till next day 9 am and then force you to work another whole shift. The overtime is paid single, and 500 to 800 Rs per month are embezzled. The helpers hired through contractors get 2,800 Rs, neither ESI nor PF. The wages are always delayed, we haven’t received our March 2010 wages yet (24th of April 2010).

Sargam Export Worker
(153 Udyog Vihar Phase I)
There are an abundance of little irregularities going on in this factory: there is always some overtime left unpaid; people who had worked January and February 2010 and left the job since then were not paid the 300 Rs DA; those who leave now are not paid the statutory bonus.

Dheer International Worker
(299 Udyog Vihar Phase II)
People work 250 to 300 hours overtime per month. The payment is at single rate and 50 to 60 hours get embezzled per month. Wages are paid delayed.

Cosmy Worker
(864 Udyog Vihar Phase V)
The helpers working in this factory get 3,000 Rs. The skilled tailors get 140 to 150 Rs per day. Wages are delayed. If you leave the job you have major trouble to get your outstanding wages. Workers who go to the local ESI office in Dundahera have to face a lot of trouble.

Mac Export Worker
(143 Udyog Vihar Phase I)
The 400 workers employed in the factory get neither ESI nor PF. The
helpers get 3,500 Rs. When being hired the tailors are promised 175 Rs for an 8-hour day, actually they are paid 150 to 160 Rs. The normal shift runs from 9 am till 9 pm, but they make you work longer, till 1:30 am. Overtime is paid at single rate, every month 300 to 400 Rs get embezzled. Lack of drinking water is a major problem in the factory. The toilets are very dirty. The big boss swears a lot.

Asian Handycraft Worker
(310 Udyog Vihar Phase II)
The helpers are paid 3,300 Rs to 3,500 Rs, the skilled workers get 4,000 to 4,500 Rs.

Kis Export Worker
(871 Udyog Vihar Phase V)
In the factory 450 workers are employed through two different contractors, they get neither PF nor ESI. The tailor helpers get 3,914 Rs and the tailors get 156 Rs per day. The 300 Rs DA statutory from January 2010 has not been added to the monthly wages. The thread cutting and bead-stitching women workers are paid 3,600 Rs. The daily working-times are from 9 am till 10 pm – 18 to 20 days per month they make you work till 1 am. About 100 women workers are send home at 9 pm, but a third contractor supplies 20 female workers who work from 9 pm till 1 am. There is no monthly day off. The male workers work 160 to 200 hours overtime per month, about 200 Rs get embezzled. There is a lot of swearing on the shop-floor, there is a lack of drinking water.

Security Guard

The office of the company Swift Security is situated at Nihal Bhavan in Dundahera. The company employs 6,000 security guards, on 2×12-hours shifts. There is no weekly day off. If you work 30 days per month, 12 hours per day they pay you 4,000 Rs to 5,000 Rs. Even after three to four years of employment they don't give you ESI. They cut 540 Rs in the name of PF – when people leave the job, some are paid double amount of the fund money, some are paid single, some are not paid out at all. Sometimes you have to work 36 hours on stretch – they won't give you money for food, and the overtime is paid single. Wages are paid with delay. If we don't have any security ourselves, so will we give anyone else security? We just wear uniforms and stand around.
Eastern Medikit Worker
(292 Udyog Vihar Phase II)
The 300 casual workers were paid their March wages late, on 20th of April. The company did not pay the new minimum wage, only 3,870 Rs. The April wages haven’t been paid yet – 15th of May. The company does not include the DA of July 2009 nor the DA of January 2010. The casual workers work on two 12-hours shifts, the overtime is paid at 14 Rs an hour – March overtime has not been paid yet either. The management would not let casual workers leave after 8-hours, no matter if the worker is ill, no matter if he or she might drop dead.

Bharat Export Overseas Worker
(493 Udyog Vihar Phase III)
Non of the 300 workers employed in the factory get ESI or PF. The helpers in the finishing department get 120 to 130 Rs for an 8-hours shift. Workers work 150 to 200 hours overtime per month, payment is at single rate. There are three faulty fridges for drinking water. The toilets are very dirty.

Oberoi Hotel Worker
(Shankar Chowk)
The workers employed through Starling Vilasan work on the construction site of the five-star Oberoi Hotel. The 300 workers get neither PF, nor ESI. Their wages are below the minimum wage: 3,600 Rs.

Pearl Worker
(446 Udyog Vihar Phase V)
Even if management makes you work till 1 am, they won’t give you extra-money for food. Only the first two hours overtime are paid at double rate – the rest single rate.

Radhnik Export Worker
(215 Udyog Vihar Phase I)
If you want to get drinking water or go to the toilet you have to take a token. If they make you work till 2:30 am they give you 30 Rs extra for food, though the food in the canteen is not good. We work 80 to 100 hours overtime per month, they pay single, but force us to sign double-
rate. The 500 skilled tailors get neither ESI nor PF – officially they run as employees of Om Enterprise, but management says, that when clients/buyers come to the factory we are supposed to say we are Radhnik company workers.

Polypack Worker
(193 Udyog Vihar Phase I)
If you take one day of per month, they mark all four weekly days off as absent, even so you have worked. This means that you lose 720 Rs of your monthly wage. The daily shift times are from 8 am till 8:30 pm, they often make you work till midnight. They call any work after 12.5 hours shift ‘overtime’, and pay it less than single rate. The 50 workers hired through contractors are paid 5,400 Rs: for 26 days of 12.5 hours.

Taurus Home Furnishing
(418 Udyog Vihar Phase III)
The helpers are paid 3,000 Rs, the checkers 3,500 Rs and the tailors work on piece-rate. Out of 300 workers only 10 to 15 might get ESI and PF. The drinking water is bad. The toilets are dirty.

Countess Craft Worker
(6 Udyog Vihar Phase I)
The workers employed in the carpet show-room have not been paid February, March and April 2010. The company has not paid into the PF fund the last two years. Since three years the company has not paid the statutory bonus.

Crew Banks Worker
(199 Udyog Vihar Phase I)
Severe wage delays of two month now.

Gaurav International Worker
(198 Udyog Vihar Phase I)
The managers swear a lot at us. The female thread-cutting workers are paid only 3,000 Rs, the male helpers 3,000 to 3,300 Rs, there is also physical abuse going on.

Gurgaon is one of the biggest call centre hubs of the globe, having been
re-location destination for a lot of US call centre work. Now that the crisis hits the US wage level, calls might be re-routed back up to the global north. A short summary of a recent study and a short workers’ report about house-keeping work in an American Express call centre in Gurgaon.

US matches Indian call centre costs

(Financial Times, 17th of August 2010)

Call centre workers are becoming as cheap to hire in the US as they are in India, according to the head of the country’s largest business process outsourcing company. High unemployment levels have driven down wages for some low-skilled outsourcing services in some parts of the US, particularly among the Hispanic population. At the same time, wages in India’s outsourcing sector have risen by 10 per cent this year and senior outsourcing managers based in the country command salaries above global averages. Pramod Bhasin, the chief executive of Genpact, said his company expected to treble its workforce in the US over the next two years, from about 1,500 employees now. “We need to be very aware [of what’s available] as people [in the US] are open to working at home and working at lower salaries than they were used to,” said Mr Bhasin. “We can hire some seasoned executives with experience in the US for less money.” The narrowing of the traditional cost advantage is also spurring other Indian outsourcers to hire more staff outside India. Wipro, the Bangalore-based IT outsourcing company, started to recruit workers in Europe, the Middle East and Africa during the global economic downturn. Suresh Vaswani, joint chief executive of Wipro Technologies, forecasts that half of his company’s overseas workforce will be non-Indians in two years, from the current 39 per cent. India is still expected to retain the overall cost advantage, particularly in more sophisticated software outsourcing. The move to expand operations in the US also comes as protectionist rhetoric against outsourcers rises in Washington. Last week, Charles Schumer, a US senator, described Indian IT outsourcing companies unflatteringly as “chop shops”, a term referring to places where stolen cars are dismantled for their parts.

If you can bare to scroll through various rather tedious semi-racist comments on the article mentioned above, please have a go and click HERE
Call Center Worker
(226 Udyog Vihar Phase I)

The call center company is called FIS. About 1,500 to 2,000 workers phone for American Express. In the call center 22 house-keeping workers are employed through contractor. In January 2010 we were given 3,600 Rs and the contractor promised to increase the next wage by 300 Rs. In fact he paid 3,300 Rs in February. We work between 40 and 160 hours overtime, each hour overtime is paid 12.5 Rs. Money for ESI and PF is cut from the wages, but we are neither issued an ESI card, nor do we receive PF when we have to leave the job. Instead they cut 1,400 Rs from your last wage. Therefore most people leave after pay-day, which is around the 8th or 9th of the month. You ‘only’ lose 800 Rs outstanding wage this way.

Worker's Report – Faridabad Majdoor Samachar

Circle of Animal Lovers (NGO) Worker
(E-67, DDA Flats, Saket)

I work in the NGO. There are 30 of us employed here – doctors, drivers, cooks, helpers and office staff. The doctors get over 20,000 Rs per month for 8 hour days, the office staff gets 6,000 to 8,000 Rs. The drivers get 6,500 Rs for 12-hour duties. The cook and the helpers get between 3,000 and 5,500 Rs per month for 14-hours shifts. None of the workers get ESI or PF. The NGO is engaged in a sterilisation scheme for street dogs – which is part of the street-dog eradication program run by the Delhi government. Although officially the government has assigned the MCD (Municipal Corporation of Delhi) for this task, but actually the big shots have decided to let cheap NGO workers complete the work. The MCD pays 445 Rs for the sterilisation of a dog, and besides provides other favours to the NGO management: the NGO gets water and electricity free. The vans are called ambulance and are in a bad condition – but because of the NGO name the police do intervene. The madam running the NGO swears at the workers and even lifts her sandal to threaten the helpers. The 15 workers who stay in the office take some of the restaurant food that was originally meant for the dogs, some of the donations meant for the dogs get messed with, too. The whole process of catching a dog, sterilising it and letting it free is very painful – several
dogs die and are buried in the scrub-lands at night. But they are entered as completed sterilisations in the register. The two doctors have to perform 30 to 40 dog operations per day... a doctor let some younger helpers do the work. This increases pain for the animal and the likelihood of death.

2) Collective Action –

Reports on proletarian struggles in the area

We document six short reports by garment workers about seemingly spontaneous strikes to enforce higher wages, which took place in April 2010. The strikes have two parallels, one in space, the other in time. The strikes correspond with the more violent and widespread mobilisations of garment workers in Bangladesh and they continue the series of previous strikes during the last official increase of the minimum wage – click GurgaonWorkersNews no.9

The combination of the fact that companies do not passing on the wage hike and the fact of current inflation forces workers to react. One of the limitations of these struggles is the fact that mainly the skilled tailors get involved, while unskilled workers tend to remain outside. The struggles also depend on the enormous ups and downs of work/orders in the international garment industry.

Viva Global Worker / Marks and Spencer Worker
(413 Udyog Vihar Phase III)

The March 2010 wages did not contain the 300 Rs DA statutory since January 2010. The workers did not like that. On 8th of April 2010 600 skilled tailors stopped the machines and struck. On 9th of April the tailors continued the strike and some workers in the finishing and sampling department joint them. On the 10th of April the strike continued... when the management promised that the 300 Rs DA will be paid with the April wages the workers started work at 4 o’clock in the evening. Viva Global manufactures garments, among others, for Marks and Spencer. Non of the 200 workers in the finishing department get ESI or PF. Out of the 600 tailors only 150 get ESI and PF. Workers work 80 to 90 hours overtime per month, but payment is at single rate.

http://www.marksandspencer.com/
Fortune Garments Worker  
(Plot 39, Sector IV, IMT)

The wages are delayed every month. On the 9th of April they told the skilled workers: “We will pay you after the lunch-break, now go back to work.” When wages were not given by 4 pm, the workers stopped the machines and went to the office of the general manager. At 6 pm the place was in chaos, the tables were over-turned, the window-panes broken, the company called the police. The skilled workers were given the March wages on 12th and 15th of April, the other workers were told that money will be given on the 17th of April. Then they said that wages will arrive on the 20th... On the 20th of April, after the meal-break, the workers in the finishing department stopped working, they continued their tool-down on the 21st and were paid a day later on the 22nd of April. The workers doing computer embroidery stopped working at 9 pm on the 24th of April and refused to do overtime on the following Sunday. On Monday the general manager told these workers that they will be paid by 2 pm, that they should go back to work... The workers continued working till 4 pm and then stopped the machines. The computer embroidery department was on strike Monday, Tuesday and Wednesday. On Wednesday they gave 20 workers their wages, but the machines continued to stand still. On Thursday the 29th of April, after all workers in the department had been paid, work was re-started at noon. The workers in the knitting department did not stop working - they were paid an advance of 3,000 Rs, but they haven’t seen their March wages by 1st of May 2010. At the moment there is little work, so there are only 600 workers - after August there will be more than 1,000 workers, but none of them will have PF or ESI. I don’t know whether the middle-management and supervisory staff gets ESI and PF. In the factories minors of 13 to 15 years of age are employed. The thread-cutters get 3,500 Rs for a 30-days month, 8-hours day. The drinking water is bad, the toilets are dirty.

Boutique International Worker  
(B-246, Okhla Phase I)

Around 200 skilled tailors struck work on 28th of March 2010 in order to enforce the new minimum wage of 6448 Rs instead of the old wage of 4,370 Rs, which was still paid by the company. After management reassured workers about a wage increase, they started work on 29th of
March. After the management did not publish a written notice about the wages work was stopped again on 30th of March, the management put up the notice and work started at 11 am. The workers in the second factory on plot D-80 stopped work on 29th of March, because the management did not pay the February DA. Since then the company started to sack the ‘old tailors’ and to hire fresh ones, paying them 5,850 Rs.

Wearwell Worker
(B-61 and B-134 Okhla Phase I)

Around 850 skilled workers in both factories struck work on 20th of March 2010, from 9 am till 9 pm. The next day work stopped again at 10:30 am. Work resumed only after the management put up a notice saying that the 400 permanent tailors will get 248 Rs for an 8-hours day and the 450 casual workers 225 Rs. Then the company started to kick out casual workers and hired new ones, paying them 203 Rs. Workers in the factory have to work from 9 am till 3 am on regular levels. The company used to provide transport for the female workers, but they have stopped the transport.

R.V. International Worker
(D-153, Okhla Phase I)

On 14th of March 2010 about 100 skilled tailors stopped work and demanded 248 Rs for an 8-hours day. So far they were paid 175 Rs and they were promised 225 Rs. After two hours of strike the management agreed to pay 248 Rs. The company started to lay off people – end of April about 30 tailors were left. The thread-cutting and stitching female workers get 2,400 to 2,500 Rs per month.

Orient Fashion Worker
(F-8, Okhla Phase I)

On 15th of March around 900 skilled workers stopped the sewing machines. After one hour of strike the company put up a notice announcing 248 Rs for 8 hours-day.

“There aren’t any students here, no teachers to suffer. It’s a school without rules out here”. (From movie-song, ‘Rang de Basanti’)

The relation between students’ and workers’ struggles used to be, if at all,
a type of political alliance. Since the 1950s the relation changed, it increasingly became a social, rather than merely a political relation: more and more students were forced to see themselves as workers in the making. Whether a student will see her or himself as a worker while being at university roughly depends on six dimensions:

* young people from what kind of class background are able to enter university?
* how is the process of education in itself organised (division of learning, targets, hierarchies)?
* what is the relation between students and university staff and workers?
* do students have to work or do internship while studying?
* what is the influence of the wider (class) political situation and movement on the campus?
* what is the future prospect after leaving university, in terms of labour market, debts, position of intellectual labour in the social production process?

Like the society to which it has played the faithful servant, the university is bankrupt. This bankruptcy is not only financial. It is the index of a more fundamental insolvency, one both political and economic, which has been a long time in the making. No one knows what the university is for anymore. We feel this intuitively. Gone is the old project of creating a cultured and educated citizenry; gone, too, the special advantage the degree-holder once held on the job market. These are now fantasies, spectral residues that cling to the poorly maintained halls.

(From: “Communique from an Absent Future”, California Universities)

We neither have space nor knowledge to describe how these six dimensions have re-shuffled over time. Therefore just some general remarks. There are about 104 lakhs higher students in India, which is only around 7 per cent of the young population in ‘university age’. During recent years more semi-private colleges came up. Young, often working class youth entered these colleges – rather than the traditional universities and IIT's – given that they promise a ‘more directly’ marketable degree. The perspective of these students and their families on ‘education’ is mainly one of future investment: debts for paying the
fees most correspond to future job and wage perspectives. The pressure on students to pass the exam has aggravated, apart from a question of pride, prestige it became a more existential question of managing the debts. In December 2010, 20 students (in high school and college) committed suicide in Maharashtra; most due to intense fear of poor academic performance. India has the second highest suicide rate in the world and 40 per cent of the cases are in the adolescent age group. In 2006, 5,857 students, this is 16 a day, committed suicide across India – this number has increased drastically since then.

“One day this will all end. We’ll all go our separate ways. Life gets busy. Too many problems. After college we have to dance to fate’s tune. When I’m out on the streets... nameless, faceless, scared. Just walking the streets”.

(From dialogue, ‘Rang de Basanti’)

The process of education is changing. Professors at a meeting about ‘Democracy and University’, held in March 2010 complained about the increasing Taylorism of their work: students are given DVD’s for ‘e-learning’, as part of the planned shift to semester-system at Delhi University professors would have to correct 30 papers for marking a day, the time for revision has been cut down, teachers are now officially called ‘stakeholders’, which creates a kind of ‘client’ relation with the students. Professors and students fear that the planned opening of the education market for ‘foreign universities’ will foster this trend towards ‘universities becoming a market-place’. Another expression of the ‘neo-liberal’ university is the increase in casual work among the university staff. Most of the work like canteen, cleaning, security is now outsourced to contractors. There have been various struggles around this issue – see for example the report by PUDR [jnu_workers_report]

In addition to recent fee hikes and hikes in hostel rents the state intensifies repression against the more radical part of the student movement – under the pretext of ‘anti-Maoist’ anti-terrorism. There are ongoing protests about this issue, for more information click [HERE]

While most of the more radical student groups either solely focus on the campus or use the student world as ‘cadre-recruitment-base’ for the party, for example student unions like [AISA], some students start to debate the question of the ‘historical material’ changes of the position of
students within society and in relation to the working class, for example the group Correspondence – click HERE for their pamphlet.

Students protest fee hike

Greater Noida, August 17, 2010

Protesting against the fee hike, students of IEC College of Engineering & Management today boycotted classes and held demonstration outside the college. “Though the university registrar has informed that the fee approved by the fee fixation committee is applicable to the first year students only, the college is demanding the hiked fee from the second year students as well which is unjustified,” said the agitating students.

“We are also protesting against the fee hike for the first year students. The fee of Rs 75,000 was already high. Now, it has been hiked to about Rs 85,000 for B.Tech., MBA and MCA courses,” the students pointed out. “Since Friday, we have been protesting peacefully and requested the college management to resolve the issue. As it did not pay heed to our pleas, we were forced to demonstrate today. We have come here to study and not involve ourselves in any agitation,” they added.

Protest by teachers against semester system at Delhi University

New Delhi, August 17, 2010

As the Delhi University Teachers Association (DUTA) today held a massive demonstration outside the vice-chancellor’s office over the issue of introduction of semester system. DUTA today claimed that the tussle with the administration had strained its relationship with college principals. “Never before in the past have the principals and the DUTA come into conflict in this manner. The vice-chancellor is trying to create a rift between principals and the teachers to impose semester system in science courses. He is issuing them ‘orders’ to implement semester system,” said DUTA president, Aditya Narayan Mishra.

Rohtak University – Faridabad Majdoor Samachar

Maharshi Dayanand University Security Worker

(FMS January 2010)

In 2001 they started to hire guards through contractors. Because the minimum wage was not paid in 2002 the guards, the gardeners and cleaners went to an official who sent them to the labour department.
Since then the number of workers hired through contractors has increased relative to the permanent workers and the labour law is violated openly. In 2005 workers started a sit-in protest and hungerstrike in front of the office of the principal. Workers gave a notification to members of parliament and even to the Prime Minister... In order to suppress the resistance they started to sack workers bit by bit. At that time only 18 guards out of 90 were paid the DC rate, the rest was paid 100 Rs for a 12-hours day. They don't get ESI or PF. The guards come from nearby villages... When there was major construction work done at the university they brought workers from far away to do the job. The female workers carrying bricks, sand, cement they call coolies and they pay them only 82 Rs a day. The male workers are paid 92 Rs. There is a large number of 14 to 15 year old boys working, they are paid 82 Rs.

Building workers on dharna

New Delhi, August 12

For the second time in the month, construction workers employed at the Miranda House Commonwealth Games site sat on a dharma outside the college. The workers, students and teachers, under the banner of the Delhi Nirman Mazdoor Sangharsh Samiti, were protesting against the non-payment of wages. The workers were supported by many Delhi University students, members of the Miranda House Staff Association, women’s and youth organizations like Centre for Struggling Women (CSW) and Krantikari Yuva Sangathan (KYS). They were also protesting against several other violations of labour laws. “The workers have not been paid for the entire one month and four days for which they have been working at the college. Furthermore, the rate of payment fixed by the contractor is well below the legal minimum wage rate. Unfortunately,
despite the fact that the contractor has defaulted on paying the workers and violated several labour laws, the main employer, i.e. the college principal, Ms Pratibha Jolly has refused to step in and release the workers’ arrears,” said a member of the Mazdoor Sangharsh Samiti. “Since August 4, only a small part of the workers’ dues has been released with no further surety provided by the college administration to look into the other key demands of the workers,” he said.

3) According to Plan –

General information on the development of the region or on certain company policies

The south of Delhi’s industrial belt is connected to the vast village hinterland of Haryana. And there is no calm in the hinterland. We spent some days in Mandkaula visiting friends – you can read the travel diary below. It is followed by news items about recent semi-rural unrest.

Mandkaula, Haryana, India

Mandkaula is a village near Bawal, with about 15,000 inhabitants. It borders poor Muslim dominated Mewat district, situated close to the planned Manesar-Kundli Expressway. Mandkaula is an ‘Ideal Village’ meaning that it is chosen by Haryana government to get several crore Rupees for investments into road works, street lamps and so on. Mandkaula is an ideal Indian village in many senses. It has been in the centre of the Green Revolution, it has ‘benefited’ early on from irrigation and electrification. It is within the catchment area of the industrial labour market of Faridabad. The land-holding is more or less equally distributed between those who have land. Despite, or may be because of, being an ideal village we can see the social death of peasantry. After hundreds of years of ‘agricultural tradition’ the current older generation of peasants in their 60s is probably the last ‘peasant generation’ of this village. Their are few families who might continue farming, but the social domination of field work is gone.

Out of 15,000 inhabitants about 7,000 are landless, mainly ‘castes’ engaged in handicrafts like pottery and weaving, some street cleaners. This is a quite typical ratio for India. Less typical is the quite equal land-distribution amongst the landed peasants, belonging to the Jat caste. About 80 per cent of them have around 5 acres. Out of the 250 potter
families around five people still work with the stone-wheel and clay – they have no apprentices for the future. There are only one or two hand-looms left, the nearby industry has undermined the market position for hand-woven goods. There are about 400 acre common land, which basically means land taken-over and used by the state. The government built a stadium and a university department for agriculture studies on the common land.

Mandkaula was in the centre of the Green Revolution. Electricity arrived in 1964, largely replacing hand or bullock-driven wells with electrically operated borewells. Irrigation was improved through a nearby bigger canal. In the mid-1960s the government ordered a structural program to ‘unify’ land-holdings. Individual farmers used to own scattered land, after the reform most of them had a single unified piece of land. Then came the tractors. Nowadays there are more than 300 tractors in the village. Crop pattern changed since the 1950s and 1960s. Where there used to be millet and other rough crops, there is only wheat left. Rice production only started with the development of the canal and the tubewells. A lot of the harvest and wheat thrashing work is done by machines plus wage labourers. A gang of wheat threshers from Rajasthan travel with their diesel-fuelled thrashing machine. They take about 800 to 900 Rs per acre. They provide the labour force, around ten workers. It usually takes them about one hour for an acre. After the wheat harvest in Haryana they drive on towards the soy bean harvest in Madhya Pradesh. Thanks to mechanisation, the wheat harvest takes about seven days, the rice harvest not longer than 15 days.

The living standard amongst the peasant is decent, much better than the living standards of industrial workers in town. The houses and inner-yards are airy, no feeling of crowdedness. You are more likely to find more televisions, coolers, fridges here, than in workers’ homes. But life is traditional. Women wear their faces covered when around strangers. The houses of the landed are spacially detached from the houses of the potters and the cleaners. ‘Caste’ live amongst ‘caste’. Without land and without jobs the former artisans are much harder hit. They complain that the National Rural Employment Guarantee Scheme (NREGS) is not implemented. There are about 150 people in the village who got a job card. There are 80 NREGS jobs, but they ran out. Instead of creating NREGS jobs, the panchayat engages outside contractors for road works
and other infrastructural jobs, because he can cash in commission. Most of the farmers in Mandkaula are in debt, often for non-agricultural expenses like family houses, dowry or education.

The sons born in the 1970s and 1980s were not to become farmers. Most farmers tried to get them into government jobs: the police force, the army, the administration. The family of our comrade is no special case. His father owned 50 cows for diary production. In the early 1970s all his labourers left Mandkaula in order to work in the factories of nearby Faridabad. Contractors of Escort, Goodyear and other companies came to the village offering higher wages and a life in the urban. Our comrade himself left the village and worked in factories for some years. He returned to the village to keep the family farm going, but all his four sons have become office workers. Two of them commute every day between Faridabad and Mandkaula, which is about 40 minutes by train and another 30 minutes by three-wheeler. Living in the village is cheaper and better – but the younger sons want to leave the village soon.

If the **Kundli-Manesar Expressway** develops according to plan about 27 villages will disappear in the ‘special corridor’. Two kilometres on both sides of the expressway are dedicated for industry and real estate. The state starts to offer money to the land-owners, but people wait and see how prices develop. In that way the farmers always relate to the government: they need the government for jobs for their sons, they need it for the procurement of their harvest, for the subsidies and village development, for the final sale of their land.

---

The longer lists about ‘village protests’ is random and arbitrary. The village is everything else, but not a ‘proletarian community’. We know to little about the background and class position of the farmers protesting against land acquisition for a nuclear power plant or against lack of electricity. We don't know who blocked the street and attacked police posts. As we can see from the short report from Mandkaula – the villages are crisis ridden and they are divided. Social tension is increasing, and it finds many different channels, some of them seem to reflect the old inter-village oppression. For recent conflicts between Dalit and Jats in Mirchpur, a Haryana village please read [HERE](#) Protesters halt traffic
Jind, July 28

The district witnessed traffic blockades at three places to highlight their grievances on various issues.

A large number of shopkeepers blocked traffic at Patiala Chowk by sitting on dharna on the main crossing for an hour to express resentment over the increasing number of thefts in the locality in the past few days. The blockade was lifted after the intervention of the ASP, who assured them of a proper action.

Meanwhile, residents from Pouli village here blocked traffic on National Highway-71 linking Jind with Rohtak in protest against inadequate supply of drinking water in the village. The villagers claimed that there had been no water supply for the past three days. The third such incident was reported from Braha Khurd village located on the Jind-Gohana road. The villagers held protest after an elderly person was run over by a speeding vehicle this morning. Alleging delay and inaction on the part of the police to chase and arrest the accused driver, residents of the village blocked the traffic by laying down wooden logs and parking their vehicles across the road.

Furious villagers attack police post

Sirsa, August 2

Irritated at the merciless thrashing of a vendor by the police, villagers attacked a police post at Kulan village in this district last evening. Such was the fury of the mob that the in charge at the police post had to run for safety. The villagers, including women, later sat on dharna outside the post till senior officers reached there and made the policeman apologise for his act. The police had yesterday raided certain places to check gambling and rounded up five gamblers. Puran Singh, a vendor, out of sheer curiosity, went towards the police post to see what was happening. Prem Kumar, in charge of the police post, beat him up with a stick, dragging him inside the police post situated on the main crossing of Kulan village. The police action incensed the villagers and shopkeepers in the vicinity, who raised slogans against the police and freed the victim. In the meantime, some women members of the family of the victim reached there with sticks and barged into the post, forcing the cop to flee. Additional police force from Tohana and brought the
sitting under sat on dharna outside the police station with the victim and his wailing children. The villagers demanded an apology from Prem Kumar and that the police should bear the expenditure of victim’s medical treatment. They blocked the crossing halting traffic towards Bhuna, Ratia, Tohana and Jakhal.

Power Pangs – Villagers lock up school, anganwari

Sirsa, August 10

After the alleged beating up of a power nigam SDO by some villagers and subsequent arrest of an accused, residents of three villages today adopted a tough posture and decided to withdraw their children from schools and anganwaris. Villagers from Dhigtania, Chouburja and Rangrikhera today blocked traffic and locked the village school and the anganwari in protest against the erratic supply of power to their villages.

In Jind village, substation closed

Jind, August 10

Residents of at least three villages in the district locked a power substation and blocked traffic at two separate places here today to highlight their grievances over short supply of power in rural areas. The protests were lifted after intervention of the officials concerned. The villagers locked the 33 kV substation at Singhana village following an altercation with the staff posted there.

Irate villagers damage buses

Karnal, August 11

Incensed over the alleged failure of the authorities concerned to regulate power supply, residents of Tahkhana village blocked the National Highway No. 1 near Tarawari, 15 km from here, for about two hours today. The protesters, comprising mainly children and women, pulled down hoardings and went on the rampage, damaging three Haryana Roadways buses of the Panchkula, Ambala and Chandigarh depots. Hundreds of vehicles and commuters remained stranded on the road and foreigners, who were on their way to Chandigarh, got scared of the protest. The protesters alleged that power supply was erratic for the past over five months, but nothing had been done in this regard.

Gorakhpur farmers oppose acquisition
Fatehabad, August 17

Farmers from Gorakhpur village in this district, where the Nuclear Power Corporation of India Limited (NIPCL) is to set up a power plant soon, are up in arms against the government move to acquire their land. Hundreds of farmers met District Revenue Officer Om Prakash Verma today and submitted a memorandum asking the authorities to acquire alternative land for the plant. The villagers, whose land has come under this notification, have started filing individual objections with the authorities. They held a meeting in the village chaupal yesterday and decided to oppose the government move, threatening suicide if the government did not budge. The state government had recently issued a notification under Section 4 of the Land Acquisition Act-1894 for acquisition of 1,313 acres of the village for the plant. “We are not going to part with our agriculture land at any cost,” declared Dana Ram, a farmer, whose 52 acres fall under the land selected for acquisition.

Power-less, villagers clash with cops

Damage substation; police fires into air; sarpanch among 300 booked

Jind, August 19

Sans power for the past three days, hundreds of irate residents of Nagura village in the district resorted to violence, which lead to a clash between them and the police last night. The police fired several rounds into the air, besides resorting to a lathi charge, to disperse the mob. The violence resulted in heavy damage to the 132 kV substation and disruption of power supply to several villages in the region. Several persons, including some policemen, were injured when protesters resorted to throwing stones. A large number of policemen have been deputed at the substation and in the village. The police has booked about 300 persons, including the sarpanch of the village, Rajesh Kumar, in this connection. According to reports, hundreds of villagers assembled on the Jind-Assandh road last night in connection with the power supply.
problem. The police then opened fire into the air and resorted to a lathi charge to disperse the violent mob. At least six policemen, including Krishan Kumar, SHO of the Alewa police station, were injured in the violence. Property and machinery worth about Rs 8 lakh was damaged at the substation, said an official.

Villagers make team beat a hasty retreat

Fatehabad, August 22

A team of officials of the Food and Supplies Department from Fatehabad had to beat a hasty retreat when they went to Nadel village near Jakhal for “door-to-door checking” of some records of foodgrains supplied through the public distribution system (PDS). Villagers, who suspected that the officials had come to the village to tamper with the records, snatched ration cards from them when they were allegedly making some entries in the cards of the villagers. The Tribune had published a report, “Rotten wheat finds way through PDS”, in these columns yesterday and highlighted the fact as to how fungus-infested wheat was sold to poor families in the village. Gurjeet Singh, a former member of the village panchayat, entries in whose ration card was allegedly tampered with by the officials, called villagers, who asked the team to leave their village.

3 killed as farmers go on rampage near Aligarh

August 16, 2010

Three persons, including a PAC jawan, were killed and nine injured in a village near Aligarh when farmers, demanding higher compensation for land acquired for a township, fought pitched battles with police who opened fire to restore calm. The violence broke out last night in Jikarpur village when the farmers went on a rampage vandalising a police post, indulging in heavy brickbatting and setting afire a bus and another vehicle. The trouble erupted after rumours flew thick and fast that a farmer leader had been arrested near the village which lies close to Uttar Pradesh-Haryana border. Over 2,000 farmers on Sunday staged a sit-in at Jikarpur, the epicentre of yesterday’s violence. The protesters also tried to block traffic at several places on Aligarh-Tappal road. Vijay Prakash said the farmers this morning destroyed machinery for construction of the Expressway. The farmers are on the warpath demanding higher compensation for land acquired for a township project along the Delhi-
Agra Taj Expressway.

Gurgaon is still an Eldorado for the international real estate business. In August 2010 the Hooda Haryana government was put into a no less dubious public spot-light for getting engaged in shady land-deals in Gurgaon. Farm land was turned into cheap property to build an amusement park. We summarised some news items on the matter.

Govt under fire over Gurgaon land deals

Tribune News Service

Gurgaon, August 10

The Haryana government has come under sharp criticism for the recent move of leasing out big chunks of prime public land in Gurgaon to a private party at rates much lower than the prevailing market price. The plots, located in Sector 29 and Sector 52 of Gurgaon, have been leased out for the development of amusement parks. While the local HUDA officials and other authorities concerned are tightlipped over the issue, all-out efforts are being made to hand over the said chunks of prime public land to the private player. So much so that a road passing through one such chunk of land is being covered with loose earth to facilitate the beneficiary. The front leaders of the Federation of Residents Welfare Associations (FORWA) and Gurgaon Citizens Council (GCC) maintained that the 25-acre plot in Sector 29 had been given on a 33-year lease at a nominal price of Rs 56.25 crore, as against the prevailing market price of Rs 2,016.67 crore for the purpose. “Similarly, the 17-acre plot in Sector 52, which could have been leased out for 33 years at Rs 548.53 crore as per the prevailing market price, has been given away for a meagre Rs 38.25 crore,” they asserted. “So many controversial land deals coming to light clearly vindicate our stance that the Hooda government is a regime of property dealers,” said an opposition party leader, adding that even the Punjab and Haryana High Court had also pointed out at the nexus between the state leadership and builders. Talking to The Tribune today, a front leader alleged that the Hooda regime eyed prime property in the National Capital Region (NCR), especially Gurgaon, and its single-point agenda was to grab farmers’ land in collusion with unscrupulous builders and colonisers.

This is an attempt to introduce a regular update on general tendencies of
crisis development in India – motivated by Greek shock-waves, naked shorts and potential spillovers. Apart from short glimpses on the macro-level of things we focus on general trends in agriculture and automobile sector: the current demise of the past and the toxicity of the future.

* The Crisis in July and August 2010 – A Summary

Tension between short-term influx and growing internal debts

The months of July and August 2010 confirmed the picture of the economy in India being in a waiting-loop of crisis. The government is able to announce that GDP growth is still on 8 percent-growth-path and that, after the massive outflow of 20 billion USD of short-term invested capital after the ‘Greek-Shockwaves’ in May 2010, money is flowing in again since June – mainly as short-term portfolio investment. These ‘good news’ are in contrast with the probably more substantial worries expressed during the last two months:

– the association of industrialists Assocham expects inflation to increase to 15 per cent in the coming months; the general inflation, which is in double digits for the fifth consecutive month, stood at 10.55 percent June – July 2010;

– the current trade deficit, which is a measure of higher imports of goods and services over exports, has already risen 50 per cent to 21.7 billion USD during April-May 2010 from around 14.4 billion USD a year ago; the trade deficit of the January – March quarter was the biggest since 1981;

– bank credit is growing at an annual pace of around 22 per cent while deposits grow at a 15 percent; the credit-deposit ratio has widened to 73.44 percent in July 2010 from around 70 percent at the start of this year, climbing above the monthly average of the past five years of 69 percent;

– 50 per cent of the 2009-10 foreign currency reserves growth is due to appreciation of the Rs in relation to the US-Dollar; the Rupee has proven to be a rather volatile currency, meaning that there is a big scope for depletion of the reserves in case the Rupee plunges

– according to a Reserve Bank of India report from August 2010, `total factor productivity’ has dropped from 2.6 per cent in ’92-97 to 1.7 per cent in ’97-2005; while productivity in agriculture has slipped from 3 per cent to -0 .2 per cent, that in industry has dropped from 3.1 per cent to
1.4 per cent
Total GDP 2009: 1,367 Billion USD
Total Export 2009: 165 Billion USD
Trade Deficit 2010-11: 120 Billion USD
Total FDI 2009: 39 Billion USD
External Debts 2009: around 200 Billion USD
Public debts of GDP 2009: 60 per cent
Fiscal Deficit: 5 per cent
Share in global merchandise trade in 2008: 1.5 per cent

Tension over Inflation between Finance and Fiscal Managers

The major concern, the high inflation, causes increasing tensions between the ‘political class’ and their financial managers, e.g. in the form of the Reserve Bank of India. While the government still claims that the general inflation is mainly due to high food prices and that ‘a good monsoon’ will sort things out, the Reserve Bank of India (RBI) announced in July that two-thirds of May inflation was contributed by non-food items. The RBI gives credits to the banking sector, the interest rates of these credits have been hiked four times since March 2010 in small steps of 25 basis points. Each of these interest hikes were accompanied by major public controversy whether the danger of inflation or the danger of ‘smothering the boom’ is more pronounced. “We will tell them [the government] that if inflation expectations solidify, it will push up government bond yields, loan rates will go up, and there will be a spiralling impact economy wide,” an RBI source said in August 2010. The interest hikes of the RBI have been passed on to consumers via the State Bank of India in August 2010. The SBI is the country’s largest lender. In August the SBI raised benchmark lending rate by 50 basis points to 12.25 per cent, making home, vehicle and other corporate loans linked with the rate costlier to middle-class consumers – and will very likely reverberate within the micro-finance sector of rural poverty, see below.

Tension between Central and State Government

The government’s take on the inflation problem is highly contradictory. After the central government has fuelled inflation by its reform to free-
float petrol prices – causing considerable price hikes in June 2010 – Finance Minister Pranab Mukherjee now asks the state governments to cut taxes on petroleum products, “a move that would help tame the current double-digit inflation”. According to Rupe Report from August 2010 on subsidies – click HERE [http://www.rupe-india.org/49/subsidies.html] – state taxes on petrol in India are significantly higher than average: “While India’s petrol and diesel retail prices are lower than those in many developed countries, they are higher than US prices as of May 2010, solely on account of taxes. The ex-tax prices of petrol and diesel were, respectively, 7 cents and 11 cents lower in India than in the US; yet the retail prices of petrol and diesel in India (i.e., including tax) were, respectively, 36 cents and 6 cents higher than in the US.” So basically the ‘state subsidies’ for the petrol or fertilizer sector are actually a ‘slight lowering of taxation from a very high basis’. A similar point of tension between central and state governments is the implementation of the new goods and services tax (GST) across the country next year. State governments fear that the new tax will shift taxation power further towards the centre – increasing the problems of the debt-ridden state budgets. Terming the new tax as “anti-democratic, anti-poor and anti-farmer,” Madhya Pradesh finance minister Raghavji said in August that the new tax regime is aimed at divesting the states of their financial freedom. The proposed new indirect tax, which will subsume all the major levies like excise, sales tax, VAT and other local levies like octroi, is anti-democratic as the proposed GST Council will not be accountable to Parliament as well as to the state assemblies and through it the power of the states to levy tax on sale and purchase will be taken away. After the implementation of the GST regime, Madhya Pradesh will lose revenue to the tune of 2,200-2,500 crore RS per year. The Finance Minister’s answer does not require any further comments: “The gain from GST will propel the country from one-trillion dollar economy to two trillion-dollar economy in a short span of time,” he said while addressing a meeting of the industry chamber Ficci.

Tension over International Markets

Apart from re-shifting debt burdens the state in India is up for selling more assets. This time we don’t talk about mobile-phone licenses, but about the real stuff: coal, oil. In August 2010 the central government announced plans to list its state-owned coal mining company Coal India
by October 2010 and to sell an additional stake in its national oil company. The Indian government gave the mandate for the offering for Coal India shares to Deutsche Bank, Enam Securities, Morgan Stanley, Citigroup, Bank of America Merrill Lynch and Kotak Mahindra Capital. Coal India claims to be the largest coal producer in the world, accounting for 85 per cent of Indian output. Question remains if this partial opening will ease the general tension concerning foreign investment in the Indian market, particularly the retail, defence and agricultural sector. In August 2010 US Trade Representatives engaged in a diplomatic clash when announcing that they will be “exploring all options, including legal tools, to force India to open up its agriculture market”. “We are exceptionally frustrated. I will tell you it’s generally not our practice to comment publicly as to whether we are going to take legal action, but I would tell you we are exploring every alternative and every enforcement tool available to us to get India to open up their markets on a number of agriculture issues, the dairy sector in particular,” the US Trade Representative, Ron Kirk, told the US lawmakers in early August. During his visit to India in late July 2010 David Cameron aimed at a similar direction: Business Secretary Vince Cable has announced the government will allow the export of British civil nuclear technology to India for the first time. In return Mr Cameron is expected to call on India to reduce trade barriers in banking, insurance, defence manufacturing and legal services. A £500 million deal for BAE systems, Britain’s biggest defence contractor, to supply Hawk jet trainers to India is expected to be among “a string of high-profile contracts” to be signed during Prime Minister David Cameron’s visit. During the same visit immigration minister Damian Green made clear that in future only ‘high-class’-migration to the UK is wanted: “I’m convinced that we can achieve our objective of reducing migration to the UK, whilst driving forward our commitment to trade and inward investment. We can do both. We want to encourage to come the UK the brightest and most talented workers, entrepreneurs and investors”. He said Britain is now working more closely with Indian police and educational bodies to clamp down on unscrupulous agents who use fake qualifications to get student visas for customers and those behind bogus colleges.

Tension in some of the multi-national industrial core sectors

Obviously there are dozens of union mobilisations each day – click HERE
for daily up-dates on LabourStart. At this point we only want to mention certain apparent parallels between mobilisations at multi-nationals in China and India. While the Honda strike in China was paralleled by a dispute at Hyundai in India in spring 2010, now Foxconn workers in India entered the sad stage of victimisation after their Chinese brothers and sisters. The strike at Hyundai was followed by a similar ‘open’ dispute at Volvo, while unions at Apollo tyre maker agreed to employment of temp-workers and workload increase after two months of lock-out.

– 500 Foxconn workers stage protest
July 2010

Workers who came under exposure of mysterious gas leak at Foxconn factory in Sriperumbudur were admitted to Hospital with complaints of giddiness, nausea and breathlessness. About 500 workers from the factory with the support of unions in neighbouring industrial units went on a sit-in protest in front of the Foxconn factory. However, the protest was called off later on as authorities and management promised action. Meanwhile, there was no operation in the company, which assembles handsets for Nokia.

– Employees at Indian Volvo bus plant strike over pay
August 2010

The two week long strike at Volvo Bus factory in Hoskote near Bangalore has ended with both the management and workers union coming to a mutual agreement on wage revision. Management has agreed to revise salaries of workers with retrospective effect from April 1 last for three years. Management, however, declined to reveal the exact rise in compensation for the workers. This was the first ever strike at Volvo’s bus plant in India. The strike lasted for two weeks, but a labour conflict which has slowed down production has been going on for about three months, he added. Four of the plant’s employees were suspended following a dispute at the plant in April, during which they allegedly physically assaulted a manager. During the three month labour conflict some employees have worked less or not at all in protest. The conflict has set the plant’s production pace back 60 buses, Johansson said. The factory rolled out 535 buses last year.

– Lockout at Apollo Tyre plant ends
End of August 2010

The two-month lockout at Apollo Tyres Ltd.’s Perambra, India, plant has ended as the company and two unions have come to a resolution. The parties have agreed to raise the plant’s daily capacity from 308 tons to 340 tons. Meanwhile, Apollo will hire an additional 200 people, and unions have conceded that the company can use “secondary manpower” at certain times. “The increase in capacity, manpower and the use of secondary labor are all progressive steps,” says Satish Sharma, chief of Apollo’s India operations. The Perambra factory produces light truck, medium truck, bus and agricultural tires.

* The Rural Crisis

The news items we collected for July and August relate about growing farmers’ debts in Maharashtra and Punjab and the announcement of the state to claim land from bankrupt farmers, if necessary with the help of force. The rulers and their social managers also presented solutions to crisis-ridden farmers: the bad fix of micro-credits, micro-electronics, and, if necessary, re-location to African bloody soils of civil war. In the long-term the rural crisis might be fought out in the cities: “On a conservative estimate, 45 per cent of Indians would be living in towns and cities by 2050. This means that 379 million people may be added to the urban space over the next 40 years,” the National Council of Applied Economic Research (NCAER) said in its report ‘How India Earns Spends and Saves’ in August 2010. Urbanisation is a process of concentration: While nearly 25 per cent of urban population in India lived in cities with a population of one lakh in 1901, the number increased to 45 per cent in 1951 and 69 per cent in 2001.

To cater to this growth, India needs to invest $1.2 trillion in capital expenditure, mainly infrastructure, over that period, an eight-fold increase of current spending levels, MGI said. India now spends 17 USD per capita on urban infrastructure, compared to rival China’s 116 USD. What ‘state-management’ of urbanisation also means was revealed in mid-August in Bangalore: concentration-camps. From a BBC report: “Officials in the Indian city of Bangalore are investigating a spate of deaths at a camp for beggars. At least 100 inmates have died in the government-run camp on the outskirts of the southern city this year, 27 of them in the past week. Activists accuse the state government of
negligence and say conditions in the camp are appalling. More than 2,500 inmates live in squalor at the camp and diseases there are rife, correspondents say. There are just two toilets for every 500 inmates.”

Foreclosures in Maharashtra

Scores of farmers mired in debt in the arid cotton belt of Vidarbha in Maharashtra are close to losing their property rights, as the state-controlled Land Development Bank has kick-started the process to recover dues from them. A top revenue ministry official said the process to recover loans by selling off land belonging to those farmers who have defaulted is “definitely on” and could start as early as July 23. It is now a well-accepted fact that mega loan amnesty schemes, such as the ` 71,000-crore waiver announced by the central government and the state’s ` 6,240-crore loan waiver, excluded many farmers in the state. The waiver was applicable only for loans contracted from a government-backed institution. But in the hinterland, most farmers borrow from money-lenders. Many of them could not avail of the amnesty schemes, as the eligibility was restricted to those having two hectares or below. More-than-half of Vidarbha’s 35-lakh farmers own more than two hectares and, therefore, according to the government scheme, can only obtain a loan waiver of 25 per cent of their outstanding loan instead of a total write-off. Now, the state government wants to recover the remaining 75% of the loans that have not been paid back until now. “According to rules, the Land Development Bank needs to recover loans within five years from disbursement. More delay than the stipulated time makes it mandatory for the bank to recover its dues by selling the immovable assets, in this case, the land,” an official associated with the exercise told ET. He said necessary orders to take over the properties of farmers have been issued and the powers to take possession of defaulters’ land have been vested with the respective district deputy registrars. “These officials have demanded police protection. This is being extended to complete the process,” a Nagpur-based government official said.

Debts in Punjab

Central Punjab has been the food basket of the state and the country since the 70s when the Green Revolution brought bumper wheat and paddy crops in its wake. A quarter century later, farmers of the area continue with the same foodgrain rotation but at a heavy price. A steep
fall in water table is forcing farmers to dig deeper in search of water fanning the start of an agrarian crisis. Farmers of these districts are not only digging deeper borewells for water every few passing years but also digging themselves into debt from which they have a little hope of climbing out. Amar Singh from Khairpur Jattan village in the Ghanaur block of Patiala says 95 per cent of its residents are under debt. Amar Singh, who owns 16 acres of land and has two grown up sons and their extended families to feed, says 10 years ago, the family irrigated their land with 60-ft deep borewells. He says he dug his first deep borewell in 2002. At present, he is replacing an older borewell, which had become defunct with 375-ft deep borewell. Ironically, he has not struck sweet water even now. The story of Harmesh Singh of is similar. Harmesh’s march towards debt stated five years ago when he installed a 225-ft borewell. He took a loan of Rs 1.85 lakh from a bank to do so. He also purchased a tractor shortly afterwards so as to reap the rewards of mechanised farming. However, whatever he earned was offset by continuous expenditure on his borewell. The farmer started off with a 5-brake horsepower (bhp) motor, upgraded to 7.5 bhp and finally installed a 15 bhp motor over a year ago. With a debt of Rs 4 lakh now and minus the tractor that he has sold off, Harmesh is now indifferent towards life. When asked about his loan repayment schedule, he says, “Sometimes I give it (instalment), sometimes I don’t.”

Bad Fix One: Microcredits

Microcredits became big business in India. The sudden credit crunch after October 2008 global banking crisis has shown how close the remote Indian villages are to Bombay financial district or the Wall Street – in financial terms. According to their own sources the microfinance sector growth 80 to 100 per cent a year. Around 70 to 80 million small farmers depend on micro-credits. There are reports that small ‘self-aid groups, e.g. women who buy a hand-loom together, turn against their members once they are unable to pay back their share of instalment. The microfinance sector has to grow quickly in order to dish out credits, in order to grow. So far the microfinance companies had to take loans from normal banks, paying about 12.5 per cent interest. They passed the interest on to the small farmers, who have to pay around 25 per cent interest. These farmers cannot obtain credit from ‘normal banks’, because they cannot show the required securities. Microfinance is placed
between the official financial sector and the money-lenders. While before the crash US banks used to grant people mortgages 120 per cent above what they were able to show as security, the microfinance institutes in India still lend credits around 150 per cent above the value of the small farmers’ property. In order to attract more capital from global streams they have to show growth rates of the mentioned 80 per cent – the sector is overheating. International Groups like the German Allianz or real estate developer Larsen and Toubro entered the market. Using the argument that the sector has to get financial sources independent from the official banks – in order to lower the interest rates for the farmers – microfinance companies started to issue shares on the stock-market. SKS Microfinance is one of these companies. Within three years this company increased the number of ‘clients’ 20-times – now around 5.3 million people depend on loans from SKS. In June 2010 188 million shares of SKS were sold on the market. A boom similar to the IT bubble, but the crash will have much more severe social consequences.

Bad Fix Two: Microelectronics

In the 1870s the colonial state promised that the telegraph system will prevent further famines in India, given that the information about the lack of foodgrain can be circulated quicker. The famines in the 1890s were even worse – partly because of the telegraph-system resulting in even quicker speculation. History does not repeat itself, it move in a social-technological spiral. A study about ‘agricultural productivity increase through mobile-phone services’ concludes in August 2010: “Among the states studied, small farmers from Maharashtra (income between Rs 12-17,000/month) reported the highest use of their phones to access information, leading to diverse benefits. These included yield improvements, price realisation and better adjustment of supply to market demand. Ideally, market price information is valuable in deciding where and when to sell, but also in deciding the cropping pattern. On the ground, there was some marginal evidence that the bargaining power with traders (who used mobile services widely) improved when farmers were armed with market price information”.

Bad Fix Three: Relocation

African nations offering land for free to Indian farmers

11 Aug 2010, 1551 hrs IST, PTI
Some African countries are offering land on lease for 99 years for free to overseas farmers and India should grab the opportunity, industry body Assocham said today. The countries that were in the forefront trying to attract agriculturists were Sudan and Ethiopia, he said. Several Chinese farmers have already accepted the offer and begun cultivation of land, said Tyagi.

Bad Fix Four: Pre-emptive Counterinsurgency

Currently the state in India is undertaking a major operation to enforce identity cards, which means photographing, fingerprinting, and iris-scanning every resident of India, plus issuing of digital files, the so-called UID System. Combined with the ID-card is a supposed reform of the ‘Below-Poverty-Line’-food program. The idea is to not ‘guarantee’ minimum prices for the ‘officially poor’ anymore, but to issue food coupons. The definition of who is poor and changes in the households composition or income is supposed to be combined with the ID-drive. From an official document: “Since the Unique Identification will not, in itself, have information on people’s poverty status, these kinds of tailoring of information will need to be added to the UID System. Further, since households do move in and out of BPL status there has to be provision for updating of information.” This again is added to the ‘job-card-regime’ of the National Rural Employment Guarantee Scheme (NREGS), which only grants paid employment to locally registered people, often requiring a bank account. The state is blatant about the ‘counterinsurgency’-character of NREGS:

“India battles Maoist influence with jobs scheme – BBC July 2010

Also called the Mahatma Gandhi National Rural Employment Guarantee Act, it is being used to kick-start much needed development work in the area. Kaushik Lohar is a fortuitous beneficiary of a sudden rush of development work to keep the rebels away from his village. “If the Maoists were not at our door, all this wouldn’t have happened,” said Mr Lohar. “We have been waiting for development for decades.” He said he earns up to 3,000 rupees a month working on the dam, much more than what he used to earn as a daily wage worker.”

The “3,000 rupees a month” is the utter exemption. Not even 1 per cent households in Bengal got the promised 100 days’ work under the National Rural Employment Guarantee Act (NREGA) in 2009, the latest
report of the rural development ministry has revealed in August 2010. Out of the total 31,15,422 households, only 19,163 got 100 days’ employment. Households on an average got 32 days of work. Seventy-two per cent of eligible households got merely 15 days of employment, the report said. The figure for most other states hovers around 5-6 per cent. Not only do people get less than 100 days, they also tend to get much less than the minimum wage. Reported in August 2010: “For 11 days, 99 people toiled to dig a check-dam under the Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS) in Tonk district of Rajasthan. But when it came to wages, they were paid only Rs 11 – Rs 1 for each day of labour. The Rs 11-payment was decided by a Junior Engineer who inspected the work site. Gudaliya residents protested, calling it a cruel joke, and appealed to the district administration. To no avail. For Gudaliya residents, this is not a lone case. For four jobs between April and June, they have reportedly been paid Re 1, Rs 7, Rs 12 and Rs 25. These wages have only increased their ire against the government. Incidentally, details of the payments are available on the MGNREGS website but have failed to move the authorities.”

Obviously, NREGS plays a role for poor people’s income, particularly for women – around 40 per cent of NREGS workers are women. A recent study – click HERE [upload pdf]- on NREGS impact on women says that although NREGS wages in the studied areas formed only 15 per cent of the total households income, it formed a significant income for the female members.

The state can not rely on the violence of structure and control alone, please read the fact-finding team’s press release about the killing of comrades Azad and Pandey from the 22nd of August 2010.

* The Automobile Crisis

We have little to say about the automobile crisis this month, just three news article snippets about Maruti: More Sales, Less Profits, More Debts!

– “The country’s largest car maker, Maruti Suzuki India, reported 29.18 per cent jump in sales for July 2010 at 1,00,857 units.”

– “Maruti Suzuki’s July Profit Unexpectedly Falls 20 per cent as Raw Material Costs Swell”
“Maruti Suzuki is among carmakers to have introduced waiting lists in India as a lack of parts including tires, bumpers and batteries damps vehicle production. Local components makers have struggled to expand because of debt levels that are twice as high as Asian suppliers. India’s 133 listed makers of components and tires have an average debt-to-equity ratio of 138 percent, according to data compiled by Bloomberg. The average for the 73 companies in the Bloomberg Asia Pacific Auto Parts & Equipment Index is 58 percent.

The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.

Workers hired by the company for a limited period of time.

Workers hired for a specific performance, paid for the performance.

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays
an allowance on top of wages.

DC
Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):
Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:
1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC
Haryana State Industrial and Infrastructure Development Corporation

ITI
Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi
Slum Hut

Lakh
see Crore

Lay off
Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.
Minimum Wage:
Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat
A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):
Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card
Officially the so called ‘governmental fair price shops’ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have
a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):

Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:

When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices:

Housing:

- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
- Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:
- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:
- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

Workers hired through contractors
Similar to temporary workers, meaning that they work (often for long
periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
GurgaonWorkersNews – Newsletter 31 (October 2010)

Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers uprooted by the agrarian crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, Asia’s biggest Special Economic Zone is in the making. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

Voices Against The Day – Seven Young Workers from Gurgaon

We spoke to seven young workers from Gurgaon about village and urban life, about work and hope. They are in their early twenties, part of the new generation of workers in urban India. They work in textile and automobile factories, as rickshaw drivers and cleaners in guesthouses. The conversations touch upon the question of gender, religion and other
identities thrown into urban social transformation. They ask the question of social power against the current state of being.

*** Woman Textile Worker –

“I am 17. I have worked in this factory since six months. Before that I worked in another factory. Brown, they produce medicines. In medicine – don’t ask. Like there is a lot of glass. When it breaks, it cuts into the hand. Then the drugs powder – if it comes on your hands or face, they burn. It damages. I worked in that factory for two months. It was my first job. I left it, because I did not earn much money.”

*** Rickshaw Worker –

“What can we do about it? We cannot go to the police. If we complain to the government, they do not listen to us. If we, 10 or 100 rickshaws, jam the road, and ask the public to increase our fares, the police will come and beat us up, because we do not have a union. If there were a union, if even two rickshaws block the road, no car will pass them.”

*** Guest House Workers –

“It is now two and a half years since I came here. For a job, for work, to earn money, this is why I came here. One person can earn Rs 2000 – 3000. In the village getting a job is not so easy. To get a government job you need a lot of qualifications, backing, money, everything. We do not have this. If you cannot get a government job, in the village there are no companies. What can you do there – some work in farms or in houses.”

*** CNC-Operating Automobile Worker –

“I have done a diploma in machining. It takes about 2 years to get this diploma. The course costs about Rs. 30,000. With a diploma you can get a job for Rs. 8,000 – 10,000 for 8 hours work. I worked there since 3 months. Before that I was training. The actual work can be done without doing the course, but it would take time.”

*** Textile Worker –

“No, there was no leader. There were 50 craftsmen. When it was lunchtime at 3 o’clock, all the craftsmen went outside and talked with one another that the rate was low and it should be raised otherwise we should stop working at 3:30. So everybody went inside and stopped working. When the supervisor asked us to work, we said “First increase
the rate”. There was no need for a leader. And there was no agreement with the management, only with the contractor”.

*** Textile Worker –

“It is very simple. If we work hard for 16 hours, we go straight to bed and sleep. We eat and drink whatever is there – hot or cold – and go to sleep. If we feel exhausted, we go and get a medicine for body-ache and go back to our job. If you don’t turn up for the job, you will get thrown out.”

I have just slept. I was injured so I went to sleep after I came back from work. I got injured from the [sewing] machine. The needle went into my hand. The thread was stuck in the machine. When I tried to remove it, I accidentally moved the machine with my foot and my hand came under the machine. The company provided no treatment. Many people get injured like that. There are more accidents in the night.

There are about 3,000 workers in the factory. Many are women. About 1,500-2,000 must be women. They do all kind of work. Everything – operator, sewing also work as hand operators. I am an sewing machine operator. I sew only one part, the arm of a shirt. In one shift I have to sew at least 80 pieces. If I don’t meet the target, the line keeps moving. Nothing happens. The clothes are exported, but I don’t know where to.

I am 17. I have worked in this factory since six months. Before that I worked in another factory. Brown, they produce medicines. I like to work in the export line, because making clothes is clean work. In medicine – don’t ask. Like there is a lot of glass. When it breaks, it cuts into the hand. We have to wash the bottles. Then the drugs powder – if it comes on your hands or face, they burn. It damages. I worked in that factory for two months. It was my first job. I left it, because I did not earn much money. Rs 2500. And I had to work a lot. My bones used to hurt. Then I had to work with medicines. I did not like it. I felt claustrophobic.

The money I earn, girls who are younger than 18, do not get jobs. But I was desperate, and I told a lie at the job. It is so difficult in my family. There is no one to earn except me and my older sister. My father lives, but he has knee problems. He does not work. I have a younger brother. We are educating him. My sister and I – by working. So I said to them at work that I was 19. So they gave me work. Otherwise they would not have
It is normal for women to work there. Women workers have been there from the start. The atmosphere in export is good. There is no harassment, in fact there is pressure on the men to behave themselves. So nobody says anything. Yes, we talk a lot, men and women, but nobody forces anybody. They can talk in the factory. In our canteen too, boys eat on one side and the girls eat on the other side. But they work together. Because they make even women work very hard. And women are getting ahead of men. Women even do the work that men cannot do, they work harder. The employers think that perhaps women will not resist.

The biggest problem is that of the toilet. There are so many women and men working in the factory, but only 2 or 3 toilets. So there is always a queue. When we do overtime, the advantage is that we get double the money. For 2 hrs work we get 4 hrs money. If we work on a Sunday for 8 hrs work we get wages for 16 hrs. For a 8 hour day, I earn Rs 4200 per month. I give all the money to my family, I keep about Rs. 400-500 for myself. The rest I give. Our real salary should be Rs. 4500. But the company is not giving it. The company gives 4200. From Rs 4200, Rs 500 go into pensions. So after the cuts, we get about Rs 3600. From that I keep Rs 300 for transport, I keep Rs 50 – 100 for my own costs. If everybody joins, something an be done about the wages. I cannot do anything alone. Together we can ask for he wages that are our right. We talk that when our grade is Rs 4500, we should get it. We should get the perks. Like today, when I got hurt I went to get medical aid. They did not do much for me. Just gave me half a tablet. Then I went and got myself a tetanus injection. And I got medicine myself, and so it became better. I paid myself. 50 Rupees.

Question: Is there a union in the factory?
A.: Union?

Question: Union – how do you say it? AITUC for example?
A.: Unity [Ekta]? There is unity. If anybody puts pressure on us, then not one person alone, but everybody protests. If somebody shouts, we all answer back. We are all united. The supervisor shouts because if we do not give him the piece, we do not produce, we do not meet the target, he will shout. If a piece is not right he will shout. We just say, “what we did
not do in this hour, we will do in the next”. Or “We don’t know what is going wrong”. So we correct him. There is same unity between men and women.

I have one girl friend in the factory, named Bharti. Here in the basti [workers dwelling], I have only neighbours. Here, I do not want to make friends. They talk nicely in front of you, but criticise at the back. They criticise me. If I tell them something private they spread it everywhere.

I would like to be somebody, although I did not get any education. Some profession, some office job. If I get such a job, it would be nice. Here, I go fresh in the morning; but come back tired. I get tired working.

Perhaps my parents will get me married in 1 or 2 years. If not here, then with somebody from the village. What those other people ask me to do and what they don’t let me do – they must decide. If I get married, will I be allowed to see my family? I will not be able to see how my parents are. I would like to stay with them. Our present situation should change. I should work well so our conditions become better. Yes, I would like to work after marriage, because the inflation is so high these days. So if there are 10 people in a family if they all don’t earn, the household will not work. It is so expensive. The house cannot run on one salary. That’s why I wish if after marriage, I am allowed to work I will work. I don’t want to live in the village. I have never been to the village. I don’t know what it is like. I cannot do the work of a village.

I live in Gurgaon since ten years. I drive a bicycle rickshaw. The conditions were better 10 years ago, but now they are very bad. Because the numbers of people have increased a lot. The work we used to do for Rs 2000, now people are doing for Rs 1000. So it is bad. People come from West Bengal, Bihar, UP, Jharkhand, Madhya Pradesh…

When I first came to Gurgaon, there was nothing here. There were not such big houses, not so many houses, not so much rent. We paid Rs. 200, 300 or maximum Rs 500 for rent. Landlords used to beg us to take the house on rent and were ready to do everything for the tenant. Now, when I want to rent, people say they have no room, even when they do have empty houses to rent. Because we cannot pay them the rent they want. We can pay Rs. 1000 – 1200. But Rs 2000 – 4000 how can we pay?

Most workers rent their rickshaws, the rent is Rs. 1000 per month. We
earn Rs. 4000 – 4500. So Rs. 3500 are left. We pay Rs. 1000 for the rent of our shacks.

The shack costs Rs. 1000, but you can also get a room for Rs. 1000. To live in a brick-room is difficult because there we have to cook on gas fire. We cook on wood fire. For gas we need a cylinder. We don't get a cylinder because you need a ration card. Also, they don't give you any place to put the auto rickshaw. This is why we live in shacks.

Some tension goes on between old people and newcomers. For example you come, I say “Rs. 50 for the fare”, while another rickshaw driver will come and say, “Rs. 20”. So how should it work? There will be tension. When the fare is Rs. 50, why should we take Rs. 20? A minimum rickshaw fair? Nobody talks about this. Because we do not have a rickshaw union here. So nobody talks about this. So if we do not get Rs 20 per kilometer, it is no use.

Sometimes the police make raids. They say “this is an illegal immigrant”, but they are just ordinary workers. The trouble we have with the police is that we park our vehicles everywhere on the road. The police does not let us park on the road. If we park in front of a mall, the guards complain and the police beat us with batons. We have to bear this.

But what can you earn in a different job, for example in the factory – Rs. 2000 to 3000, maybe Rs. 3500. But nobody gets more than that. How can with survive with that? In the factory one works for 12 hours. We work about 10 hours. And in the factory there is an owner and a supervisor. We work when we want to. But yes, there is tension: no passengers, no work.

I think it will become worse in the future. The situation is so bad now. In 2-3 years it will be completely bad. People will be forced to starve. The rice we used to eat for Rs.10 a kilo, we eat today for Rs. 25 a kilo. After 2 years it will be Rs. 30 or 40 for a kilo. Our rickshaw fares are not going up. So if we will not starve, what else will we do?

What can we do about it?. We cannot go to the police. If we complain to the government, they do not listen to us. If we, 10 or 100 rickshaws, jam the road, and ask the public to increase our fares, the police will come and beat us up, because we do not have a union. If there were a union, if even two rickshaws block the road, no car will pass them.
How to make a union? Suppose you are the representative from here. You could tell all rickshaw drivers to pay Rs 500 or Rs 200 per month. All rickshaw drivers in Gurgaon would then deposit Rs. 100 or Rs 200 per month with you, and get a certificate, with the fare for each area on it. So if the police bother you, you show this certificate. If they still don’t listen, you leave the vehicle there and ask the union to intervene. There is a union in Bihar, also in Bengal, but not in Haryana.

L.: It is now two and a half years since I came here. For a job, for work, to earn money, this is why I came here. One person can earn Rs 2000 – 3000. In the village getting a job is not so easy. To get a government job you need a lot of qualifications, backing, money, everything. We do not have this. If you cannot get a government job, in the village there are no companies. What can you do there – some work in farms or in houses. It is not permanent. It is temporary. You work for one day and then sit around for a week. This is not right.

N.: I came in 2000. I have been here for 9 years. First I was small. Now I am grown up so I should earn a little more. I think I will not stay long here. I will go back to my village. It is better in the village than here. Here no one respects you. In Haryana, Gurgaon, if a Bengali makes a mistake they get beaten up. We cannot live nicely or easily here. So I do not like it very much here – in Haryana, in Gurgaon. Yes, 9 years ago it was even worse. In the village what else could my parents have done. They did farming. We still have a little land, but now my parents live here.

L.: When I came first, I came with a friend. He used to be here, then he went to the village and brought me with him. I found a job after two – three days. It was a company. A small one. A guest house. Yes, cleaning in the guest house. Yes, I found work fast because my friend took me.

N.: When I came, as I was small, there was no work to be found. That time, I was 10 years old, and people did not give work to small kids. An uncle had come to Gurgaon earlier, he brought us here. When we first came to Haryana, there were no big flats. It was like a forest. And we too lived in 921
shacks. We did not have a flat. Now we have a flat. Gurgaon has become such a nice city. It was not so nice before. There weren't many roads. My parents went to the village some days ago and have returned, and will go again. My father does cleaning jobs here. In the village there is not so much smell, not so many cars, not so many roads.

L.: I have come to Gurgaon for the first time in my life. When I came here, I had not been to such a big town. I thought I would get lost. I did not know what I would say if someone spoke to me. That time I did not speak any Hindi, only Bangla. If somebody asked, “What is your name?” I used to think, “What should I say?” Because I am a Bengali. My language is Bangla. Now I do not have any difficulties. All the other Bengalis who are here have some relative, but I until now, I do not have any relative – only friends. No relative by blood.

Here the habits are a little bad, because the Bengalis drink a lot, quarrel with their wives and do not talk to each other with respect. If there is one vacancy here, there are ten young men who want to have it. So what can you do? So which one of the 10 will get the job? So there is always this danger about jobs, a lot of difficulty. How much salary do we get? Rs 3000-4000. What can you do with Rs 3000-4000? Nothing. We have so many expenses. Just the rent for one room is Rs. 1500. To work in a call centre, the first thing you need is qualifications. And the qualifications that you need, I don't have them. You need at least a Bachelor. And the BA should be in English Honours. But there was no English in my village. There is no Hindi, either. Only Bangla. We learn Hindi after coming here.

There is a big difference between a guest house and a factory. The work in a guest house is a little easy. You don't have to work that hard. We work in an air conditioned room not in the heat. We can work freely. Nobody is there to watch. Factories are full of the noise of the machines and there are many people. So it is difficult. In a guest house, the supervisor should have a minimum qualification of a B.A. And without a B.A.? – You cannot earn anything. If you live alone, it is very hard. I have taken another person in my room. So the rent is reduced to Rs. 700 – Rs. 800. If you take one more person, it becomes even less.

I have come here for many days – not a lifetime. After living here for a year or so, I will go back to my village, and live with my parents. Then I
will come here again for 6 months – 1 year. But we don’t want to stay here permanently.

N. and me, we are friends, he is Muslim, I am Hindu. But people who are not friends think “this person should not talk to me, should not touch me”. “It is not good to meet with them”. They think like this in the village. It is less here. It does not work like that here. Here the friendship works. Like in the village, if I go to somebody’s house they stop me. They say, “Don’t come in, don’t touch me”. It happens a lot even today. I think differently. He is a good friend of mine – that’s what I think.

I am just coming back from work in the company. I have just done the night duty for 12 hours. I am a VMC operator. Vertical Machining Center – it is designing and modelling work. It is dyeing work. From the dyes, models are made, and then production is made and after production it goes to the press shop. The main client is a company JCB – they manufacture diggers. We make a part for them. And also for Hero Honda and Escort.

About 450-500 workers work in the factory. About 200-250 are permanent. I am employed directly by the company. Among the subcontractors the rate is Rs. 4,200 for 8 hours and they give around 3,500. I earn Rs. 9,000 per month. For 8 hours plus 4 hours overtime daily shift. One week night, one week day shift. There is forging work in the factory, so the furnaces are on and there is fire. This is hard work and the workers have problems. There is a lot of work. The factory runs for 24 hours, even on Sundays. After 12 hours work, I sleep for 4-5 hours and sit with my family. I just have to go to work and eat and sleep.

I work on a CNC machine. After you set it, it runs by itself, and you don’t have to do anything. I have done a diploma in machining. It takes about 2 years to get this diploma. The course costs about Rs. 30,000. With a diploma you can get a job for Rs. 8,000 – 10,000 for 8 hours work. I worked there since 3 months. Before that I was training. The actual work can be done without doing the course, but it would take time.

My father works for the Electricity Board. So he is the only one who does not live in Allahabad. His brothers still live there. My wife still lives there, too. I am a Brahmin, but in the factory there is no difference between castes. Here in the bastis [workers dwelling], people think according to castes and this makes a difference. It makes a difference in terms of
eating. We eat separately. We don’t eat meat whereas people of lower classes eat meat. I like it when people mix and eat together. That is correct.

The first time, after I came from the village, I found the environment in the city strange. Finding a job is difficult; I came here to work for 7-8 months and then go back and come again. In the city, the ways of living and eating are strange. There is no time to eat or sleep. You get up to go to work, have a shower to go to work, eat to go to work. Nothing is left for one’s own life.

I had learnt sewing work for 2 years in the village. I was 12 years old then. I was 14 and a half years old when I came here. I did not come to the city on my own. I had a relative – my father’s uncle’s son. I came with him. He taught me the work for 7-8 months. I lived with him for 3-4 years, after which I started to live separately. Since then I have been in this place.

The first job was hard. For 6 months I worked continuously from 9:00 a.m. to 1:00 a.m. No, there was no holiday. Because of that I had health problems – breathing problems. I had to be treated for 1 year. I spent more than I earned on my treatment. Now I am alright. After 6 months I worked in another factory J P Export until I was 15. Then I was 15. Then I worked for 2 years in Liliput Kidswear. Now, since 1 year, I have been working at Unistyle Image. I worked in 7-8 factories altogether, in the last seven years the wages did not increase. I was never made permanent – it has been just like this. I am 22 years old now.

In a year we work for at least 10-11 months and spend one month in the village. And that too – we go for a week or 15 days every 3-4 months. We go for one week and then come back. It is not convenient. There are some people who go back to the village after 5 years because nothing changes there – it remains the same. So people go home according to their need. Those people who have a relation to the village, because of parents, they stay in the village for 2-4 months. They work only for 6 months. Those who do not have money they go to the village after 9-10 months or 4-5 years. Somebody who comes from Bihar, it is difficult for them to go back every 3 months. He earns Rs. 3,000 and can save Rs. 1,000 or Rs. 2,000. The train fare costs Rs. 1,000 or Rs. 2,000. So he won’t go. My village is somewhat close. It costs only Rs. 150, so I go often. But
for those whom it costs Rs. 500 – Rs. 600 and it takes 36 hours, they do not do this so often.

Somebody who is old – 45 years, they can't do much work so why should anyone harass them? And the older you get, the less capable you are of working. Now, when I am 40, I will not be able to see the sewing, I will be practically blind. Because the threads are fine – it is detailed work. So I have to think what I will do after this. We'll see. Some people go back to the village and do farming.

Normally I earn Rs 5,000 – 6,000. I pay Rs 850 for rent. We are three, so my rent costs are Rs. 300. For food I manage in Rs. 2,000 – Rs, 2,200. If you smoke and drink, those expenses can be increased as much as you want. But I live simply so I manage within Rs. 2000. If we fall ill, there is no telling how much money we will need. One does not know what the doctors will charge. If someone earns Rs. 6,000, he can save Rs. 3,500. I have to send some money back home.

The government has been raising the daily wage, but the wages you earn from piece rate have been coming down. And I have so far worked on piece rate. Seven years ago, the Delhi rate for 8 hour week was Rs, 3,200; now it is Rs.4,550. For example we can say that 20 years ago, all workers were permanent. Perhaps 10 years ago about half were subcontract workers. Now perhaps 80 per cent of the workers are subcontracted. But compared to earlier times, the earnings have gone down.

Previously, the machines were run with the feet. Now there is a computer machine in which we do not need to cut the thread. The computer machine is safer and faster. Whereas with the previous machines we could make 7 pieces, with the new machines we can make 10. We can make 3 pieces more. Where you got Rs 12, you can now get Rs. 36. The problem is to have to sit 16 hours in one place. It is a difficult situation but we are forced to sit there because the company puts pressure on us. If we don't do it, we will have to leave the company. So we do it in order to be able to live. The atmosphere between the workers is okay, but sometimes there are tensions. Some workers get more work and others less. It is piece rate so if someone gets 10 pieces while another one gets 20, and so the workers will talk why someone got more pieces.

To improve their lives, the workers believe in one thing only – that what is written in their fate – just that will happen. This is their only target. If
they are fated to do 12 hours work, then it is useless or beyond their thinking to ask what they can do about it. Life has not improved, rather it has become hell. And it is deteriorating because work is decreasing. There is one company that is being closed down and everything is being sold. In the next 3-4 years, work will decrease and the situation will become very bad. We will move from company to company. 15 days here and then move. We will manage to earn our bread but where we used to get Rs. 5,000 – 6,000 we will get Rs. 4,000. Finding another job is difficult because you have to learn the job. When you see another person doing it, you think it is nice work but as soon as you get in, you find out that it is rubbish work.

The workers feel angry, but there are supervisors standing there all the time. And they have no shortage of workers. If one leaves, there are 10 to take his place. If you do not meet the target, they will remove you and somebody else will take your place. And the workers are always changing – nobody is permanent. Today you come back from work, but there is no guarantee that tomorrow you will have the same work. So it is pointless to think about the future. The workers here keep going on in these conditions. If there is little space to breathe, he wants to cope there. So there is no hope because we do not know what will happen tomorrow.

In 7 years, this is the only factory I have been to where workers stop working, because they offer to pay Rs. 10 per piece and we say this is too little and they say they will not increase it. So we stop work. Then through negotiations, they increase it by Rs. 1 or Rs. 2 or Rs. 4. When we see that this will give us Rs. 200 – Rs. 250 more, we start working again. Recently they offered Rs. 28 for a piece. We stopped working so he increased it to Rs. 32, then offered Rs. 35. We still did not work so he eventually offered Rs.37. In this, there are 50 people who do the sewing. They were all involved.

In total about 100 workers work in the factory of which 50 are tailors, 20 ladies who cut thread, 15-20 in ironing, and helpers. The tailoring craftsmen fought for their rate, the others did not take part. They are mostly subcontractor’s workers. And they also tell us, “You are craftsmen. If you leave here, you will get another job. We will have difficulties in finding a job. We are fine the way we are.”

We were not too afraid to go on strike. Our work is so insecure that we,
who work in piece rate, we don't know when they will throw us out. Some people did fear that they might lose their jobs. But we work on piece rate so that if there is no work tomorrow they will get rid of us anyway. That is why when he refused to give us the rate we asked for, we asked him to settle our accounts. As he was preparing to release us, the man in charge of production came and said he would give Rs. 37. So the work started again.

No, there was no leader. There were 50 craftsmen. When it was lunchtime at 3 o’clock, all the craftsmen went outside and talked with one another that the rate was low and it should be raised otherwise we should stop working at 3:30. So everybody went inside and stopped working. When the supervisor asked us to work, we said “First increase the rate”. There was no need for a leader. And there was no agreement with the management, only with the contractor. The management says they do not have anything to do with us. The owners have nothing to do with us. We are subcontract workers so the subcontractor comes and talks to us. There are two subcontractors. They talk to the management. The management never talks to us, whether we work or not.

We won Rs. 100 for every 12 hours. Once the rate is agreed it stays the same for that production [order]. Because the orders are for 2,000 – 4,000 pieces. What is being made now, there are 12,000 pieces and for these pieces the rate we have agreed that will apply. But the biggest problem is that there is a vast supply of workers. So it is difficult to think how to do this. With us it was that we were making the full piece. In other places it is done in a production chain so you cannot do it. With the full piece you can stop work. In many such factories, which work on piece rate, this kind of thing goes on constantly. There is always disagreement over rate and they increase the wages by Rs.2 – Rs.4. And the workers manage to get something. But the trouble with piece rate is, today there is work and tomorrow not whereas those who are on salary, they get it regularly. But it evens out. The salaried workers earn Rs. 5,000 and we earn Rs. 5,000. But in piece rate there is tension and there are targets.

The labour power, when the workers want it, everything is possible, but they have constraints – there is a wife and kids. When we stopped working for 4 days our wages were increased. If everybody became like this, conditions can become better. But if the workers have a tiny
breathing space, they try to manage within that. So how can you talk to them, they are not even prepared to think like that. And one cannot hope that there will ever be a revolution. What should I say? If the worker unity happens we will see. This is a very old tradition and it will take time to get rid of it.

In the sewing department 300 craftsmen work – we are tailors. Then about 250 in pressing, then about 150 in the cutting department. Normally at 9:00 in the morning we start and at 8:00 p.m. or 9:00 p.m. they let me finish. Normally on Sunday, they don't let me off. No holiday in a week, not even in a month.

It is very simple. If we work hard for 16 hours, we go straight to bed and sleep. We eat and drink whatever is there – hot or cold – and go to sleep. If we feel exhausted, we go and get a medicine for bodyache and go back to our job. If you don't turn up for the job, you will get thrown out. If you get there in time, they enter your attendance, then they make you work. And suppose you worked till 2:00 a.m. through the night yesterday, your body hurts – it does not matter. They get the same amount of work from you.

With the body, it is that suddenly my stomach started to hurt. I took a tablet and went to the company. I sit at my machine, but if output is less, this does not suit him. He wants to get maximum work, according to the target. He wants to have as much target from me today as he had yesterday.

There are many complaints. They do not give us clean water to drink. By drinking dirty water we catch a cold, or get a fever and headache and many things go. Also because of the lack of hygiene in the toilets, we get health problems too – malaria, tubercolosis or something else. If you work 16 hrs non stop, without proper food and rest, it is simple – you will get tb.

The body does not co-operate. How can the body co-operate, because you take 16 hours work from it. If you work with the body properly and give it proper rest, there is no problem. But it is very simple. We get Rs 4000 – Rs 4300 salary. If the company does not give us overtime work, just Rs. 2,000 is the cost of our room and food. If on top of that we take away Rs. 500 for other costs, then Rs 1000 – Rs 1500 are left. And we cannot do anything with that. So we do overtime in the interest of
earning more money.

It is not a rule to work till 1:00 a.m. I can finish early. The situation as it is in my house. In my family, I have registered my children for school and college. To educate them and keep them well, to clothe them, I will have to work, even though it is a lot of stress for me. It might kill me but I will keep working. It is like this. For others, for our parents – for their poverty, to give them money for food, this is why I must earn.

My heart says, “Okay, let’s work till 1:00 a.m. because we do not get double time but single time. Three hours overtime is not enough. We must put in 6 hours. So we have to stay back until 1:00 a.m. When we work till 1:00 a.m. we will fall ill, and have other problems with the body. And so the money we earn with overtime, will get spent on medical problems. So our need is that the salaries should be better. If it is now Rs 4,000 it could be raised to Rs 5,500. Then we will have no need to do overtime.

I see that one year after starting a company the owners can buy three other companies, and think about putting in more machines. So much profit they can make.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers up-rooted by the rural crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, new industrial zones turn soil into over-capacities. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Workers in the Automobile Supply Chain: Reports and Interview –

Gurgaon is location of the world’s third biggest car plant and two major motorcycle factories. We document eleven workers’ reports from the automobile supply chain, given to Faridabad Mazdoor Samachar in autumn 2010. From a Honda workers report:

“Until May 2010 production target was 1,025 motorcycles per shift, since
April 2010 it is 1,075. In May even the former target of 1,025 could not be achieved – given strikes at the one or the other part suppliers. Due to lack of parts workers have to sit idle for one or two hours, per shift we manage to assemble sometimes 600, sometimes 700 cycles. And given that the workers did not fulfil the fixed target, Honda management cut money from all workers’ May wages.”

We also publish a translation of a recent interview with a Rico union official. The Gurgaon Rico Auto dispute ruptured the global supply-chains and brought assembly lines of GM and Ford in the US to a halt. The original interview has been published in the first issue of Sangharshrat Mehnatkash.

*** Private Exploitation and Police Raids: Reports on Domestic Work in Delhi/Gurgaon –

We summarised two reports on situation of domestic workers in Delhi and Gurgaon. The ‘decadent’ character of the boom since 1991 increased the numbers of domestic workers: the lack of other job opportunities and the demand of the waged middle-classes pushed a lot of mainly migrant workers into the private urban spheres. The regime keeps pressure on the migrant work-force and their wages by threatening them with regular police raids. The last excuse of mass police operations was the ‘public safety’ during the Common Wealth Games.

*** Gurgaon Garment Factory Workers’ Reports –

After the Viva Global / Marks and Spencer dispute in August and September 2010: exploitation continues in Gurgaon’s and Manesar’s industrial areas. We document short reports from Gurgaon and photos from a Viva Global Workers solidarity action in London.

2) Collective Action –

Reports on proletarian struggles in the area

*** A lonesome, brave action of Gurgaon security guards at India Bull-

A short report about an invisible, unspectacular, but potentially widespread form of working class collective action.

3) According to Plan –

General information on the development of the region or on certain company policies
*** Urbanising Disaster / News Rubble from Gurgaon –

Gurgaon/Delhi: slums growing – unsold homes piling up – SEZ turns into real estate – farmers sell land for nuclear plant – with the help of Haryana’s holy trinity of state/private property developers/village councils – the gated communities protest against ‘collapse of governance’ – brand-new highways turn into permanent jam or killing fields – 100 workers died for metro-train construction – police raids against migrant workers in the name of public safety… news rubble from the disaster-zone of urbanisation.

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –

This is an attempt to introduce a regular update on general tendencies of crisis development in India – motivated by Greek shock-waves, naked shorts and potential spillovers.

* The Macro Crisis September / October 2010 –

We start with a look at India’s position in the global ‘currency war’: increasing inflow of hot money, high inflation despite hikes in interest rates, appreciation of the Rupee, therefore growing trade deficit and state debts. The abstract puzzle of shifting mathematical factors is an expression of social struggle: who will bear the social tension necessary to keep up in the air a huge bubble of over-accumulated wealth, toxic credits, state bonds – high enough to be able to look out for the tiny spots of profitable investment around the globe? Who will have to sweat for these profits, whose wages will be eaten up by tense inflation, who will lose jobs due to swamped markets and bubbled up currencies, who will default and live in misery in the face of potential abundance?

* The Punjab Crisis –

In October 2010 the trickle-down effect of (international) debts lead to a de-facto announcement of default by the Punjab state government. The central state offered to waive half of Punjab’s state debts in return for a structural adjustment program: an adjustment which first of all forces the local state to tackle farmer’s debts more fiercely. In mid-October we hear about killed farmer’s union leaders who defied the repossession of indebted farmers’ land.

* The Food Crisis and Social Death of Peasantry –
Some news-items on increasing proletarianisation of farmers, on the neo-liberal hybrid illusions of the Second Green Revolution and it’s post-neo-liberal reality. Some news on the difficulty of the state to balance the commodity prices of agricultural products in times of peasantry crisis, global speculation of food prices and the looming danger of proletarian food-revolts. We see how the cocktail of hot money and increasing interest rates turns lethal in the form microfinanced rural suicide.

* The Generalisation of Class Struggle –

The ‘totality of capital’ seems blatant: global supply-chains and global (micro)finance bridging town and village, multi-national corporations combining locations of different sectors and stages of development. Seeing it detached from it’s mobile existence as the ‘living element’ of capital – meaning: seeing it through the lens of the institutional labour movement – the world of the working class is nothing but fragmented. Task of communist collectives today is to discover the social dimension and potential for generalisation within workers’ experience and struggle. At this point we can only superficially hint at some ‘clusters of proletarian reality’, which might become of major importance for the generalisation of future struggles beyond the rural/urban and national/international divides: news on the struggles against ‘destructive development’ in the mining and forest belts, struggles within the rural employment schemes and struggles in the multi-national industrial centres, like Chennai.

4) About the Project –
Updates on Gurgaon Workers News

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

The Maruti Suzuki car plant in Gurgaon is said to be the third biggest car factory in the world. In September 2010 Maruti announced to open a third assembly plant in Gurgaon/Manesar district, which would raise capacities to 1.75 million per year. Maruti Suzuki recently became more
intertwined with global automobile capital: Volkswagen bought 20 per cent of Suzuki. From an article: “VW is selling greater volumes in China so Suzuki can use components from China through VW; this will bring down costs. But whether Suzuki makes common use of VW in China of VW uses Suzuki to source components from India ... there has been no discussion between the two partners on this as of now.”

We document short reports of workers in the automobile supply-chain, followed by an interview with a Rico union official. Rico Auto workers were locked-out in September / October 2010. For some background information see:

GWN 22

* Automobile Workers Reports

Honda Motorcycle and Scooter (HMSI) Worker
(Plot 1, Sector 3, IMT Manesar)

The company hires ITI workers through contractors. After a year of employment the company enforces a break of 15 days, then some workers are hired as ‘re-joining’, other workers as ‘new joining’. Three months after re-joining you have to pass a test. Last year 490 workers went through the test. Only 26 workers hired through contractors were made company casual workers after this test. After two years of being casual the company might think of making workers permanent... In 2005 there were 1,700 permanents in 2010 there now are 1,800. This year there have been no tests – once the company has started production in the new plant in Bhiwari there might be new tests. There are two shifts. Until May 2010 production target was 1,025 motorcycles per shift, since April 2010 it is 1,075. In May even the former target of 1,025 could not be achieved – given strikes at the one or the other part suppliers. Due to lack of parts workers have to sit idle for one or two hours, per shift we manage to assemble sometimes 600, sometimes 700 cycles. And given that the workers did not fulfil the fixed target Honda management cut money from all workers’ the May wages. The workers hired through contractors are granted 29 days holiday per year, but at the same time they warned that whoever takes more than 15 days will not be ‘re-joined’. Well, they don’t even give you 15 days holiday. You cannot take holiday
right away, you have to announce it two weeks in advance, fill in an ‘emergency form’, in the sense that your grandparents must have died. If you are ill or have to take sudden leave for other reasons they call it ‘unplanned’ holiday and threaten you with the sack. Nowadays there are 1,800 permanent and 6,500 workers hired through contractors in the production departments. The permanents mainly work as supervisors, as ‘relievers’ [for people absent from the lines] and as replacements for people on unplanned leave. The actual production work is mainly done by workers hired through contractors. In the motorcycle engine department there are 4 engineers, 12 permanent workers and 110 workers hired through contractors. The permanent workers get 18,000 Rs wage and 10,000 Rs incentive, whereas the workers hired through contractors get 7,500 Rs. By cutting ESI and PF the 7,500 Rs are turned into 6,250 Rs and this wage is paid for ‘achievement of full target’ – in May 2010 the company paid 5,900 Rs. The work-pace at the lines is unbearable for an 8-hours shift, nevertheless workers work up to 150 hours overtime per month. Hardship forces them. Overtime is paid 35 Rs per hour, while workers at Hero Honda in Dharuhera factory get 50 Rs. There are two sorts of workers also when it comes to overtime...

Omax Auto (Honda, Hero Honda, Suzuki) Worker
(Plot 5, Sector 3, IMT Manesar)

In the factory work 70 permanents, 80 casuals and more than 1000 workers hired through seven different contractors, producing parts for two-wheelers. There are two shifts: 7 am till 5:30 pm and 5:30 pm till 7 am. Workers work on piece rate, the company kicks them out once daily production target is finished. Some 200 workers are kicked out at 2 am, others at 3:30 am. These workers have difficulties to reach home at night, living in the various surrounding villages. The permanent workers undertook some steps in order to form a union. All workers gave 300 Rs, on three different occasions, so 900 Rs in total. In the paint-shop – opened in August 2003 – the company used to employ workers directly. In September 2009 the paint-shop was handed over to a contractor. Some of the permanent workers were kicked out, some were transferred to the welding department, some were transformed into workers hired through contractors. In November 2009 the union got recognised, but the union flag was not hoist. Accusing him of theft the management kicked
out the union president. In response the factory was kept close for two days in January – those workers who were inside stayed inside, those who were outside remained so. Demands were put forward: take back the union president; increase the wages of the permanents by 6,000 Rs, of the casuals by 4,000 Rs, of the workers hired through contractors by 3,000 Rs; make 40 workers permanent in the first, 20 in the second and 10 in the third year; provide buses for transport; improve the canteen...

They took back the union president and started to increase the wages of the permanents, by August 2010 their wages were increased by 2,400 Rs. They did not make anyone permanent. There are no buses. Those workers hired through contractor working in the plant for more than 5 years got 200 Rs wage increase. The others got nothing. In total 300 workers got something out of it, 900 workers got nothing. Amongst us – who paid 900 Rs for the union formation and got nothing out of it – there is no one who would continue paying the union dues. In June, when people wanted holiday for weddings or other reasons, the company refused to grant days off to the workers hired through contractors. The union president said that he cannot do anything about it. About 70 to 80 workers handed in their notice and went back home to the village. The contractor did not pay the outstanding wages (18 days paid holiday and one month wage bonus). Now they give enforced breaks to all newly hired workers after six month of employment.

Munjal Showa (Hero Honda, Honda, TVS, Suzuki) Worker
(Plot 3, Sector 6, IMT Manesar)

There are around 40 to 50 permanent workers, around 500 casual workers and 1,500 workers hired through 15 to 20 different contractors. These workers manufacture shock-absorbers for Hero Honda, Honda, TVS and Suzuki (motorcycles and scooters) – on three 8-hours shifts. Bank holidays are not paid. The factory was closed from 24th of December till 1st of January – this period was not paid. The casuals and workers hired through contractor are not paid the statutory bonus. Per month people work 40 to 100 hours overtime. Most workers get 20 Rs per hour overtime, some get 30 Rs. The casuals are given an enforced break after six months of employment, they are not re-hired as casuals, but through contractors. If they have hired too many and there is not enough work people are sent back home – the newly hired contract workers are
sent back on ten days per month on average. For two thousand workers there are only two drinking water devices – you have to stand upright at the lines all the time. Most workers drink warmish water from the tap. The toilets are dirty.

JV (Maruti Suzuki) Worker

(Plot 113, Sector 3, IMT JManesar)

On a single 12-hours shift 150 workers manufacture parts for Maruti Suzuki. The wages of the helpers and machine operators is 4,214 Rs. The overtime payment for the helpers is less than single rate: 17.5 Rs per hour. There are only 14-15 permanent workers, the rest are all casuals. There are 20 power presses. Accidents keep on happening, people cut their hands and are sent to the ESI. If their injuries are minor, e.g. if only one finger is injured, they are taken back on. If the injuries are more severe, they are kicked out.

Krishna Maruti (Maruti Suzuki) Worker

The factory is on the premises of the Maruti Suzuki factory in IMT Manesar – at gate number 4. In the moulding division 250 workers manufacture plastic fibre parts for the inner lining of Maruti Suzuki cars. They work on two 12 hours shifts. The overtime is paid at single rate, around 20 Rs per hour. All workers are hired through two different contractors, only the 25 – 30 people of the middle-management are permanents. Whether helper or operator, all are given the ‘unskilled’ grade. Those operators who work there since two or three years get 200 to 300 Rs more per month. If you have full attendance you get 350 Rs extra, if you take a single day off they cut 350 Rs from your wages.

Track Components Worker

(Plot 21, Sector 7, IMT Manesar)

Only the staff (middle-management) is hired by the company directly, 700 workers are hired through three different contractors. There are two shifts, the day-shift is 10.5 hours the night-shift is between 11.5 and 13.5 hours. The overtime is paid less than single rate. From wages money for ESI and PF is deducted. Even after years of employment an ESI card is not given – they issued a blank card once, but they ceased to do even that. The statutory bonus for 2008 was paid in March 2010, and for people who have worked the whole year the bonus was only between 1,000 Rs
and 3,500 Rs. There is always trouble with wages for paid holidays – they say: “Don’t ask, take what you are given”. The production increases. After they increased the work load of the newly hired workers in the welding department they now ask the old workers to also increase their load. If you ask for more money in return they say that you don’t have to come back the next day, that you can look for a different job. In the factory there are 42 power-presses. In order to increase production, the safety devices have been removed. With the safety guard in place you were able to churn out 2,000 pieces, after having removed it even 4,000 pieces. In order to keep production running the machines are not even switched off for the allotted time for maintenance. Due to the lack of safety, the lack of maintenance and the work pressure a lot of hands get cut. If you cut your hand they send you to an ESI... and then sack you. The factory manufactures silencers for cars and motorcycles. After end of shift it can take up to an hour to leave the factory – workers have to queue up and leave the plant very slowly.

Kalpana Forging (JCB, Maruti Suzuki, Mahindra, Hero Honda) Worker

(Plot 35, Sector 6, Faridabad)

The factory runs every day, 24 hours. 400 workers manufacture parts on two 12-hours shifts. The operators work 150 to 225 hours overtime, paid at single rate. There are 200 helpers, for 30 days of 12-hours shifts they get 5,500 Rs. Only 100 to 125 workers get ESI or PF. One hand gets cut at the power presses every month. They don't fill in the accident report. They send the injured workers to private treatment and then sack them. There is no ambulance. There is no canteen. They give you one tea and one biscuit for a 12-hour shift, if they make you work longer than 12 hours they give you 25 Rs for food. The drinking water is bad. The toilets are dirty. One of the managers swears a lot at the workers.

GL Autoparts (Hero Honda, Yamaha, Honda) Worker

(Plot 14 b, Industrial Area, Faridabad)

Out of 700 workers employed 600 are hired through five different contractors. These 600 workers are graded as helpers. The women workers get 2,700 to 3,000 Rs, the male workers get 3,000 to 3,500 Rs. No worker gets PF or ESI. There are two 12-hours shifts, but often they make you work longer. Overtime is paid at single rate. The wages of the
workers hired through contractors are delayed.

**Sanden Vikas (Maruti Suzuki, Tata, Mahindra, Hindustan Motors, Honda) Worker**

(Plot 65, Sector 27 a, Faridabad)

Around 60 permanent and 400 workers hired through contractors are employed. They manufacture air conditioning systems for various automobile companies. Officially there are two shifts: from 6:30 am till 3 pm and from 3 pm till 11:30 pm. Actually the workers hired through contractor work from 6:30 am till 7 pm and from 3 pm till 6:30 am. These workers are forced to work 8 to 12 hours on Sundays, as well. They work 200 hours overtime per month, paid single rate. Leaving 12 of their workmates alone and suspended, the rest of the permanent workers entered the factory in February 2010, after a strike. They entered with the promise of labour officers and representatives of the management, that everyone will get their job back and that there won’t be any sentiments of revenge. The management has actually taken eight workers back on, but an internal investigation has been started to decide about their future. Four workers have been sacked and remain outside.

**Rajhans Industries (Honda, Maruti Suzuki, Orient Pankha) Worker**

(NH-2, opposite Grain Warehouse)

In the two plants opposite the Grain Warehouse more than 400 workers are employed. In the machine shop two 12-hours shifts rotate, in the other departments there is only one 12-hours shift. There are more than 300 workers hired through contractors. The male and female helpers get 3,200 Rs, the press operators get 3,500 Rs. Overtime is paid at single rate. About 400 to 500 Rs is cut from wages for ESI and PF. If you leave before six months of employment they won’t fill your PF document. there are a lot of accidents at the power presses.

**Hyundai Superon Worker**

(255 Udyog Vihar Phase 4)

The middle-management of the showroom is hired directly, about 200 workers are hired through contractor. The wages are 3,500 to 4,000 Rs. In the second week of July the labour inspector came for a visit – he did not speak to the workers, he only met the officers and left again.
Rico Auto Workers Interview

We translated an interview with an union official at Rico Auto Industries in Dharuhera – flaws in the translation are due to our own shortcomings. Parts of the interview refer to the Rico strike at the Gurgaon plant in 2009. We published more critical comments on the strike in previous issues. The union official mentions the need for workers’ unity several times. The bases for workers’ unity is undermined in the very same factory where he works: while permanent (unionized) workers are paid between 14,000 Rs and 24,000 Rs the ‘other half’ of the work force – hired through contractors – receive 4,125 Rs. The current wage agreement increases this division. Besides, the actual wage increase negotiated in the agreement is very likely to be below inflation rate. The basic wage is increased by around 5 per cent in the first year (basic wage plus bonus by around 12.5 per cent), by 3 per cent in the second (basic wage plus bonus by 8 per cent) and in the third year by 1.25 per cent (basic wage plus bonus by 3.1 per cent). When referring to the struggle at Rico Auto in Gurgaon we see the current difficulties of traditional union struggle: many of the ‘militant’ permanent workers became disillusioned and took the offer of Voluntary Retirement Schemes.

Without unity within the workers’ movement it will not be victorious –

Interview with official of the Rico Auto Workers Union (Dharuhera, Haryana)

From: Sangharshrat Mehnatkash Issue No.1 – September – October 2010

Contact: mehnatkash2010@gmail.com

Q: What factory do you work in and who is the boss?

The factory we work in called Rico Auto Industry Ltd. and the boss is Arvind Kapoor.

Q: How many plants does Rico run in India?

Currently Rico runs four plants. Out of the four factories three are in Haryana (Dharuhera, Gurgaon, Manesar). The fourth factory is in Ludhiana, in Punjab. Apart from these plants Rico runs factories in collaboration with other companies. In Manesar (FCC Rico and Jinfei Rico), Dharuhera (Magna Rico), and in Rajasthan (Kebros).
Q: What does the factory manufacture and what is its annual turnover?
We manufacture clutches, panels, hubs, gears, sheet drums, driver lenses and other parts for Hero Honda. Apart from that we produce rear grips for Honda and fuel/oil pumps for Maruti Suzuki. Last year’s turn-over of the Dharuhera plant was about 260 crore Rs.

Q: Including all categories of workers, how many people are employed in the factory?
There are 335 permanent workers, 28 casuals and 300 to 325 workers hired through contractors.

Q: When was your union established? Did the initial establishment of the union involve struggle with the management?
Our union was set up in 1998. When we tried to form the union, the management was against this and management also refused a wage revision. For these demands we went on strike for one week. In course of this movement twelve workers got suspended for three months.

Q: Could you say something about the important movements fought on behalf of the union?
The first movement immediately after the formation of the union was about the wage agreement. As a result of this movement the management accepted a wage settlement of 1,330 Rs and the payment of incentive bonus. We were also successful in getting the 12 suspended workers back to work and in getting permanent contracts for 1106 casual workers. The second wage agreement (2001) brought 4 per cent annual increment plus payment of 1,850 Rs. The third agreement (2004) 5 per cent annual increment plus 2,150 Rs and the fourth (2007) 5 per cent plus 3,050 Rs. Today the minimum wage of a permanent worker is 14,000 Rs and the maximum 23,000 to 24,000 Rs. In addition, with each agreement some workers hired through contractors were made casuials and casual workers were made permanent. Currently the workers hired through contractors get 4,250 Rs per month.

Q: Does your union currently put forward any demands?
Yes. We currently demand a wage settlement. Our demand is that workers should get a minimum of 25,000 Rs.

Q: How did the extensive movement in the Rico Gurgaon plant start and
around which demands?

We demanded union recognition and a wage revision. Dissatisfied with their situation the workers wanted to establish a union. The management said: “Form a workers’ committee.” But the workers applied for union recognition. The management reacted by locking-out workers and by suspending 16 of them. This triggered the movement.

Q: What is your opinion concerning this movement at Rico Gurgaon?

The movement started by the Rico Auto Employees Union at the Gurgaon plant encouraged workers in the whole region of Gurgaon. They went on strike for 46 days. Given the pressure of this movement, management and government had to bow in front of it – because the movement got support from workers in the whole region. The seven – eight unions present in the area fought shoulder by shoulder. On 20th of October 2009 around 100,000 workers of 70 to 80 different factories went on strike. But the AITUC leadership did not really give full backing to the workers. The AITUC leadership tried to claim all the merits of this movement for themselves, which lead other unions to withdraw. The management and government then realized that the strike lost in strength. They saw and took the opportunity to encircle, suppress and attack the workers. This is why the movement was not able to be completely successful.

Q: We have heard that nearly all those people who had important roles in this struggle have left the job. Why was this?

This is a wrong information. Out of the 116 suspended workers 9 went back in. After having sacked the main leaders the management came up with a Voluntary Retirement Scheme. Around 100 to 125 workers took the offer. Because once a union file is rejected you won’t get a second chance. Out of pain and hopelessness some people then took the VRS. Some of the leaders have taken money and they were greedy. The shortcomings of the workers advisors were also not neglectable.

Q: According to your opinion, to which extend is the AITUC leadership responsible for the contemporary defeat of the movement? How do you see the role of the workers in this movement?

The AITUC leadership slowed down the pace of the movement at a time when it needed to be more determined. The unity between the various
unions, which emerged during the movement would have had to be fortified. The AITUC leadership disregarded this unity, it therefore broke. Inside the factory management managed to get production going, protected by the police. The management of Honda and Maruti also supported Rico management at that point. Given these facts it became difficult to keep the struggle, which happened outside of the factory, running. They were forced to come to an agreement without the 70 suspended workers.

Q: What do you think is the impact of the unsuccessful outcome of this struggle on the wider workers’ movement in Gurgaon? And will it be a long-term impact?

All in all, the struggle also had beneficial results for the workers. The struggle has spread quite a lot between different workers. Within these wider work-force the consciousness/awareness increased. In a lot of factories workers put forward the demand for union formation. In some cases unions have been established. But after the struggle, the agreement settled by the union leadership created an atmosphere of hopelessness among the workers. This gave a blow to the movement. Some workers left the job. But there has also been a damage of 200 to 250 crore Rs to the bosses.

Q: The end of the struggle at Maruti Suzuki has been similar. What impact does remain of this? What kind of difficulties does your and other unions have to face due to the outcome of the struggle?

After the defeat of the Maruti struggle in 1999 the situation became very bad. The rate of settlements [wage increments?] decreased. The period of governance in Haryana under Chautala’s BJP and Bhajan Lal’s HJC was also bad. Initiated by the Huda Congress government some agreements were settled. For whatever reasons.

Q: What kind of impact does the struggle at Honda [2005] still have?

After the struggle at Honda in 2005 the atmosphere changed. In order to appease the situation the Honda management was forced to come to a settlement. The consciousness within the unions increased after this struggle. The process towards unity was fostered. After the incident at Pashupati [several workers killed by police after strike in Dharuhera] in 1998 a Trade Union Council had been formed. An Action Committee had
also been founded, but this initiative was not driven further. After the Honda struggle a general union committee was formed. This has increased the pressure on the government.

Q: What other struggles in India have encouraged the local workers’ movement?

The struggles in Nandigram in West Bengal have encouraged workers here. But the fact that Tata has left Singur has damaged the reputation of the left.

Q: Can you give us any insights concerning the unsteady or disorderly mentality of workers in Gurgaon when it comes to the issue of union formation or other struggles for their interest? Instead of seeing the necessity of a long-term struggle do they become entangled in erratic efforts?

It is not so much a question of disorder than of lack of knowledge. People say: “Form a union and everything will be alright.” But there is little readiness to see it through. The responsibility of a leadership is to tell workers about the importance of unions. This problem became visible during the recent dispute at Denso factory. There, workers earned 18,000 to 20,000 Rs per month all additional benefits. The AITUC leadership said: “Form a union”. The process for union recognition had just started when 20 people got suspended. At this point the AITUC withdrew their support. The strike was broken. All but 20 to 22 people went back inside the factory.

Q: What kind of wrong inclinations or tendencies do you see within the workers?

Workers fight once they are forced to do it. But once a settlement is reached they forget about union unity and the importance of the long-term struggle. While on the other side, management keeps up its readiness to suppress workers at all times. There is a tendency of workers to hand over / delegate matters to the comrades above them. When problems increase, the leaders are addressed. Therefore workers and lower ranks of leaders have a problem to understand and to have a long-term perspective of their movement. The management has educated and knowledgeable people. We don’t. When the struggle is on, we call all workers of this world our brothers. But once the struggle is
over we try to withdraw from this. Some of the higher-rank comrades have always been corrupt. But some of the lower-rank leaders also fall prey to lowness. But there are also courageous and militant people among them.

Q: What kind of future do you see for the workers’ movement in Gurgaon?

The future will depend on how a leadership will emerge.

Q: It seems as if the trade union unity in Gurgaon is becoming weaker?

We all put forward the slogan “Workers of the world unite”, but whether small or big, none of the unions put this into effect. This is the main obstruction on the path towards unity. Like the bosses act in self-interest, so do trade unions become victims of their petty self-interests. They don’t undertake the necessary steps towards unity. The big trade unions compete in order to take over the small unions and thereby set one group of workers against the others. This illness of the trade unions is the main reason for the divisions within the workers’ movement. As long as there is no unity within the workers’ movement, the conditions of workers will not improve.

Q: What do workers think about the industrial progress in the Gurgaon area?

Every worker in the region wants industrial progress. Because directly or indirectly they will find a job and income. But the bosses should also keep the workers’ interests in mind. Forced by exploitation workers had to embark on the path of resistance.

On 30th of August 2010 the workers’ union at Rico Auto Industries in Dharuhera signed an agreement with the management. Below you can find a summary of the agreement.

1. Both sides agree that the agreement will run for three years, starting from 1st of April 2010 to 31st of March 2013.

2. Both sides agree that in the period of the agreement the monthly wages and allowances of the permanent workers will increase by in total 5,100 Rs. The total increase will divided up into three annual stages, as follows:

From 1st of April 2010 to 31st of March 2011 the wage will be increased
by 2,550 Rs, of which the basic wage will be increased by 1,020 Rs. [...] 

We summarised two reports on situation of domestic workers in Delhi and Gurgaon. The ‘decadent’ character of the boom since 1991 increased the numbers of domestic workers: the lack of other job opportunities and the demand of the waged middle-classes pushed a lot of mainly migrant workers into the private urban spheres. The regime keeps pressure on the migrant work-force and their wages through regular police raids. The last excuse of mass police operations was the ‘public safety’ during the Common Wealth Games.

* In Defense of the Rights of Domestic Workers
Sindhu Menon, Vol. 8 Nos: 1-3, January-June 2010

In India, domestic work is a vast area of employment, but there is no precise sense of its exact size and extent. The estimated number of domestic workers in India is 90 million this is probably an underestimate because there has been no scientific study to document such workers in the country. “Around 50 lakh people in India keep more than two-three domestic workers as help,” says Harish Rawat, Minister of State for Labour and Employment. The rough estimate by the Task Force is that it has grown by 222 per cent since 2000.

Caste: A Big Barrier

Caste and language play an important role in the lives of domestic workers. Indian society is still far from being caste free; and although some changes have taken place in urban areas, most of the villages are still plagued by casteism and feudalism. Lower-caste families continue to work as bonded labour for upper-caste landlords. As domestic workers, they get only food and shelter. The entire family is supposedly ‘taken care of’ by the feudal joint families that employ them. The children too are not spared—at a very young age, they are taught to serve and not to question.

A Brahmin family still largely employs a Brahmin cook. A lower-caste woman is expected to clean the vessels, sweep and mop the floor, and wash clothes but when it comes to cooking, the upper-caste community still prefers to employ upper-caste cooks. Even in states that boast of high literacy, the majority of domestic workers are dalits or tribals and
they are conveniently understood to ‘prefer’ certain jobs. However, ‘preference’ for a certain kind of work is not theirs to express. “Although women migrate in large numbers to work in Delhi as domestic maids, Muslims and lower castes are not preferred,” says Bharti Sunar from Hoogly district of West Bengal. “The dooms, chamars and muslims are the worst affected. If you are dark, you will not get a job. One has to hide one’s caste identity, most of the time, to get a job,” says Bharti.

“Women change their dressing styles too; they wear bangles, put bindis, even if they belong to the Muslim community, and select a Hindu name,” she says. Thus, Jameela and Sheriffa become Sita or Geeta; their burkhas give way to sarees and mangalsootras-just to get work. “We are not cheating anyone. We do this because it is a question of survival,” says Nadira, a maid from Beghampur.

Bharti is a dalit (Dass) and her husband Ramkumar Sunar from Nepal belongs to the goldsmith (kshatriya) community. They stay with their children in Sector 9, Rajapur village. “My wife is dark and so people categorise her as a lower caste. It is difficult for her to get work as a cook. I am fair, therefore, I get work as a cook,” says Ramkumar. “Complexion plays a crucial role in getting a job,” says Bharti. “Though dark, I manage to get work because of my surname; most of them know that Sunar is a kshatriya,” she adds.

The upper class has enough education to identify the caste of workers; but their education does not result in the understanding or realisation that the barrier of caste is something that needs to be done away with if we as a nation have to progress. Unfortunately, their ability to discriminate between castes is applied only to deny those seeking work on the basis of their caste, or to use them only for cleaning toilets.

Caste consciousness is not only with those who hire domestic maids; it also exists in the minds of the workers themselves. “I will never clean the toilet, it is not my work; it is the work of the jamedar,” says Asha Lamba, a Nepali. A majority of the women interviewed have similar opinions. “Achoot logon ka kaam hai bathroom safai karna, hum nahin karte (Cleaning the bathroom is the work of untouchables; we will never do it)” is what they clearly say.

Language: Another Barrier
“When I came to Delhi, I barely understood Hindi. Slowly, I learned the language and now can communicate in Hindi,” says Maya, a maid in south Delhi. Maya is a Nepali and during her initial years in Delhi, communication was very difficult. “Nepali and Hindi have some similarities, but my cousin, who went to a Marathi family, had a tough time,” says Asha Lamba. “There are obvious differences in our use of the language, which differentiates us from upper caste women domestic help,” says Bharti Sunar. “It is the issue of survival; so we try our best to adapt to the situation by trying to talk like the upper castes.”

There are three types of domestic workers in the city: the live-in maids, the live-outs and the part-timers.

The Live-ins

Live-in maids are full-timers, who stay either in the servant quarters or within the house of the employer. “The work we do never gets over,” says Basanti Toppo from Jharkhand. Basanti came to Delhi with her sister in 2002. “We have to be available 24 hours a day,” says Himani, another domestic maid from Jharkhand. “We have to get up early in the morning and start our work. Often, when we go to bed after finishing all the work, some member of the house will come home late. We will then have to open the door, warm up the food, serve them, wash the utensils, clean the table and only then go to bed,” says Himani.

There is no accurate data on the number of live-in maids. The highly exploitative conditions in which they work can be understood only when someone comes out to tell her/his story. Every employer guards his/her privacy. Questions on the status and conditions in which domestic workers live and work are not entertained.

“The live-ins work in highly exploited situations,” says Sunita, the coordinator of the National Domestic Workers Union. “Accessibility to those workers is nil because they seldom come out or interact with others,” she adds. The case of Sumari, a young girl from Jharkhand, is one such case of exploitation.

Sumari has been bedridden for the last one-and-a-half years. Her body, from hips downwards, is numb. Her legs are getting weaker day-by-day. Her condition is the outcome of a suicide attempt. Sumari, beaten up by her employers, decided to commit suicide by jumping from the terrace of
the fourth floor of the house where she was working. The events leading to this are as follows:

Sumari worked as a live-in maid in a house in Janakpuri, West Delhi. She got the job through John Enterprises, a placement agency. Though the policy of the placement agency was to give workers only for 11 months, Sumari’s was an exception. She worked in the house for more than one-and-a-half years. The employers—both husband and wife—would scold her in abusive language and torture her unnecessarily; she continued working there doing all the household chores, till that fateful day, which changed her life drastically.

Another maid asked Sumari to carry her bag to a nearby house where some construction work was happening. The construction labourers saw Sumari and asked her where she was from. Sumari’s employers saw her talking to the workers and abused her in front of the workers and other neighbours. They dragged her inside the house and beat her brutally, all the while alleging that she was an immoral character. They then asked Sumari to cook the food and clean the entire house in half an hour, failing which she was threatened that she would be beaten.

Shattered and totally humiliated, Sumari started crying and went up to the terrace. The lady of the house followed her shouting abuses. In utter panic, Sumari jumped from the terrace. She was taken to the hospital and was admitted for two weeks. Later, John Enterprises took her to their agency office; since then she has been lying on the floor without proper treatment. The catheter through which her urine passes has become old and infected. She cannot move or get up; everything has to be done lying down. Her mother was called to the placement agency and is staying with Sumari.

“A staff member of this agency was my cousin. It is only due to his intervention that the agency brought me here. When he argued that I should be given better treatment, he was thrown out of his job,” says Sumari. The placement agency wants to collect more money from the employer and so is compelling Sumari to make false charges. The employers, on the other hand, say that if Sumari keeps her mouth shut, she will be paid compensation. “What the arguments are between the agency and employer I do not know. I’ll be happy if I die because I have been lying on this floor on a chaddar for more than one-and-a-half years.
I have bed sores. It is better that I die," she wails. She doesn’t know what to do. No one is there to take care of her. Her mother, a villager, who does not know Hindi, is confused.

Sumari needs treatment. She needs good food; at least, she needs to be able to return to her village. But nothing is happening. There are innumerable others like Sumari-beaten, exploited, sexually abused, raped or killed. These women are simply trapped and are known to no one but their employers.

The Live-outs

Live-outs are those domestic help, who report at their employer's house in the morning and return to their homes in the evening. In practice, however, nothing is defined. Live-outs, who work for one household, have to earn enough to pay their rent, electricity, water, food, fuel, transportation and other costs. “We are fortunate because the house we stay in is owned by my employer and so we have to pay only Rs 850 towards rent. Electricity and water are not charged.” says Julie Thigga, who stays in Jasola village near Apollo Hospital, New Delhi.

Julie came to Delhi nine years ago from Chirayya village in Jharkhand along with her husband Kaleb Thigga, who works in an export factory in Okhla. Julie’s first job was as a masseuse. She did it for the members of two to three households for a few months. Later, she managed to find a house in which to do household chores, and has been doing this work for the last eight years. Julie is paid Rs 1,800 per month for doing chores including dusting, cleaning, sweeping, mopping, cleaning utensils and washing clothes. Her work starts at around 9 a.m. and ends at 9 p.m. She is given breakfast and lunch. “Except cooking, and cleaning the toilets, I do all the work,” says Julie.

Nirmala, from Jharkhand, has been in Delhi for the last 15 years. She came to Delhi with a friend. Within two months, she got a job in a house in Sarita Vihar and, till date, she has been working in the same house. She works for eight hours, cleaning the entire house. She is paid Rs 3,500 per month. In spite of the fact that the nature of work which Julie and Nirmala do and the time spent are somewhat similar, there is a huge difference in payment. There are, in fact, no general standards for fixing the wages of domestic workers.
The Part-timers

Part-timers are those who work for two to three hours at a time in different houses. They work like machines, running from one house to another. They are paid according to the tasks they undertake; for example, they earn Rs 300 for sweeping and mopping, washing utensils and washing clothes whereas they earn Rs 200 for dusting. These rates also are not fixed. “Apart from the household work, our employers make us do many other jobs-cutting the vegetables, looking after the baby and, at times, running errands,” says Ellamma, a domestic worker. The worst part is that in the end, nothing is recognised. The workers are only cursed, blamed and fed with leftovers.

Placement Agencies: Boon or Bane?

Domestic maids in metros are largely migrants. Unemployment, poverty, loss in crops, mortgaged land, siblings to be married, death, sickness, etc., are some of the reasons that force these workers to migrate to cities in search of jobs. Many young girls are enticed by the lure of city life and the idea of getting some quick money. They are brought in by relatives, neighbours or friends from the same religion, community or caste. Placement Agencies are a relatively new phenomenon.

There are no rules or restrictions for setting up a placement agency. A majority of the existing placement agencies are fraudulent by nature. An agency is like an octopus. It entangles the girls in its tentacles, with no escape from its clutches. One agency in particular, John Enterprises, gave a clear picture of the atrocities perpetrated in placement agencies. It is located in Raghubir Nagar, Rohini, West Delhi. The inmates of the agency allege that the owner, Mr. John, and his wife are in Jharkhand jail for committing crimes of molestation, rape and kidnapping. Reportedly, Mr. John’s second wife is running the office in Raghubir Nagar. None of the employers for whom the agency has procured domestic workers could be reached.

Sushanti, and her brother, Bathru, have come all the way from Orissa in search of their sister Mubika, who was brought to Delhi by John Enterprises with an assurance of a job. Mubika has been in Delhi for the last one-and-a-half years. Till date, neither her parents nor relatives have spoken to her nor have they received any letter or money from her. “We have tried to get in touch with her. When any of our relatives or
neighbours comes to Delhi, we request them to meet her. But the
placement agency always refuses to allow them to meet her because she
is working in a household as a full-timer,” says Bathru. “My brother has
been here for the last one month and I came two weeks ago, but madam
has not given us our sister’s address. We don’t need her money. What we
would like to know is whether our sister is alive or not,” says Sushanti.

Placement agencies place workers on contract for 11 months. The
employers make payments each month for the workers to the agency
directly. After 11 months, when the girls wish to go back to their native
place and ask for their money, the agency does not give it to them. It
forces them to enter into another 11-month contract with another house
in another area. The agencies make sure that the girl does not run away
nor get close to the people who employ them. Sunita Sangre, from
Jharkhand, finished her 11-month contract and pleaded for at least a
ticket to travel back home. “This agency is very big and they recruit
women in large numbers,” says Sunita. “The agency people never check
how we are treated at our employers place. If the employer shifts house,
we are taken along with them; in such cases even the placement agency
will not know where we have been taken.” “Humare madat karne koi
kanoon nahin hai (There is no law to help us),” says Sangeeta, another
domestic maid.

“At nights, the offices of many placement agencies turn into
entertainment places for the police and local goons,” says an activist
(who wanted to conceal his identity) in West Delhi. “When the police and
the goons are there to support them, who will raise voice against the
agencies?”

Child Labour

Despite the much-talked-about inclusion of domestic work in the
schedule of hazardous employment in the schedule of the Child Labour
(Prohibition & Abolition) Act 1985, child labourers are increasingly
employed as domestic workers in cities. Very few organisations seriously
take up the issue of child domestic workers. “Child domestic workers get
the least priority, if we look at governmental interventions,” says Urmila,
a child rights activist. Many of the children start working when they are
six years of age. In most cases, the child will begin by assisting its
mother in domestic work. By the age of ten, she will be expert enough to
manage an entire household. These child workers are also not free from beatings and abuses.

“My day starts in the kitchen. I have to prepare breakfast and lunch before 10 a.m. The whole family takes packed lunch,” says Nandini, a 13-year-old, who works for an upper middle-class family. She has to get up at 5 o’clock in the morning to start cooking. Besides cooking, she does sweeping, swabbing, cleaning the vessels and washing the clothes. From 10 o’clock onwards, she becomes the babysitter. “Madam will always have guests. They may come at any time. I will have to cook food for all of them. Madam will be busy entertaining them so I have to finish all the work without any help.” The likes of Nandini’s madam are quite common. Children are made to work day and night without any consideration. “After all this hard work, I am scolded and thrashed even for the most trivial reason,” says another twelve-year-old domestic worker. Cases of violation rarely get reported because the employers are usually influential.

Most employers have a disdainful attitude towards their maids. They miss no opportunity to rebuke this underprivileged lot. For the rich and the influential, the domestic workers are paid slaves. They call them ‘servants’ and make them do all the menial work. This ‘servant culture’ prevails in most households. Parents hardly have the time to see how much work piles up on the domestic help. Even the children of the household learn to take things for granted and hardly show respect to the person they consider doing the ‘dirty’ work.

Living Hell

“Getting a house to stay in Delhi is a nightmare,” says Parvati, a domestic maid in the Shivalik area of South Delhi. “Very often, we have to shift houses due to some flimsy reason cited by the landlords to increase the rent,” says Maya, a maid in Sarvodaya Enclave. Maya pays Rs 2,800 as rent and Parvati Rs 3,500. Added to this are the electricity and water charges. A majority of the domestic workers live in resettlement colonies, or jhuggis. The city beautification drive by demolishing jhuggis has rendered thousands homeless in Delhi.

Very often, these resettlement colonies do not have any toilets. “We use the open grounds,” says Nirmala, an inmate of Jasola village jhuggis. After shopping malls have come up near these open grounds, it has
become difficult to find an isolated place,” she adds. “We are not allowed to use the toilets at our workplace,” says Bharti Sunar. “We have to either control ourselves or, if the situation worsens, to use the common lavatory or look for open grounds. The open grounds in front of the apartments we work in are always parks and gardens. So the only option left we have is to control our urge or go home,” adds Bharti. “This results in problems with urinary problems and the uterus gets affected,” says Namita, a health worker. “Our children are not allowed to play in the parks where we stay,” complains Bharti. “Those parks are only meant for the landlord’s family.”

The worst problem these workers face is that they have to purchase their groceries and vegetables from the shop that their landlords own. As tenants, they are supposed to buy rations from this shop only. “The landlord’s charges for each item are exorbitantly high and its quality is poor, but we have no other option. If we do not buy from him, we will be thrown out of the house. If we do buy things from elsewhere, we can bring it in only late in the night when we are sure that the landlord and his family are fast asleep,” says Ramkumar Sunar, Bharti’s husband.

“This phenomenon is spreading very fast,” says Rajendra Ravi, an activist of the National Domestic Workers Union. “It is quite visible in Aligaon and many other places. The family that owns the colony runs the shops too and make the inmates buy goods from these shops. And worse than the grocery shop is the money lending business of the landlord. When someone falls sick or faces any emergency, these domestic workers borrow money from the landlords. They pay 10 per cent interest monthly for the money borrowed. They pledge their things such as TVs, gold and gas cylinders. If the pledged goods are not taken back in a month’s time, they become the property of the landlords.

Counting Domestic Workers

In India, efforts to organise domestic workers have been taken up by all central trade unions. The AITUC has come up with an innovative concept. “We are asking all our middle class working women, especially from banks, LIC, GIC, etc., to make sure that at least the rights of domestic workers who work for them are protected,” says Amarjit Kaur, national secretary of AITUC. “We are asking them to take the initiative to make workers aware of the need for organising.”
Organising domestic workers is a herculean task because there are no proper statistics available. There are innumerable civil society organisations that are taking the lead in highlighting the issues of domestic workers. “The ministry has asked the National Labour Institute and the National Social Security Board to compile the statistics of domestic workers in the country. It is one of the priorities of the government,” says Harish Rawat. “There should be a legal provision for protecting the rights of domestic workers.”

In an effort to register the domestic workforce and protect them as well as the employers/employees, police stations are supposed to issue identity cards to domestic workers. Employers are expected to give photographs of their maids and have them registered with the police station of their locality. The workers interviewed express happiness over this process because they need not answer the embarrassing questions of the employers and resident societies. Sadly, this drive is yet to be implemented effectively.

Conclusion

“I tie my five-year-old daughter Seeta and four-year-old boy Rahul to the cot till I come back from work,” says Parvati, a domestic maid. She has been doing this since they were out of the cradle. Women's movements and feminists in the country need to realise how these workers-who come to work at their places-the ones that make it possible for them to be outside the house and to work and live comfortably-live their lives and cope with their appalling circumstances. Ironically, this domestic workforce-exploited, abused and dehumanized-is the biggest contributor to women’s liberation and independence!

* Commonwealth Games 2010: Illegals not allowed

6 October 2010

“Sita, the servant, is gone. Delhi is shining, as is Gurgaon. Sita, like my uncle’s family, lives in Malibu Towne in Gurgaon, 212 acres of heaven where the upper-middle-class inhabitants of the tower apartments enjoy a life of “no load-shedding” – meaning the towers’ power is supplied by generators so that residents can avoid the cyclical power cuts the Indian government inflicts on its booming populace. No marble floors and 24-hour power and water for Sita, though. She and her husband, Mahesh,
live in a makeshift jhuggi, or shanty town, right next to the towers, where a few sticks in the mud support the blue tarp that they and their three children call home. Sita is my uncle’s family’s primary servant and she cooks and cleans the dishes, toilets, floors and clothes. Mahesh cleans the cars. Their friend, Gautam, is the mali, or gardener.

Their jhuggi, just next to the Malibu towers, is built on a plot of land owned by a jat – a member of the land-owning caste in Haryana, the state of which Gurgaon is a part. They call him Pehelvan (meaning “wrestler”) and pay 600 rupees (£8.50) a month for the right to live there illegally. There are about 100 residents there. Pehelvan, like my family, also knows their other secret. “Sita” is really Mehrunissa, “Mahesh” is Muhammad and “Gautam” is Yassir Khan. They are all Bangladeshi refugees, Muslims using Hindu names to work in the predominantly non-Muslim households of Gurgaon. They are illegal immigrants and have no papers.

On the night of 15 September, Pehelvan confirmed to Sita and her family that the Gurgaon police were rounding up people like them and sending them home, because there was no room for illegals during the approaching Commonwealth Games. He told them that he had tried to bribe the cops with 15,000 rupees per family, which was the going rate, but the lines at the local thana, or police station, were too long – he was not the only jhuggi slumlord in booming Gurgaon with the same idea – and it might make better sense for them to leave till “the Games are over”.

Five nights later, Sita and her family arrived at my uncle’s house with two trunks of belongings, two bicycles and six buckets to store. In the early hours of 20 September they drove out of Gurgaon, leaving most of Malibu Towne without servants, car cleaners, gardeners and rubbish collectors. Pehelvan had helped them charter a bus for the inflated rate of 100,000 rupees, including his cut. The bus was headed to the porous border towns of the Indian state of West Bengal, next to Bangladesh, the impoverished country they fled eight years ago.

My extended family also left Malibu Towne, taking up temporary residence in the larger family house in one of Delhi’s other satellite townships, where the servants are aplenty and live in “servant quarters” on the property (so no prying police). They hope to return to Gurgaon in
a month when “Sita”, “Mahesh” and “Gautam” come back.

Gurgaon, arguably the call-centre capital of a new and booming India, is home to many gated communities like Malibu Towne. There is Central Park, Unitech Nirvana Country, Beverly Park 1 and 2, Suncity, Georgian Residency, Emerald Hills, and Hamilton Court. The list is long and a new one seems to come up every week. Each supports its own micro-economy of illegal domestic workers.

The servant crisis has gone largely unreported, though. The residents of Malibu Towne are not used to cleaning their own homes, so dishes are piling up and floors are not being swept daily. Calls to various neighbours who were dependent on Sita and her friends reveal that many have taken to eating in Gurgaon’s air-conditioned shopping malls which boast vast food courts.

Sita’s workday would start at 5.30am and finish at 7pm. She took care of eight houses. There are an estimated 500 families in Malibu Towne. Many Sitas were therefore needed. Most of them have now decamped to the Bangladeshi border to wait till the games end. The central government has started the Unique Identification Authority of India (UIDAI), headed by Nandan Nilekani, the man who gave us the mother of all outsourcing companies, Infosys. More than 1 billion people are to be given UIDs, or unique identification numbers – a gargantuan and complicated exercise. It is not clear if Sita and her family will have access to UIDs or even want them. Being undocumented sometimes has its advantages.”

OLYMPUS DIGITAL CAMERA

Dheer International / GAP Worker

(299 Udyog Vihar Phase 2)

We work from 9 or 9:30 am till 11 pm on a daily level. A lot of workers have to work from 9 am till 4 am on 15 days per month. On Sundays we work from 9 am till 4 pm. If they make you work the whole night, you get 40 Rs extra for food. There is no canteen. We work 140 to 225 hours overtime per month, these hours are paid less than single rate, about 16
Rs per month. If you object the fact that 1,000 Rs per month get embezzled they threaten you with sacking. They also kick workers. Amongst others we produce garments for GAP. There is a high work pressure, there is a defined target for every minute of work. If you don’t meet the target they swear at you, also hit you. There are around 4,000 workers in the production and finishing department, none of them gets ESI or PF. The helpers are hired through two contractors, the male helpers get 3,500 Rs, the female 3,200 Rs. The water is not suitable for drinking. When a client or buyer turns up they put up a sign ‘No Drinking water’, they remove it again once the client has left – then there is no other water to drink.

Bharat Export Overseas Worker
(493 Udyog Vihar Phase 3)

Work starts at 9 am. In the production department workers are forced to work till 1 am – on four days per week. In the finishing department the workers always work till 1 am and two or three times per month they have to work full-nights. When they make you work till 6 am they give you 25 Rs extra for food. Overtime payment is at single rate. Out of the 350 workers no one gets PF or ESI – only the middle management gets the statutory social security. The helpers are paid 130 Rs for 8 hours, the skilled tailors get 180 Rs... On 16th of July the guys from the personnel gathered all workers of the finishing and production department and told them that buyers [clients] would visit the factory the following day. They told the workers to lie and say: the helpers get 162 Rs, the skilled workers 270 Rs, there is no overtime and everyone gets PF and ESI. The buyers arrived and went again – they did not ask the workers.

Libas Export Worker
(357 Udyog Vihar Phase 4)

I work in this factory, but I want to talk about my landlord. The landlord has property in Dundahera and Kapashera. He says that tenants have to buy flour, lentils, rice etc. in his shop, otherwise he would kick them out of their rooms.

Eastern Medikit Worker
(196 Udyog Vihar Phase 1)
The wages are delayed. The casual workers received their June wages on 20th of July. The permanent workers work on three 8-hours shifts while the casuals have to work on two 12-hour shifts. The overtime is paid less than single rate, about 15 Rs per hour. The overtime worked in may was paid delayed, on 11th of July.

**Graffiti Export Worker**

(377 Udyog Vihar Phase 2)

On 10th of July the company closed the tailoring department. Out of 350 workers only 85 workers in the finishing department are left. Instead of 8 hours the helpers have to work 10 3/4 hours to get the minimum wage. The company makes workers work from 9 am till 2 am at night. The checkers get 7 hours overtime for these long shifts, while the helpers get only 5 hours – for the same long shift. Only few workers get ESI and PF. The wages are paid late. The water in the factory is bad.

**EEL Worker**

(402 Udyog Vihar Phase 3)

Around 175 workers manufacture machines for the cement industry. They work on two 12-hours shifts. Overtime is paid at single rate.

**Rakheja Enterprises Worker**

(74 Udyog Vihar Phase 4)

The helpers are paid 3,300 Rs, the general checker 4,000 Rs and the tailors get 4,500 Rs. Overtime is paid less than single rate, 16.66 Rs per hour. Out of 700 workers only three get ESI and PF. The toilets are dirty. The company runs another factory on plot 744 in Udyog Vihar Phase 5. There helpers get only 3,000 Rs.

**Sargam Export Worker**

(132 and 210 Udyog Vihar Phase 1)

The company pays the minimum wage. The managers swear a lot and take 500 Rs bribes from each unskilled worker each month. The main client is H&M.

**Bhurji Supertech Worker**

(272 Udyog Vihar Phase 2)
The June wages have not been paid yet: 22nd of July 2010.

**Premium Moulding Worker**
(185 Udyog Vihar Phase 1)
The helpers get 3,500 Rs. Workers work 80 hours overtime per month. The overtime payment is only 6 Rs per hour.

**S and R Export Worker**
(298 Udyog Vihar Phase 2)
Workers work from 9 am till 11 pm, and are made to stay till 2 am. They force you to work on Sundays, from 9 am till 6 pm – if you don’t go, they sack you. The overtime is paid less than single rate, around 17.5 Rs per hour. The company does not provide working shoes – the finishing department handles glass items. If you don’t bring your own safety shoes, they send you back home. They provide drinking water only during the official breaks, and sometimes you will even have to look for drinking water outside the factory. The toilets are very dirty.

**Mona Designs Worker**
(146 Udyog Vihar Phase 1)
Around 500 workers work from 9 am till 8 pm, sometimes the whole night. The overtime is paid less than single rate, around 19 Rs per hour.

**Kumar Printers (Ranbaxy, Teachers Whiskey, Gillet, Delphi, Champion Underwear) Worker**
(Plot 24, Sector 5, IMT Manesar)
We work on two 12-hours shifts. We often have to work from 8 am till 1 am. This causes major distress. We work 175 hours overtime per month, this is paid single rate, about 20 Rs per hour. Out of 12 hours only 3 hours are called overtime, one hour is cut from wages every day. They say it is for ‘meal and tea break’. In the factory they have installed cameras everywhere. We produce packing cartons for various companies. There are 70 permanent workers, 10 to 15 company casuals and 200 workers hired through contractors.

2) Collective Action –
Reports on proletarian struggles in the area
India Bulls Worker

(448 Udyog Vihar Phase 5)

In the headquarter of the company 3,500 people are employed. India Bulls is a finance company engaged in the share market, the real estate business, electricity sector etc.. For cleaning work India Bulls employs 60 workers, for security 26 workers, for maintenance 15 workers – all hired through contractors. The security guards are hired through Swift Security, they work on 12-hours shifts, no weekly day off. Their monthly payment for 30 days, 12-hours per day is 6,200 Rs. When, on 7th of July 2010, security guards decided to withdraw from duty for half an hour... the management promised to increase the monthly wage by 1,000 Rs.

3) According to Plan –

General information on the development of the region or on certain company policies

The rural hinterland is turned into social deserts, the cities turn semi-disfunctional. A collage of news items from September and October 2010.

...Urban Slums growing...

There has been a growth of 17.8 million in urban slum population of the country in the last decade, according to a government committee. The projected slum population in the country for the year 2011 would be 93.06 million from the 75.26 million estimated in 2001. Gurgaon population is to double by 2025. According to a state government spokesperson, Gurgaon-Manesar complex will accommodate nearly 40 lakh population (4 million) in the next 15 years.

...and unsold homes piling up...

According to the Royal Institution of Chartered Surveyors (RICS), around 250 million sq ft of residential inventory remains unsold across major markets in the country. Most of the upcoming projects are located in Navi Mumbai and Thane near Mumbai, or in Noida and Gurgaon near Delhi, where unsold home inventory levels are at all-time highs.

...SEZ jobs blown by real-estate bubble...

The great SEZ dream that Gurgaon has been harbouring for some time now is unlikely to become a reality any time soon. While top officials of
Haryana Industrial and Infrastructure Development Corporation (HSIIDC) admitted that there is no fixed time frame for developing the Special Economic Zone (SEZ) in Gurgaon, they added that a substantial portion of the land that Reliance Industries (RIL) had acquired for the SEZ would be used for realty development. The Harayana SEZ was touted as the Indias largest one and was expected to generate 5 lakh jobs...

...with the help of Haryana's holy-property-trinity: state / real-estate mafia / kulak-power...

On 3rd of October the High Court had quashed Haryana governments decision to acquire Nathupur village panchayats land and also instructed to refund over Rs 51 crore to DLF to take back the possession of the land. The order quashed the entire land deal between the Haryana government and the DLF which was inked on 2006. The state government had paid compensation to the Gram Panchayat and then sold off the land (19 acres) to the DLF. According to a senior official of the revenue department, gram panchayats involvement in such deals has become more obvious after private players started showing interest in village lands. With the land price in Gurgaon and adjoining areas hitting the roof, private real estate developers are trying to get village land at a low price by colluding with the panchayat head and other key members, he added.

...middle-class protest against collapse of governance...

“To register their protest against the “complete collapse of governance” in Gurgaon and press for the fulfilment of their demands, the representatives of different residents bodies launched a “civil disobedience movement” on the Gandhian pattern here yesterday. “Due to utter lack of the basic civic amenities and services in Gurgaon, we have decided to rename it as “Minimum City” instead of “Millennium City” to underline our point. “It has been decided to boycott the payment of all municipal and property taxes and maintenance charges to builders if the situation does not improve within three months.” Gurgaon is seeing the emergence of a new form of ghettoisation, something that the promoters of the gated colonies in the city or the state authorities approving such colonies had not visualised. Increasingly, a large number of nooks and corners are coming up in the city that are governed by a set of rules that appear to have been coined by individual groups of residents themselves
and not by the original developers, the resident welfare associations or even the local civic bodies.

...farmers’ sell-out to sell land for nuclear power...

Fissures have appeared among Gorakhpur farmers agitating to save their land from acquisition for the nuclear power plant in the district. Rahul Gandhi had recently praised the land acquisition policy of the Hooda government and advocated adoption of the Haryana model by other states. Meanwhile, a group of Gorakhpur farmers at a separate meeting here today welcomed the government decision to set up the nuclear power plant in their village. The farmers said they had no objection to giving their land for the prestigious plant. All they wanted was suitable compensation so that they could purchase land elsewhere.

...while high-ways turn into killing snakes of fuming sheet-metal...

When the Delhi-Gurgaon Expressway was opened to public two-and-a-half years ago, it was meant to fasten things up. The travel time between Delhi and Gurgaon during peak hours has shot up. According to DSC Ltd, the private concessionaire of the 28-km-long Expressway project, the traffic volume at the 32-lane toll plaza has touched almost 1.9 lakh passenger cars per day from approximately 1.3 lakh PCU at the time of opening of the Expressway. That's a 46 per cent jump in traffic volume. According to the study done by the Centre for Transforming India (CTI), if all of Gurgaon's intersections were to be included in the study, the total petrol loss due to jam would add up to Rs 2 crore a day. According to the study, a vehicle loses some 0.7 litres of fuel a day because of traffic jams and stoppage time. Once the traffic flows, it kills: “Three people died in separate accidents on the National Highway-8 stretch of Gurgaon in the past 48 hours.”

...and metro-train-construction into a field of tomb-stones and ash...

Over 100 workers have died during the construction of the metro railway in the Indian capital, Delhi, according to a submission by the metro authorities. The frequent accidents at metro sites have given rise to fears that safety standards are being compromised in the rush to build new lines, correspondents say. for recent photo-story on construction workers: http://www.tehelka.com/story_main47.asp?filename=hub091010We_Who.asp
...and low-wage subcontracted source of employment in slum-city...

In order to keep the stations clean the house keeping department of **Delhi Metro** hires workers through various contractors: A to Z, All Services, Prahari etc.. Since February this year the minimum wage for unskilled work in Delhi is 203 Rs for an 8-hours shift. The cleaners at Delhi Metro were paid 100 Rs – since May 2010 they get 120 Rs per day, much less than what they are entitled to. If you work 30 days per month you get 3,600 Rs. *(Faridabad Mazdoor Samchar)*

...migrant workers in fear of the state to raid in the name of public urban safety...

Ramesh is the sole earning member of his family but he had to leave his job and go back to his hometown, Patna. He is among many migrant labourers who have left this satellite town of the Indian capital in the past 15 days due to the verification drive ahead of the Commonwealth Games. “I can fill the form and give it back to the police but the officials are threatening us. They talk rudely and say they will arrest me. I am leaving the town and will come back after the Games,” 24-year-old Ramesh told before leaving. Almost 50,000 migrant workers have left Gurgaon. “There are almost five lakh migrant workers in Gurgaon and more than 20 per cent have left the city due to the verification process,” IMT Industrial Association general secretary Manoj Tyagi said. The migrant workers belong mainly to Bihar, Jharkhand and Madhya Pradesh. Most of them do not have any identity proof such as ration card, driving licence or voter ID. “We came from Bihar to work here. We do not have any identity proof, which is causing problems for us,” said Rajeev, an industry worker. “We are afraid because of this drive. Some of my friends have left the city due to lack of any identity proof. But now my employer has given me an identity proof, so now I am feeling relaxed,” he added.

“Not only the industries, the residents of the town are also facing the shortage of workers. I have to wash my car because my servant has also left due to the drive,” district public relations and grievances committee president Jagan Nath Mangla said. Following the police verification drive, residents say, there has been a drop in the frequency of weekly garbage collections. Consequently, vacant plots in every colony have turned into dumping grounds. After the verification, the number of maids, drivers and garbage collectors has reduced to a large extent.
This is an attempt to introduce a regular update on general tendencies of crisis development in India – motivated by Greek shock-waves, naked shorts and potential spillovers.

* The Macro Crisis September / October 2010

We start with a look at India’s position in the global ‘currency war’: increasing inflow of hot money, high inflation despite hikes in interest rates, appreciation of the Rupee, therefore growing trade deficit and state debts. The abstract puzzle of shifting mathematical factors is an expression of social struggle: who will bear the social tension necessary to keep up in the air a huge bubble of over-accumulated wealth, toxic credits, state bonds – high enough to be able to look out for the tiny spots of profitable investment around the globe? Who will have to sweat for these profits, whose wages will be eaten up by tense inflation, who will lose jobs due to swamped markets and bubbled up currencies, who will default and live in misery in the face of potential abundance? We have to discover the breaking points, the points where the contradictive movements of capital culminate in confrontation with its antagonism: working class struggle.

* The Punjab Crisis

In October 2010 the trickle-down effect of (international) debts lead to a de-facto announcement of default by the Punjab state government. The central state offered to waive half of Punjab’s state debts in return for a structural adjustment program: an adjustment which first of all forces the local state to tackle farmer’s debts more fiercely. In mid-October we hear about killed farmer’s union leaders who defied the repossession of indebted farmers’ land.

* The Food Crisis and Social Death of Peasantry

Some news-items on increasing proletarianisation of farmers, on the neo-liberal illusions of the Second Green Revolution and its post-neo-liberal reality. Some news on the difficulty of the state to balance the commodity prices of agricultural products in times of peasantry crisis, global speculation of food prices and the looming danger of proletarian hunger revolts. We see how the cocktail of hot money and increasing interest rates turns lethal in form of suicides of rural microfinance.

* The Generalisation of Class Struggle
The ‘totality of capital’ seems blatant: global supply-chains and global (micro)finance bridging town and village, multi-national corporations combining locations of different sectors and stages of development. Seeing it detached from it’s mobile existence as the ‘living element’ of capital – meaning: seeing it through the lens of the institutional labour movement – the world of the working class is nothing but fragmented. Task of communist collectives today is to discover the social dimension and potential for generalisation within workers’ experience and struggle. At this point we can only superficially hint at some ‘clusters of proletarian reality’, which might become of major importance for the generalisation of future struggles beyond the rural/urban and national/international divides: news on the struggles against ‘destructive development’ in the mining and forest belts, struggles within the rural employment schemes and struggles in the multi-national industrial centres, like Chennai.

Total GDP 2009: 1,367 Billion USD  
Total Export 2009: 165 Billion USD  
Trade Deficit 2010-11: 120 to 135 Billion USD  
Total FDI 2009: 36.6 Billion USD  
External Debts 2009-10: around 273 Billion USD  
Foreign Exchange Reserves 2010: around 280 billion USD  
Public debts of GDP 2009: 60 per cent  
Fiscal Deficit: 5 per cent  
Share in global merchandise trade in 2008: 1.5 per cent  

India’ economy heating up in the Currency War

In October a Brazilian statesman made it official: a currency war is on, a global race to export the crisis through devaluation and ‘quantitative easing’ – e.g. Japan brought interest rates down to virtually zero in October and the US announced to continue the devaluation through government bond self-digestion. Hot money keeps streaming into the trenches of the emerging markets looking for temporary shelter. India is one of them. The short-term investment market heats up through inflow of foreign funds: a record $19.7 billion of Indian equities has been
bought this year, one-third of the inflow happened since the start of September 2010! In early October the stock market index, Sensex, closed above the 20,000-mark for the first time since 2008. What seems like a boom-bonanza is enfolding it's contradictive dynamics.

Stimulus policies and capital inflow keep inflation high

The combination of post-2008 stimulus policy and capital inflow fuels inflation and the central bank RBI has difficulty containing it. Even after the fifth hike of general interest rates this year the inflation still hovers around 10 per cent, food price inflation was 16 per cent in mid September. The government ‘petrol sector reform’ from August/September 2010, which free-floated national prices, leads to general hikes: The public sector oil companies have increased the price of petrol by 70 to 72 paise per litre. This follows an increase in September of 27 paise per litre. The price of petrol has already been increased by 1 Rs per litre in the space of three weeks. An attempt to centralise and raise funds to counter-balance the state deficit.

Higher interest rates foster appreciation of the Rupee

In mid September the RBI raised key short-term lending and borrowing rates by 0.25 and 0.50 percentage points, respectively, to about 6 per cent borrowing rates in total. The higher interest rates attract more foreign money flows. The hot money pushes the value of the Rupee upwards, in September the Rupee breached the 45 mark to the US-Dollars – between August 2009 and August 2010 the Rupee appreciated by 11.6 per cent in real terms. “According to Bloomberg data, the rupee gained 5.3 percent in September 2010 as global funds poured in over $23 billion in stocks and $10 billion in the debt market.” Upward pressure on the currency is expected to be continue in the wake of Coal India's $3.5 billion initial public offering opening on 18th of October – a record sale of state property. As a result of the waves of inflow, the appreciation of the Rupee encourages imports and hampers exports: India’s garment exports – and garment industry is one of the ‘employment-generating’ export sectors – declined for the third successive month in July 2010, showing a 22.5 per cent annual drop.

Appreciation increases the growing trade deficit and external debts

Exports grow faster than exports. The trade deficit is widening to an
annual record high of 135 billion USD. In October the commerce secretary said: “The deficit is still within manageable limits, but its absolute size is worrying,” adding that financing such huge deficits for a longer period could be a challenge. India’s current account deficit in the June quarter widened to $13.7 billion, in fact it tripled compared to the $4.5 billion of the same period in 2009. The lower interest rates abroad lead to an increase of external debts: between March 2009 and March 2010 external debts increased by 16.5 per cent to 261.5 billion USD.

External debts continued to increase: in the three months of April – June 2010 month external debt rose 4.1 percent or 10.8 billion USD to 273.1 billion USD due to a sharp increase in short-term trade credits, commercial borrowings and multilateral government borrowings. The short-term debt increased by 5.4 billion USD to 57.8 billion USD, accounting for 21.2 percent of the total external debt. Of the total public debt, external debt was 10.25 per cent [this last figure is dubious, given that total public debts would than amount to more about 2,700 billion USD]. Punjab becomes India’s California, brought to its knees by combination of rural and international debts.

Equity boom and debts a productive credit function?

In summary: the figures above demonstrate the increasing volatility of the financial situation and express some contradicting tendencies, e.g. the necessity to raise interest rates to curb inflation, which in turn stifles the economic ‘recovery’. Government advisors warned in October 2010 that any sudden change, e.g. a sudden rise in global oil-prices, could throw the monetary system out of balance. Apart from the general fragility of the financial framework the question remains, whether the capital inflow is absorbed in a productive sense and whether the increasing internal and external debts express a credit function: meaning that the borrowed money is used for capital investment.

Decline in Foreign Direct Investment

We can say that while general capital inflow increases, the share of FDI (investments in productive assets) shrinks. In October 2010 an UN study declared that India is now the 13th biggest global attractor of FDI – which says more about the miserable condition of other national markets than the ‘shining’ condition of the Indian one. Foreign direct investment in India fell by nearly a quarter in the first seven months of 2010 to $12.56
billion. In 2009, India attracted $36.6 billion in FDI funds, equivalent to 2.7 percent of its gross domestic product. In comparison, China attracted $95 billion, or 1.9 percent of GDP. In the calculation of the Indian state FDI is crucial for the development of necessary infrastructure projects. Power, for example, attracted only $1.44 billion in FDI in the most recent financial year — a pittance in the context of Indian state's hopes for $350 billion to $400 billion of funding for power for the five years 'great leap forward', which is supposed to start in 2012.

Sluggish growth of capital goods production and investment
The question concerning the relation between debts and productive and profitable investments is a rather more difficult one. On the surface things look good: industrial growth for the first five months of this fiscal stood at 10.6 per cent in comparison to 5.9 per cent growth in the same period a year ago. Most of the industrial growth is due to growth of production of consumer goods, whereas in August 2010 the capital goods production – production for future production – actually shrank by 2.6 per compared to 2009. Similarly the growth of the ‘core sector’: The core sector, which includes crude oil, petroleum refinery products, coal, electricity, cement and finished steel, grew by ‘only’ 3.7 per cent in August. The growth had slowed from 3.9 per cent recorded in July.

Another hint concerning the ‘investment climate’ is given by a study on 2,700 mainly manufacturing companies, published in October 2010. According to the study fixed assets creation (CFA) of the analysed companies registered a decline of 6.5 per cent in FY10.

GDP-boom, but no employment growth
The most recent National Sample Survey (NSS) of autumn 2010 indicates that the last five years of GDP boom was a jobless boom. The survey speaks of a total of 2.4 million jobs created between 2005 and 2008. The total number of (official!) wage workers increased from 457.9 million in 2004-2005 to 460.2 million in 2007-2008, a growth rate of just 0.17 per cent. This is much lower than the population growth and rural proletarianisation rate. In the rural sector employment shrank – only the state generated ‘public works’ (including NRGS) increased from 221 million person days in 2005-2005 to 939 million person days in 2007-2008. Even if these figures do not reflect the actual job creation – most of employment, also in modern urban industries, is ‘off the books’ – they
demonstrate that the growth of permanent employment is minimal.

Juggling the crisis with state force: head-counts and market wars

Both industrial output and investment patterns still say little about actual potentials for future profits. And facing an increasing debt crisis, profits are needed. The Indian state has to push for a growth in ‘profit generating’ sectors. Most of these sectors are attached to external markets – markets have to be conquered or defended. India is re-arming heavily. After deals with the UK and Russia in August the Indian defence ministry announced that it is aiming to finalise a 5.8 billion USD defence agreement with the United States before November 2010. In August and September the ‘Kashmir’-conflict was used as a pretext to engage in intensified diplomatic quarrels with the Chinese government: 11,000 Chinese soldiers were deployed in Pakistan part of Kashmir after the flood, the Indian diplomacy speculates about Chinese efforts to secure access to the Indian Ocean ports. The ‘trade war’ is extended to Africa. In mid-October Indian business-papers wrote about a delegation visit of the Minister for Industry and Indian company managers: “With the help of the government, Indian industry is implementing a strategy to compete with China and European countries for capturing markets in growing African economies, particularly in East Africa. India, on its part, is trying to counter the commercial threat from China and European nations by offering lines of credit to African firms. “That will help source capital goods from India,” FICCI Secretary General Amit Mitra said.”

Profit generating sectors are not necessarily employment generating sectors, as the NSS indicates. A social crisis of rural demise and underemployment has to be managed cost effectively and by divide-and-rule. The 2011 census will be both – a drive towards social management of poverty by attaching ‘welfare’ to ‘computerised identification’ and in itself a re-enforcement of caste politics. It will be the first ‘caste-census’ in the almost 65 year history of ‘independent’ India.

“The campaign for a caste census has been spearheaded by three opposition parties, the Janata Dal-United (JD-U), the Samajwadi Party (SP), and the Rashtriya Janata Dal (RJD). Ultimately, the Indian government did institute a 27 percent quota for the Other Backward Castes. That it did so in the 1990s coincident with embrace of neoliberal policies, involving the dismantling of public and social services and massive tax cuts for the big
business, is not accidental, nor incidental.” The state has to re-shift debts and individualise dangers of default. The current state debt crisis of Punjab is an example about the local and global class origins of the debt crisis.

In early October the central state offered to waive half of the state debts – 35,000 crore RS, about 7.8 billion USD – in return for a structural adjustment program. The Punjab government spends 8,000 crore annually for debt interests. First person squashed in the field of tension between central and state financial crisis and the attached political faction fights was the Punjab Finance Minister, who had to leave his job. Manpreet has often been accused of raising the highest debt in the form of external commercial borrowings, taking the total debt of the state from Rs 48,000 crore to Rs 71,000 crore within his three and a half period as finance minister.

The debt crisis in Punjab is fuelled from various locations in time and space: a hang-over of times of counter-insurgency against the social turmoil of the 1980s, which saw the Punjab more or less permanently occupied by Indian army; the farmers’ debt crisis after the decline of their market position; the crisis of remittance from and migration to UK, US and Canada, given that a large share of proletarians from Punjab work abroad; the ‘industrial crisis’, particularly of the textile industry, an expression of which are the current massive powerloom workers’ unrests in Ludhiana, click HERE.

Once we take Punjab's position in the national-agricultural division of labour into account (grain basket) and have a closer look at the demanded ‘adjustments’ we can see that the ‘state debts’ are, most of all, an expression of the social crisis of capitalist farmers in India. Of all states, the highest number of indebted farmers is in Punjab. The average level of indebtedness per agriculturist is about Rs 42000. The volume of total indebtedness is Rs 25000 crores. From 1998 to 2009, 2116 farmers have committed suicide in this state. According to non-official sources the actual number is several times more than this.

In August 2010 state banks issued their official threats against indebted farmers in Maharashtra to dispossess their land – those farmers who were ‘beneficiaries’ of the 2008-09 debt waiver program and who were
not able to pay back ‘their share’. In fact, as an article on 12th of October revealed, most of the farmers did not take part in the scheme: the offer of the state to rebate 25 per cent of the debt would have meant that farmers had to pay the remaining 75 per cent. Most farmers defaulted, unable to pay back.

“According to bankers’ collective estimates, farm loans in the range of 2,000 – 2,500 crore would have fallen overdue as farmers’ response to the debt relief scheme was below expectation even after the expiry of the deadline. “Programmes like debt waiver and debt relief have destroyed the repayment culture of borrowers, especially farmers. Even politicians make false promises to woo voters,” said a senior banker, on condition of anonymity.”

A similar position is now held against the ‘populist’ government of Punjab, which is accused of having pampered the local kulak farmers. “The terms are tough but the debt-ridden state seems to have run out of options. The Punjab political leadership has an opportunity to end the ruinous politics of populism and return to fiscal discipline and responsible governance. Punjab’s present economic situation is pathetic. The state is heading for a debt trap, which means taking more loan to pay the existing loan. Any further slip-up can lead to a loan default, non-payment of staff salaries and invite the President’s Rule for a financial breakdown. The stakes are high.”

Accordingly the demanded adjustments are a direct attack on ‘indebted farmers’, which would aggravate the social crisis considerably:

* Cut power subsidy from Rs 3,100 crore to 1,000 crore in five years

* Hike irrigation water charges

* Impose property tax

* Sell the state stakes in sick PSUs (meaning: sack thousands of workers in factually bankrupt companies)

In mid-October 2010 bad news reach from Punjab:

“As per initial reports, on 11.10.2010, the revenue officials went to auction the land of an indebted peasant, Bhola Singh to recover a loan outstanding against him. To protest against this, the peasants under the banner of BKU (Dakonda) held a peaceful Dharna at the auction venue
and raised slogans. The peasant organizations have been successfully resisting such expropriation of peasant’s lands since almost a decade. In view of the protest by the BKU, none came forward to bid for the land and the auction failed. The revenue officials went back. Most of the peasants gathered on the spot also went away and only a few activists of the BKU remained there, to discuss the further course of action. In a pre-planned move, the revenue officials accompanied by arhtiyas, their hired armed goons, and a local Congress leader, came back and started the auction again. When the BKU activists protested, they attacked them firstly with brick bats etc., and thereafter fired upon them indiscriminately, killing Pritpal Singh Alisher on the spot and injuring several others. This bloody incident occurred in the presence of revenue and police officials. Recently the Director General of Punjab Police has dubbed 17 organizations of peasants and farm laborers, including BKU Dakonda, as “Naxalite Organizations”. For whole report click HERE

One week later news of a more successful action against repossession from Sirsa, Haryana.

“Villagers force revenue officials to return

Angry residents of Shahpuria village here today forced a team of revenue officials, who had gone to the village with the police to evict a farmer, to make a retreat. The farmers, who were armed with lathis and other weapons, made it clear that they would not allow the officials to take possession of farmer Ram Chander Punia’s 5 acres of agriculture land. Activists of the Akhil Bharatiya Kisan Sabha led by Krishan Swaroop Gorakhpuria and Prahlad Singh Bharukhera also came in support of Punia and announced that they would not allow the farmer to be divested of his land. The revenue officials maintained that they had come to the village to implement the court orders as Punia had lost his case with respect to that land to a Sirsa trader. Later, the revenue officials stalled their possession due to pressure of the villagers and left the village.”

In the form of agrarian revolution (mechanisation, land concentration etc.) capitalist development increasingly detaches the issue of food production from the issue of peasantry / ‘farmers’ as a distinct social class. In India this process is still volatile, impacting on the fate of millions whose income partially depends on agriculture production. It is
therefore strongly mediated and shaped by state policy. Production of food becomes commodity production, but the commodity 'food' keeps a distinct character in the reproduction of rural/urban class relations. The commodity price of agricultural produce determines the fate of the indebted or profit-making farmers. The commodity price of food is the main determinant of the wage level of workers. The state's agrarian policy is manipulation of a pressure valve, steering between shockwaves of farmers' mass social death and proletarian food riots. This price-balance-walk is increasingly influenced by global trade of agrarian products. The contradictions between productivity increase, over-production, speculation and 'artificial scarcity' aggravate. In the following we can provide only some hints, some recent news relating to the question of food price and re-structuring of the agrarian sector.

Increasing proletarianisation of small farmers

Some, though older, nevertheless interesting details about the general proletarianisation of 'small farmers'.

"Commensurate with the National Sample Survey data on sources of income, Bhalla notes "an astonishing increase in the proportion of agricultural labor households recorded as possessing land (from 7-8% to 67%)" between the late 1970s and late 1980s. Clearly, as cultivation income declines and small plots can no longer support a family, many small and marginal peasants are taking to agricultural wage employment. In west UP between 59 and 70 per cent of income of landless households came from non-agricultural. Much of this employment is migrant. Those who still 'work the land' often do it in semi-proletarianised status. "Lerche (1999) in his study of villages in Jaunpur district of eastern UP, offers an interesting example of a type of production relation that is neither strictly sharecropping, nor strictly wage labor. Rather it appears to be a type of piece-rate system for agriculture couched in sharecropping terminology. The balance of investment, risk and control over labour process between the landowner and the tenant is substantially changed. Earlier, in these parts, a pair of oxen and a plough were normally expected to be provided by the tenant, but now the landowner provided all inputs including a tractor for ploughing. Now the landowner retains control over the major inputs and over production itself while the "sharecropper” only provides his and his
family's labor-power. In a variant of this system, the tiseri system, “the landowner supplied 2/3 of expenditure for fertilizer and seeds, and provided irrigation, while the sharecropper provided all labor as well as the remaining share of inputs, and received one-third of the harvest.” (p. 188) Thus one can clearly see degrees of dispossession or proletarianization at work here. The tiseri system became more prevalent in the 1990s as agricultural wages increased. According to Lerche it has been adopted by landowners as a strategy to handle labor conflict.”

The Second Green Revolution: hybrid micro-financed agro-chains

The neo-liberal market farmer stereo-typically looks like this: around 5 to 8 hectares of cash-crop, possibly as contract farmer, if not, then dependent on combination of state procurement and/or (sugar mill, cotton trading) agro- capital. Increasing input-costs enforce multiple debt-relations: state banks, micro-credits, moneylenders. The household depends on wage work of family members and employs foreign wage work seasonally. Various global trends impact on the farming business: drying up or fresh supply of credits; rising or falling input prices, largely influenced by global oil price; fluctuating output prices. The ‘Second Green Revolution’ is supposed to be more ‘flexible’ than the ‘First Green Revolution’ mirroring neo-liberal and globalised production. The heavy input of tractor machinery and chemical fertilizers is supposed to be liquefied by hybrid/GM-seeds and diversified cash-crops. Instead of central state procurement or sales to mill cooperatives the contractual relations are supposed to be franchised: contract farming within the food-processing supply chain, micro-financed flower and exotic fruit production for the global market. An expression of the ruling-class view on the ‘Second Green Revolution’ are the comments of the Indian ambassador for Argentina in September 2010, in an article on how Indian agriculture sector can learn from its South American counterpart. “Viswanathan referred to the Argentine group Los Grobos, which has brought the outsourcing model to agriculture. Los Grobos cultivates 270,000 hectares in Uruguay, Brazil and Argentina, without owning a single plot of land. It uses “precision farming”, which employs software to determine the input distribution and monitors by satellite the location of the seeds and sprayer machines. At the same time, soil monitors give
real-time information, helping the group head office to decide on the nutritional and other parameters.”

The state, the global institutions of finance and planning (WTO etc.), the agro-companies, the ‘small-producer’ NGO’s – and may be the farmers themselves – imagined the farming sector as a ‘network’ of small entrepreneurs, financially self-sufficient, but connected to a wider flexible production chain. Nodes of that chain are modern terminal markets, or in words of the Indian Ministry for Agriculture: “intelligent agrologistic networks combining consolidation centres, agroparks and rural transformation centres”. Every state is busy developing these terminals, for example in Sambalpur, Orissa: the construction will cost around 80 crore, storage for vegetables and fruits will be combined with auction halls and processing units. Around 1 million tons of fruit and vegetables are supposed to be dealt with per year. The terminal market will be connected to 20 ‘collection centres in the catchment area, in a radius of about up to 290 km. Ideally these terminals are linked up to the global agro-trade. What was displayed as a peaceful idyll of ‘shared location advantages’ during the boom time of globalisation might now turn into a ‘trade war’ over soil and produce. With food becoming more significant for financial speculation and bio-fuels for the energy regime, we now witness a kind of ‘Second Plantation Regime’. In September 2010 we could read in the Economic Times: “Indian companies are increasingly getting a foothold into South America, acquiring assets and land not just to get entry into its lucrative agricultural market but also to export commodities such as sugar, pulses and edible oils back to India. According to Latin American diplomats serving in New Delhi, Indian company Shree Renuka Sugars recently made it to the club of top five sugar producers in Brazil, South America’s largest country and world’s biggest sugarcane producer. India’s largest sugar refiner, Shree Renuka Sugars had first bought a sugar and ethanol producer Vale Do Ivai S.A. Acucar E Alcool in November 2009 for $240 million, including its 18,000 hectares of land and cane crushing capacity of 3.1 million tonnes annually. A few months later, in February, it invested another $329 million for a 51-percent stake in Equipav SA Acucar e Alcool, that owns two sugar mills with 10.5 million tonnes annual capacity, as well as, 115,000 hectares of cane growing land in south-eastern Brazil. “Frankly, there is also not much sensitivity about the issue of land in South
America due to the low population, unlike, say, in Africa where it is often a political hot potato,” the diplomat added. “The cost of land generally in South America is half the cost of land, say in Punjab. The most fertile land is costing around $12000 a hectare, while fallow land can be bought for as little as a few hundred dollars a hectare.”

The crash of the neo-liberal farmer and the persistence of left ideology

The idyll of the ‘happy franchised farmer’ is the hellish reality of debts and mass suicide. We described the ‘success story’ of microfinance institutions in the last newsletter. Here a short news item on the dark side of the boom, the other side of the same bloody coin:

17 of the dead were not defaulters: SKS

Friday, Oct 15, 2010

Hyderabad: Following a spate of suicides by poor and rural people in Andhra Pradesh allegedly due to pressure from MFIs, SKS Microfinance today said that as many as 17 borrowers from their firm figured in the list but none of them were loan defaulters. “Even police have cleared that we are not involved in that,” Vikram Akula, Executive Chairman, SKS Microfinance, told reporters here. As per the data available the interest rate charged by the companies range from 26-60 per cent. Andhra Pradesh has been witnessing several suicides by rural people in the last 45 days following inability to repay loans taken from microfinance companies and the figure according to official sources, has touched 30. To a query, Akula said if a borrower dies, the remaining loan amount is waived and whatever has been paid till then, will be returned to the family. When asked about the ordinance, he said, “As an NBFC, SKS is under the purview of RBI and is regulated by it. The state government will have to take up with RBI and Finance ministry as far as interest rates are concerned.” The Andhra Pradesh Police arrested three people working with SKS Microfinance and Spandana on a complaint of harassment by a borrower, announced the media on 22nd of October 2010.

Only with the actual crash of neo-liberalism as an operating system at the end of 2008 the WTO, the UN and other representatives of the management of capital re-discovered the importance of the ‘subsistence farming’. The food riots in mid-2008, the credit crunch of the microfinance system, the general crash of agricultural commodity prices
and the prospect of severe social unrest due to unemployment added a new bit of ideology to the ‘post-neoliberal farmer’: farming has to be green and sustainable. “It is not all for ‘fast profits’, we also have to see the human and ecological factors.” The former promoters of the Green Revolution are suddenly becoming priests of perma-culture. Behind the talk about subsistence and sustainability is a looming threat: in these times of recession, stay where you are, don’t claim a better life as (urban) wage workers, wait on your bits of soil and sustain yourself, wait until you or your labour is needed.

Given their antiquated ideological approach, most factions of the left are paralysed by these seemingly contradictory developments. To talk in the old categories of ‘the peasantry’ as an ‘allied class’ means to disregard the proletarian character of most of the rural population. The agrarian crisis is hence not seen as an intrinsic part of capitalist development: the agrarian revolution and the requirements of urbanisation; the double-character of proletarianisation, as: on one hand outcome of struggle against patriarchal exploitation and social claim for better life and on the other hand as violent process of up-rooting and dis-appropriation. The agrarian development is seen as a ‘wrong policy’ or an ‘external imperialist enforcement’. The following lines might serve as an example of this type of lefty view, where ‘agents of capitalist social process’ are turned into the ‘subject of the process’ itself:

“The Bharti-Walmart or the Tata Kisaan-Tesco joint ventures are only couple of such instances where American or British retailers have tried to tap in this untouched sector. German Metro Cash and Carry or American PepsiCo has already invested in agricultural production in India. They want to capture the huge domestic market in India as well as re-engineer Indian agricultural production to perfectly match the needs of the west. Monsanto, DuPont and Syngenta together control 40 percent of the seeds market and own 47 percent of the seeds. Bayer, Dow and a few more completely control the farm-chemicals market. Only 10 pesticide companies have 89 percent share of the market. Wal-Mart, Kroger, Carrefour and Tesco together control 40 percent of retail. And the unifications and mergers that these corporations frequently undergo are a product of the immense control that financial market exercises over them.”
Food processing and ‘retail supply-chains’ are not a mere ‘imperialist trick’ of multi-nationals to get ‘food in the door’ of an ‘untouched’ Indian agricultural sector. Currently only ten percent of food in India is ‘processed’. The capitalist process of urbanisation – a deepened (spacial) division between hinterland and town – enforces tinned-tomatoes and cold-storage halls. Longer distances between orchards and urban consumption and increased full-household wage work drives towards supply-chain-systems of ready-made food. Companies like Warl Mart obviously not only profit passively from these processes, they become active agents. They can present themselves as the more effective middle-men between capitalist farmer and urban consumer. They say that in countries with an ‘organised mass retail sector’ farmers get two thirds of the final market price for their products, while in India farmers get a third – the rest is siphoned off by a large sector of middle-men and traders. They don’t say that it took several decades of mass migration to the ‘new world’, decades of industrial ‘work-house-society’, mass starvation and World Wars in order to get rid off small traders and to reduce the share of farmers to 2 per cent of population in the ‘developed nations’.

Current food price inflation and speculation

Above we had a brief look at how food and agro-products are produced. In the following we give some examples about how they are circulated as a commodity. The price movements are impacted on from various levels: local and global markets, state intervention in both of them through procurement, storage or tariff-policies. The price movements reverberate back to the soil, shape the process of concentration and changes in crop patterns. In the last decades there has been a decline in food grain production. The annual per capita food grain availability (not purchase power) which was 177 Kgs in 1990 has gone down to 152 Kgs in 2005. We find ourselves in a complex situation: India was spared from global food riots in mid-2008; the Doha round conflict between US and other agro-export nations and China/India to ‘open local markets’ intensified; since 2009 pulses are increasingly imported to India; while due to increase in global prices after draught in Russia 2010 the Indian state thinks about rising the cap for wheat and rice export; while at the same time food inflation in India soared to 20 per cent during 2010 and left movements
criticise the state for letting food grains rot in the procurement storages. Similar to the left view on ‘foreign engagement’ in the agricultural sector, the simple left interpretation of the contradictive state policy is: the state runs down the procurement system in order to open it for private companies. Others say: the rotting food is expression of kulak power and of the low wages of the working class who cannot afford to buy the storaged grains. We have no more sufficient answer to the wider question, below some snippets symbolising the various elements of the ‘food question’.

Food inflation continues to accelerate

“Food inflation rose marginally to 16.37 per cent for the week ended October 2”. These are the official figures. Comrades of the ‘Open the Storage’- campaign allege that “Food inflation has hovered around 18-20 per cent in the past two years. The retail price of coarse rice increased from 9 rupees per kilogramme to 17 rupees per kilogramme at Bhubaneswar in Orissa and from 12.50 rupees per kilogram to 22 rupees per kilogramme at Coimbatore in Tamilnadu. Similarly the retail price of Atta (Wheat flour) increased from 12 rupees per KG to 20 rupees per KG at Gorakhpur in Uttar Pradesh and from 10 rupees per KG to 16 rupees per KG at Ludhiana in Punjab.”

Conflict between Farmers and Millers/Traders: Delay in Rice Procurement

Karnal, 3 October, 2010

Hundreds of farmers blocked vehicular traffic on the GT Road (Karnal, Haryana) for nearly three-and-a-half hours today to protest the delay in procurement of paddy by government agencies and rice millers. The farmers alleged that the procurement was to start from October 1 but not a single grain had been purchased and their produce was lying in open and rotting. Bhartiya Kisan Union (BKU) district general secretary Sham Singh warned that any further delay in purchase of paddy would make the farmers restive and the agitation could take a violent turn. The leaders said against Rs 40,000 incurred on rice cultivation on one hectare area, the net return was Rs 20,000. The Haryana Pradesh Rice Millers and Dealers Association had blamed the wrong and faulty rice procurement polices of the Centre and the state government pushing rice millers into crisis and cautioned that they would not purchase paddy from the growers in case their grievances and demands were not addressed.
Conflict between Millers/Traders and the State: Charges for storage

Chandigarh, 5 October, 2010

A five-hour-long meeting between agitating rice-millers and senior officers of the Haryana Food and Supplies Department here last night failed to break the stalemate over the purchase of paddy, which has been arriving in the mandis of the state in large quantities over the past five days. The millers have refused to purchase paddy on behalf of government agencies till their demands are accepted. Though the government agencies are committed to purchasing paddy at the minimum support price of Rs 1030 per quintal, they just don’t have any infrastructure to do so. In the past it was the millers who used to purchase paddy on behalf of the government, clean it, transport it and store it in their mills, though on paper all this work was done by the government agencies. The millers used to get milling charges at Rs 15 per quintal. Over the years, the system became so perfect that the agencies did not feel the need to develop infrastructure of their own. This year the space position in the warehouses of the FCI is worse than what it was last year. The millers fear that they would again be asked to shell out heavy holding charges this year.

West Asia curbs threaten Indian rice exports

23 September, 2010

India’s basmati rice exports to West Asia could be hit after Saudi Arabia and Iran took measures to curb imports. Rice shipments to Iran and Saudi Arabia comprise 60 per cent of the exports. While Iran has withdrawn import licences, Saudi Arabia has removed subsidy on rice imports. Private investors and government agencies from Saudi Arabia have been acquiring arable land in African countries for growing aromatic rice. India annually exports about $500 million worth of basmati and $102 million worth of non-basmati rice to Saudi Arabia. Rice exports increased by 44 per cent to 2.3 million tonne in 2009-10 from 1.8 million tonne in 2008-09, Agricultural and Processed Food Products Export Development Authority (Apeda) data said.

Wheat imports rise by 27 pc in first quarter of 2010

27 September, 2010 (Economic Times)

New Delhi has contracted to import a whopping 2 lakh tonnes of wheat
in the first half of the current fiscal, this is 27 per cent more than in the entire 2009-10. BUT shipments are unlikely to take place soon as prices are high, Roller Four Millers Federation of India said today. Wheat prices in the international market have firmed up sharply since last two months, on supply concerns due to drought and wildfire in Russia, one of the world’s biggest wheat producers.

Good time for wheat export [!]

28 September, 2010 (Economic Times)

The monthly report of the department of economic affairs, ministry of finance, that appeared in mid-September 2010, affirms that drought in Russia, floods in Pakistan and fears of looming dryness in South America are helping bulls of wheat. India can commence wheat exports at ‘competitive prices’ of $300 per metric tonne (mt) fob – against $100-160 per metric tonne fob realised in the earlier export programme of 2001-05 – and can effectively cover markets of the geographical arc between South Korea and Yemen. The niche period of wheat export is available till March-April 2011. A wild card in the export market is China, which has not historically been a significant. China surprised experts when it made some purchases of US corn earlier this year, but it is not clear if it will be a major buyer of the current crop.

Left campaign to open government food grain storage: state hoards food grains

30 September, 2010

“Almost 10,000 people across eight districts protested against rotting food grains in FCI and State godowns in West Bengal. With food stocks having reached a record level of 608.79 lakh metric tones, almost a third of the stocks are lying in the open under temporary cover. This year already 1.77 Crore MT has rotten and become unfit for human consumption alone. While on the one hand we have hunger, spiralling food prices and declining food availability, on the other hand, our so-called welfarist Government has aggravated the situation by becoming a hoarders of food grains. The stock holdings of cereals by the Government as of June 1st 2010, have reached a record level of 608.79 lakh metric tonnes (MTs). This is the second highest stock since 2002 and three times the amount required as a buffer reserve aiding and abetting
speculative price rise in the open market. In just the State of Punjab, close to 1.36 lakhs MT of wheat, which was procured in 2008-09, is still lying in the open. This is the third monsoon that this stock is weathering and all available official reports suggest that up to a third of this grain i.e. close to 50,000 MTs is already unfit for human consumption.” from: http://sanhati.com/articles/2741/

The ‘totality of capital’ seems blatant: global supply-chains and global (micro)finance bridging town and village, multi-national corporations combining locations of different sectors and stages of development. Seeing it detached from it’s mobile existence as the ‘living element’ of capital, seeing it through the lens of the institutional labour movement, the world of the working class is nothing but fragmented.

Tasks of communist collectives today is to discover the social dimension and potential for generalisation in each individual workers’ experience and struggle. We need an organised debate about how the current crisis changes the composition of class through the re-structuring of global division of labour, rural and urban migration – and how each workers’ experience in circulation already contains essentials answers to the question: how to organise?

At this point we cannot come up with much more than this appeal. We can only superficially hint at some ‘clusters of proletarian reality’, which might become of major importance for the generalisation of future struggles beyond the rural/urban and national/international divides.

* The rural upheaval within and against ‘destructive industrial development’

The forest and mining areas have been thrown into state of emergency and areas of counter-insurgency. In this heated up atmosphere it is of utmost difficulty and importance to unravel the class dynamics in what is portrayed as a struggle between state vs. Maoist or multi-nationals vs. ‘communities’. The recent state’s offer of ‘fair share’ of mining profits to ‘local communities’ has to be seen not only as a material ‘buy off’, but as an attempt to contain social unrest in manageable categories of ‘community’ and ‘represented deals between different interests’. Two weeks after the state put a preliminary halt to the Vedanta mining project in Orissa in late August 2010, a halt for ‘civilised negotiations’, the company was attacked by proletarian anger in early September:
“Thousands of workers ransacked the offices of a refinery run by British resource giant Vedanta. The violence at the refinery was due to Vedanta cancelling short-term staff contracts related to its expansion plans, the Economic Times reported. The refinery was forced to halt work when 2,000 protesting workers carrying sticks and sharp objects cut off the power supply.” Would the regime manage to mobilise this type of proletarian anger against the “rural poor’ resisting the industrial projects”? Examples of analytical efforts to put the local uprising in a wider picture, see Radicalnotes and Sanhati

Book Review ‘Out of this earth’ 10

Once the mining is established as a destructive act, the conflict does not stop, it continues on a different qualitative level: The strike of 13,000 contract workers against the central government-owned Neyveli Lignite Corporation (NLC) in the south Indian state of Tamil Nadu entered its second month on October 21. The workers have shown great determination in prosecuting their strike in the face of the unions’ refusal to appeal to NLC’s 14,000 regular workers to join the strike and the attempts of both government and opposition parties to foist a settlement on them that would leave them as a permanent low-wage workforce.

Whole article on WSWS

* The struggles within the National Rural Employment Guarantee Scheme

Given the ample character of the NRGS it will not only be an essential element of household wage and labour for millions of rural proletarians, it also develops into a playground of political and social management. The potential of generalisation of proletarian struggles – which previously might have had individual local land-lords as their target – is opposed by a vast apparatus of NGO / state institutions to mediate and channel the arising conflicts. All these examples say little about the inter-relation between NRGS and the conditions of wage work in the urban industrial centres: does the (paper) existence of a rural welfare scheme actually work as a ‘fall-back-option’ for urban migrant workers? Will their urban experiences rise or lower the claims made within the NRGS and other rural jobs? Nor is there much knowledge about the impact of the NRGS on the rural labour market: does the existence of the NRGS encourage workers in other rural jobs to raise their claims, or does the
NRGS serve as a general ‘grievance channel’?

Official wages of the NREGS fall behind the official minimum wage. In January 2009 the Central Government froze wages under this Act at Rs. 100 per day. Thus with time NREGA wages have fallen below minimum wages; and have also fallen in nominal terms with the unabated double digit food price inflation over the past year. The non-payment of wages within the NRGS is still blatant. In September 2010 following news came from Rajasthan: Farmers in the tribal Dahod district have decided to boycott the local elections over non-payment of wages under the National Rural Employment Guarantee Scheme (NREGS). There are about 2,223 such farmers in Fatehpura Taluka of Dahod district, who have decided to abstain from voting. Nathu Pargi (56), a farmer who took up work as a labourer under NREGS, in 2008, said: “I did not receive a single paisa as payment, so why should I vote for anyone? The people who have taken the money will contest these elections again.” The grievances are taken up, in institutionalised form. Another example from Rajasthan, 3rd of October 2010:

A hundred Mahatma Gandhi National Rural Employment Guarantee Scheme (MNREGS) workers, who were paid a paltry Re.1 for a day’s work in Tonk district of Rajasthan, returned the amount to the Chief Minister’s Relief Fund. The dharna, which marked the culmination of the “Mazdoor Haq Yatra” (March for the rights of workers) reached from five different destinations – Ajmer, Jodhpur, Kota, Rajsamand, and Udaipur – after 16 days journey. The dharna was to establish “dignity and justice” of those worked under the job scheme, said Shankar Singh of the MKSS. The MKSS failed to register a union of NRGS workers. When the Majdoor Kisan Sangharsh Samiti – formed by NREGA workers under the guidance of NAC member Aruna Roy – approached the registration office, they were told that NREGA workers don’t qualify as ‘workmen’ as defined in the Industrial Disputes Act and the Trade Union Act of 1962, because they are not engaged in a trade or industry. The trade union of NREGA workers in Chittoor in Andhra Pradesh, for instance, was registered without any difficulty, primarily because it was a zonal level affair. The same goes for the GCKS or the Gram Kooli Karmikara Sanghatane, a union of NREGA workers from Karnataka. Initially, it was allowed to register at the zonal levels but was denied permission to set up a state-level union. However, after much coaxing it is set to register at the state
level. Many trade unions, like the one formed by Anuradha Talwar in Bengal, have merely affiliated themselves to the existing New Trade Union Initiative instead of going for an independent registration as a trade union.

* The new generation of multi-national workers

The new generation of workers in industrial clusters like Gurgaon, Chennai or Vapi/ Bharuch are the leading subjects to express and combine the anger of rural misery – the background they are still in touch with – and power and aspirations as part of a global exploited class. We try to document voices of this generation in the newsletters. A particular effort has to be made to debate the differences and parallels of their experiences and those of their brothers and sisters in China – in particular after the wave of strikes at Honda suppliers in China in May and June 2010. Below some news from Chennai, another fast growing new industrial centre of India.

Chennai figures in a list of the world’s fastest-growing cities. Projected to reach a population of ten million by 2025 (presently about seven million), Chennai’s metropolitan area “is taking full advantage of India’s soaring industrial sector, particularly the booming automobile sector. Car markers such as Hyundai Motor India, German luxury car maker BMW and Ford Motor India besides Dell, Sony, Samsung and Nokia India have set up their plants on the city outskirts employing more than 23,000 people. Workers’ unrest grows with the urban. Employees of Hyundai Motor India went on a flash strike in June this year demanding that the management reinstate 67 employees dismissed earlier for demanding recognition of trade union. The latest in the series of strikes is in all three facilities of tyre major MRF at Arakkonam, Thiruvottiyur and in Puducherry. Union sources said the employees were pressing for recognition of union, wage revision and removal of surveillance cameras. “Employees were against installation of CCTVs in Tiruvottiyur plant since it invaded their privacy...” a Union member claimed. The Arakkonam plant produces about 45,000 truck tyres and 25,000 tubes while Pudicherry and Thiruvottiyur manufacture 13,500 and 6,500 truck tyres on a daily basis. In addition, about 13,000 contract workers of the public sector Neyveli Lignite Corporation have also been on strike since September 19, pressing for various demands including raising of wages and issues
relating to bonus. As a rather symbolic example of China/India parallels an article about the current strike at Foxconn in India. An example of the separation between ‘permanent workers’ unions and the majority of the temporary workforce.

Strike halts production at Foxconn India

September 24th, 2010 Chennai,

Foxconn India is one the major vendors for Nokia India. Production at Foxconn came to a halt on 24th of September halt with workers affiliated to Foxconn India Thozilalar Sangam (FITS) striking for higher wages and union recognition. The plant employs 1,800 permanent workers. Around 1,500 permanent workers participated, half of them are women workers. Around 6,000 contract workers and trainees were not allowed to work by the strikers. Around 1,000 strikers were arrested during the sit-in, but released later. 23 union reps got suspended.

On September 23, Foxconn India had informed the workers that it already entered in to a memorandum of understanding with the FITMS union, hence no negotiations with FITS and announced the imposition of eight days wage cut for workers who participated in the strike. On October 10, the police locked up 320 Foxconn India workers along with CITU state secretary Soundarajan in connection with the workers’ protest.

A good article on the strike on WSWS

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

AITUC
BPO
CITU
Casual Workers
Contract Workers
Crore
DA
DC
ESI
The All India Trade Union Congress (AITUC) is the oldest trade union federation in India and one of the five largest. It was founded in 1919 and until 1945, when unions became organised along party lines, it was the central trade union organisation in India. Since then it has been affiliated with the Communist Party of India.

Business Process Outsourcing: for example of call centre work, market research, sales.

Centre of Indian Trade Unions, a national central trade union federation in India. Politically attached to CPI(M), Communist Party of India (Marxist). Founded in 1970, membership of 2.8 million.
Workers hired by the company for a limited period of time.

Contract Workers

Workers hired for a specific performance, paid for the performance.

Crore

1 Crore = 10,000,000
1 Lakh = 100,000

DA (Dearness Allowance):

An inflation compensation. Each three to six months the state government checks the general price development and accordingly pays an allowance on top of wages.

DC

Deputy Commissioner, Head of the District Administration.

ESI (Employee's State Insurance):

Introduced in 1948, meant to secure employee in case of illness, long-term sickness, industrial accidents and to provide medical facilities (ESI Hospitals) to insured people. Officially the law is applicable to factories employing 10 or more people. Employers have to contribute 4.75 percent of the wage paid to the worker, the employee 1.75 percent of their wage. Officially casual workers or workers hired through contractors who work in the factory (even if it is for construction, maintenance or cleaning work on the premises) are entitled to ESI, as well. Self-employment is often used to undermine ESI payment.

Exchange Rate:

1 US-Dollar = 43 Rs (July 2008)
1 Euro = 68 Rs (July 2008)

HSIIDC

Haryana State Industrial and Infrastructure Development Corporation

ITI

Industrial training, e.g. as electrician or mechanic. Two years of (technical school), one year of apprentice-ship in a company. During the two years at school the young workers receive no money, but they have to pay
school fees. A lot of the bigger companies ask for ITI qualification.

Jhuggi

Slum Hut

Lakh

see Crore

Lay off

Lay off in the Indian context means that workers have to mark attendance, but they actually do not work and receive only half of the wage.

Minimum Wage:

Official minimum wage in Haryana in June 2007 is 3,510 Rs per month for an unskilled worker, based on an 8-hour day and 4 days off per month. But hardly any workers get this wage.

Panchayat

A locally elected village administrative body in charge of village-level issues.

PF (Employee’s Provident Fund):

Introduced in 1952, meant to provide a pension to workers. Officially applicable to all companies employing more than 20 people. Official retirement age is 58 years. Given that most of the casual workers belong to the regular workforce of a factory, they are entitled to the Provident Fund, as well. So are workers employed by contractors. If workers receive neither PF nor ESI they also do not show up in the official documents, meaning that officially they do not exist.

Ration Card

Officially the so called ‘governmental fair price shops‘ are shops were ‘officially poor’ people can buy basic items (wheat, rice, kerosene etc.) for fixed and allegedly lower prices. In order to be able to buy in the shops you need a ration card. The ration card is also necessary as a proof of residency, but in order to obtain the ration card you have to proof your residency. Catch 22. Local politics use the ration depots and cards as a power tool that reaches far into the working class communities. Depot holders’ jobs are normally in the hands of local political leaders. In return
they receive this privileged position, which often enable them to make money on the side.

SP
Superintendent of Police, Head of the District Police.

Staff
In India staff includes managers, supervisors, security personnel and white-collar workers.

Trainees
In general trainees work as normal production workers, they might have a six-month up to two-year contract. Depending on the company they are promised permanent employment after passing the trainee period. Their wages are often only slightly higher than those of workers hired through contractors.

VRS (Voluntary Retirement Scheme):
Often a rather involuntary scheme to get rid of permanent workers. Particularly the VRS at Maruti in Gurgaon made this clear, when 35 year olds were sent in early retirement.

Wages and Prices:
When we hear that a cleaner in a call centre in Gurgaon, an industrial worker in Faridabad or a rikshaw-driver in Delhi earns 2,000 Rs for a 70 hour week, which is about the average normal worker’s wage, we have to bear in mind that they often came from West Bengal, Bihar or other remote place in order to get this job. In order to put 2,000 Rs into a daily context here are some prices of goods and services – based on Summer 2006 prices. Inflation levels have been high since then. For more recent prices see:

https://gurgaonworkersnews.wordpress.com/gurgaonworkersnews-no-928/

Housing:
- Monthly rent for a plastic-tarpaulin hut shared by two people in Gurgaon: 800 Rs
- Monthly rent for a small room in Gurgaon (without kitchen), toilet and bathroom shared by five families: 1,300 Rs
Monthly rent for a small room in a new building in central Gurgaon, single toilet and bathroom: 4,500 Rs to 8,000 Rs

Food:

- Half a kilo red lentils on the local market: 25 Rs
- Kilo rice on local market: 14 Rs
- 1 Kilo Onions and 1 Kilo carrots on local market: 25 to 30 Rs
- McChicken: 40 Rs
- Bottle (0,7l) of beer at Haryana Wine and Beer shop: 50 to 70 Rs
- Cigarettes (10), cheapest local brand: 25 Rs
- Starbucks Coffee (Latte Medium) in Shopping Mall: 59 Rs

Utensils:

- Faulty shirt on Faridabad local market: 40 Rs
- Single gas cooker plus new 2 litre gas cylinder: 720 Rs
- Re-fill gas (2 litres – once every month and a half): 100Rs
- Second-hand bicycle: 600 to 1,000 Rs
- Two simple steel pots: 250 Rs

Transport and Communication:

- Bus ticket to nearest bigger bus stop in South Delhi: 14 Rs
- Daily Newspaper: 3 Rs
- One hour internet in a cafe: 20 Rs
- Cinema (new) ticket Saturday night: 160 Rs
- Single entry for swimming pool: 100 Rs
- One litre Diesel: 30 Rs
- Driving license in Haryana: 2,000 to 2,500 Rs
- Start package pre-paid mobile phone (without the phone) 300 Rs
- Phone call to other mobile phones: 1 Rs
- One month mobile phone flat rate: 1,500 Rs

Luxuries:
- Minimum dowry poor workers have to pay for the marriage of their daughter: about 30,000 Rs (80,000 Rs more likely)
- Money given to poor labourers for their kidney: about 40,000 Rs
- Compaq Laptop: 50,000 Rs
- Flight Delhi to London: 28,000 Rs
- Cheapest Hero Honda motorbike (150 cc): around 40,000 Rs
- Ford Fiesta: 587,000 Rs
- Four hours on Gurgaon golf course: 800 Rs (info from golf course worker earning 2,400 Rs monthly)
- Two-Bedroom Apartment in Gurgaon: 10,000,000 to 50,000,000 Rs

workers hired through contractors

Similar to temporary workers, meaning that they work (often for long periods) in one company but are officially employed by a contractor from whom they also receive their wages. Are supposed to be made permanent after 240 days of continuous employment in the company, according to the law. A lot of companies only have a licence for employing workers in auxiliary departments, such as canteen or cleaning. Companies usually find ways to get around these legal restrictions, e.g., workers services are terminated on the 239th day to avoid workers reaching eligibility criteria to become permanent. In many industries contract workers account for 60 to 80 per cent of the workforce, their wage is 1/4 to 1/6 of the permanents’ wage.
Gurgaon in Haryana is presented as the shining India, a symbol of capitalist success promising a better life for everyone behind the gateway of development. At a first glance the office towers and shopping malls reflect this chimera and even the facades of the garment factories look like three star hotels. Behind the facade, behind the factory walls and in the side streets of the industrial areas thousands of workers keep the rat-race going, producing cars and scooters for the middle-classes which end up in the traffic jam on the new highway between Delhi and Gurgaon. Thousands of young proletarianised middle class people lose time, energy and academic aspirations on night-shifts in call centres, selling loan schemes to working-class people in the US or pre-paid electricity schemes to the poor in the UK. Next door, thousands of rural-migrant workers up-rooted by the rural crisis stitch and sew for export, competing with their angry brothers and sisters in Bangladesh or Vietnam. And the rat-race will not stop; on the outskirts of Gurgaon, new industrial zones turn soil into over-capacities. The following newsletter documents some of the developments in and around this miserable boom region. If you want to know more about working and struggling in Gurgaon, if you want more info about or even contribute to this project, please do so via:

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Local Automobile Workers: Electronic Flow Regime combining Welding Robots and Slum Production –

The 1st and 2nd tier suppliers are squeezed from two sides of capitalist contradiction, from both sides of the supply chain: from the down-stream side of capital-intensive manufacturing and from the up-stream side of workshop and slum production. The ‘information-flow regime’ in Maruti Suzuki’s central assembly plant expresses capital’s hope that a
perfectly synchronized supply-chain will reconcile ‘technical productivity’ and ‘profitability’, by tuning the rhythms of welding-robots to those of the dexterous hands of child labour. We document glimpses at different sections of the supply-chain: an article on ‘electronic flow-management’ at Suzuki Maruti in Gurgaon; articles on the situation of 1st tier suppliers and a worker’s report about conditions at ‘Wing Automobile’; and finally reports from workers employed in the workshop and slum production of the automobile industry in Faridabad.

*** Local Call Center Workers: Re-Location, Domestication and Workers’ Anger –

Short article on a rather dubious ‘technological fix’ for the Gurgaon call centre industry and an angry worker’s report from Sparsh BPO about working conditions, a strike and mass lay offs.

*** Migrant Workers’ Living Sphere in NOIDA / An Academic Research –

An excerpt from “Global Capitalism, Workers’ Spaces and Processes of Selective Inclusion/Exclusion: Findings from a Newly Industrialising Area in India” by Anita Trivedi

2) Collective Action –

Reports on proletarian struggles in the area

*** Student Protests against Fee Hike in Haryana –

Part of the international student protests? On 5th of October, students enrolled in Adarsh College of Education held a militant protest outside the college. They were protesting against the college authorities for forcing students to pay 40,600 Rs for the course offered. Read article by KYS (Revolutionary Youth Organisation).

*** Death of a Manager and Murder Case against 377 Automobile Workers at Allied Nippon –

In September 2008, an industrial dispute at Graziano car parts manufacturer in NOIDA ended in a manager’s death and subsequent victimisation of workers. Two years later, a different location in the wider Delhi industrial belt, a different automobile parts manufacturer, the same victimisation of workers after a violent dispute. Again the media worries
about the ‘investment climate’.

3) According to Plan –

General information on the development of the region or on certain company policies

*** Big Industry and Local Land-Owners: Alliance in Gurgaon –

The power base of Haryana's political class is the combination of big industry and local landowning class. Real estate rent and industrial profits transform into tax money – of which the local peasantry receives their share in form of compensation payment. In November 2010, while Panasonic reveals their plan to open a new washing machine factory in Gurgaon, the Haryana government announced the ‘Revised Land Acquisition Policy 2010’, which basically means an increase in the state-fixed minimum compensation.

*** The Social Tsunami Impact / Snap-Shots against Capital-Class-Crisis –

This is an attempt to introduce a regular update on general tendencies of crisis development in India. The micro-credit system defaults, remittance flow is threatened by change in global migration regime, inflation is stifling industrial investment, state debts are increasing and rural wages officially kept below minimum wage level, pushing people further into debts: a capitalist vicious cycle. Debating the dimension of the micro-credit crisis in India we have to go beyond the old formula of ‘parasitic moneylenders in new disguise’. The growth of micro-credits is essentially part of the wider global development: credit money has to fill the gap between global over-capacities and subsequent under-consumption. The ‘micro-credit’ – as much as ‘subsidies’ or ‘farmers’ debt waivers’ – has therefore to be seen as the ‘grease’ in a troubled process of proletarianisation. The Nobel Prize idyll of ‘small entrepreneur’-ship has capsized in the rough sea of global crisis.

4) About the Project –

Updates on Gurgaon Workers News

*** Past Tense / Present Unrest – Local Working Class History –

We put online various historical documents on working class experience in Faridabad in the 1970s and 1980s. Despite having been one of the largest industrial areas in India at the time and a hotspot of post-
Emergency proletarian turmoil, the experience of workers in Faridabad rarely entered the realm of official labour history. For the current generation of workers and communists a critical engagement with the voices from the past is essential part of the search for new trajectories and new forms of organisation. In the near future we intend to bring more documents and voices back into our present discussions and extend the archive on this site. Get involved!

*** Glossary –

Updated version of the Glossary: things that you always wanted to know, but could never be bothered to google. Now even in alphabetical order.

1) Proletarian Experiences –

Daily life stories and reports from a workers’ perspective

*** Local Automobile Workers: Electronic Flow-Management: Combining High-Tech Assembly Plants and Slum Production –

The Indian car industry is in a ‘sales boom’: all time record figures during the last months. But does the ‘sales growth’ translate into a ‘profit growth’?! The supplying industry complains about ‘squeezed margins’: the pressure on prices is so high that it hardly allows sufficient upgrading of capacities and future productive investments. They have difficulty to keep up with the demand in productive output. With dwindling profits per car the central assembly plants suck the supply chain dry: just-in-time, low inventory, low prices, full quality.

The 1st and 2nd tier suppliers are squeezed from two sides of capitalist contradiction, from both sides of the supply chain: from the down-stream side of capital-intensive manufacturing and from the up-stream side of workshop and slum production. The low wage regime of workshop and slum production hardly makes it profitable to invest in machinery. The workshop and slum production itself is part of a ‘human supply chain’ of cheap labour, reaching into the rural parts of society. The current conflicts about minimum wages for rural employment schemes will re-shape this supply – see ‘the Social Tsunami Impact’ in this newsletter.
Below we document some glimpses at different sections of the supply-chain: an article on ‘electronic flow-management’ at Suzuki Maruti in Gurgaon; articles on the situation of 1st tier suppliers and a worker’s report about conditions at ‘Wing Automobile’; and finally reports from workers employed in the workshop and slum production of the automobile industry in Faridabad.

* The Electronic Flow

The ‘electronic flow’-management in central assembly plant symbolises the attempt of capital to get to grips with the flow of value. Their obsessive hope is that the ‘information’ passed on between assembly department and the scattered landscape of supplying industry can become the container of ‘value’ – ‘information’ being similarly immaterial and evasive. The ‘information-flow regime’ is their hope that a perfectly synchronized supply-chain will reconcile ‘technical productivity’ and ‘profitability’, by tuning the rhythms of welding-robots to those of the dexterous hands of child / slum labour.

“At Maruti Suzuki, electronic flow is a religion”

(Economic Times, 19th of November 2010)

At India’s largest carmaker, E. Nagare or ‘electronic flow’ is a religion. Simply put, this electronic flow is actually the sequence of production plans from the vendor [supplier] to Maruti’s shopfloor, which now sits at a two hour cycle from 30 days in the past. As S Maitra, Managing Executive Officer (Supply Chain) of Maruti Suzuki indicates, “E . Nagare has completely transformed the supply chain at Maruti over the last four years.” Across Maruti’s twin sprawling plants in Gurgaon and Manesar, multi-coloured bumpers arrive in mobile trolleys and components line up outside factory sheds directly feeding the ever-hungry, multitasked assembly lines. For the company’s 250-odd Tier I vendors and 20 global suppliers, supply is now a seamless activity. Maruti receives multiple supplies in a day within a slot of two hours based on the information given out to its vendors the previous night. That’s a far cry from the initial 30-day or subsequent 15-day cycles Maruti drove in years ago. And that’s what it takes to crank out 4,600 cars a day.

Along with processes like E. Nagare, new technologies and materials such as plastic instead of a metal fuel tank or light tinting of glass to
keep the car cool, are now in the offing. Increased competition in the late 90s gave rise to global suppliers coming to India, like Delphi of GM. “Delphi came with a range of technologies, like wiring harnesses, chassis and powertrain components and AC components and they became our suppliers as well,” says Maitra. At that time, it was the ‘Materials’ division of Maruti that dealt with the supply side. Instead of price increase, which was the order of the day, Maruti called on its existing vendors to focus on cost reduction. Initially, the company could bring down the cost of production by 2-3 per cent and in 2006-07, it even lowered that by 5%. “We had to induct many global suppliers in our vendor network, like Faurecia for seat mechanism, Bosch and some Japanese suppliers like Dentsu, Sumitomo Metals and Continental, all with a global footprint,” elaborates Maitra.

* The 1st tier squeeze

The profit squeeze of the wider industry appears as ‘unfair price policy’ to the supplying companies.

“Sales of passenger vehicles have set a scorching pace-25-27 per cent in the first half of the financial year-and auto component makers are struggling hard to catch up. Over the next few years, the vendors are expected to pump in at least Rs 2,000 crore to meet the demand. One factor that has enabled companies to make such high investments is the willingness on the part of original equipment manufacturers (OEMs) to re-negotiate contract prices. In the past ten months, the average contract prices have gone up by 5-10 per cent. As Ramesh Suri, chairman of the country’s largest car air-conditioning company Subros, which supplies air-conditioners to Maruti Suzuki, Tata Motors and Hyundai Motor, says, “We are going to invest up to Rs 200 crore for capacity enhancement,” adding that the only option left for his company is to constantly ramp up production to meet demand. Suri explains that while passenger vehicle makers constantly put pressure on component makers to cut costs, there is a limit to how much they can manage. He says while the company’s topline has been growing steadily, there is constant pressure on the bottomlines. “The average net profit per sale has certainly declined,” he claims, adding, “Auto firms have realised that they can’t continue to do business till the time they increase contract prices.”Managing director of Gurgaon-based auto component maker Omax Autos Jatender Mehta
adds that his contracts with leading carmakers have increased 5 per cent in the past one year. “If we have to invest in our facilities, we cannot do it till we get more for our components,” he says. Mehta explains that high volatility in prices of key components like steel, copper, zinc and aluminum, which have increased 10-12 per cent since last year, has burnt a big hole in the budgets.”

* The 1st tier workers’ anger

Wings Automobile Worker
(I-35, DLF Industrial Area Phase 1)

There are 25 permanent workers and 325 workers hired through contractor. They produce ignition coils for two-wheelers of Hero Honda, Bajaj, Yamaha, Honda, Hero Puch and Kinetic. They also produce parts for Maruti Suzuki. Officially workers are employed 8.5 hours per day, but actually they work 200 hours overtime per month, paid at single rate. If workers are made to work 20 hours non-stop, they get 20 Rs extra for food. There is a constant danger of cutting your hands – the production targets at the 12 power presses and the 10 moulding machines is too high. Even when the machines are faulty you have to run them. If one of your pieces is rejected (due to flaws) they cut one hour of your wages, they swear at you, they also push-beat you. Fingers are cut on a regular level. They don’t fill in the accident report. After an accident you are sent for private treatment and then you are dismissed. In an auxiliary of the company (Eden) 5 permanents and 70 workers hired through contractors produce horns for two-wheelers, cars and tractors. Recently, a newly hired worker was made working 26 hours non-stop on a power press, he had an accident and lost two fingers. The toilets are very dirty. There is no drinking water. Wages are paid delayed.

http://www.wingsauto.com/

(from: Faridabad Mazdoor Samachar no. 267)

* The Automobile Slum-Production Workers

In the ‘industrial villages’ and slums of Faridabad more than 100,000 workers are employed in small workshops, which produce for the bigger industry on contract bases. Nearly all of them are ‘invisible’, they don’t show on any official documents. The workshop economy is an outcome of the 1980s restructuring process – see ‘Workers History’ on the
GurgaonWorkersNews site. The 1980s and 1990s witnessed mass lay-offs of permanent workers. Some of them remained in touch with their former department managers and turned into their suppliers: they opened a workshop. The machinery of the workshop stems from a similar cycle of re-structuring: lathes, power presses and other machines replaced by micro-electronic revolution, often imported from Germany and Japan. New workers stream in from the countryside and find a job in the slum economy – in many cases they come from the workshop-owner’s villages. Below some voices from the low-wage labour-intensive regime.

Boxer India Worker

The workshop is situated near Industrial Area, 17 workers are employed. They work on six power presses, three lathes, one grinder and one reamer. They manufacture cycle clamps and other parts for JCB, Maruti Suzuki and RK Industries. The helpers are paid 2,500 to 3,000 Rs and the operators get 4,000 to 4500 Rs per month. The shift-times are from 8:30 am till 8 pm, but people are made to stay till midnight, too. Overtime is paid at single rate. Due to working too long hours, due to lack of maintenance and due to the fact that helpers are made to work on power-presses there are a lot of accidents: fingers get cut. Injured people are supposed to organise bandages through private channels. After being given 100 or 150 Rs by the boss they have to hear: if it does not get better through the bandages, why don’t you urinate on the wound. Even if you are still injured and bandaged you have to come to the workshop and do whatever work.

Aman Enterprises Worker

The workshop is in Saray Mohalla in Mujesar. There are two surface grinders, cylindrical grinders, internal grinders, a lathe machine, MNCR, a tool grinder, a drill, two generators – four workers, the workshop owner and his nephew use them in order to make dies for factories. The wages are between 2,500 Rs and 5,000 Rs. There is no toilet. Due to the surface grinder and the generators there is a lot of dust and exhaust in the air.

Lakshman Singh Mittal Industries Worker

The workshop is in Dabua, near the Sarvoday School. In the workshop 25 workers work on 12 power presses, on a surface grinder and a big drill,
manufacturing parts for Whirlpool. Official shift times are from 8:30 am till 9 pm. The workshop owner knows all tasks, he does the setting – his son supervises the outsourced work. He is a senior die fitter, he does not work himself, he gets more than 5,000 Rs. The helpers and operators get 3,000 Rs to 3,500 Rs.

BS Enterprises Worker

The workshop is in Saray Mohalla in Mujesar. Three workers use a lathe, a surface grinder, a drill and a generator in order to do job work for bigger factories. Wages are about 3,500 Rs.

(from: Faridabad Mazdoor Samachar no. 267)

Short article on a rather dubious ‘technological fix’ for the Gurgaon call centre industry and an angry worker’s report from Sparsh BPO about working conditions, a strike and mass lay offs.

* The Technological Fix

Finally an end to expensive office blocks and mingling of sexes: modern technology is supposed to enable ‘housewives’ to do the call centre job from their domestic sphere. “With just one laptop or desktop computer with internet and a phone connections, people could operate from their rooms, attend to inbound calls that otherwise land at the call centre. With this, housewives, who would never otherwise dream of joining a BPO, would be able to take jobs and do it from their homes,” said Mike Manson, director of the ‘innovative company’. “Virtualisation of voice technology would help setting up of one-seater or 3-5 seater micro BPOs in tier 3 and 4 cities from where the BPO companies are drawing talent pool,” said Sriram Srinivas, vice-president. “This would not only benefit the employee to save on overheads such as rentals and high cost of living in metros like Gurgaon but also helps the company reduce cost on things such as employee transportation expenses.” Experiences in the US and Western Europe taught us that even in call centres capitalist production is still mainly a ‘socially enforced’ type of productivity: despite rent costs the mass office is still more productive due to mass cooperation, flow of creativity, discipline and surveillance.

* The Angry Worker

Sparsh BPO Service Worker
“We currently operate through 20 state-of-the-art facilities across nine locations in India. Our dedicated workforce of over 16,000 motivated professionals provide qualitative solutions in the areas of transaction processing and call centre services, aiming to achieve excellence in every transaction.”

The call centre is in a 12-floor building, several thousand workers are on the phone 24 hours on three shifts, phoning for BSNL, Airtel, Airsale, Reliance Com, Orient Bank of Commerce. For 26 working days per month they get 4,800 Rs. After 8-hours shift they are often made to stay two hours longer, which is not paid. The company does not pay for transport and those workers who use the ‘employee cabs’ have 1,000 Rs per month deducted from their wages. In addition 210 Rs is cut for PF and 80 Rs for ESI – but no ESI card is given. The food break is only 15 minutes – there are two 5 minutes breaks for tea. There is never enough time, but no matter what, you are supposed to work. You cannot make the customer wait, that’s what they say. Against this the workers stopped work at the end of March 2009, they stopped work for three days. They went inside the office, but they did not log in. The management reacted by smashing 4-5 computers and trying to blame the workers for it, saying that they will file a police case and send them to jail. Bit by bit they started to kick people out – in the end it must have been about 2,000 workers. Actually a lot of workers handed in their notice, but the company refused to take it – instead they said that the workers just left the job. After having worked there for more than two years I went to the office in order to make them sign my PF form. They just threw it away and said that I left the job without giving notice and that I won’t get the PF. The company keeps 200 workers for housekeeping. They work 12-hours shifts, 30 days per month and get only 4,887 Rs – no ESI and no PF. The company has another office at 195 Udyog Vihar Phase 1. There workers phone for Vodaphone, Shub Yatra, Bhartiya Jivan Bima Nigam and others.

GLOBAL CAPITALISM, WORKERS’ SPACES AND PROCESSES OF SELECTIVE INCLUSION/EXCLUSION
Findings from a Newly Industrialising Area in India
Anita Trivedi
August 2007

[We document an excerpt dealing with the living arrangements of migrant workers in NOIDA, a neighbouring industrial area to Gurgaon and Faridabad]

Material differences at the workplace and variation in work practices and responses were reflected in the living spaces of workers. Key findings reinforced the theme of variation observed in labour management practices and the responses of workers at the workplace. At the same time, while the strategy of control of workers and undermining the commonalities through differential employment contracts and remunerations was reflected in the hierarchy of the living spaces, it was also crosscut by a sense of unity among workers arising out of shared spaces, experiences and a sense of unfairness. The living spaces formed a significant dimension of social relations of production.

In the five residential areas a form of hierarchy originating from and akin to the one at the workplace could be observed, with the government-planned (Industrial Authority) sectors/colonies at the top and unauthorised slums at the bottom as shown in Table 2. In between, in descending order were the company colonies, unauthorised colonies, ‘urban’ villages and authorised slums. The areas towards the upper end of the hierarchy had access to better services and to the decision-making levels of the state; such access progressively declined as one moved down the ladder.

<table>
<thead>

</tr>
</tbody>
</table>
A Colony, Greater Noida
Slightly reduced scale and reach of public infrastructure and services
Unauthorised regularised colony
Harola, Noida
Come up through unauthorised sale or grab of land but regularised by government by providing some services
Authorised urban villages
Surajpur, Greater Noida
Villages surrounded by industrial and municipal urban settlements
Unauthorised slums
Khoda, Noida
Very little infrastructure / services

The processes of selective inclusion and exclusion extended here too. The ‘included’ permanent workers in the MNCs largely resided in well-developed and serviced areas; others ‘partly incorporated’, e.g. skilled migrant workers, apprentices, lived in company colonies, peri-urban areas and villages; and a majority of temporary and migrant workers, adversely incorporated or excluded, dwelt in the slums. Such scaling of the spaces resulted in further divisions among workers.

I admit we are better than others, especially the unauthorised ones, but not very good either. The light (electricity) doesn’t always come. The colonies of the Authority are much better. Why the difference?
(Union Functionary, J3, resident of a company colony)

Workplace injustices were overshadowed by demands for services and other issues in some areas. This continued the process of fragmenting the workers evident at the workplace and of weakening the formation of a collectivity.

However, on closer examination certain variations in the above scheme of things were observable. Not all ‘included’ workers resided in areas where they were expected to, i.e. well-developed and well-serviced residential areas. Some locals, who owned land and were economically and politically powerful continued to reside in or maintained strong links
with villages, ‘urban’ villages and sometimes slums. This provided them with an opportunity to continue with an additional source of income (usually from agriculture or related activities); and allowed them to retain their dominant status (of class and/or caste) with its resultant social networks and benefits.

The ‘most included’ permanent workers, both in terms of employment status and also of the quality of the areas of residence and access to services, had the greatest fear of being ‘excluded’ from both. They suffered from a sense of insecurity similar to workers in other categories. At the other end, the ‘most excluded’ migrants who resided in slums exhibited no such fear and were resigned to workplace inequality and apathetic towards living conditions:

What is the point (of services)? We only come here to sleep. I am here to earn…and they will never give us a permanent job.

(Focus group of migrant workers, I1 and I2)

In between, there were many variations based on levels of inclusion and exclusion both at the workplace and in living areas. Many who were ‘more included’ at the workplace felt ‘excluded’ in the living spaces and vice versa. The skilled migrant workers (e.g. J2) who lived in the ‘urban villages’ experienced a greater sense of inclusion with respect to work but exclusion when it came to access to people of influence/decision-making processes because they did not ‘know anyone’.

Yes, we live together but half of them are locals and they go home. The people (locals) understand our problems but they live here during the week and go to their villages over the weekend. They are different. We are different. We have skills and we held good jobs. They work at the firm only for the name. Pay and conditions don’t matter to them.

What can we do? Nobody listens to us…we are from different places. We don’t know anyone here and even if we ask for help, no one will stand by us, we are from outside.

(Focus group of migrant skilled apprentices, J2)

The reverse was true for many unskilled local workers (e.g. K1, J2) who lived in the surrounding villages and continued with the original agrarian pursuit (often as a fallback option during periods of unemployment). They drew confidence from local networks of community, village, and
region and were vocal in their criticism of workplace practices and migrant workers for ‘putting up with them’:

I tell the security men who misbehave (manhandle, shout) with me...I will see you at the gate...

Others (migrant workers) who put up with it are not men.

(Local temporary worker, K1)

Many of the relatively prosperous and influential locals, who were excluded or partly included-excluded in the workplace as temporary workers in its various categories, often indulged in land grab in the slums and extended accommodation at high rents to migrant workers. The economic strength and political clout required for this originated from their insertion into channels of influence (access to officials and politicians through links of family, caste, village etc that are often drawn upon in times of crisis or during elections). They were most vocal in their demands for services and more hopeful of their fulfilment because of their social support systems.

I tell you it is a matter of time...we will get the recognition (thereby services in the unauthorised colony). They [the government] will have to do it. We are a solid vote bank for them.

(Local temporary worker, J1, Head of the residential committee)

In a way, their exclusion at the workplace was sought to be remedied by seeking greater inclusion in their other spaces. Despite the very evident divisions, the unintended outcomes of such structuring and reconfigurations were the coexistence of the workers in the living spaces, the urban-rural continuum and the overlap of spaces and issues in the physical and mental landscapes of workers. Shared spaces encouraged sharing of the experiences and injustices of the workplace. The empathy and the sympathy from the shared plight, or the fear of it, often overcame the divisions and hierarchy of both the workplace and living spaces.

The situation in those areas [Khoda and Harola] is bad. The workers there are mostly in export units and it is well known the kind of exploitation that goes on in such units. The government supports the owners of such units but ignores the terrible conditions that the workers live in... where else can they live on the pittance that they receive? As for
us (in the MNCs), it is a different kind of exploitation. [Nods of approval by all]

(Union President, J1 during a mixed focus group)

A fragmented workforce from fragmented work organisation lived in hierarchical living spaces. Given their degree of fragmentation, sense of insecurity and spatial segmentation, one would expect to find a much weakened workforce with reduced avenues of organisation and representation. Yet, the politics of the workers displayed complexities that arose from their varied exclusion/inclusion at the workplace and in living spaces and the varied nature of interest articulation. The emphasis on the interests articulated differed on the basis of the place of residence (more service-oriented in the slums and completely work-related in the residential areas of the MNCs), or origin of workers (migrant or local), or skills of workers.

Variation of interests could be observed between the slums, where demands centred on better living conditions and services, and the well-serviced residential sector developed by the government, Gamma, where the permanent MNC workers were concentrated, where workplace and work related issues completely dominated. Again, service-related demands in slums were vocalized by influential local residents of the area and not the migrant workers. The urban village of Surajpur and the company colonies showed a mix of demands: the demands for services were not as strong as in the slums and were mixed with criticisms of work culture and practices.

While migrants and temporary workers in the slums displayed apathy towards their living conditions and towards the idea of political solutions to the same, and felt completely disempowered politically and economically, those in other areas, e.g. the migrant skilled workers working in the MNCs and residing in the ‘urban villages’, were more engaged. This stemmed from their sense of greater inclusion (however selective) at the workplace. However, it is significant that the engagement was not with the local politics but with the new economic policies of the state to attract MNCs and its impact on them, i.e. at the global-national level (the case of apprentices of J2 who spoke of workplace issues but disregarded the local ones).

Migrants, whether in temporary low paid employment or skilled, felt
weaker on account of ‘not knowing anyone’ compared to the local workers who felt stronger because of their social support systems despite their insecure jobs. The presence of many well-placed permanent workers and entrepreneurs, mostly local, in the unauthorised slum of Khoda indicated both the operation of an ‘informal’ economy and the use of informal channels and mechanisms by the workers to gain economic strength and social status, and thereby access to the decision-making processes and institutions.

If they are going to take our land away, why wouldn’t we grab this land? We have to live and this is our place, our roots. [AT – But land grab is not good, surely?] No, it isn’t. But a man has to go up in life. Money talks, power matters.

None of the locals wanted to move and all felt that the migrants were unfortunate, thus manifesting the relationship between spatial mobility and social power.

Nobody wants to be rootless; I can't imagine going somewhere else to live... it is sad to be a migrant.

This fractured politics with conflicting interests in the slums and the ‘urban villages’ reflected the inclusion-exclusion experienced by workers at the workplace. The local residents were ‘more included’ in the social processes of decision-making and power because of their origin (as compared to the migrants) but ‘more excluded’ than the permanent workers in the MNCs (who had access to better services). The latter, for their part, were not as concerned with the conditions of the slums (when asked about it) as with their own largely work related issues. The greater inclusion of the migrant skilled workers and exclusion of the local unskilled workers at the workplace reinforces Massey’s (1996) emphasis that space implies a co-existence of differences and multiple trajectories. Also, the preoccupation with service provisions in the slums was counterpoised by very powerful workplace and work-practices related responses in the company colonies and the residential sectors of the workers.

At the same time, the workers in the MNCs were as likely to exhibit a place-based politics in their villages.

I still have my land in the village...have bought some more too. This area
is only going to grow more, not less. At the end of the day, it is family [extended family], community that matters...in times of need, marriage, troubles, and illnesses. Without your roots and links (in the village), a man is anchorless.

(Permanent worker, MNC)

Another example was found in interviews conducted with a local, permanent worker and a focus group of a mix of workers from the same organisation in one of the villages. When the interview was completed, I requested for all categories of temporary workers to be assembled. None of the temporary workers sat down and no response was forthcoming on any of the issues raised except from the permanent worker, who belonged to the dominant caste, was one of the rich men of the village, and was also instrumental in getting others employment. On being prompted, the permanent worker said ‘I am telling you, why do you need to ask them’ and the temporary workers said ‘we agree with what he says’.

Despite attempts by capital to undermine their commonalities, the possibility of a common consciousness emerging among workers, identified at the workplace, was also identifiable in the living spaces of workers. There was a keen awareness of trends and practices in other workplaces. Also, all along there was an emphasis on injustice and unfairness and a feeling of ‘us’ and ‘them’ among workers. Despite the divisions and conflicting interests there was a continued sense of awareness that such differences were largely work-mediated. This came through in almost all interviews and focus groups when workers, after initial scapegoating of other groups of workers, would end by attributing all their problems to the ‘MNCs, employers, state, new policies and changes’. Use of local networks were accepted by all and resented by some but always attributed as a counter to the prevalent ‘unfairness’.

It appeared that processes of exclusion-inclusion were multiple and interrelated and operated in all domains of workers. Although at some level the exclusions at workplace and living space were mutually reinforcing, in other respects and for some groups they were mutually compensating – e.g. exclusion at work can be offset by living space inclusion, and vice versa. The locational sources of power, i.e. those rooted in a place, local support structures and networks of influence that
followed from it played a role. Also, though the fragmentation of both living space and workspace was a source of division, there were countervailing sources of solidarity deriving from a shared plight (or fear of it). Workers attempted to counter work-generated and spatial inequalities by demands for services, through recourse to formal as well as informal channels of influence and institutions of the state. What emerged was a lack of concordance between power location within the village or other living space, and power location in the company. Old social structures rooted in agrarian systems persist alongside new power relations in industrialised workplace settings.

2) Collective Action –

Reports on proletarian struggles in the area

Part of the international student protests? On 5th of October, students enrolled in Adarsh College of Education held a militant protest outside the college. They were protesting against the college authorities for forcing students to pay 40,600 Rs for the course offered. Read article by KYS (Revolutionary Youth Organisation).
